List of Contributors

Anālayo, Bhikkhu, completed a PhD on the *Satipaṭṭhānasutta* at the University of Peradeniya, Sri Lanka, in 2000 and a *habilitation* research through a comparative study of the *Majjhimanikāya* in the light of its Chinese, Sanskrit, and Tibetan parallels at the University of Marburg in 2007. He is a professor at the Numata Center for Buddhist Studies of the University of Hamburg and researches at the Dharma Drum Buddhist College in Taiwan. His main research area is early Buddhism and in particular the topics of Chinese *āgamas*, meditation, and women in Buddhism.

Barrett, T.H. (Tim), is professor emeritus of East Asian history at the University of London, where he held a professorship from 1986 to 2013 at the School of Oriental and African Studies, University of London. His publications focus for the most part on the Tang dynasty, for example *Li Ao: Buddhist, Taoist, or Neo-Confucian?* (1992), *Taoism Under the T'ang* (1996), *The Woman Who Discovered Printing* (2008), and *From Religious Ideology to Political Expediency in Early Printing* (2013).

Bauer, Christian, is professor of Southeast Asian philology at Humboldt University, Berlin, Germany; prior to his appointment in 1993 he was a lecturer in Southeast Asian linguistics at Mahidol (1986-93) and Thammasat (1985-86) universities, Bangkok, Thailand. He holds a PhD in Mon-Khmer Studies from the School of Oriental and African Studies, University of London. He has conducted extensive field research in Thailand and Burma over the past three decades and has published in relevant research journals such as *Bulletin of the School of Oriental and African Studies*, *Journal of the Royal Asiatic Society*, *Journal of the Siam Society*, and *Mon-Khmer Studies* as well as in book collections. His main interest focuses on historical linguistics of Mon, Thai, and Khmer, epigraphy, and manuscript research. A grammar of Old and Middle Mon is forthcoming.

Baums, Stefan, is the lead researcher of the Buddhist Manuscripts from Gandhāra project at the Bavarian Academy of Sciences and Humanities and teaches at the Ludwig Maximilian University of Munich. He previously held research and teaching posts at the University of Copenhagen, the University of Washington, the University of California, Berkeley, and Leiden University. His interests include Buddhist philology and epigraphy, the development of Buddhist hermeneutics, and the description of Gandhari language and literature. His current work focuses on the decipherment and edition of Gandhari birch-bark manuscripts containing commentaries on early Buddhist verses and the *Saṃgītisūtra*, and on a new edition of the Buddhist inscriptions of Nagarjunakonda. He is the editor (with Andrew Glass) of the *Dictionary of Gāndhārī*.

Berezkin, Rostislav, obtained his PhD degree from the University of Pennsylvania, Philadelphia in 2010, and candidate of sciences degree (the Russian equivalent of a PhD) from the Saint Petersburg State University, Saint Petersburg, Russia, in 2009. He is an associate research fellow at the National Institute for Advanced Humanistic Studies, Fudan University, Shanghai. His main fields of research are religious storytelling and popular religion in late imperial China, and precious scrolls (*baojuan*) of the Ming and Qing dynasties in particular. His publications in Russian include a book on the function of precious scrolls in Chinese culture, with the *Baojuan about the Three Rebirths of Mulian* as an example (*Dragotsennye svitki v duhovnoi kul'ture Kitaia: na primere Baots'ziuan' o treh voploscheniiah Muliania*). His English articles have been published in *T'oung Pao*, *Late Imperial China*, *Asia Major*, *Monumenta Serica*, *Journal of Chinese Religions* and *Chinoperl: Journal of Chinese Oral and Performing Literature*.

Byrne, Christopher, is completing his PhD in the Department of East Asian Studies at McGill University, Montreal, where he has submitted a dissertation on Chan Buddhist poetry, entitled "Poetics of Silence: Hongzhi Zhengjue (1091-1157) and the Practice of Poetry in Song Dynasty Chan *Yulu*." His research addresses

both how Chan poetry expresses a paradoxical relationship between language and silence and how Buddhist monks adapted and transformed Chinese literary conventions in composing verses for the interests and needs of the monastery. He is currently a Bader Postdoctoral Fellow at the School of Religion at Queen's University, Ontario, where he is expanding his research on the cultural significance of poetry written by Chan Buddhist monks during the Song dynasty. His research interests also include the intersection of gender and religion in women's writings from late imperial China.

Clarke, Shayne, is an associate professor in the Department of Religious Studies at McMaster University, Ontario, Canada. Before completing his PhD at the University of California, Los Angeles, in 2006, he studied Asian languages, Buddhist studies, and religious studies in New Zealand and Japan. His primary area of research is Indian Buddhist monasticism, as viewed through the corpus of Indian Buddhist monastic law codes preserved in Sanskrit, Pali, Tibetan, and Chinese. He has published on topics such as clerical celibacy, the role of humor, and the problems surrounding the establishment of nuns' ordination lineages in Tibetan Buddhism. Recent publications include a study of the continued familial and marital relationships between ordained Buddhist monks and nuns and their families (*Family Matters in Indian Buddhist Monasticisms*, 2014), and a full-color, facsimile edition of the Vinaya manuscripts from Gilgit preserved in the National Archives of India (2014).

Dietz, Siglinde (retired), has been working on the *Sanskrit-Wörterbuch der buddhistischen Texte aus den Turfan-Funden/Sanskrit Dictionary of the Buddhist Texts from the Turfan Finds*, a project of the Academy of Sciences at Göttingen, for over two decades. Her main research interests focus on Indian Buddhist epistles in the Tibetan Tripiṭaka (PhD; publications 1984, 2008, 2012), the canonical Abhidharma works of the (Mūla) sarvāstivādins (*Fragmente des Dharmaskandha*, 1984), their Sanskrit fragments and their transmission in the Tibetan Tanjur (*Lokaprajñapti, Kāraṇaprajñapti* [1997], *Karmaprajñapti* [1997]), Buddhist cosmology, and Buddhism in Gandhara and on the Silk Road (publ. in *The Spread of Buddhism*, 2007).

Eltschinger, Vincent, received his PhD in Indology and Buddhist studies from the University of Lausanne. Since 2003, he has been a research fellow at the Institute for the Cultural and Intellectual History of Asia of the Austrian Academy of Sciences. His research work focuses on the religious background, the apologetic dimensions and the intellectual genealogy of late Indian Buddhist philosophy. His publications include several books and numerous articles dedicated to various aspects of the Indian Buddhists' critical interaction with orthodox Brahmanism from Aśvaghoṣa to late Indian Buddhist epistemology. Vincent Eltschinger has been teaching at various universities including Budapest, Lausanne, Leiden, Leipzig, Venice, Vienna, Zurich, and the École Pratique des Hautes Études (Paris), where he has just been appointed as a full professor of Buddhist studies.

Felbur, Rafal, is a PhD candidate at the Religious Studies Department of Stanford University. His research focuses on the early period of Chinese Buddhism, especially the 4th and 5th centuries, with occasional forays into the Late Imperial period. His broader interests include Buddhist modernism and theories of religion.

Foulk, T. Griffith, is the Riggs Professor of Religion at Sarah Lawrence College, and co-editor in chief of the Soto Zen Text Project, sponsored by the Administrative Headquarters of Soto Zen Buddhism in Tokyo. He has authored numerous monographs on textual, ritual, and institutional aspects of the history of Chinese and Japanese Zen Buddhism. A recent major publication is an annotated translation of *Standard Observances of the Soto Zen School*, vol. I: *Translation*, and vol. II: *Introduction, Glossaries, and Index*.

Funayama Toru is professor in the Institute for Research in Humanities, Kyoto University, Japan. He specializes in medieval Chinese Buddhism in the Six Dynasties period, as well as in the scholastic tradition of the Yogācāra school of Indian Buddhism during the 6th through the 10th centuries. His recent works include *Butten wa dou kan'yaku sareta no ka: Sūtora ga kyōten ni naru toki* (Making *Sūtra*s into "Classics" [*jingdian*]: How Buddhist Scriptures Were Translated into Chinese; 2013), *Kōsōden* (a four-volume Japanese translation of the *Biographies of Eminent Monks*, co-authored with Yoshikawa Tadao; 2009–2010), and *Shintai sanzō kenkyū ronshū* (Studies on the Works and Influence of Paramārtha; 2012).

Galambos, Imre, is lecturer in premodern China at the University of Cambridge, where he began teaching in 2012 after ten years of working for the International Dunhuang Project at the British Library. His primary areas of expertise are Chinese manuscripts, especially those from Dunhuang, and the history of the Chinese script. His two books on the subject are *Orthography of Early Chinese Writing* (2006) and *Manuscripts and Travellers* (2011, co-authored). His most recent publications focus on codicological aspects of the Dunhuang manuscripts, as well as Central Asian influences on medieval Chinese scribal culture. In addition, he has also worked on Chinese secular texts in Tangut translation among the manuscripts and imprints discovered at the ruins of the city of Khara-Khoto. Since 2013, he has been president of the European Association for the Study of Chinese Manuscripts.

Giebel, Rolf, is a free-lance translator and independent researcher. His primary area of research is esoteric/tantric Buddhism, and he has translated *The Vairocanābhisaṃbodhi Sutra* (2005) and *Two Esoteric Sutras* (2001) and co-translated *Shingon Texts* (2004) for the Bukkyo Dendo Kyokai English Tripiṭaka. He also has a particular interest in the reconstruction of Sanskrit as preserved in Chinese transliteration in the Chinese Buddhist canon and has published several studies on this subject.

Gray, David B., is an associate professor of religious studies at Santa Clara University, in Santa Clara, California, where he teaches a wide range of Asian religions courses. His research explores the development of tantric Buddhist traditions in South Asia, and their dissemination in Tibet and East Asia, with a focus on the *yoginītantras*, a genre of Buddhist tantric literature that focused on female deities and yogic practices involving the subtle body. His publications include numerous journal articles and book chapters, as well as *The Cakrasamvara Tantra: A Study and Annotated Translation* (2007), *The Cakrasamvara Tantra: Editions of the Sanskrit and Tibetan Texts Translation* (2012), and the forthcoming work *Tsong Khapa's Illumination of the Hidden Meaning: Maṇḍala, Mantra, and the Cult of the Yoginīs, An Annotated Translation of Chapters 1–24.*

Griffiths, Arlo, received his PhD in Sanskrit from Leiden University. After holding a position as lecturer in Indian religions at the University of Groningen, and holding the chair of Sanskrit at Leiden University, he joined the École française d'Extrême-Orient (French School of Asian Studies) in 2008 as professor of Southeast Asian history. His main fields of expertise are Hindu and Buddhist religious/ritual literature in Sanskrit, Old Javanese literature, and inscriptions of South and Southeast Asia in Sanskrit and vernacular languages. He was posted at the École française d'Extrême-Orient's Jakarta Center from 2009 through 2014, and now teaches in Paris and Lyon, respectively at the École Pratique des Hautes Études and at the Université de Lyon III – Jean Moulin. His various authored and coedited works include *The Atharvaveda and its Paippalādaśākhā* (2007), *The Paippalādasaṃhitā of the Atharvaveda, Kāṇḍas 6 and 7* (2009), *From Laṅka Eastwards: The Rāmāyaṇa in the Literature and Visual Arts of Indonesia* (2011) and *The Inscriptions of Campā at the Museum of Cham Sculpture in Đà Nẵng* (2012).

Gummer, Natalie, is a professor of religious studies at Beloit College in Beloit, Wisconsin, where she has taught since 2001. Her research examines the intersection of textual practices (especially ritual practices, oral performance, and translation) and ethics in premodern Mahāyāna Buddhist literary cultures, with a particular focus on South Asia. She is the author of several articles on Mahāyāna *sūtra*s, and coeditor (with Karen Derris) of *Defining Buddhism(s): A Reader*.

Gyatso, Janet, is a specialist in Buddhist studies with concentration on Tibetan and South Asian cultural and intellectual history. She is Hershey Professor of Buddhist Studies at Harvard University where she is a member of the Divinity School faculty and currently associate dean for faculty and academic affairs. Her books include *Apparitions of the Self: The Secret Autobiographies of a Tibetan Visionary* (1998); (editor) *In the Mirror of Memory: Reflections on Mindfulness and Remembrance in Indian and Tibetan Buddhism* (1992); and (co-editor) *Women of Tibet* (2005). She has recently completed a new monograph, *Being Human in a Buddhist World: An Intellectual History of Medicine in Early Modern Tibet* (2015), which focuses upon alternative early modernities and the conjunctions and disjunctures between religious and scientific epistemologies in Tibetan medicine in the 16th–18th centuries. Janet Gyatso was president of the International Association of Tibetan Studies from 2000 to 2006.

Hamar, Imre, is a professor of Chinese studies at Eötvös Loránd University, Budapest, and director of the Institute of East Asian Studies. His primary areas of expertise include Chinese philosophies and religions. He authored *A Religious Leader in the Tang: Chengguan's Biography* (2002), edited *Reflecting Mirrors: Perspectives on Huayan Buddhism* (2007) and coedited *Avataṃsaka Buddhism in East Asia: Origins and Adaptation of a Visual Culture* (2012). He has published several articles on various aspects of the Chinese exegetical tradition of the *Buddhāvataṃsakasūtra*, the Huayan school.

Hartmann, Jens-Uwe, is professor of Indology at the University of Munich. After studying in Munich (PhD in 1984) and Göttingen (*habilitation* in 1992), he held the post of professor of Tibetology at Humboldt University in Berlin before returning to Munich in 1999. He became a full member of the Bavarian Academy of Sciences in 2001, and a corresponding member of the Austrian Academy of Sciences in 2007. His research focuses on the recovery and reconstruction of Indian Buddhist literature on the basis of Indic manuscripts as well as Chinese and Tibetan translations. His various authored and coedited works include an edition of the *Varṇārhavarṇastotra* of Mātṛceṭa (1987), a study of the *Dīrghāgama* of the Sarvāstivādins (1992), the series *Buddhist Manuscripts* devoted to the publication of ancient Indic manuscripts from Afghanistan (2000, 2002, 2006), and *From Birch Bark to Digital Data: Recent Advances in Buddhist Manuscript Research* (2014). He is also interested in Indian Buddhist art, especially that of Gandhara, and in modern developments of Buddhism in Asia and in the West.

Heesook Nam is currently a director of the Research Division, National Museum of Korean Contemporary History. She received her doctoral degree from the Department of Korean History of Seoul National University with a dissertation entitled "A Study of the Publication of Buddhist Texts in the Late Chosŏn Dynasty" (2004). She specializes in the history of Chosŏn era Buddhism.

Hidas, Gergely, received a doctorate in Oriental Studies from Balliol College, University of Oxford. For more than five years he was affiliated with the Department of Indo-European Studies at Eötvös Loránd University, Budapest, where he taught various courses and pursued research. Thereafter he participated in research projects under the auspices of the University of Oxford, the Hungarian Academy of Sciences, the University of Cambridge, and the Austrian Science Fund, and was appointed as a Khyentse Fellow at the Center of Buddhist Studies, Eötvös Loránd University. He has recently joined the British Museum where he explores magical-ritualistic texts of Gupta era Buddhism.

Hill, Nathan W., is reader in Tibetan and historical linguistics at the School of Oriental and African Studies, University of London. He studied at Harvard University with Leonard van der Kuijp and Jay Jasanoff. His research focuses on Old Tibetan and Trans-Himalayan historical linguistics. His publications include *A Lexicon of Tibetan Verb Stems as Reported by the Grammatical Tradition* (2010) and *Old Tibetan Inscriptions* (2009), co-authored with Kazushi Iwao. His current projects include the creation of a Tibetan diachronic part-of-speech tagged corpus and the search for sound laws relating Tibetan, Burmese, and Chinese.

Hinüber, Oskar von, is professor emeritus at the Albert-Ludwigs University of Freiburg and ordinary member of the Akademie der Wissenschaften und der Literatur, Mainz, foreign ordinary member (Associé étranger) of the Académie des Inscriptions et Belles-Lettres, Paris, and corresponding member of the Österreichische Akademie der Wissenschaften, Vienna. He has mainly published in the fields of ancient Indian cultural history, historical grammar and literature of Middle Indo-Aryan languages, the Buddhist manuscript tradition, and epigraphy.

Honjo Yoshifumi, is a professor of Buddhism at Bukkyo University, Kyoto, where he has been teaching Indian and Pure Land Buddhism for the last several years. His primary areas of expertise include Sarvāstivāda Abhidharma and Japanese Pure Land Buddhism. He has translated into Japanese chapters 5, 7, and 8 of the *Abhidharmakośa* in collaboration with the late Hajime Sakurabe and Nobuchiyo Odani (2004-2007). He has published *A Table of* Āgama *Citations in the Abhidharmakośabhāṣya and the Abhidharmakoṣopāyikā* (1984) and *Kusharon chū upāikā no kenkyū* (2014), an annotated full Japanese translation of the

Isaacson, Harunaga, was born in Kuma, Japan, in 1965. Isaacson studied philosophy and Indology at the University of Groningen (MA 1990), and was awarded a PhD in Sanskrit by the University of Leiden (1995). After holding teaching positions at Hamburg University and the University of Pennsylvania, he was appointed professor of Classical Indology in the Department of Indian and Tibetan Studies at the Asien-Afrika-Institut, Hamburg University, in April 2006. His main research areas are: tantric traditions in pre-13th-century South Asia, especially Vajrayāna Buddhism; classical Sanskrit poetry; classical Indian philosophy; and puranic literature. His most recent publications include *The Sekanirdeśa of Maitreyanātha (Advayavajra) with the Sekanirdeśapañjikā of Rāmapāla: Critical Edition of the Sanskrit and Tibetan texts with English Translation and Reproductions of the MSS* (with Francesco Sferra) and *The Niśvāsatattvasaṃhitā: The Earliest Surviving* Śaiva *Tantra*, vol. I: *A Critical Edition & Annotated Translation of the Mūlasūtra, Uttarasūtra & Nayasūtra* (with Dominic Goodall and Alexis Sanderson).

Jansen, Berthe, currently holds a research fellowship at Heidelberg University and the Numata visiting professorship at Leiden University for the academic year 2015-2016. Her current research focuses on the organization of the premodern Tibetan Buddhist monastery and its position in society. The main sources she examines are Tibetan monastic guidelines (*bca' yig*), on which she has published various articles. In 2015, she obtained her PhD in Buddhist studies at Leiden University with a dissertation entitled "The Monastery Rules: Buddhist Monastic Organization in Pre-modern Tibet." Together with Jonathan Silk she is currently editing the proceedings of the conference "Buddhism and Social Justice" held in 2014. In addition to her academic research endeavors, she has been working as an interpreter and translator of (Buddhist) Tibetan since 2004.

Ji Yun received his PhD in Chinese literature from Fudan University in 2006, and is currently an assistant professor of the Buddhist College of Singapore. During the writing of his doctoral dissertation, his research encompassed the philological study of Buddhist scriptures, collection of biographical materials of early medieval Chinese monks, and anthropological studies of early Buddhism in China. Eventually, his dissertation "A Study on the *Biographies of Eminent Monks*" was published in early 2009. He is now engaged in teaching subjects such as Buddhist literature, and the institution of the Buddhist saṅgha. He also assists in overseeing the daily operation of the college's Academic Office and the College's library. His recent publications include *The Subtlety of Buddhavacana: The Development and Transmission of Buddhist Literature* (2011) and two translations (from English to Chinese): *Mahayana Buddhism: The Doctrinal Foundations*, by Paul Williams (2015), and *Selected papers of Jan Nattier* (2015).

Jia Shanshan, is a doctoral student of Indology at the University of Hamburg under supervision of Professor Harunaga Isaacson. She is at present working on her dissertation "A Critical Edition, Annotated Translation and Study of the Tenth chapter of the Laṅkāvatārasūtra." Her main research interests are *tathāgatagarbha* theory, early Yogācāra, Abhidharma, and tantric Buddhism. In addition, she studies Sanskrit manuscripts as an associated member of the Centre for the Study of Manuscript Cultures (SFB 950).

Jorgensen, John, is an adjunct associate professor at the College of Asia and the Pacific, The Australian National University. He teaches Japanese history and his chief research interests are East Asian Buddhism, especially Chan, and Korean new religious movements. His major publications include *Inventing Hui-neng, the Sixth Patriarch: Hagiography and Biography in Early Ch'an*, 2005, three volumes of translation in the *Collected Works of Korean Buddhism* (vol. III: *Hyujeong: Selected Works*; vol. VII/2: *Gongan Collections II*; and vol. VIII: *Seon Dialogues*, 2012), and a translation with Eun-su Cho, *The Essential Passages Directly Pointing at the Essence of the Mind: Reverend Baegun (1299–1375)*, 2005. He has recently worked on Chinese Yogācāra.

Kanno Hiroshi, is a professor of Buddhist studies at Soka University in Tokyo, Japan, where he has been teaching for 27 years. He specializes in Chinese Buddhism and has carried out extensive research on the commentarial literature associated with the *Lotus Sūtra*, the *Vimalakīrtisūtra*, and the *Nirvāṇasūtra*.

He has published annotated translations of the commentaries on the *Lotus Sūtra*, such as the *Fahua yiji* by Fayun, the *Fahua xuanyi* by Zhiyi, the *Fahua wenju* by Zhiyi, the *Fahua youyi* by Jizang, and the *Fahua tonlüe* by Jizang. Recent publications include *Reading the Fahua xuanyi: Introduction to the Tiantai Thought* (in Japanese, 2013) and *Study on Chinese Buddhist Thought of the North and South Dynasties and Sui Period* (in Japanese, 2012).

Kano Kazuo, is an associate professor at Koyasan University, Japan, where he has been teaching for five years. His primary areas of expertise are the cross religio-cultural exchanges between India and Tibet, including the history of doctrinal development of the Buddha-nature teaching in India and Tibet centered on the *Ratnagotravibhāga*, Sanskrit manuscripts transmitted in Tibet, and Tibetan monastic architecture and libraries influenced by Indian culture. His most recent publications include the Sanskrit edition of Abhayākaragupta's *Munimatālaṃkāra* in collaboration with Dr Li Xuezhu. He is the editor of the *Mikkyo bunka* (Journal of Esoteric Buddhist Culture).

Kieffer-Pülz, Petra, obtained her MA (1984) and PhD in Indology from the University of Göttingen (1989). She worked as a research assistant on the *Sanskrit-Wörterbuch der buddhistischen Texte aus den Turfan-Funden/Sanskrit Dictionary of the Buddhist Texts from the Turfan Finds*, Academy of Sciences, Göttingen, Germany (1985-1996), and as a research fellow at the Seminar for Indology, Martin-Luther-University Halle-Wittenberg (2001-2007) as well as at the Academy of Sciences and Literature in Mainz, Germany (since 2010). Her primary fields of interest include the cultural history and literature of the Buddhism of South and Southeast Asia with a special focus on Pali literature and Buddhist monastic traditions (Vinaya). Besides numerous articles and reviews her authored and coedited works include *Die Sīmā. Vorschriften zur Regelung der buddhistischen Gemeindegrenze in älteren buddhistischen Texten* (1992), *Bauddhavidyāsudhākara. Studies in Honour of Heinz Bechert* (1997) and *Verlorene Gaṇṭhipadas zum buddhistischen Ordensrecht. Untersuchungen zu den in der Vajirabuddhiṭīkā zitierten Kommentaren Dhammasiris und Vajirabuddhis* (2013). Her most recent publications focus on the reuse of text in Pali commentarial literature and on scholastic Pali.

Kirichenko, Alexey, is an assistant professor at the Institute of Asian and African Studies, Moscow State University, Russia. His primary areas of expertise are Burmese monastic Buddhism, Burmese manuscript culture (and transmission and circulation of Buddhist texts in particular), religious infrastructure and Buddhist mural sites, and royal and monastic historiography. For the last ten years he has been engaged in extensive field and archival work in Myanmar. His publications include approximately 30 chapters and titles in edited volumes and academic journals on Burmese and Southeast Asian history.

Kleine, Christoph, is professor of history of religions at Leipzig University, Germany, since 2008. Before that he held the position of professor of East Asian religions and philosophy at Munich University, Germany. His main areas of research are Buddhism in East Asia (especially Pure Land Buddhism in Japan), the history of Japanese religions (especially in the Kamakura period), hagiography, religious nonconformism, and concepts of secularity outside the "modern West." His various authored and coedited works include *Buddhismus. Handbuch und kritische Einführung* (2011, ^{2}2015; in collaboration with Oliver Freiberger), *Der Buddhismus in Japan. Geschichte, Lehre, Praxis* (2011), and *Hōnens Buddhismus des Reinen Landes. Reform, Reformation oder Häresie?* (1996).

Kværne, Per, is Professor Emeritus at the University of Oslo, Norway, where he had the Chair of History of Religions from 1975 to 2007. His research interests have covered Tibetan mythology, ritual, and religious history, with a particular focus on the Tibetan Bön religion and its relationship to Buddhism. Among his works are *Tibet Bon Religion: A Death Ritual of the Tibetan Bonpos* (1985) and *The Bon Religion of Tibet: The Iconography of a Living Tradition* (1995), besides numerous articles. He has also contributed to the study of late Indian Buddhist tantric texts: *An Anthology of Buddhist Tantric Songs: A Study of the Caryāgīti* (1977; ^{2}1986, ^{3}2010). He has published a major monograph on the Scottish artist William McTaggart: *William McTaggart 1835-1910: Singing Songs of the Scottish Heart* (2007). He is a member of the Norwegian Academy of Science and Letters in Oslo and the Accademia Ambrosiana in Milan.

Lagirarde, François, is an associate professor at the École française d'Extrême-Orient where he has been working for more than 20 years; he has been posted in the École française d'Extrême-Orient Centers of Vientiane and Bangkok and is presently the director of the Chiang Mai Center. He holds a doctorate in religious studies from the École Pratique des Hautes Études (Paris) where he has been teaching from 2011 to 2014. His area of interest covers literary, anthropological, and intellectual histories of Buddhism in Southeast Asia, vernacular Buddhist literature in Thailand, manuscript studies in northern Thai and Lao language, and Buddhist philology and historiography. François Lagirarde has published extensively at the École française d'Extrême-Orient press and in many academics journals. His latest work is a database devoted to the traditional Thai historiography transmitted by the Lanna manuscripts (http://www.efeo.fr/lanna_manuscripts/).

Lammerts, D. Christian, is assistant professor of religion at Rutgers University. His research focuses primarily on Southeast Asian Buddhism, Buddhist literature, legal history, and manuscript and epigraphic studies. His recent publications include *Buddhist Dynamics in Premodern and Early Modern Southeast Asia* (2015), "Genres and Jurisdictions: Laws Governing Monastic Inheritance in Seventeenth-Century Burma" in *Buddhism and Law: An Introduction* (2014), and "The Murray Manuscripts and Buddhist Dhammasattha Literature Transmitted in Chittagong and Arakan" in the *Journal of Burma Studies* (2015).

Lee, Younghee, earned her PhD from the University of Hawai'i at Manoa and has taught at Smith College and the University of Auckland, where she concurrently served as director of the Korean Studies Centre of the New Zealand Asia Institute. Presently she is an Honorary Research Fellow of the University of Auckland. Amongst her publications are *Ideology, Culture and* Han: *Traditional and Early Modern Korean Women's Literature* (2002), several articles on Buddhist vernacular poetry of the late Chosŏn period, including "Gender Specificity in Late-Chosŏn Buddhist Kasa," and a chapter entitled *Hell and Other Karmic Consequences: A Buddhist Vernacular Song*, in: R.E. Buswell, ed., *Religions of Korea in Practice* (2007). With Boudewijn Walraven she is working on a study of Buddhist practice focused on didactic Buddhist poetry and paintings in late Chosŏn.

Maggi, Mauro, studied in Milan, Naples, and Hamburg. He was a librarian at the Istituto Italiano per l'Africa e l'Oriente in Rome and an associate professor of Indo-Iranian comparative philology at L'Orientale University, Naples. He is now an associate professor of Iranian philology, religions, and history at La Sapienza University, Rome, where he has been teaching since 2008. His primary areas of expertise are Buddhism among Iranian peoples, Indo-Iranian philology with a focus on Khotanese language and literature, and early and substandard New Persian. His various authored and coedited books include *The Khotanese Karmavibhaṅga* (1995), *Pelliot Chinois 2928* (1997), *Religious Themes and Texts of Pre-Islamic Iran and Central Asia* (2003, with C.G. Cereti and E. Provasi), *Middle Iranian Lexicography* (2005, with C.G. Cereti), *Iranian Languages and Texts from Iran and Turan* (2007, with M. Macuch & W. Sundermann), *The Persian Language in History* (2011, with P. Orsatti), *Buddhism among the Iranian Peoples of Central Asia* (2013, with M. De Chiara & G. Martini). Most of his publications focus on the edition and interpretation of Khotanese Buddhist texts and pay special attention to the (re)interpretation of problematic passages in the light of parallel and similar texts in Buddhist and other Indian traditions.

Mair, Victor H., received his PhD from Harvard University in 1976. He is professor of Chinese language and literature at the University of Pennsylvania, Philadelphia. He specializes in Buddhist popular literature as well as the vernacular tradition of Chinese fiction and the performing arts. His publications include *Tun-Huang Popular Narratives* (1983), *T'ang Transformation Texts: A Study of the Buddhist Contribution to the Rise of Vernacular Fiction and Drama in China* (1989), *Painting and Performance: Chinese Picture Recitation and Its Indian Genesis* (1988), the *Columbia History of Chinese Literature* (2001), the *Columbia Anthology of Chinese Folk and Popular Literature* (2011), and numerous articles in major academic journals.

Mano Shinya, is a research associate at the School of Oriental and African Studies, University of London, and a part-time lecturer at Waseda University, Tokyo. He specializes in Sino-Japanese Tantric Buddhism, and he is currently working on the myth-ritual relationship ciphered in Yixing's commentary on the *Mahāvairocanasūtra*.

Masahiro Shimoda, is professor at University of Tokyo, in the Department of Indian Philosophy and Buddhist Studies, head of the Center for Evolving Humanities, Graduate School of Humanities and Sociology, University of Tokyo, and president of Japanese Association for Digital Humanities. He has been visiting professor at the School of Oriental and African Studies, University College London (2006), visiting professor at Stanford University (2010), and is visiting research fellow at University of Virginia (2012).

Mayer, Robert, is university research lecturer in Tibetan and Himalayan studies at the University of Oxford, where he has held a post since 2002. His primary areas of expertise are the Rnying ma tradition of Tibetan Buddhism, the tantric manuscripts from Dunhuang, and the Bön tradition. He and his wife Dr Cathy Cantwell have directed several research projects at Oxford, and have co-authored several books and many articles. His most recent monographs co-authored with Cathy Cantwell include *A Noble Noose of Methods, the Lotus Garland Synopsis: A Mahāyoga Tantra and its Commentary* (2012) and *Early Tibetan Documents on Phur pa from Dunhuang* (2008).

Mochizuki Kaie, is a professor of Buddhism at Minobusan University, Yamanashi, Japan, where he is also director of the Research Institute of Eastern Culture. His primary areas of expertise include late Indian and Tibetan Madhyamaka and the Jo nang pa in Tibet. His various authored works include *A Study of the Mahāsūtrasamuccaya of Dīpaṃkaraśrījñāna* (2 vols.; 2001-2004), *Tāranātha no dBu ma theg mchog kenkyu* (Tāranāthaの*dBu ma theg mchog* 研究: A Study on the dBu ma theg mchog of Tāranātha; 2011) and *Zenyaku Atiśa Bodai dō tō ron* (全訳 アティシャ 菩提道灯論: A Japanese Translation of the *Bodhipathapradīpa*; 2015). His most recent publications focus on the commentary on the *Lotus Sūtra* that was translated from Chinese into Tibetan. In addition to his academic research endeavors, he is also editor of *Acta Tibetica et Buddhica*.

Monius, Anne E., is professor of South Asian religions at Harvard Divinity School, where she has taught since 2002. A historian of religion specializing in the religious traditions of India, her primary research interests lie in examining the practices and products of literary culture to reconstruct the history of religions in South Asia. Her first book, *Imagining a Place for Buddhism: Literary Culture and Religious Community in Tamil-Speaking South India* (2002), examines the two extant Buddhist texts composed in Tamil; her forthcoming project, *Singing the Lives of Śiva's Saints: History, Aesthetics, and Religious Identity in Tamil-Speaking South India*, considers the role of aesthetics and moral vision in the articulation of a distinctly Hindu religious identity in 12th-century South India.

Pinault, Georges-Jean, is director of studies at the École Pratique des Hautes Études (Paris) and professor of the philology of Buddhist texts of Central Asia since 1999. His area of expertise covers the historical and comparative linguistics, especially of Indo-European languages and of languages of Central Asia. His fields of investigation include Sanskrit texts, from Vedic onwards, as well as Tocharian and Old Turkic texts. He has published extensively on Tocharian manuscripts and Buddhist texts written in the two Tocharian languages, and he is currently editing the manuscripts of the Pelliot collection. He is much involved in the analysis of parallel texts in various Central Asian languages, especially with respect to stylistics, vocabulary, and translation techniques. His major recent publication is a textbook and grammar of Tocharian (*Chrestomathie tokharienne*, 2008). His output concerns mostly issues of Tocharian literature, Indo-European etymology, morphology, and syntax.

Protass, Jason, is a PhD candidate in the Department of Religious Studies at Stanford University. His areas of research include Buddhism of the Song dynasty and their histories and literary arts. He has recently worked under the auspices of a Bukkyo Dendo Kyokai Fellowship as a visiting researcher at Ryukoku University in Kyoto, and later as a Fulbright Fellow at Academia Sinica in Taiwan. In addition to monks' poetry and the Song dynasty, he also has an abiding interest in Gozan culture of Japan, and the development of Geographic Information System guided research of Buddhist history.

Powers, John, is professor of Asian Studies in the College of Asia and the Pacific at the Australian National University, Canberra, and a Fellow of the Australian Academy of the Humanities. He specializes in Indian and Tibetan Buddhist philosophy and is the author of 14 books and more than 60 articles, including *A Bull of a Man: Images of Masculinity, Sex, and the Body in Indian Buddhism* (2007).

Radich, Michael, is senior lecturer in religious studies at Victoria University of Wellington, New Zealand. He received his PhD in 2007 from Harvard University for a dissertation entitled "The Somatics of Liberation: Ideas about Embodiment in Buddhism from Its Origins to the Fifth Century C.E." He is also the author of *How Ajātaśatru was Reformed: The Domestication of "Ajase" and Stories in Chinese Buddhism* (2011), and *The* Mahāparinirvāṇa-mahāsūtra *and the Emergence of* Tathāgatagarbha/*Buddha-nature Doctrine* (forthcoming); and he has published major articles in the *Journal of the International Association of Buddhist Studies*, the *Annual Report of the International Research Institute for Advanced Buddhology at Soka University*, and *Zinbun*.

Roesler, Ulrike, is associate professor in Tibetan and Himalayan studies at the University of Oxford. With a background in Indian and Tibetan Studies, her research focuses on the Indo-Tibetan interface, the assimilation and appropriation of Buddhism in Tibet, narrative traditions of India and Tibet, early Tibetan biographies, and the Kadampa tradition of Tibetan Buddhism. Her more recent book publications include *Tibetan & Himalayan Healing* (2015, coedited with C. Ramble), *Lives Lived, Lives Imagined: Biographies in the Buddhist Traditions* (2010, coedited with L. Covill & S. Shaw), and a monograph on the Kadampa master Potowa entitled *Frühe Quellen zum buddhistischen Stufenweg in Tibet* (2011). She has also founded the Tibetan and Himalayan Studies Centre at Wolfson College, Oxford and is currently coeditor of the *Journal of the International Association of Buddhist Studies*.

Rospatt, Alexander von, is professor of Buddhist and South Asian studies at the University of California, Berkeley. He specializes in the indigenous Buddhist tradition of the Kathmandu Valley, and in the doctrinal history of Indian Buddhism. He was trained at School of Oriental and African Studies, University of London, and at Hamburg University, where he earned his PhD (1993) and submitted his habilitation thesis (2001). Before joining University of California, Berkeley in 2004, he was assistant professor at the University of Leipzig. He also taught on visiting appointments at the universities of Oxford, Vienna, Munich, and at the Institute for Postgraduate Buddhist Studies at Tokyo.

Salomon, Richard, (PhD, University of Pennsylvania, 1975) is professor of Asian languages and literature (Sanskrit) at the University of Washington, Seattle, and director of the University of Washington's Early Buddhist Manuscripts Project. His specialties are Sanskrit language and literature, Indian Buddhist textual studies, Indian epigraphy and paleography, early Indian history, Gandhari language and Gandharan studies, and the world history of writing. He has published five books and many articles in these fields, including *Indian Epigraphy: A Guide to the Study of Inscriptions in Sanskrit, Prakrit, and the Other Indo-Aryan Languages* (1998), *Ancient Buddhist Scrolls from Gandhāra: The British Library Kharoṣṭhī Fragments* (1999), and *Two Gāndhārī Manuscripts of the "Songs of Lake Anavatapta"* (*Anavatapta-gāthā*) (2008).

Samuels, Jonathan, is a research fellow at the Heidelberg Centre for Transcultural Studies (Heidelberg University). He holds the title of *geshe*, having completed the traditional scholastic training of a monk in the Geluk school of Tibetan Buddhism, during two decades of residence in Tibetan communities in India and Nepal. He teaches Tibetan, and has recently published *Colloquial Tibetan: The Complete Course for Beginners* (2014). One of his areas of expertise is the Tibetan Buddhist intellectual heritage, and his forthcoming publications include *Tibetan Buddhist Epistemology II: The Geluk School* (2016), his translation of several key works by major authors belonging to the Tibetan monastic tradition. His 2014 doctoral thesis (Oxford University) is entitled "Tamang Clan Culture and its Relevance to the Archaic Culture of Tibet." He currently researches aspects of clan- and kinship-based social organization and practice, pertaining both to the contemporary setting of ethnic groups in the Tibetan borderlands and the unreported history of Tibet.

Schaik, Sam van, is based at the British Library, and is currently a principal investigator in the project Beyond Boundaries: Religion, Region, Language and the State (funded by the European Research Commission). His previous research projects include Tibetan Zen, Tibetan and Chinese paleography, and the Tibetan tantric manuscripts from Dunhuang. He also occasionally lectures at the School of Oriental and African Studies, University of London. Recent publications include *Tibetan Zen* (2015), *Manuscripts and Travellers: The Sino-Tibetan Documents of a Tenth-century Buddhist Pilgrim* (2012) and *Tibet: A History* (2011).

Sernesi, Marta, is researcher and lecturer at the Ludwig-Maximilians University of Munich. Her main area of expertise is Tibetan history, religion, and literature. She works primarily on premodern historical, biographical, instructional, and poetical sources, with a focus on the issue of the formation, transmission, and representation of Buddhist traditions and lineages. Her recent publications are devoted to Tibetan book culture, investigating modes of textual production, the circulation of manuscripts and printed books, and early xylographic bookprinting in Tibet.

Sferra, Francesco, is associate professor of Sanskrit language and literature at the L'Orientale University, Naples, where he has been teaching for the last 15 years. His primary areas of expertise include history of religion, tantric studies, and Indian philosophy of language. His works include the critical edition and translation of the longer *Ṣaḍaṅgayoga* by Anupamarakṣita with its commentary by Raviśrījñāna (2000) and the *Sekoddeśaṭīkā* by Nāropā (2006). He is founder and coeditor of the series Manuscripta Buddhica (vol. I, 2008).

Silk, Jonathan A., is professor in the study of Buddhism at Leiden University, The Netherlands. Before coming to Leiden, he taught for many years in the United States at universities including Yale and University of California, Los Angeles. His research focuses on Buddhist scriptures, particularly Mahāyāna *sūtras*, with special attention on their manner of transmission from Indic sources through Chinese and Tibetan translations. His recent monographic publications include *Buddhist Cosmic Unity* (2015) and the collected papers of Erik Zürcher, *Buddhism in China* (2013). In addition to other roles, he is co-editor in chief of the *Indo-Iranian Journal*.

Skilton, Andrew, is a senior research fellow in Buddhist studies at King's College London, where he is a member of the Department of Theology and Religious Studies. His areas of expertise include Buddhist Sanskrit and Pali languages and the editing and study of texts in these languages. His publications include translations, such as the *Bodhicaryāvatāra* (1995) and the *Nāgānanda* (*How the Nāgas are Pleased*, 2009), edited volumes (*Śūraṃgamasamadhisūtra* and *The Buddhist Schools of the Small Vehicle*, 2013), history and textual studies. His areas of research interest currently involve the *Samādhirājasūtra*, meditation in various contexts, including early Mahāyāna, pre-reform Theravāda, and the early decades of Buddhism in the United Kingdom. He is coeditor of the journal *Contemporary Buddhism*.

Solonin, Kirill, is a professor at the Institute of Chinese Classics, Renmin University of China, Beijing, where he has been teaching for the last three years. His previous affiliations include Foguang University in Taiwan and the Institute of Oriental Manuscript Research, Russian Academy of Sciences. His primary areas of research are the history and transformations of Sinitic Buddhism, Buddhism in the Liao and Xixia, as well as Tangutology in general. His publications include *Appropriation of the Dharma* (2007; in Russian), *The Twelve Kingdoms* (1995; Chinese translation 2011) as well as numerous articles on various aspects of Tangut and Kitan Buddhism and publications of the Tangut Buddhist texts.

Steiner, Roland, held positions as academic assistant and post-doctoral research fellow at the Department of Indology and Tibetology of the University of Marburg. Since 2008, he is a member of the Mokṣopāya Research Group of the Indological Institute, University of Halle-Wittenberg, Germany. His main research areas are classical Sanskrit and Prakrit literature and Tibetan translations of Indian texts. His publications include philological studies on Indian drama, Indian Buddhist literature, and Sanskrit metrics. Most recently, he released translations of several books of the *Mokṣopāya*, the Kashmirian version of the so-called *Yogavāsiṣṭha*.

Straube, Martin, is a researcher at the Akademie der Wissenschaften zu Göttingen (Academy of Science, Göttingen) contributing to the *Sanskrit-Wörterbuch der buddhistischen Texte aus den Turfan-Funden und der kanonischen Literatur der Sarvāstivāda-Schule/Sanskrit Dictionary of the Buddhist Texts from the Turfan*

Finds and of the Canonical Literature of the Sarvāstivāda School. Besides his occupation with lexicography his primary areas of interest include Buddhist narrative literature, and Indian classical poetry in Sanskrit and Middle Indo-Aryan dialects.

Sueki Fumihiko, is professor emeritus at the University of Tokyo and International Research Center for Japanese Studies (Nichibunken). He taught Japanese Buddhism at the University of Tokyo for 22 years and, thereafter, directed research on Japanese religion at Nichibunken for 6 years. His primary research field is Japanese Buddhism from the 9th to 13th centuries, but he also researches modern Buddhism in Japan. He has been interested in the relation between Buddhism and Japanese indigenous ideas, and the Japanization of Buddhism of this interrelation. Recently he also began to construct a new philosophical and ethical system on the basis of Japanese classical Buddhist ideas. He published *Heian Shoki Bukkyō Shisō no Kenkyū* (1995), *Kamakura Bukkyō Keisei ron* (1998), *Meiji Shisōka ron* (2004) and other books in Japanese. The English version of his book *Buddhism vs. Ethics* was published in 2015 and *Philosophizing in Japan* is also in print.

Sugiki Tsunehiko, is a professor of the Department of Global and Regional Cultures at Nihonbashi Gakkan University, where he teaches Buddhist studies and religious studies. He holds a PhD in religious studies from the University of Tokyo (2000). He has published, as articles, critical editions of some Sanskrit works belonging to the Buddhist *yoginītantra* literature, accompanied by studies in the hagiography, sacred geography, yogas and rituals, calendars and astrologies, theories of the body, and theories of life and death in esoteric Buddhism in early medieval South Asia. One of his most recent publications is: "The Consumption of Food as a Practice of Fire-oblation in Esoteric Buddhism in Medieval South Asia," in the *International Journal of South Asian Studies* 3 (2010).

Szántó, Péter-Dániel, is a post-doctoral research fellow of All Souls College, Oxford. His first degrees are from the Eötvös Loránd University, Budapest; he wrote and defended his dissertation on the *Catuṣpīṭhatantra* at the University of Oxford (2012). His primary area of expertise is the Indic literature of mature esoteric Buddhism, but he is also interested in mediaeval Indian epigraphy, codicology, Sanskrit poetry and poetics, Old Tibetan literature, and the literature of Śaivism.

Tanemura Ryugen, is an associate professor of Buddhist studies at Taisho University, Tokyo. After having been educated at the University of Tokyo, he studied at the University of Oxford, where he took his PhD in classical Indology (2003). His main research field is Indian tantric Buddhism and he has authored many works in this area, including *Kuladatta's Kriyāsaṃgrahapañjikā* (2004) and *Kriyāsaṃgraha of Kuladatta, Chapter 7* (1997). His recent publications include critical editions of Śūnyasamādhivajra's *Mṛtasugatiniyojana*, a manual of the Indian Buddhist tantric funeral, and chapters 19 and 22 (*pratiṣṭhā* section) of the *Padminī*, a commentary on the *Saṃvarodayatantra* by Ratnarakṣita.

Tauscher, Helmut, is a (retired) associate professor of Tibetan and Buddhist studies at the University of Vienna, Austria, where he has been teaching since 1981. His main fields of research include Tibetan developments in Madhyamaka philosophy, and the genesis and development of the Tibetan Buddhist canon. For more than two decades he has regularly been conducting field research in the western Himalaya within a series of Tibetan Manuscript projects. His various authored works include *Die Lehre von den zwei Wirklichkeiten in Tsoṅ kha pas Madhyamaka Werken* (1995) and *Catalogue of the Gondhla Proto-Kanjur* (2008). His most recent publications focus on Ladakhi manuscript Kanjurs and their position within Tibetan Buddhist literature.

Tribe, Anthony, is an independent scholar working in the field of South Asian Buddhism with a specialization in the history and development of tantric Buddhism. He received his doctorate in Indian Buddhism from the University of Oxford and formerly taught in the Asian Studies Program at the University of Montana, USA. His publications include articles on Mañjuśrī and a chapter on tantric Buddhism in *Buddhist Thought: A Complete Introduction to the Indian Tradition* (^{2}2012). At present he is preparing for publication an annotated translation and critical edition of chapters 1–5 of Vilāsavajra's 8th-century Sanskrit commentary on the *(Mañjuśrī)nāmasaṃgīti*. He is a fellow of the Royal Asiatic Society.

Tropper, Kurt, is research fellow at the Austrian Academy of Sciences' Institute for the Cultural and Intellectual History of Asia, Vienna. Since the 1990s, he has done extensive field work and research on inscriptions in Central and Western Tibet (Tibet Autonomous Region, PR China) as well as in the Indian and Nepalese Himalayas. He has authored and edited several monographs and articles in the field of Tibetan epigraphy.

Veidlinger, Daniel, a professor of comparative religion at California State University, Chico, with a focus on Southeast Asian religion and media studies. He is the author of *Spreading the Dhamma: Writing, Orality and Textual Transmission in Buddhist Northern Thailand* (2006) and has recently coedited the volume *Buddhism, the Internet and Digital Media: The Pixel in the Lotus* (2015). He is currently on the editorial board of the *Oxford Bibliographies: Buddhism* online resource and is working on a book that compares the role of communications technology in the spread of Buddhism in the premodern and modern worlds.

Wallace, Vesna A., is a professor of religious studies in the Department of Religious Studies at the University of California in Santa Barbara. Her two areas of specialization are Indian Buddhism, particularly Mahāyāna and Vajrayāna traditions, and Mongolian Buddhism. She has authored and translated four books related to Indian Buddhism, three of which pertain to the Kālacakra tantric tradition in India, and published numerous articles on Indian and Mongolian Buddhism. She has also brought to press an edited volume on Mongolian Buddhism, titled *Buddhism in Mongolian Culture, History, and Society* and is currently conducting research on the interplay between texts, images, and rituals in Mongolian Buddhism. She is a recipient of many grants and awards, including the Silver Medal bestowed by the President of Mongolia, Mr. Elbegdorj.

Walraven, Boudewijn, is professor emeritus of Korean studies of Leiden University in the The Netherlands and currently visiting professor at the Academy of East Asian Studies of Sungkyunkwan University. He studied at Leiden University, where he earned his PhD, and Seoul National University. From his first publication (a study of the social implications of sorcery accusations in the Chosŏn period) onward he has been interested in the use of anthropological approaches to Korean culture and history. Recently he focuses on two projects, one (in cooperation with Younghee Lee) a study of Buddhism in the late Chosŏn period seen through the focus of vernacular songs and paintings, the other the anthropology of history, an inquiry into the social conditions and social functions of both the production and consumption of history in the sense of representations of the past. He is a founding member of the Association for Korean Studies in Europe, which he has served as president for two four-year terms. Presently he is the editor of the *Sungkyun Journal of East Asian Studies* and the online journal *Korean Histories* (www.koreanhistories.org). In 2003 he was awarded the Order of Cultural Merit by the government of the Republic of Korea.

Werner, Eric, works as assistant for the Khyentse Center for Tibetan Buddhist Textual Scholarship at the Department of Indian and Tibetan Studies, Asia-Africa Institute, University of Hamburg. Being generally interested in the various strands of the Tibetan reception of Indian Buddhism, his current research focus lies in the scholastic literature from the 12th to 14th century with a special emphasis on depictions of Mahāyāna philosophy within Bka' gdams pa writings in general and the writings of Phywa pa Chos kyi seng ge (1109–1169) and his successors in particular, as well as on the Tibetan doxographical (*grub mtha'*) tradition of the same period.

Yoshida Yutaka, is a professor of linguistics at the Graduate School of Letters, Kyoto University, Japan, where he has been teaching for the last ten years. His primary areas of interest include Middle Iranian studies, in particular Sogdian philology, and the history of the Silk Roads before the Islamization. His various authored and coedited works include *Studies of the Chinese Manichaean Paintings of South Chinese Origin* (2013), *Notes on the Khotanese documents of the 8th–9th centuries unearthed from Khotan* (2006), and *Iranian Fragments from the Otani Collection* (1997). He was elected as a corresponding fellow of the British Academy in July 2014.

Zacchetti, Stefano, is Yehan Numata Professor of Buddhist Studies at the University of Oxford (since 2012). Previous to this appointment he worked at the International Research Institute for Advanced Buddhology (Soka University, Tokyo) from 2001 to 2005, and at the Ca' Foscari University of Venice from 2005 to 2012. His main research areas are early Chinese Buddhism (especially translations and commentaries), Prajñāpāramitā literature, and the history of the Chinese Buddhist canon. His publications include the monographs *Storie delle sei perfezioni: Racconti scelti dal Liu du ji jing* (Venice, 2013), *In Praise of the Light* (Tokyo, 2005), *Fazang – Il Trattato del leone d'oro, Esedra Editrice* (Padova, 2000), and numerous articles.

Zieme, Peter, is professor emeritus of the Free University of Berlin, Germany, temporarily living in Tokyo. He worked for many decades for the Turfan studies project of the Berlin-Brandenburg Academy of Sciences and Humanities. In his publications he edited several Old Uigur Buddhist scriptures selected from collections of Turfan materials such as *Vimalakīrtinirdeśasūtra* (2000) or *Magische Texte des uigurischen Buddhismus* (2005) in the series Berliner Turfantexte.

Introduction

Works sometimes considered to be "Buddhist Encyclopedias" have existed at least since the 7th century in China, compilations such as those of Daoshi (道世; 591?–683 CE), the *Fayuan zhulin* (法苑珠林; The Pearl Forest in the Dharma Park; T. 2122) and the *Zhujing yaoji* (諸經要集; Collection of Key Passages from Scripture; T. 2123; for both see Teiser, 1985). But the categorization of such texts as "encyclopedia" indicates something rather different than what we generally intend by the term in modern usage. In traditional China, as earlier in the West, encyclopedias were anthologies of excerpts of previous works, rather than collections of contributions composed as independent productions. (On the Chinese genres of *leishu* [類書] and *congshu* [叢書], see Wilkinson, 2012, 955–964; on encyclopedias broadly, see Collison & Preece, 2015.) In contrast, Encyclopedias of Buddhism are much newer. The distinction between "Buddhist Encyclopedias" and "Encyclopedias of Buddhism" is important, not only with respect to the mode of collection of their contents: Buddhist Encyclopedias are emic works, produced within the tradition, while Encyclopedias of Buddhism are scholarly enterprises, accountings of what is known about Buddhism and Buddhist traditions, presented (ideally) in a non-apologetic, nonsectarian, impartial, and disinterested manner. However, the scope and volume of a reference work does not necessarily correspond in any clear way to its title. There exist, for instance, a number of works titled in English "Encyclopedia of Buddhism," ranging from the *Encyclopaedia of Buddhism* edited by an international team led by G.P. Malalasekera (1899–1973) in 8 large volumes (of about 800 pages each), published in Colombo between 1961 and 2009, to the 192 pages of the *The Illustrated Encyclopedia of Buddhist Wisdom: A Complete Introduction to the Principles and Practices of Buddhism* (2000), authored by G. Farrer-Halls, "a trained aromatherapist." *The Princeton Dictionary of Buddhism* (2013), published under the general editorship of R.E. Buswell, Jr. and D.S. Lopez, Jr., calls itself a dictionary, but at 1,304 closely packed pages is more encyclopedic than many works which bear that word in their title. Since its entries, however, restrict themselves to terms and names, without explicitly engaging concepts or themes, it may be understood more appropriately as a dictionary than as an encyclopedia. One of the two editors, Buswell, already produced a work of the latter variety in his two volume *Encyclopedia of Buddhism* (2004; just shy of 1,000 pages), whose "target audience is the nonspecialist reader." For such readers this is indeed a fine work which, within its scope, provides up-to-date and reliable coverage of a broad spectrum of Buddhist doctrinal, historical, biographical, and other kinds of information. Moreover, a number of single-volume works have also appeared in English in recent years, such as J. Powers, *A Concise Encyclopedia of Buddhism* (2000; in 277 pages), whose audience is students, and D. Keown and C.S. Prebish, *Encyclopedia of Buddhism* (2004; in 952 pages), who reach further, expressing their "hope [that] it will become an indispensable tool for students, teachers, and researchers from a wide range of disciplinary backgrounds, as well as to [*sic*] the general reader" (Keown & Prebish, 2004, ix)

While Western language scholarship, then, primarily in English (but at least also in French and German), has certainly contributed a number of reference works on Buddhism, only a few of which have been noted here, if only in terms of sheer bulk the majority of scholarship, including reference works, has no doubt been published in Asian languages, most particularly in Japanese. In this language the gold standard of scholarly encyclopedic works is without question the monumental production overseen by Mochizuki Shinkō (望月信亨; 1869–1948), the *Bukkyō Daijiten* (佛教大辭典) published between 1932–1936 (Tokyo) in seven volumes, later expanded to ten (1954–1963). There is, however, virtually no domain in the study of Buddhism in which the advances made since the 1930s would allow the state of the field embodied in Mochizuki's great work to stand. Even when the facts recorded there have stood the test of time, they do not now stand in the same context as they did when they were first presented 80 years ago. Mochizuki's work is a landmark and its influence profound, reaching far beyond Japan. This is illustrated by a careful comparison of the primary sources prolifically cited by the great Étienne Lamotte in the justly legendary apparatus to his many works with the corresponding entries in the *Bukkyō Daijiten* – although Lamotte's failure to cite Mochizuki consistently obscures this debt. In addition to being inevitably dated, Mochizuki's work is also limited in its scope,

being primarily an encyclopedia of East Asian Buddhism, and secondarily Indian Buddhism as filtered in East Asia. What is more, it is written in what is now even for Japanese scholars somewhat difficult language. In some respects, and mutatis mutandis, one might even say of it what has been said of one of the greatest Western works of a similar genre, the *Encyclopaedia of Islam*, namely: "Although the topical coverage of the *Encyclopaedia of Islam* is remarkably broad and the scholarship it contains is of very high quality, the project is not without its flaws. One general criticism that has been directed at it is that it is very difficult for ordinary readers to use and can be confusing even for professional Islamicists. A typical difficulty is that the articles, which are long on facts and short on explanation, can become opaque and bogged down by inordinate attention to complex and trivial details of little more than antiquarian interest" (Daniel, 1982). The value of Mochizuki's work is not reduced by appreciating its limitations: it is a great work, but it is not a work for our time, neither in its overall conception nor in its reflection of the state of Buddhist scholarship.

In Japanese there is also a plethora of sectarian reference works, which we might best think of as "Buddhist Encyclopedias," works such as the *Mikkyō Daijiten* (密教大辭典) on esoteric Buddhism, published originally in three volumes between 1931–1933 (Kyoto, later expanded to 6 vols., 1968–1970), Pure Land works in the lineage of the *Bukkyō Daijii* (佛教大辭彙), published in three volumes (Tokyo, 1914–1922; later in 6 vols., 1935–1936), such as the *Shinshū Daijiten* (真宗大辭典; 3 vols., Kainan city, 1935–1937,) and *Jōdoshū Daijiten* (浄土宗大辞典; 4 vols., Tokyo, 1974–1982), or the *Bukkyō Tetsugaku Daijiten* (仏教哲学大辞典), the title of which translates as Encyclopedia of Buddhist Philosophy but which is more correctly a six-volume work on Sōka Gakkai doctrine (Tokyo, 1963–1970). This is not the place to survey the wealth of Japanese scholarship presented in reference works (for a slightly outdated overview, see http://alc.ucla.edu/refguide/refguide.htm), or to offer an appraisal of Buddhist reference works in general, but a few words are necessary to explain the need for, and the timeliness of, the present project.

Malalasekera's *Encyclopaedia of Buddhism* no doubt set out to present a comprehensive survey of the entirety of Buddhism, but the project was troubled from the outset, provincial and out of step with scholarly progress (de Jong, 1962). While even now there is information of value to be found within its pages, especially in the earlier volumes, it is often hard for the nonspecialist to discern what is reliable and what not, the problem made all the more severe by the age of the work and the tremendous progress made in Buddhist Studies in the last half century. The only other viable candidate for a comprehensive research tool could have been the *Hōbōgirin* (Tokyo, 1929–2003), founded in 1926 by Sylvain Lévi and Takakusu Junjirō, later edited for many years by Paul Demiéville. But its scope was intentionally restricted from the outset to consideration of sources in Chinese and Japanese (even when dealing with Indian Buddhism), and in other respects. The first volumes contain a number of short and medium length articles, arranged under alphabetic headings in Japanese pronunciations. However, by the most recent volume, published in 2003, the project had reached only *Den'e* (傳衣; "the transmission of the robe"), and in place of the smaller and therefore topically wider-ranging entries of earlier volumes had evolved already in 1979's volume V into a collection of a small number of lengthy articles, or even small monographs (anticipated already in Demiéville's 45-page contribution "Byō" [Illness] in 1937), thus moving the project into a significantly different genre. Despite recent discussions concerning restarting the work, since it managed since 1929 a mere eight volumes (of 1178 pages, an average rate of 14 pages per year), the last of which saw the light 12 years ago, it is in any case clear that at best the project will require many more years. (For a brief history, and an appraisal of future prospects, see Iyanaga, 2015.) It is at the least interesting that the last general editor of the *Hōbōgirin* project, Hubert Durt, in the context of a review of a Japanese reference work and albeit clearly speaking about such Japanese works, wrote, in a fashion that might seem prescient, that "one cannot but feel that the time is ripe for a truly extensive Buddhist encyclopedia, with signed entries and accurate references" (Durt, 1989–1990, 406).

Into this context steps, a quarter of a century later, *Brill's Encyclopedia of Buddhism*, the *BEB*. The project is ambitious: we have set out to create a platform for the creation of an overall treatment of the wealth of Buddhist traditions in their multiplicity. Thus, we conceive of this project on a long scale; it should, in fact, never be "finished" or "complete." By presenting the initial five-volume *printed* version of the *BEB* (see below) thematically, moreover, we strive to free ourselves from the limitations imposed by alphabetic schemes, such as are employed by most other projects. Our primary aim is to present a synthesis of the best knowledge attained by critical scholarship at the time of publication; the ability, however, to correct and update remains important (again, see below).

The *BEB* aims to cover, in principle, in the first place all aspects of "premodern" Buddhism, without too carefully defining this category, especially from a chronological perspective. Moreover, and in relation to the delimitation of the "premodern," we focus our attention on Asia, for as Buddhism becomes "modern" it also spreads beyond its historical grounds in Asia. This restriction in coverage in the initial printed volumes of the *BEB* is in large part both a function of the competence of the editorial team, and the scope, as we understand it, of "Buddhist Studies" as a discipline, at least in the narrow sense. It is important to stress, however, that any distinction between "modern" and "premodern" is not primarily a chronological one. Contemporary Tibetan monastic training is overwhelmingly "premodern," and the same classification would apply to numerous commentaries produced on texts in recent years by, for instance, Chinese scholar-monks. By the same token, in many important respects "modernity" begins in Japan, and in Japanese Buddhism, in the early Meiji period (shortly after 1868), thus almost 150 years ago. Any restriction to "the premodern" is therefore bound to appear to some extent ad hoc. In contrast, "modern" or "modernist" Buddhism has different characteristics, and is approached differently. It is in some respects often better treated by sociologists, anthropologists, and perhaps political scientists than by philologists, historians, art historians, and the like. Since, however, the continuities between premodern and modern Buddhism certainly far outweigh their differences, we intend in the future to integrate treatments of both modern and "modernist" Buddhism in the *BEB*. To clarify, in the case of the present volume, while it is true that there has been, especially in the last decades, a tremendous outpouring of publications on Buddhism, both in Asian and in Western languages – sermons, commentaries and the like – in principle this material is not discussed in the present volume, for the reasons just stated. This should not be understood to mean that the editors consider this material foreign to the Buddhist traditions, for it is certainly every bit as Buddhist as works produced in centuries past. It is rather that this literature is more fruitfully treated in a different context. This treatment, however, remains a task for the future, and the present volume, therefore, does not address modern or modernist Buddhist literature, although it does discuss works written in recent times. Again, the operative distinction here is much more conceptual than chronological.

In the context of defining the scope of the present project, it is vitally important to clarify the notion, deployed above and relevant here as well, of "tradition,"[1] which is intended to point to a more or less self-conscious stance by those within historically Buddhist contexts, not, of course, limited in any way to "elites," nor necessarily defined in contradistinction to "non-Buddhists." The crucial boundary is intended to avoid the non-sense that everything a Buddhist does is therefore Buddhist: Buddhists often eat rice, but eating rice is not – shorn of other context – a Buddhist activity.

The *BEB* is thematic and not alphabetical, nor is it arranged as a history in chronological order, nor regionally, although all of these facets are taken into account. Entries are meant, in so far as is possible, on the contrary to break down geographic, chronological, and other boundaries. Buddhism can be seen both as an overarching category, and as a synthesis of multiple Buddhisms. We hope that our manner of presentation will permit both of these standpoints to be made clearly available. In this respect, however, we immediately encounter the limitations imposed by the nature of present-day-scholarship itself. While it might be ideal, for example, to have a survey of Buddhist narrative literature which deals with the genre(s) across regions, and highlights pan-Buddhist continuities, no single scholar at present has the expertise to write such an article, and the secondary scholarship is not advanced enough to permit a specialist in one area to confidently rely on the results from another area available in accessibly published form. At the same time, it is also of course desirable to situate Chinese Buddhist narrative, for instance, within the context of Chinese narrative more broadly. This tension is generalized. Any topic sits on at least two axes, that of its vertical relation to the historical Buddhist tradition (in this case, Buddhist narrative from India onward), and that of its so to speak horizontal location within a cultural context (here Chinese culture and the Chinese literature tradition). One possible solution to the challenge of vertical integration would be to encourage several specialists to cooperate and together produce more sweeping surveys; we believe that this would produce not only potentially more interesting articles, but also forge bonds of cooperation between scholars that could generate new scholarship. Even success in facilitating such cooperation, however, would not in itself address the question of whether in any given presentation priority is better placed in situating the topic primarily within pan-Asian Buddhist culture or within a specific cultural framework. The answer to the question of which is more desirable hinges, in fact, on the interest of the individual reader, and it is very difficult to simultaneously achieve both presentations, even theoretically, much less in terms of the actual availability of capable scholars to author them.

An Encyclopedia of Buddhism has an obligation, one might think, to define the scope of "Buddhism" in general, but in fact this too is a difficult, and perhaps an impossible, task. Moreover, to define is by definition to exclude. The *BEB* takes a common-sense approach, and aims to be – if questions arise – rather too inclusive than too exclusive. While the editorial board proposes the list of desired entries, and sketches their intended scope, it naturally follows from the fact that each author is an expert in his or her subject that contributing scholars are given considerable latitude to define the actual scope of coverage of their entries as they see fit. What is much more important for us than maintaining any parallelism of treatment between related entries – something which is often not even desirable, given the diverse nature of the tradition – is to maintain throughout the editorial stance of disinterested scholarship.

The non-confessional standpoint of the *BEB* also highlights its intended target audience of both scholars and members of Buddhist communities, in Asia and beyond (although of course these categories may also overlap). While we expect that many users of the *BEB* will be scholars and students of Buddhist Studies, we also hope that scholars of other religious traditions, literature specialists, historians, anthropologists, and others will likewise find much here to stimulate and inform them. At the same time, we also very much hope that those within or from traditional and traditionally Buddhist cultures, with an appreciation for etic ways of conceiving of their past, and their present, will similarly find here both much that is familiar, and also much that is new, and further that they find this newness to be refreshing and even invigorating. We can only hope for this sort of reception for the *BEB* by offering a disinterested academic approach to our subject – by creating an Encyclopedia of Buddhism rather than a Buddhist Encyclopedia. Our stance will manifest itself not only with respect to our avoidance of confessionalism, but also regionally, in our attempts to avoid privileging any certain area, whether it be delimited linguistically, doctrinally or in any other dimension. All of this said, we are able to present only what scholars have investigated and discovered (and are willing to share with us), and scholarly foci are not, and will never be, wholly neutral and value free. A vision of Buddhist traditions that seeks to take into account all manifestations is by definition an etic project. An etic standpoint, however, takes emic standpoints as data: therefore, by approaching Buddhist traditions from a nondenominational, non-confessional, "outsider" perspective, we include "insider" views as well, taking care to avoid favoring any particular one. (Of course, Buddhists, scholars or not, Asian or not, may certainly take an etic stance toward their own tradition – just not simultaneously with an emic one.)

We aim to be inclusive and to do away with as many preconceptions as possible, but we are limited not only by scholarly attention but also by our sources. This first volume presents a case in point. Far from all Buddhist transmission or teaching takes place in written form: whether instructions be secret, or private or simply casual, this aspect of Buddhist teaching escapes the net which is meant to capture – if this is the right metaphor! – the scriptural. In the same way, most of what we know of the past is what was recorded by elites, by the powerful, by the wealthy, and overwhelmingly by men, just as most of the distant archaeological record preserves the monumental rather than the humble. We can work to fill in a history more representative of the stories of those who usually escape the historian's gaze, but we should remain aware of how partial our picture is. This partiality extends further. We know that a huge proportion – we do not know, however, how great –of the once extant literature has simply not survived. Thus, as we seek to state clearly what we know, and what we do not know, we must also remain aware of what we *cannot* know. In that sense, if we think of the *BEB* as a map of Buddhism, we must remain conscious that this map also plots two kinds of empty space. It plots empty space of areas not yet explored, but for which we know we have information: an example relevant to the present volume might be the massive commentarial literature on the Vinayas, as yet hardly explored (although this volume makes a start with its entry on Pali Vinaya commentarial materials). And it plots what we might dare to call "unknown unknowns," regions of which we are not even yet quite aware. We hope that in plotting the blank spaces on our map as clearly as we can, and drawing attention to these voids, we will encourage researchers, and particularly students, to see these vacancies as an opportunity, and strive to fill them, to shine light in the dark places, as well as attempting to mend and fill in what has already been sketched out.

The *BEB* is intended as a scholarly project, and it therefore expects its audience to be familiar with Buddhism and with Asia on something more than an introductory level. That said, we do make an effort to

explain, to translate foreign terms, to contextualize and to make as clear as possible whatever assumptions stand behind a given assertion. As editors we try to make certain that a specialist in, for example, Japanese literature, should be able to understand an entry on Indian Buddhist literature, or that a graduate student focused on Sri Lankan commentaries be able to make sense of an article on Korean scripture exegesis. At the same time, we would hope – and if we have done our job right, we would expect – that the expert in biblical literature would be able, with some attention and care, to read and understand articles on Buddhist scriptures in the *BEB*, without the slightest knowledge of Sanskrit, Pali, Chinese, or Tibetan.

The multiplicity of coverage and the breadth of approach of the *BEB* should also mirror the field of Buddhist Studies in other ways. The study of Buddhism encompasses different academic traditions, which we hope to represent in our contributors as far as possible. Every effort has been made to break down barriers between what are sometimes very compartmentalized domains. Where we have not yet achieved this, we hope to improve in the future. But anyone who has ever attempted to read a Japanese language article about Japanese Buddhist doctrine, for example, or a study on Buddhist logic in any language, immediately encounters the challenge of coming to grips with the vast network of unstated assumptions, of the "common knowledge base" upon which some scholars situate their presentations. While striving to present the appropriate level of specialized knowledge, the *BEB* simultaneously attempts to make that knowledge accessible to those who will not share the assumptions of background common to scholarly insiders.

Framing the *BEB* in the august company of "the Mochizuki" and the *Hōbōgirin* will not, we trust, be read as hubris: rather, it is an expression of our awareness of the height of the standard which we must strive to meet. We cannot expect instant success, and the editors are as aware as anyone of how very far we are from the ideal with this first volume. Its scope, to focus on just one issue, is inconsistent, especially in its tilt toward Indian materials and the correspondingly insufficient treatment of East Asia. In part this is intentional and justified, since the core of the Buddhist scriptural tradition is indeed Indian, whether or not the predominant weight of the traditions which transmitted and preserved that literature may belong to other regions entirely. However, our aim was to survey *all* Buddhist literature (an impossible task!), and not just its scriptural core, and in that respect our treatment is not as balanced as we would have liked it to be. This imbalance is due in part to the (im)maturity of the field, but also to the absence of timely contributions from some qualified colleagues. Other reasons include a growing academic culture ruled by metrics which consider encyclopedia entries to be something less than serious scholarship, a pressure which can affect untenured scholars to a very unfortunate extent.

In respect to its coverage and to its ability to represent the riches of the field, for better or for worse the *BEB* is, among other things, a kind of mirror of the study of Buddhism in the early 21st century. (It is not at all coincidental that the image of the mirror appears in the titles of many important encyclopedias, in Europe as well as in China; Sullivan, 1990, 319). While we attempt to make our mirror as free from distortion as possible, one of the facts it reflects, after filtering, is just how vast the tradition is, how little of Buddhist traditional culture has been subject to careful scholarly scrutiny, and how very few scholars are at work in so many subfields. While some subjects may attract a considerable number of specialists, others are represented, if at all, by only one or two. When these specialists have, for this volume, not shared their knowledge and insight, the result can be a consequent gap in our coverage. This is not reflected in our table of contents, which indicates as forthcoming only entries we are sure will appear, not those we simply wish we had.

While we maintain that there is a difference between etic and emic standpoints, as discussed above, and between scholarship and apologetics, this does not mean that the *BEB* wishes to reflect only a single vision. We strive, ideally, also to reflect interests wider than those of European and North American scholarship, a category which is not nearly as much geographic as it is conceptual. There is perhaps a divide in expectations among scholars (and not necessarily between scholars and practitioners), however, especially with regard to locating the right matrix of "haute vulgarisation." The editors have struggled, and continue to struggle, to overcome the conceptual distance between the poles of over-popularization and hyper-specialization.

This first volume deals with literature, and in a smaller way with the languages used for recording texts and the material substrata upon which they were written. "Literature" in the *BEB* has a broad sense, and is of course not limited to les belle lettres, but for our purpose covers written texts of various genres and purposes, including narrative, but also ritual, legal, and administrative materials. While we certainly could have easily begun with a first volume dedicated, for instance, to history, the reason to begin with scripture is that Buddhist texts represent, at least emically, the transmission of the religion as such. They embody one of the Three Jewels (the second of the set of Buddha, his Teachings and his Community), and provide – again, at least emically and normatively speaking – the basis for all practice and aspiration. The *BEB* begins with "literature" also because it is through literature that the field of Buddhist Studies has developed the majority of its insights into premodern forms of Buddhism. It thus claims a sort of privileged domain within the scholarly field. Of course, the various facets of the Buddhist tradition are distinct only from an analytical point of view. There is no real differentiation into aspects or facets or domains, because these are merely ways of interpreting what is, organically, an integrated whole. Thus by definition the lines we draw and the borders we create are, while helpful, adventitious and subjective.

Our division into volumes of the *BEB* is also convenient, subjective and provisional, as are the borders drawn by the individual contributions themselves. The subsequent planned print volumes will engage other general domains as follows:

- Volume II: Personages – both historical and mythical;
- Volume III: Life and Practice – including monastic life, social organization, ritual and education;
- Volume IV: Doctrine – including schools, traditions and concepts;
- Volume V: Space and Time – including history, the spread of the tradition, politics, and society; and
- Volume VI: Index.

The division of content into these respective volumes may in some cases seem arbitrary. It is not only for this reason – because of the organic wholeness of the tradition – that we look forward to the presentation of the *BEB* online as quickly as possible. This access will allow users to negotiate the relations between topics in the ways most meaningful for them, whether this means aligning topics geographically rather than subject-wise, or chronologically, and so on. The natural interrelations between topics, between individuals and their cultural backgrounds and productions, and every sort of complex network of interrelations is but poorly presented in linear text, and much better in a hyperlinked form.

Much is missing in this present, first volume. Some of this absence, as mentioned above, is owing to the fact that we were unable to locate able and/or willing scholars specialized in a certain field, some because the field itself, as the editors imagined it, has as yet been insufficiently investigated. Some gaps – many more than we wish – are due to the absence of articles that in the end were not submitted. We will do our best to make good these gaps in supplements that will appear as appendices to further volumes. More importantly, in due course the online version of the *BEB* will continue to grow, expand, supplement, and of course correct what we are able to present in print. Our ultimate and realistic goal is of an open-ended *BEB*, not only in the sense that we will continue to update and correct the entries already present in the current scheme. Rather, we hope and expect that the blank spaces on the map mentioned above will, over time, be filled by future scholarly work, and the results of these future studies will find a home in the *BEB*. Obviously, such a goal has no conceivable completion, because its open-endedness is the open-endedness of knowledge itself.

Open-endedness does not, however, mean anarchy or free-for-all. While we have sought to standardize some aspects of our presentation, such as romanization systems and references to standard primary works and journals, in other respects we have allowed our contributors to present their materials as they saw fit, so that, for instance, the reader should expect little standardization in the translations of technical terms. If there appear to be disagreements, on the other hand, on factual matters – such as the dates of a certain author – this is probably to be attributed to the failure of the editors to notice and clarify the discrepancy. We expect and hope that readers will bring such things, and any additional suggestions, to our attention and, again, we will aim to correct and supplement lacunae in the online version. We trust, however, that wherever the online version will take us, the printed volumes, the first of which you have before you now, will remain of value for a considerable period of time as the first reference for any student or scholar seriously interested in the Buddhist traditions.

Part of our quest for consistency involves the conscious decision to give priority to Sanskrit in terms of vocabulary. This is, of course, not always historical: early Buddhism certainly did not use Sanskrit, and it goes without saying that outside of the Indian cultural sphere it was rarely employed, other than as a system of mystical sounds. Nevertheless, it makes sense to take Sanskrit as the lingua franca of the tradition, and unless there is a reason to use another language, we prefer, for the sake of standardization, consistency and mutual comprehension, to use Sanskrit forms for technical terms, place and personal names, and the like. When other languages are used, we employ standard romanization schemes. For some languages, no standard transcription system yet exists. In these cases, we have relied on experts and followed their best

advice. We trust that this will not lead to confusion. We have also striven to standardize references to primary and secondary sources, but in the vast tradition, we have encountered more than a few cases of well-established abbreviations which overlap with a different referent for the same abbreviation in another domain covered by the *BEB*. We hope and trust that the context and a bit of common sense will make the references clear. Following the practices of Brill, toponyms and names of languages have been written in popular forms, the former following Google Earth. It should be noted that some contributors – and the general editor – disagree with this decision, but in the end the publisher's desire for consistency, also with other reference works it publishes, won out over scientific accuracy.

A word of apology is due to some of our contributors. While we continued to receive contributions to volume I down to the very last moment, other scholars submitted the final versions of their entries in a very timely manner, some as long as two and a half years ago. I personally apologize to them for the delay, and to the reader for those cases in which this has meant that some of the most recent scholarly results may not have been taken into account. Future volumes will, we trust, appear much more quickly.

The general editor began this project with a huge ambition, perhaps far too huge. He was emboldened by the enthusiastic encouragement of friends and colleagues. But for various reasons, some of the original members of the board were unable to continue actively over the years since the project was first conceived. The original group of colleagues who met to discuss the viability of the project included Oskar von Hinüber, Harunaga Isaacson, Juhyung Rhi, Akira Saito, and Cristina Scherrer-Schaub. The editorial team subsequently underwent a number of transformations, with various scholars offering their advice for longer or shorter periods of time, and it is unfortunately not possible to list the names of everyone who, over the years that the project evolved, generously offered their advice. In the end, in addition to the general editor, editorial responsibilities for the first volume were primarily undertaken in different measures by Vincent Eltschinger and Oskar von Hinüber, Lucia Dolce, Johan Elverskog, Harunaga Isaacson, Christian Lammerts, Robert Mayer, Juhyung Rhi, Francesco Sferra, and Stefano Zacchetti. One limitation of the original complexion of the advisory board, alluded to above and reflected to some extent in the eventual entries themselves, was the imbalance between South and East Asia, to the detriment of the later, and the relative neglect of Southeast and Central Asia. While we worked hard over several years to remedy this imbalance, given the vastness of Buddhist literature and the finitude of human capacities, the first volume is inevitably much more partial than it should, ideally, have been. For the second volume, now under preparation, our editorial team is renewed. Further details will be found in the introduction to volume II.

Scriptural

General

Canonicity

Canonicity as a general concept revolves around authority, and therefore around power and the exercise of power: assertions about canonicity are therefore ipso facto attempts at assertion of power. In a Buddhist literary context, such assertions most centrally relate to the acceptance of works as scripture or holy writ, the nature and definition of such works, and the manner in which they are so valued. The connection of canonicity with power is certainly not limited to Buddhism: we see prominent examples from the codification of the Hebrew Bible in the Temple in Jerusalem to the English translation project of King James and, according to traditional literary accounts, in the canonization of the Qur'ān under the third caliph, 'Uthmān ibn 'Affān (Motzki, 2001). However, canonicity is a highly fluid notion and functions on virtually infinite levels, and thus the degree and manner of exercise of power and authority implicated in any given case of canonicity will necessarily differ. Although the acceptance of a work or body of works as canonical can also be enacted by a smaller group (or even by an individual), avowals on a societal level carry a correspondingly greater implication of the ability to enforce such pronouncements, and consequently denote their greater influence. In principle, it is community adoption of the dicta in question that signals canonicity. It is thus always vital to pay close attention to the question of who is asserting authority, and to whom those assertions are meant to apply, one implication of which is that canonicity can never be thought of in the abstract, but only within specific contexts. Claims of canonicity themselves may well be synchronic, ahistorical and alocal, asserting a universal authority, but the scholar must recognize such claims as in each case necessarily historically and locally grounded.

Any body of material upon which a tradition draws, or which it highlights in some fashion, may meaningfully be considered "canon." Thus, to take one example, while a "canon in use" may be considerably more limited in scope than a received "normative canon," it may also include material not actually found in that putative "canonical corpus." It is important, in this respect, for the scholar to distinguish between etic identifications of "actual" or "de facto" canon (canon in use) and emic designations, which are likely to be more normative and notional than the scholar's. For the same reason, the designations "canonical," "paracanonical," and "protocanonical" mix logical classes; the first is an emic designation, the latter two inherently etic; they should not be confused or conflated.

The Buddhist scriptural canons par excellence are the normative translocal collections variously called "the Pali canon (*Tipiṭaka*)," "the Chinese canon (*Dazangjing* [大藏經])," "the Tibetan canon (Kanjur [*bka' 'gyur*] and Tanjur [*bstan 'gyur*])," and so on. But at almost any level that one chooses to look, considering the local varieties of texts deemed authoritative, and the ways in which authority is deployed both normatively and tacitly, the enormous diversity of Buddhist literature manifests itself. In this sense, the diversity of Buddhist "canon" can fruitfully be seen as fractal in nature: variation occurs among texts from the level of spelling and wording in single manuscripts, up through the variety of expressions of an idea, to the organization and contents of collections. It is thus necessary to keep in mind what dimension of canonicity is in question at any given time.

Two Kinds of Canon

Many schemata have been proposed for the structure of canonicity. One of the most influential distinguishes between an "open canon," sometimes characterized as a "collection of authoritative literature" (Canon 1), and a "closed canon," correspondingly characterized as an "authoritative collection of literature" (Canon 2). Historically speaking, Canon 1 can lead to Canon 2, in that the literature collected in Canon 2 is eo ipso authoritative as well: Canon 2 is not only a closing but also a narrowing of Canon 1. However, even in the case of Canon 2, fixing and closing a canon does not imply its closure on an interpretive level; on the contrary, the interpretive scope of a canon is not closed along with the list of its contents, and virtually limitless possibilities have been discovered for the functional expansion of what are technically "closed" canons (Kraemer,

© Koninklijke Brill NV, Leiden, 2015

1991, 615n12). In the Buddhist case (but generalizable for most scriptural religious traditions), even when a "closed" set of texts is assigned "canonical" status, interpretive text production continues, in such a way that most frequently it becomes virtually impossible to access the "primary" or "root" (*mūla*) texts save through the commentarial tradition. When, in this fashion, "canonical texts" are understood primarily, or even only, through the lens of later commentary, this commentary too takes on de facto canonical status. In Buddhism, we observe these processes with respect to the evolution of authority from the *sūtras* to their classical commentaries, and onward to the sectarian interpretations of the latter such that, to oversimplify, a Japanese Pure Land Buddhist may approach his tradition – the Buddhist teachings and their interpretations – from Kiyozawa Manshi (清沢満之; 1863–1903) to Shinran (親鸞; 1173–1263) to Nāgārjuna (2nd cent. CE?) to the Buddha. While in some sense the highest authority *should* rest with the Buddha, in fact each subsequent level is in its turn canonized, and focuses and directs the scope of available approach to the former – a structural inversion of what one might naively assume to be the case. This process of interpretation reciprocally furthers the canonicity of the root text: "the degree of canonicity of a text corresponds to the amount of charity it receives in its interpretation. The more canonical a text, the more generous its treatment" (Halbertal, 1997, 29). Correspondingly, even if de iure a canon may be "closed" in the sense that it is not possible to add texts to the body of literature considered to hold a special status, this in no way closes off the possibilities for innovation, and the interpretive vitality, far from challenging the core canon, actually reinforces it.

Reception and interpretation are always local. While different interpretive lenses may be applied in different times and places to the same core canonical work, at a given time and place a certain interpretive framework not only may share in the canonicity of the root text; it is likely, in fact, to surpass it. In vivid contrast to the case of the developed Masoretic text of the Hebrew Bible, the invariant *textus receptus*, or to the *Ṛgveda*, another virtually invariant text, to take two examples, in most Buddhist cases the literal text of a canonized work will not be invariant; on the contrary, in the earliest Indian Buddhism we know of, textual transmission was oral and thus fluid, and throughout most of Buddhist history there has been a rather undogmatic approach to the fixity of textual corpora. Although there is certainly no monocausality, the variety of "recensions" or "versions" of Indian Buddhist texts is, on the whole, intimately connected with the lack of centralized political power over most of Indian Buddhist history. Correspondingly, variations in textual fluidity in Southeast Asia, Tibet, and China probably could be fruitfully mapped against solidity and centrality of political power: the more centrally governments are able to exert control, the more stable and invariant we would expect Buddhist textual production and transmission to be. This in any event seems very much to have been the case in Tibet (Mayer, 1996, 18), and in many other places, although alternative scenarios (in which state suppression might promote textual diversity, for instance, or on the contrary in which invariance survives even in the absence of centralized power, as with the two examples above of the Masoretic Hebrew text and the *Ṛgveda*) can also be imagined. The distinction between open and closed canon thus does not map directly onto that between the notion of a canon (notional canon) and instantiations of canon as textual collections. We see instead a pairing of an abstract notion of embodied authority with concrete instances of the expression of that authority. Moreover,

> canonicity is not necessarily dependent upon the stabilization of a particular text, although these two processes are clearly to be joined in some way. At Qumran there apparently existed neither a fixed text nor a definitive list of canonical books, yet the idea of a cumulative body of authoritative scripture is everywhere evident. The "idea" of the canon *preceded* its precise definition. (Chapman, 2003, 49)

No doubt the same sort of thing is true in Buddhist traditions as well.

The term "canon" is often used to refer to physical collections of "books," although it is always acknowledged that such collections might also – or even primarily – exist in memory, and the earliest Buddhist canons are certainly imagined by scholars to have been established long before they were committed to writing. Moreover, throughout Buddhist history the memorization of written texts has been an important element of education; there is good evidence from a variety of Buddhist traditions that, for instance, authors frequently quote from memory rather than referring to written sources, and many of the missionaries who brought Buddhist texts from Central Asia or India to China did so in their

memory (for a vivid, if ultimately perhaps ahistorical, episode, see Zürcher, 1999, 556n25), facts which again emphasize the nonlinear relation between writing and canon not only in preliterate periods but throughout history. This may also, but need not necessarily, contribute to the lack of fixity mentioned above.

A key concept is that expressed by the term *āgama*, roughly “what has come down to us, what has been transmitted, tradition,” and in a Buddhist context also a term for a collection of the Buddha’s sermons. What is inherited as holy scripture, what is transmitted, all falls under this general category. The term indeed is often an equivalent of “holy scripture” (although we note the apparent oxymoron of an “oral scripture,” an artifact of English usage; Eltschinger, 2007, 17–20).

The Early History of Buddhist Canonicity

We know nothing of the earliest development of Buddhist scriptural corpora. Our first reference to any such thing is found in the mid-3rd century BCE in the so-called Calcutta-Bairāṭ edict of Aśoka (Schneider, 1982; Falk, 2006, 106–108), among the first written records of India. In this edict the emperor lists seven expositions on the Dharma (*dhaṃmapaliyāya*; Skt. *dharmaparyāya*) which monks and nuns, as well as male and female lay followers (*upāsaka* and *upāsikā*), are advised to constantly listen to, and mentally reflect upon. However, while much discussed, there is little agreement among scholars as to the identity of these sermons, since most of the names are otherwise unknown (Hirakawa, 1959; Schmithausen, 1992, 113–117; Tsukamoto, 1970=1980, 566–573). Three of them *may* be identified with portions of what is now the *Suttanipāta* (von Hinüber, 1996, §97), otherwise identified (on linguistic and other grounds) as perhaps the very oldest known Buddhist literature, but it is significant that we cannot clearly identify the remainder of the names provided by Aśoka with known texts. Either the names under which discourses circulated were different from those now known, or Aśoka knew, and considered significant, discourses now lost to us. Given this state of ignorance, it is not possible to say anything further about the sermons mentioned by Aśoka, despite repeated efforts to identify their concerns or themes.

While the argument runs the risk of being circular, it should not be overlooked that the very first evidence for Buddhist “canonicity” comes in an imperial edict. However, since we lack any other comparably old evidence, this may not after all carry great weight. Nevertheless, especially in light of the crystal clear connection between (royal) power and canon through later Buddhist history, that the source of this earliest reference of “recommended texts” was the emperor Aśoka should be borne in mind.

The same Calcutta-Bairāṭ edict of Aśoka also contains an expression of great significance for understanding the scope of Buddhist notions of canon and their growth. Prefacing his short list of discourses, the emperor emphasizes that the scope of reliable *ipsissima verba* is vastly wider than the few texts he mentions by name: “Whatsoever,” the edict says, “has been said by the exalted Buddha, all that is undoubtedly well said” (trans. Schneider, 1982). It is of the highest importance for the hermeneutics of canonicity that this expression is reversed in (almost certainly chronologically later) Buddhist literature, in the Pali Nikāyas (AN iv.164,7–9) and in a Mahāyāna *sūtra*, the *Adhyāśayasaṃcodana* (quoted in the *Śikṣāsamuccaya* anthology; Bendall, 1897–1902, 15.19; Snellgrove, 1958), whence it is frequently cited, as “What has been well-said, all of that is the word of the Buddha.” This inversion is more than rhetorical flourish; it effectively expands the scope of “the word of the Buddha” virtually without limit.

Despite what this principle might seem to imply, however, the question of what to include in and what to exclude from the category of “the canonical” was not left entirely open to whim. Already relatively early in Indian Buddhist circles, formal criteria were proposed for the inclusion and exclusion of sermons from the category of “scripture”. The authentic teaching (Dharma) is to be understood to be what is proclaimed by the Buddha and by his disciples, with some lists adding also the preaching of sages, gods, and “apparitional beings” (Lamotte, 1947; Davidson, 1990). In some cases the Buddha is present and may inspire (*anu√bhū*) the eloquence (*pratibhāna*) of another speaker, while in other cases the Buddha need not be present at all, and some sermons spoken by disciples are recognized as scripture even though explicitly set after the Buddha’s death. The often-cited list of the four “principal appeals to authority” (Pal. *mahāpadesa*; DN ii.123–126, AN ii.167–170, and in many other sources, noted in Lamotte, 1947) refers to four possible scenarios of authentic textual transmission. A monk could learn teachings in four different situations: from the Buddha himself, from a community of elders, from a group of elders specialized in the transmission of one of the divisions of the teaching (Sūtra, the sermons, Vinaya, the monastic code, or *mātṛkā*, matrices which became the Abhidharma, i.e. systematic dogma), or from a single monk so specialized (Davidson, 1990, 300). However, this simply amounts to granting an individual or community authority, and at least formally Buddhist traditions agree that after the death of the Buddha he appointed no successor, proclaiming instead that the monks were to take the teaching, Dharma, as their lamp/island (perhaps punning on the ambiguity of Middle Indic *dīpa*) and as their refuge (Pal. *saraṇa*; DN ii.100, 20–22). Therefore, assuming a situation in which one does not hear a teaching directly from the Buddha himself, a further test is necessarily to be applied to what is heard: does it conform to what is found in the (already accepted) Sūtra and Vinaya? Some sources add a third criterion, namely that it not contradict reality (*dharmatā*, or in other sources, *yukti*, reasoning). While perhaps not originally intended to specify actual textual corpora, at least Sūtra and Vinaya came to be understood in this sense by some, such as the most influential Ceylonese commentator, the 5th-century Buddhaghosa (An, 2002). Historically, no doubt the motivation for the development of such criteria was the geographic growth and subsequent diversity of the flourishing Buddhist communities. Such communities needed criteria to enable authentication of unfamiliar teachings encountered in various places (Eltschinger, 2014, 202).

Evidently these standards did not suffice in all cases, however, since a few centuries after the earliest sources, we find another articulation (in the Pali *Nettipakaraṇa* and in Sarvāstivāda-Vaibhāṣika and Mādhyamika sources; Lamotte, 1944–1980, 536–540; 1949/1988), that of the four interpretive bases/refuges (*pratisaraṇa*). These four are, to rely on: (1) dharma not persons (*pudgala*); (2) meaning (*artha*) not letter (*vyañjana*); (3) explicit meaning (*nītārtha*) not intentional meaning (*neyārtha*); and (4) insight (*jñāna*) not discursive knowledge (*vijñāna*). The first echoes the four principal appeals of authority, noted above, and the proviso that one must check against the accepted teachings what one hears from (otherwise reliable – see below) individuals, and aims to ward off the dangers of personal charisma. The second is straightforward, and refers to an avoidance of overliteralism, and is plainly soteriological in intent. The third (see below) refers to a concept of broader interpretive importance, namely that not everything in the scriptures agrees, and it is necessary in some cases to understand some statements as metaphorical or allusive, in order to avoid mental confusion. The fourth category refers to true insight instead of discursive knowledge, and by somewhat later philosophers is connected with the scheme of the three successive insights (*prajñā*): that consisting of what is learnt (*śrutamayī*), what is reasoned (*cintāmayī*), and what is mentally cultivated (*bhāvanāmayī*). The first requires learning what is taught in scripture, only upon which basis may one reflect with reasoning. The progress, then, is from scriptural education to insight born of reasoning, and thence to intensive cultivation of salvific intellectual contents (Eltschinger, 2014, 203, 318ff.). Rote learning is not sufficient, and the scriptures, while providing fuel for the processes of reasoning and cultivation, are not in and of themselves salvific.

In spite of the unambiguous caveats set forth in the schemata noted above, and setting aside what obviously happened in practice, even some theorists accept the idea that persons of authority can indeed be relied upon. A relatively early text of logic and epistemology, the **Upāyahṛdaya* (*Fangbian xin lun* [方便心論]; T. 1632 [XXXII] 25b18–22), relates scriptural knowledge to highly authoritative individuals such as elders, buddhas, and bodhisattvas. For the perhaps 6th-century commentator Sthiramati (Yamaguchi, 1934, 128,21), "Scripture consists of the word of trustworthy [persons, termed *āpta*]; trustworthy persons are free of [all] causes of untruth," while for the 7th-century philosopher Candrakīrti (La Vallée Poussin, 1903–1913, 75,6–7), "scripture is the word of trustworthy [persons] cognizing supersensible things in a direct [perceptual] manner" (Eltschinger, 2014, 208). According to Dharmakīrti, individuals who have shown themselves to be reliable in matters which can be confirmed may be presumed to be reliable also in regard to those matters beyond the ken of ordinary persons: such individuals are trustworthy. This said, most articulations of matters of authority focus not on persons but on the content of the speech in question. If the speech is confirmed to be that of the Buddha (*buddhavacana*), this is not a problem, but as noted above, the speech of others is also acceptable if they are inspired. For several sources, most centrally the *Adhyāśayasaṃcodanasūtra*, inspired speech (*pratibhāna*) is *buddhavacana* if it (1) has sense and is not nonsense, (2) accords with the doctrine and does not contradict it, (3) destroys defilements and does not cause their increase, and (4) illuminates the good points and advantages of nirvāṇa and does not increase the evils of saṃsāra

Even confirming the reliability of a scriptural source may not be sufficient, however, as scriptures may appear to be in conflict. In order to avoid the idea that the Buddha taught contradictory ideas (as a common trope has it, just as an entire ocean has the single flavor of salt, so the Buddha's teaching has the single taste of liberation; Vin ii.239,32–34), some sources deploy the notion of *sūtra*s whose meaning is manifest or explicit (*nītārtha*) and those whose meaning requires exposition or is intentional (*neyārtha*; Lamotte, 1949/1988, 16–23). This notion is further related to the categories of ultimate and provisional truth (*paramārthasatya*/*saṃvṛtisatya*), as well as the more general category of skillful means (*upāyakauśalya*). According to the former dichotomy, truth claims are of two varieties: those that relate to the ultimate nature of reality, and those whose truth is conditional. Without such tools, it would have been impossible for the wide variety of philosophical and doctrinal positions which came to characterize Buddhism to develop, for it is through such means that scholars could maintain the orthodoxy of their positions even when they might appear to be in sharp contrast to statements otherwise judged to be canonical or orthodox. The notion of skillful means is deployed as a tool for explaining – or explaining away – actions or statements attributed to the Buddha which seem to contradict assertions or principles established elsewhere (for general considerations, see Pye, 1978). Perhaps the most famous example is found in the parable of the "Burning House" found in chapter 3 of the *Lotus Sūtra*. There the scene is set of a house in flames, within which are three children blithely at play, oblivious to the danger they face. The Buddha, homologized to the children's father, is made to offer three carts drawn by different animals to each of the three, in order to lure them outside to safety. However, when the children emerge from the burning house, the Buddha rewards them not individually with different carts but rather all with the same, very best cart. This parable serves as a metaphor for the Buddha's teaching of different paths to awakening (*yāna*, vehicles), including that of the *śrāvaka*s (auditors) and pratyekabuddhas (lone buddhas), when actually it is only the path of the bodhisattva, the One Vehicle (*ekayāna*), that he really advocates. In light of his salvific aims, however, he does not lie by teaching as valid aims paths which are less than ultimate. Rather, he deploys his skillful means in ways appropriate to the capacities of his audiences.

Although in some foundational senses authenticity is equivalent to *buddhavacana*, the definition of the source of this authenticity can be elusive. An extreme example comes again from the *Lotus Sūtra*, in chapter 7 of which the Buddha recounts the story of the past buddha Mahābhijñājñānābhibhū, who preaches to the 16 sons of a king (Eubanks, 2011, 37–38). After the passage of huge periods of cosmic time, this buddha again preaches to these young men, this time the *Lotus Sūtra* itself, which they memorize. Practicing again for very long ages, the 16th of these princes, like his brothers, becomes a buddha himself, none other than our Śākyamuni, who in this self-same *Lotus Sūtra* recounts this very story. In this fashion the *sūtra* effectively places its own revelation out of time, rendering it both timeless and authorless. For the authors of the *Lotus Sūtra*, it is not only the Dharma which is true and eternal, but its expression in scripture as well.

Contents of the Canon(s)

In earlier Indian Buddhism, the status of the *sūtra*s and the Vinaya as *buddhavacana* – in this context, what is taught directly by the Buddha – is not in doubt, although the exact contents of these collections (the particular *sūtra*s and rules of monastic conduct, their orderings, and their exact formulations) may be subject to debate. The archetypal status of these collections is reinforced by the usage of the compound *dharmavinaya* (lit. the Teaching and the Vinaya, found as early as DN i.229,2, Vin ii.238,26, etc.) in the broad sense of "Buddhist teachings," or even "Buddhism" as a whole. What is less settled is the status of the Abhidharma. This material is avowedly a rational organization of the vision of reality taught by the Buddha in a more haphazard way in the *sūtra*s. In other words, the *sūtra*s – to speak emically – were taught by the Buddha as various situations demanded; he did not attempt to present the entirety of his understanding of the totality of reality in any particular sermon. This totalized and totalizing picture emerges only from the systematization of all that the Buddha taught. The Abhidharma represents this attempt to gather together and rationalize the Buddha's teachings. In his enormously influential *Abhidharmakośabhāṣya* (*ad* I.3), the 4th–5th-century philosopher Vasubandhu thus states the Vaibhāṣika position that the (canonical) Abhidharma, though collected by the monk Kātyāyanīputra, is still the word of the Buddha, in the same way that the *Udānavarga* (the Sanskrit equivalent to the *Dhammapada*), a collection of verses spoken by the Buddha and accepted as canonical, was nevertheless gathered and arranged into a single collection by the monk Dharmatrāta (La Vallée Poussin, 1923–1931, I.6). For the Vaibhāṣikas and those who follow them, the Abhidharma books are thus indeed *buddhavacana* – utterances of the Buddha, though presented by another – while for others, such as the Sautrāntikas, they are not. (The Sautrāntikas nevertheless claim to possess a *Tripiṭaka* including an Abhidharma, because this is constituted for them of certain *sūtras*, such as the *Arthaviniścaya* [Wogihara, 1936, 11.33].) This has implications for the organization of canons as collections of literature, and in Tibet some editions of the Kanjur, the collection of *buddhavacana*, contain Abhidharma texts, while other editions relegate these texts to the Tanjur, the collection of works of other authorship. (Note, however, that the Abhidharma is placed in the Kanjur only in cases in which there was no corresponding Tanjur, i.e. in which only a Kanjur was produced.) Of course, this rejection of the Abhidharma as *buddhavacana* does not directly imply that in practice Abhidharmic filtering of the Buddha's teaching was any less influential. Other approaches to the question are also found. In Theravāda doctrine (and apparently in this tradition alone; Skilling, 2010, 30, 2008, 51–54; on the contested appropriateness of the label "Theravāda," see Skilling, 2012; Gethin, 2012; and Anālayo, 2013), the Buddha literally taught the Abhidharma: the well-known story of the Buddha's visit to the Trāyastriṃśa heaven is adopted to make his sojourn there the scene of his preaching of the Abhidharma to his mother, who was reborn in that realm. Upon his return to our world, the Buddha taught the Abhidharma to his disciple Śāriputra, who subsequently recited it at the First Council (Davidson, 1990, 304). (The Theravāda tradition is actually somewhat more complex than this, since one of the seven core canonical Pali Abhidhamma texts, the *Kathāvatthu*, dates itself to 218 years after the Buddha's nirvāṇa [von Hinüber, 1996, §144]. Furthermore, it is important in a broader context to remember that in Cambodia, as one instance, the term Abhidhamma is widely used to refer to a range of texts quite different from the canonical Pali Abhidhamma [de Bernon, 2012, 383].) The Abhidharma texts, moreover, were considered to present the manifest meaning of the Buddha's teaching (*nītārtha*), and thus to provide an authoritative standard by which the *sūtras* whose meaning requires exposition (*neyārtha*) were to be interpreted (Cox, 1995, 14).

Buddhist tradition virtually universally holds that after the death of the Buddha, a council (*saṃgīti*, communal recitation) was convened, at which the Buddha's preachings were collected. This included minimally his *sūtras* and the Vinaya (but see immediately above, and note that certain Pali materials hold that the *aṭṭhakathā*, commentaries, were also recited at the councils, while other traditions speak of a simultaneous Mahāyāna council; see below). It is usually recounted that the Buddha's closest disciple, Ānanda, recited the *sūtras*, and the monk Upāli the Vinaya. This differs from the question raised above with respect to the Abhidharma, since here there is no question of compilation or organizing, but only of literal reporting. A certain amount of exegetical effort has gone into addressing the question of the reliability of these recitations, for it is upon this basis that one leg of the authenticity of the Buddha's word rests. One strand of this exegesis takes as its starting point the stock (and virtually obligatory) opening expression of Buddhist *sūtras*, "Thus have I heard" (Skt. *evaṃ mayā śrutam*). Among the points put forward is that the word "thus" is a seal of authenticity, since it serves to certify that the speaker ("I," usually Ānanda, but in some, perhaps later, texts, Vajrapāṇi) recounts the Buddha's words precisely as he heard them. Several commentaries connect this account with the "biography" of Ānanda. Although he was the Buddha's constant companion, until the very moment before the council was set to begin, he had not realized awakening (arhatship). Some interpreters take what might otherwise seem a weakness in the postulation of Ānanda as a reliable reporter and turn it into a strength: since, while accompanying the Buddha during his teaching career, he did not fully understand what the Buddha taught, Ānanda had no choice but to memorize it word for word. Thus, his very spiritual backwardness, so to speak, makes him a reliable witness: being unawakened he was unable to paraphrase or interpret, but could only parrot.

In the account in the Mūlasarvāstivāda Vinaya, the fixing of the canon (in the sense of the core texts) is described as follows:

> Then Mahākāśyapa said to Ānanda, "There are just this many *sūtras* in the *āgamas*; beyond this there are none." Having said this he descended

d thus to provide an authoritative
which the *sūtras* whose meaning
sition (*neyārtha*) were to be inter-
95, 14).
dition virtually universally holds that
n of the Buddha, a council (*saṃgīti,*
itation) was convened, at which the
chings were collected. This included
sūtras and the Vinaya (but see imme-
and note that certain Pali materials
ṭṭhakathā, commentaries, were also
ouncils, while other traditions speak
us Mahāyāna council; see below). It is
ted that the Buddha's closest disciple,

> e." Having said this he descended

> from the high seat. Then the Venerable Kāśyapa addressed the great gathering: "Be it known that the *sūtras* spoken by the World Honoured One have now all been assembled." (T. 1451 [XXIV] 407c3–6; trans. MacQueen, 1981, 306)

Although the mythology of the First Council is central, even within traditional sources there is ample recognition of the fact that not everything accepted as *buddhavacana* was recited at that council. In the Pali Vinaya (Cullavagga XI.1.11; Vin ii.289,34–290,8; Horner, 1938–1966, 5.401–402), and Vinaya texts belonging to the Mahīśāsakas (*Mishasaibu hexi wufen lü* [彌沙塞部和醯五分律]; T. 1421 [XXII] 191c19–192a5; Przyluski, 1926–1928, 159–161), Dharmaguptakas (*Shifen lü* [四分律]; T. 1428 [XXII] 968b27–c17), and Haimavatas ([?]; *Pinimu jing* [毘尼母經]; T. 1463 [XXIV] 818c29–819b1; Przyluski, 1926–1928, 195–200), though not in the collections of other traditions, is found a story of a large group of monks, led by Purāṇa ("The Old One"), who were unable to reach the site of the First Council in time to join the deliberations. Being told shortly afterwards what the council had decided, namely the scope and content of the Buddha's preaching deemed "canonical," Purāṇa proclaimed it well recited (*susaṃgīta*), yet averred that he would hold in mind the Buddha's teachings just as he had heard and received them directly from the Buddha himself (Przyluski, 1926–1928, 314–323). This story may be read as already a relatively early acknowledgment of the possibility of legitimate *buddhavacana* having been transmitted outside the officially approved canon. Somewhat later, we find mention of what has been recited at the First Council, and what has not been recited (Sp i.18,3–4; Jayawickrama, 1962, 15), though there is here no attempt to connect this with the story of Purāṇa. Elsewhere we find mention of a "*sutta* which was not handed down at a council" (As 65,18–19; Hallisey, 1993, 99). There is, in other words, within the orthodox scholastic tradition explicit acknowledgment that canonicity is not coextensive with recitation at the First Council.

Some sources further acknowledge, if implicitly, the possible flexibility in the contents of authentic *buddhavacana*, and suggest the perceived necessity for a council to certify that authenticity. The Sarvāstivāda **Abhidharma-Mahāvibhāṣā* (T. 1545 [XXVII] 929c18–20; Lamotte, 1947) predicts that "[a]fter the demise of the Buddha, in the *sūtras* will be placed false [*wei* (僞)] *sūtras*, in the Vinaya false Vinaya, in the Abhidharma false Abhidharma." This signals a recognition of the circulation of texts of which the authors of this work do not approve, but which, evidently, were accepted by others, highlighting the fact that canonicity is an issue of claims toward authority.

Despite our tendency to refer to collections in Pali, Chinese, and Tibetan in the singular, as "*the* Tipiṭaka," "*the* Dazangjing," or "*the* Kanjur," in fact we know that these collections were always diverse in their composition. Moreover, the referents of the terms are frequently not what we expect them to be. In Southeast Asia, *Tipiṭaka* is often a blanket term for Buddhist literature, whether or not that literature would find a place in a collection of Pali *buddhavacana* (de Bernon, 2012, 379). In this sense *Tipiṭaka* "refers less to a collection of texts than to an ideological concept" (Bizot quoted by Hallisey, 1993, 105n2), and there are a large number of "allegedly non-canonical suttas" in Pali found in Southeast Asia (Hallisey, 1990, 1993; von Hinüber, 1996, §§ 436–437). These texts are characterized as "allegedly non-canonical" in view of the problematic nature of canonicity their existence and reception implies, although this designation is one applied by modern scholars, and thus signals first and foremost their discomfort with the tradition. This is not to say that such questions come only from without. In Burma, although the phenomenon may be older, "[d]ebates about the proper boundaries of Buddhist scripture characterise a significant proportion of seventeenth through nineteenth-century Burmese monastic writings." Although there was an awareness of the normative Sri Lankan Mahāvihārin framework for the parameters of the *Tipiṭaka* in Pali as established by Buddhaghosa, this was clearly not universally accepted (Lammerts, 2013, 120). Thus, while scholars acknowledge the existence of sectarian recensions of the *sūtras* in the Pali Nikāyas and Āgamas in Sanskrit and Chinese, and of the Vinayas, even when the exact sectarian identification of a given text may remain unsettled, it may be that even this picture is not sufficiently nuanced. Even the extant "Theravāda" *Tipiṭaka*, as transmitted in Sri Lanka and in Southeast Asia, does not necessarily represent a unanimous selection of all Theravāda stakeholders, although the main political rivals of the Mahāvihārin fraternity

> the Abhayagirivāsins used the same collection of sacred scriptures in Pāli which has been handed down to us by the orthodox Theravāda tradition of the Mahāvihāravāsins and which formed the

> common heritage of all of the three nikāyas, or sects of Buddhism, in mediaeval Ceylon. (Bechert, 1992, 96)

Similar is the often repeated claim that the Pali canon is the only extant "complete" South Asian canon. Understanding, however, the complexity of the actual situation, we can recognize both that the claim is in some respects true, and that it does not quite say what it seems to say. As a point of contrast, our Sarvāstivāda evidence, extant in sporadically preserved materials from Central Asia and in some Chinese translations, is so partial and fragmentary that even the existence of a recension of a text which, for instance, differs from that transmitted in Pali does not prove that all Sarvāstivādins had canonized that particular version. Likewise, our evidence does not allow us to speculate on what a "complete" Sarvāstivāda canon may have looked like, even if we assume that such a unitary thing ever existed at all. When we do have evidence for larger-scale collections, as with some Vinaya literature, in fact this evidence suggests precisely the opposite, namely the existence of multiple versions of texts belonging, at best nominally, to the same tradition. (There is, for instance, good evidence suggestive of variant versions of "the" Mūlasarvāstivāda Vinaya.) For works and collections identified as belonging to other groups, we are even less well informed. Therefore, given the extremely selective nature of the extant evidence, we must be very cautious about what conclusions can reliably be drawn from such partial data. When these data suggest anything, it is that canonization did not imply uniformity, even within what might, at least retrospectively and translocally, appear to be single lineages (sects).

Different canons have different scopes; the Pali canon as we have it preserves in principle not only Theravāda materials, but in fact only those associated with the politically triumphant Mahāvihārin lineage, to the exclusion of Abhayagiri and Jetavana materials (von Hinüber, 1996, § 43). The Tibetan collections, Kanjur and Tanjur, in principle collect only materials belonging to the Mahāyāna, or the Mūlasarvāstivāda, although they are drastically incomplete in the case of the latter, as it is really only the Vinaya which is represented; almost none of the *sūtras* or treatises of this school are preserved in Tibetan. One exception is the ten Mahāsūtras (Skilling, 1994; 1997), and another the *Arthavistaradharmaparyāya* (D 318/P 984), in addition to the voluminous quotations of *sūtras* which served as the sources for Vasubandhu in his *Abhidharmakośabhāṣya*, preserved in Śamathadeva's *Abhidharmakośopāyikāṭīkā* (D 4094/P 5595). There do exist references to a large-scale translation of collections into Tibetan – an *Ekottarikāgama*, *Dīrghāgama*, and seven Abhidharma treatises (Skilling, 1997b, 96) – but if these references reflect a historical reality, the translations themselves are not known to survive, and were certainly not included in any known Kanjur. Of the Abhidharma, only the **Lokaprajñapti* (D 4086/P 5587), **Kāraṇaprajñapti* (D 4087/P 5588), and ** Karmaprajñapti* (D 4088/P 5589) are available. The Tanjur however, it must be noted, also contains considerable material which at least modern scholars would classify as non-Buddhist, even the poet Kālidāsa's *Meghadūta* (Cloud Messenger), for instance, alongside such diverse works as dictionaries and Daṇḍin's *Kāvyādarśa*, a work on poetics. How and why such works were considered Buddhist enough to find a place in the Tanjur remains to be explained. The Chinese *Dazangjing* in contrast are truly nonsectarian collections, representing seemingly nearly all officially acknowledged Buddhist literature available in Chinese translation, although occasionally even more: the *Sāṃkhyakārikā* is also preserved in Chinese (*Jin qishi lun* [金七十論]; T. 2137; Takakusu, 1904), as is a Vaiśeṣika text (*Shengzong shi gouyi lun* [勝宗十句義論]; T. 2138; comp. Frauwallner, 1955), both works explicitly acknowledged in the enormously influential *Kaiyuan shijiao lu* (開元釋教錄; Catalogue of Śākaymuni's Teachings Compiled during the Kaiyuan Era), compiled by Zhisheng (智昇; 669–740) as non-Buddhist (T. 2154 [LV] 624a9–18).

A complement to the above-mentioned expansionist tendency, which recognizes as canonical materials not necessarily classified as such by certain normative sources, alongside the theoretical acceptance of a "standard canon," is the absence in many traditional monasteries of a "complete" set of authoritative scripture, however defined. This is true of most locations in the premodern Buddhist world, where monastic libraries rarely if ever contained manuscripts of the entire range of texts normatively regarded as canonical. In Laos, L. Finot in 1917 made a point that he could identify not a single monastery with full set of core texts of the Pali *Tipiṭaka*. The Abhidhamma was well represented, a fact he attributes to the practical function of these works as texts recited in funeral rites (perhaps in the form of a short collection, *Aphitham chet gamphi*). However, although certain monastery libraries in such areas may not contain a normatively defined

complete, or even substantially partial, collection of core and commentarial Pali texts, they will likely include a diverse range of scriptural materials locally regarded as authoritative, including Pali and vernacular *jātaka*s, cosmologies, historical narratives, Vinaya manuals, Buddha biographies, liturgical works, and so on. (Comp. Keyes, 1983, 272; McDaniel, 2008.)

This said, canons were not by any means neglected. In Burma, "[d]uring the seventeenth and eighteenth centuries it was common for Burmese kings to sponsor the copying of a new edition of the Piṭakat during their reign." This required demarcating those texts that were included in the category (which in all cases far exceeded merely the core texts and *aṭṭhakathā*), and an influential genre of Burmese literature, "Bibliographies of the *Tipiṭaka*" (*Piṭakat samuiṅḥ*), developed to realize that aim (Lammerts, 2013, 119n1). There is thus a tension between a tendency to concretize a "complete canon" and a complementary tendency to particularize, select, and, simultaneously, expand or constrict the borders of the canonical. This situation is not unique to Southeast Asia. There is no census of canonical collections, or of libraries at all, in premodern Tibet, and after the ravages of the Cultural Revolution, there never will be. But here and there we may find some hints. One such is found in a "guide to holy places" (*gnas yig*) compiled by Ka' thog si tu Chos kyi rgya mtsho in the early 20th century (Almogi, 2012). In his travels, this scholar found more than 169 sets of the Kanjur, of which at least 55 were manuscripts, and more than 35 Tanjurs, of which at least 4 were manuscripts. Almost none of this once rich literary heritage is known to have survived. We also learn from this survey that not every monastery could boast of its own copy of the Kanjur, much less the Tanjur as well.

In Tibet it was only the advent of printing, a technology learnt from China (and unknown for most of history in South and Southeast Asia), that allowed the standardization of some textual corpora; manuscript Kanjurs contain different contents, organized differently, although there are general trends toward unity. The role of political power here is plain:

> With the rise of the central Tibetan rulers who gained the leadership over Western Tibet in the sixteenth or seventeenth century, the canonical literature manufactured in central Tibet and in China began to spread all over the country, and was used as "standard," but it did not manage to completely supplant the local production of [Kanjurs]. (Lainé, 2009, 5)

The mere physical presence of texts in Tibet, however, is no more significant than it is in Southeast Asia, given that the texts might not have been made freely available, even to monks, on the one hand, and that there was little interest in the majority of the texts theoretically available, on the other. (This is a different question from what may be ideologically based restrictions, such as the prohibition against teaching the contents of the *Prātimokṣa* to laypeople, or restrictions placed on access to tantric literature, for which certain initiations, for instance, may be requisite.) In Tibet, even leaving the laity aside, monastic curricula require studies of a limited body of texts, almost none of which would qualify as "canonical" under normative definitions. Study is mostly restricted to textbooks (*yig cha*), or at most to a small number of treatises; even the Vinaya is not directly consulted, but studied through its systematic summary, the *Vinayasūtra* and its autocommentary of Guṇaprabha (preserved in Tibet in the Tanjur; D 4117, 4119/P 5619, 5621). In particular, *sūtra*s, although certainly acknowledged as the authoritative word of the Buddha, are rarely studied in Tibet and, apart from the ritual placement of Kanjurs on altars or the placement of texts inside images (see below), aside from *dhāraṇī* texts, they are rarely even used at all. This lack of general interest extends to scholars; although Tibetan scholars may cite scripture, in almost all cases they do so on the basis of previous citations in other works, ultimately going back either to anthologies (such as the *Śikṣāsamuccaya* or Atiśa's *Mahāsūtrasamuccaya*) or to traditional works which have earlier deployed the same scriptural citation as a proof or illustrative text (such as Candrakīrti's *Prasannapadā*; for a study of the 14th-cent. scholar Tsong kha pa's sources for his scriptural citations, see Langelaar, 2012). This distant relation to scripture may qualify as a form of de facto decanonization (see below).

Local Canonicity

In light of the fact that a "canon" may, on the one hand, have existed notionally, though not actually been accessible, while, on the other hand, materials not nominally included in a normatively standard canon were nevertheless also more or less freely available, and even elevated to a central position of attention and authority, it is evident that the concept of canon has been simultaneously deployed in more than one way. "Functional" canons have always been in use in almost any context (comp. Blackburn, 1999, 284, 303 on "practical canon"). Any canon must belong to a community: a text or body of texts is canonical only for some group. Therefore, any canon must be localized in time and space (geographical, in addition to social). Tensions may, but need not necessarily, arise, however, when a community asserts the canonicity of a body of literature which it nevertheless does not actually utilize. Categories such as "'functional canon,'" "practical canon," "curricular canon" or the like, however, assume the inherent priority of the inherited scriptural canon, which is honored only in principle. A distance between "notional" and "practical" canons is a sign of multiple communities and an inheritance by one group of persons of a value system initiated by others. As an example, Lao monks certainly knew that there were Vinaya texts that did not exist in their monasteries. These included core (*mūla*) texts, commentaries, manuals, and so on. They did not possess them, but would not dispute their authority. What they did have was a local collection, parts of the *mūla* texts, parts of commentaries, parts of manuals, and so on. This, then, was their "practical canon," the texts that were actually read and recited. We need not imagine either that these Lao monks felt that the texts available to them were deficient, or on the contrary that they were honoring texts not authorized by some central and higher authority.

That formal canons are absent does not imply the absence of canons. Every scriptural religious community at a given time and place holds a certain body of literature to be authoritative, whether that acknowledgment is made explicit or not, and the utilization of certain texts to the exclusion of others is one form of canonization. In this regard, the expression "protocanon" acts as an assertion of unity that functions, however, only retrospectively: "proto" in relation to "canon" invokes a community different than that which is the focus of the determination (full, mature) "canon" in question. Any appeal to "protocanon" is therefore inherently teleological. It is thus not historically helpful to speak of a "proto-Kanjur" as a "collection of canonical texts which aims at encompassing the maximum available canonical literature, but does not reach the extent of a [Kanjur] and lacks a systematic classification" (Lainé, 2009, 5). Such a formulation assumes that Kanjurs represent an inevitable result of a process, when the reality is rather that each collection is – or is not – deemed canonical in light of its local conditions, not as seen retrospectively in view of later developments – a chronological impossibility.

In many, if not most, cases, we cannot know why materials of evident value to one community were not shared by others. Scholars gloss over this question by referring to some materials as "local," but the only difference between a local text and a translocal one is that the latter was able to spread and be accepted and adopted outside its home range; all texts have a home range, so it is only their later history, not something about their nature, that qualifies them as "local" or as "translocal." Canonical collections such as a *Tripiṭaka*, *Dazangjing*, or Kanjur by means of their publication and circulation render their contents translocal, but prolific finds of texts not enshrined in collections – for instance, at Dunhuang – demonstrate how much has not been transmitted, in most cases without our having known even that it had once existed. We have no choice but to presume that these materials were once and at some place every bit as canonical, authoritative, and valued as materials much more familiar to us. This fact calls for our careful attention whenever we attempt to understand the scope of the canonical.

Albeit perhaps for different reasons, less historical than ideological, traditional sources are also clearly aware of losses of text. One of the most important statements about the authenticity of Buddhist scriptures is articulated by Vasubandhu in his *Vyākhyāyukti* (D 4061/P 5562), the arguments of which are rehearsed elsewhere, notably in Bhāviveka's *Tarkajvālā* (D 3856/P 5256; Eckel, 2008). Among the assertions of the Mahāyāna apologist Vasubandhu is that, just as in the Mahāyāna itself, in the Śrāvakayāna canon too – using the Mahāyāna terminology for the non-Mahāyānā scripture corpus – there once existed sermons of the Buddha which are now lost, and thus the Śrāvakayāna canon is incomplete (Horiuchi, 2007). At least part of Vasubandhu's argument is that the Śrāvakayāna canon is incomplete not only because there is reference to nonextant *sūtras* but also because it does not admit Mahāyāna *sūtras*, which were surely also preached by the Buddha. The **Mahāyānāvatāra* (*Ru dasheng lun* [入大乘論]; T. 1634 [XXXII] 37a) offers the argument that while Ānanda received some teachings from the Buddha, there are many he did not receive, those of the Mahāyāna among them (Horiuchi, 2007). For Bhāviveka in his *Tarkajvālā* (D 3856, 166b–167a; Eckel, 2008, 149), Ānanda did not memorize everything that the Buddha taught: "Therefore, the full teaching of the Buddha does not appear in

el, 2008, 149), Ānanda did not memo-
that the Buddha taught: "Therefore,
g of the Buddha does not appear in

the collection made by those who were taught by [Ānanda] and who collected [his teachings]." Following Vasubandhu, Bhāviveka recognizes not only the loss of texts legitimately taught by the Buddha, but the existence of variant versions of some that do exist, such as the *Mahāparinirvāṇasūtra* (D 3856, 168a; Eckel, 2008, 152). Moreover, Bhāviveka is well aware that different traditions pass along as *buddhavacana* different texts (D 3856, 166a; Eckel, 2008, 147), and even names texts which certain schools do not accept, or Vinaya rules which are found in some Vinaya traditions but not in others (D 3856, 167ab; Eckel, 2008, 153). An interesting parallel comes in a passage from Vasubandhu's *Abhidharmakośabhāṣya*:

> The Vātsiputrīyas do not take this text as authoritative. But why? They say: "The text which you cite from is not read in our sect." But, we ask, is it their sect that is authoritative, or the word of the Buddha? If it is their sect that is authoritative, then the Buddha is not their teacher, and they are not Buddhists. But if the word of the Buddha is authoritative, why is the text we cite from not authoritative for them? Because, they say, this is not the word of the Buddha. But why? They say: "It is not read in our sect." Now, this is unjustified. And what is unjustified here? Because to claim, as they do, that a text that is transmitted in all other sects and contradicts neither the *sūtra* nor the fundamental nature of things is not the word of the Buddha on the grounds that they don't read it, this is purely and simply inconsiderate. (Pradhan, 1975, 466.14–17; trans. Eltschinger, 2014, 199–200n26, brackets removed)

While Bhāviveka spoke of absent texts, many traditions emphasize a different sort of loss of text, namely that there once existed much more extensive versions of texts now available only partially. This may be especially evident with respect to some tantric literature, in which there was thought to be an "idealized tantric canon, replete with massive ur-texts, at the author's disposal" (Gray, 2009, 10). Access to this corpus was not limited to the past; rather there was a "pervasive notion that the true tantric canon exists in the heavens of pure lands, and that fragments of it are periodically revealed to exemplary individuals in fortunate human communities" (Gray, 2009, 11).

> One of the most important implications of the myth of the tantric canon is the idea that our knowledge of *tantras* is always fragmentary and incomplete, which leaves open the door to further revelation, and creates the space for the construction of a hierarchy to mediate access to the inaccessible store of wisdom. (Gray, 2009, 15)
>
> The collection of *tantras* that came to be the Bka' 'gyur [Kanjur] is thus replete with references to absent root *tantras*, with various texts that refer to a greater canon that exists not in this world, but was imagined by Buddhists as existing in the more glorious past, or in more glorious realms of reality. The myths of larger tantric canons bolstered the truly *conservative* efforts of scholars such as Bu ston [1290–1364] to preserve what they surely believed were fragments of a much larger, but largely lost (in this world and time period) tantric canon. (Gray, 2009, 21)

This concept is not limited to the *tantras*. In East Asia there is an idea of three variants of the *Buddhāvataṃsakasūtra*: a small version in our world, a large version with "a number of verses equivalent to the number of atoms in ten great trichiliocosms" and the number of characters equal to "the number of atoms in the world of Mount Sumeru," and a medium version with 498,800 verses and 1,200 chapters. The longer versions are retained in the Dragon Palace (*longgong* [龍宮]), the same location in which, tradition holds, the Perfection of Wisdom *sūtras* were preserved after being preached by the Buddha, to be revealed only centuries after his nirvāṇa (Rambelli, 2007, 116; Hamar, 2007, 139–140). (A similar idea of three versions of the Prajñāpāramitā of varying lengths is found in the *Da zhidu lun* [大智度論; T. 1509 (XXV) 756a28–b4], each intended for a different group of recipients according to life-span and strength of memory.)

Organization

Collections of Buddhist literature arrange their contents differently. There seems little doubt that the oldest arrangement of Buddhist literature was that into nine "branches" (*aṅga*). These divide the genres of literature into *sutta, geyya, gāthā, udāna, veyyākaraṇa, itivuttaka, jātaka, abbhutadhamma*, and *vedalla*. A further and later twelvefold classification (*dvādaśāṅga*), not found in Pali sources, adds three items: *nidāna, avadāna*, and *upadeśa*. The meaning of these categories is very far from clear. One thing that is clear, however, is that the first grouping, *sutta*, includes both what we think of as the *suttas*, sermons, as well as the Vinaya, the monastic code. (The most exhaustive treatment of this category is Maeda Egaku, 1964, 181–549 [sic!];

see also Lamotte, 1944–1980, V.2281–2304; von Hinüber, 1994.)

Another undoubtedly old arrangement is that into "Three Baskets" (Pal. *tipiṭaka*; Skt. *tripiṭaka*). The meaning of this term is also not altogether clear. One explanation refers to the expression that a preacher teaches what has been passed down in a lineage "basket-wise" or "according to tradition" (*piṭakasampadāya*; MN i.520,10). When, however, the set was fixed at three is not known.

While the reference is not datable (but the text belongs to 1st-cent. CE Sri Lanka; von Hinüber, 1996, § 42), the "appendix" (*Parivāra*) to the Pali Vinaya (Vin v.3,14) mentions a monk as very wise and a *tipeṭakin*, probably meaning that he is conversant with the three divisions of scripture. (There may be an analogy with the term *trivedin*, one who knows by heart the three Vedas.) In terms of fixed chronology, the first attestation of a related term is much older, found in an inscription of the 2nd or 1st century BCE at the stūpa site of Bhārhut in central India, which characterizes a noble (*ārya*) as *peṭakin* (Lüders, 1963, § A 56), which may indicate familiarity with one of the divisions of the *tripiṭaka*, although there is no reference here to any such threefold division. The word *trepiṭaka* itself is, however, found in 129/130 CE on an inscription from Sarnath which so labels two monks (Salomon, 1998, 270–272). In a 159/160 CE Mathurā inscription, we find not only a monk but also a nun given the same title (Lüders, 1961, § 24; Schopen, 1988–1989, 243–248). Slightly later, in the early 3rd century CE, we find the title again on the so-called Brussels Buddha of 231/232 CE (Fussman, 1974, 54–58), but it seems to virtually disappear from the inscriptional record thereafter. The attribute *trepiṭa* found in the *Divyāvadāna*, and almost certainly originally belonging to the Vinaya of the Mūlasarvāstivāda (Silk, 2008, 144), may have a similar meaning, but it is in any case a rare form. There is no indication from these references, however, either to content meant to be encompassed by the category of "*tripiṭaka*" or precisely what is meant by the term *peṭakin*/*trepiṭaka*, which grammatically suggests an individual who has done something with a *piṭaka* or the/a *tripiṭaka*. There is no necessary suggestion, in particular, that this indicates that the individual in question has committed some body of text to memory, let alone the "canon" as we know it – even leaving aside the question of what the contents of the more limited body of texts in question might be. A possible indication of the scope of a "canon" at an early period is, however, provided by inscriptions at Bhārhut and at the stūpa sites of Sāñcī and Pauni which, rather than invoking a three-fold division, use the term *pañcanekāyika* (Lüders, 1963, § A 57; Majumdar, 1940 I.324, #242; Kolte, 1969, 171–173), an apparent reference to five *nikāyas* (under the term which becomes current in Pali, rather than Skt. *āgama*). (Lamotte, 1958/1988, 157/143 suggests that the reference is to '"the canonical doctrine as a whole,"' but without proper grounds.) Terminology which might be (but is not necessarily) more precise includes *sūtradhara* and *vinayadhara*, (up)holder of *sūtra* and *vinaya*, respectively. The latter at least is attested in mid-2nd century CE, at the stūpa site of Amarāvatī (Sivaramamurti, 1942, #25 [*mahavinayadhara*], #70). Much earlier at Sāñcī we find the term *bhāṇaka* (reciter; Majumdar, 1940, I.353, #529), but again, the scope of its meaning is not clear. (For all such inscriptional citations, it is very convenient to refer to Tsukamoto, 1996; 1998; 2003.)

With the exception of what has come down to us as the Pali canon, we do not have direct evidence for even the existence of canons belonging to other sects or schools of Indian Buddhism, nor good indications of the contents or organization of those putative canonical collections. The *sutta* portion of the *Tipiṭaka* in Pali is organized into collections by length (*Dīghanikāya* [Long Discourses] and *Majjhimanikāya* [Middle-Length Discourses]), by number (*Aṅguttaranikāya* [Numerical Discourses]), grouped by topic (*Saṃyuttanikāya* [Connected Discourses]) and minor texts (*Khuddhakanikāya* [Miscellaneous Discourses]). It is, again, not known how old these classifications might be, but the term *Ekottarikā* is known in Gandhari sources from the first half of the 1st century CE (Baums, 2009, 513), though again, we cannot know what form such a collection may have taken. We do know through comparison of Pali collections with those preserved in Chinese that even when individual *sūtras* may find parallels, the organizational structures within which they are found often differ: individual texts preserved in one collection in Pali may be found in another, not otherwise corresponding, collection in Chinese. The parallel to a Pali *sutta* found in the the *Aṅguttaranikāya* may thus appear rather in a Chinese *Saṃyuktāgama*, a comparison made all the more problematic by the fact that the four Āgamas preserved in Chinese belong to different sects and were apparently originally composed in different languages: the *Dīrghāgama* (*Chang ahan jing* [長阿含經]; T. 1: Dharmaguptaka), *Madhyamāgama* (*Zhong ahan jing* [中阿含經]; T. 26: [Mūla]

Sarvāstivāda), *Saṃyuktāgama* (*Za ahan jing* [雜阿含經]; T. 99: Sarvāstivāda), and *Ekottarikāgama* (*Zengyi ahan jing* [增壹阿含經]; T. 125: Sarvāstivāda).

This tendency away from parallelism may go further: in the *Ekottarikāgama* there may be a

> general tendency...to present as a canonical discourse what in the Theravāda tradition is only found in commentarial literature.... the *Ekottarika-āgama* clearly remained open to the inclusion of later stories to a greater degree than the Pāli *Nikāyas* and other Chinese *Āgamas*. (Anālayo, 2014, 120)

In addition to the Pali and Chinese collections, we also have a largely intact Sanskrit *Dīrghāgama* affiliated with the (Mūla)Sarvāstivāda (Hartmann and Wille, in Harrison & Hartmann, 2014), the contents of which, however, do not wholly agree with either the Pali *Dīghanikāya* or the *Chang ahan jing*.

The historical diversity of the Vinaya collections is similar, except that here we have slightly more diverse material available. With the exception of a portion (the Skandhaka) of the collection belonging to the Mahāsāṃghika tradition, the bare structure and rule content of the other extant Vinayas largely agree with each other. Note however that "even the formation of the Prātimokṣasūtra texts was not completed in the first or even second centuries CE, but seems to have undergone substantial changes in the process of writing down" (Strauch, 2014, 820). The same scholar stresses the importance of writing in the development of the Vinaya literature, saying the early Gandhari manuscript he studied belongs to

> a state when a living oral tradition, which was rooted in a distinct local or probably regional context, was confronted with a growing production of written texts, which somehow petrified these local versions and distributed them into different contexts. The process of harmonisation had of course to take place between the oral versions and the written texts and between the different written texts themselves. Only such a process could eventually result in the emergence of generally accepted and supraregionally used canons with a codified and authoritative textual shape. (Strauch, 2014, 825)

Where the extant Vinayas do not agree is, most notably, in their narrative content, which constitutes the bulk of most of the Vinaya literature. It is a conceit of the Vinayas that they represent case law: they recount, in explanation of their rules, how the Buddha was presented with a problem, concerning which he then issued a ruling. The stories told to provide the background and context for this ruling are, in contrast to the rules themselves, significantly variable, and in many cases it cannot be that they go back to a common source. A part of the Vinaya of the Mahāsāṃghikas is organized significantly differently, although it too contains largely the same basic rule content (Clarke, 2004). It is also of importance to recognize that *sūtras* were both extracted from their original home in the Vinaya and, on the contrary, embedded in Vinaya texts from an originally Āgamic source, this speaking again to questions of the fluidity of the organizational principles of Buddhist canons (Yao, forthcoming; von Hinüber, 1996, §§ 67, 80).

Concerning the Abhidharma, we have quite little information, but what we do know suggests a much wider diversity than is the case with either the *sūtras* or the Vinayas. Given the even basic disagreement over the extent to which the Abhidharma is to be considered *buddhavacana*, this is understandable. While both the Pali and Sarvāstivāda Abhidharma collections contain seven works, on the text level there is virtually no overlap between these collections, although naturally the general content is largely in agreement. In this respect, we should note that while there are sectarian recensions of *sūtras*, there are no known cases of sectarian versions of any treatise (*śāstra*); even when there exist distinct treatises with the same title (such as the *Abhidharmasamuccaya*, of which two distinct texts are now known), they are not historically related, much less sectarian variants of a common core.

While there certainly are correlations between the contents of various collections both in Indic language sources and in translations (primarily in Chinese), such that it is possible to line up, for instance, an individual *sutta* in Pali with a Chinese parallel, it is not just the contents of the particular Nikāya-Āgama complexes that differ; the overall organizations of the respective collections themselves are quite different. Although a word equivalent to *tripiṭaka* exists in Chinese (*sanzang* [三藏]), Chinese canons from the earliest period of their compilation were organized on different principles, based first of all on a separation of Mahāyāna and Hīnayāna scripture, and only then into the three categories of *sūtra* (*jing* [經]), Vinaya (*lü* [律]), and treatises (*lun* [論]). The overriding category is therefore the polemical duality of Mahāyāna and Hīnayāna, rather than the "three baskets." The *Kaiyuan shijiao lu* contains the following main headings of translated works:

1. Bodhisattva (i.e. Mahāyāna) works:
   a. Sūtra:
      i) Prajñāpāramitā
      ii) Ratnakūṭa
      iii) Mahāsaṃnipāta
      iv) Buddhāvataṃsaka
      v) Nirvāṇa
   b. Vinaya
   c. Śāstra
2. Śrāvaka [i.e. Hīnayāna] works:
   a. Sūtra
   b. Vinaya
   c. Śāstra

In Tibetan the difference is even more stark. Again, an equivalent for *tripiṭaka* exists (*sde snod gsum*), and is used in exegesis, for instance in Mkhas grub rje Dge legs dpal bzang's (1385–1438) discussion of the structure of the Buddha's preaching, which includes this threefold analysis (Lessing & Wayman, 1968, 56–57). However, the actual Tibetan collections (Kanjur [*bka' 'gyur*] and Tanjur [*bstan 'gyur*]) follow another organizing principle, related historically to the Chinese model in some respects, but again not on the highest level. What is attributed to the Buddha is separated from what is not (*bka' 'gyur* means "translated [Buddha's] word" and *bstan 'gyur* "translated treatises"). Placing together the Sūtra and Vinaya as the word of the Buddha, internally the Kanjur is divided into Sūtra (with almost no non-Mahāyāna content), Vinaya, and Tantra (a category unknown in Chinese collections, although tantric texts were translated and composed in China). The *sūtra* section is further subdivided along largely Chinese lines, while the Tanjur is divided largely doctrinally, into categories such as Madhyamaka, Cittamātra (Yogācāra), Logic and Epistemology, and so on. The arrangement of materials in the Kanjur Tantra sections in particular differs among various Kanjurs, again for doctrinal and sectarian reasons.

Preservation

This sketch of the canons in Pali, Chinese, and Tibetan might lead to an impression of a greater uniformity than actually existed. It has been stressed above that Pali canons were characterized by a certain fluidity, and it was, in part, this fluidity that contributed to the perceived necessity for a series of Councils, during which (among other discussions) revisions to the theretofore accepted canon were debated. Councils, whether historical or notional, are moments of assertions of canonical authority. (It is doubtless for this reason that the 14th-cent. Tibetan scholar Bu ston and others report the idea of a council, simultaneous with the well-known First Council, at which the Mahāyāna *sūtras*, Vinaya, and Abhidharma were recited [Lamotte, 1944–1980, II.939–942; Davidson, 1990, 308].) While earlier Councils in South and Southeast Asian Buddhism may be of dubious historicity, at least those of 1477/1478 in Chiang Mai and 1788/1789 in Bangkok (von Hinüber, 1996, § 199), as well as the two most recent Councils, the Fifth and the Sixth (respectively held in 1871 in Mandalay, and 1954–1956 in Rangoon), are certainly historical. The Fifth, under the sponsorship of King Mindon, and at which only Burmese monks were in attendance, was meant to approve the inscription of the text of the core of the *Tipiṭaka* (without commentaries) placed onto 729 stone stelae at the Kuthodaw Pagoda at the foot of Mandalay Hill; editorial work was initiated by Mindon in 1856, texts were copied onto palm leaf, and subsequently inscribed on stone during the period 1860–1869, and the Council was held in 1871. The Sixth was sponsored by the Burmese government, and the results were published as the Sixth Sāsana Council edition beginning in 1956; this edition has been broadly influential in the Theravāda world (an influence which continues with its wide circulation in print and electronically by the Vipassana Research Institute [http://www.tipitaka.org/]). In 1962 there began to appear a modern Burmese translation of the whole of the core texts, which remains incomplete (as of 2014 seven texts remain). The basic motivation for such projects in Burma was always the preservation of the texts from their predicted disappearance and the attendant demise of the teaching (the Sixth Council being held at the exact midpoint of the predicted 5,000-year life-span of the Buddhist teaching, i.e. 2,500 years after the Buddha's nirvāṇa). The Sixth Council was directly motivated by this belief, with the Sixth Council editions containing an introduction explicitly stating this.

Although efforts have been made to preserve the teachings against the predicted end of their circulation in this world (see below), no such Councils are recorded to have been held elsewhere in the Buddhist world. In contrast, what one encounters in East Asia and in Tibet is the compilation of, in the first place, catalogues of scriptures, and then, after the 11th century, a series of woodblock printed editions, the existence of which contributes to standardization and preservation. In China, the Tang-period catalogues, in the age of manuscripts, can be seen as

age of manuscripts, can be seen as

prescriptive, while after the 10th century, with the rise of printing, such catalogues become descriptive (Tokuno, 1990, 32). Earlier however, and alongside the existence of printed editions, *Dazangjing* and Kanjurs were produced by hand, and there were often considerable differences between copies, both in terms of organization and contents, not to mention the actual literal readings of the texts they contain. In China, a significant number of editions of *Dazangjing* were produced, while in early Japan the case may have been even more extreme. "[T]here was no single Buddhist canon in ancient Japan; each was created at a particular moment in a unique configuration to respond to the needs of the patron and the monastic community" (Lowe, 2014, 224). The term *issaikyō* (一切經), which refers literally to "the entirety of the *sūtras*" and is treated as a synonym of *Dazangjing* (attested at least as early as the 5th cent. in a Dunhuang manuscript, S. 996), is to be understood in Nara-period Japan as "all the scriptures available," rather than a particular collection of texts (Lowe, 2014, 225). Although the *Kaiyuan* catalogue was the structural basis for such canons, the listing of texts in this catalogue (in its *Ruzang lu* [入藏錄]) was itself rewritten in Japan (Lowe, 2014, 231), an astonishing intervention in the inherited orthodoxy. It should not be overlooked that the copying activities referred to here took place in a political climate: in 7th–8th-century Japan,

> the decision to copy the canon came at a time when the patron needed to demonstrate newly gained power. Canon copying by royals from this early period, therefore, functioned within the broader Buddhist and non-Buddhist symbolic strategies of legitimation employed by the court at this time. (Lowe, 2014, 229)

While most Chinese canons were official projects, this was not always the case. There were both public and private canons, and their contents could differ: for instance, the Jiaxing (嘉興; 1598–1712) private edition contained more Chinese compositions than did the Tang official canon. Moreover, "it was not before the Sui dynasty that there was a 'Chinese manuscript canon' in a proper sense, even if the first manuscript copies of the entire canon produced by imperial order date to the Six Dynasties period," a fact which shows "the close relationship existing between the birth of the canon and the process of bringing Buddhism under the control of the state, in full swing during the 6th century, especially in North China" (Zacchetti, forthcoming).

A further contrast between the Tibetan and Chinese canons is that while the former in principle preserves only a single translation of a given text, Chinese canons generally attempt to include all known translations. Texts were certainly translated into Tibetan more than once, but as a result of this self-conscious policy, perhaps introduced by the 14th-century polymath Bu ston (Skilling, 1997b, 100n96), only a single version was included into a Kanjur or Tanjur in almost all cases. We know of the existence of alternate versions in Tibetan from references to their translation, from quotations, and in some cases from the adventitious preservation of such translations themselves, for instance in Dunhuang. A number of *sūtras* appear to have been translated from Chinese before Indic versions were available, but it seems that after the Tibetans gained direct access to a text from India, they no longer were interested in the (re)translations from Chinese. In a number of cases, such translations were made from *sūtras* actually composed in China (Li & Silk, forthcoming; and see below).

The case in China was quite different with respect to the preservation of multiple translated versions. Virtually all versions of a given text were preserved in principle (although catalogues suggest that much was lost as well). Careful comparison of multiple Chinese translations of the same text reveals the extent to which translators certainly closely studied the work of their predecessors, and utilized it to a greater extent than might at first be obvious. Even the work of the giants of Chinese Buddhist translations, Kumārajīva (334–413) and Xuanzang (玄奘; 602–664), reveals their profound debts to earlier translators (Harrison, 2008). Catalogues confirm that texts were, when recognized as variant translations of the same original, felt to correspond, being noted as "the same" (*tong* [同]). It is possible that the Chinese tolerance for multiple alternate versions is based on an approach to the source text somewhat different from that which held sway in Tibet. The Chinese may have sought the Buddha's message in as many forms as possible, while the Tibetans preferred to focus on an authoritative version, although it must be noted that the pattern applies not only to scripture, and to Vinaya (of which several distinct versions were translated in Chinese), but also to treatises. The Chinese canons commonly preserve multiple versions of such treatises, which is almost never the case in Tibet. Tibetan scholars, however, were perfectly aware of Indian textual fluidity, and took it into account in their translating and editing efforts. We know that in the Indian sphere, multiple versions of scriptures could circulate at the same place and time, as demonstrated vividly by the case of the *Bhaiṣajyagurusūtra* found at Gilgit (Schopen, 2009). Tibetan scholars note how, in revising translations, they made use of Indian manuscripts which contained variant readings to those used by the original translators of the Tibetan version. They dealt with this variety by editing and revising, while the Chinese for the most part preserved separate versions, related though they might be. Tolerance for a certain flexibility of wording or even structure in texts does not, however, necessarily imply the total absence of concern with exact wording in every case or in every context. Stories in Japanese *setsuwa* (説話) or tale literature, for instance, emphasize the importance of letter-perfect recitation of the *Lotus Sūtra*, thus both promoting and assuming an invariant shape of "the" text, in casu Kumārajīva's translation in the form of the *textus receptus* current in medieval Japan, as illustrated by the story of Kusakabe no Saru (日下部猿) in the *Nihon Ryōiki* (日本靈異記; Watson, 2013, 38). At the same time, much of the apparent uniformity we do perceive, not only in Indic texts – for which we may have very few witnesses, all stemmatically related to each other – but also for example in Chinese text transmissions, is probably due precisely to our poverty of evidence; so much has been lost that the tradition appears to us to be more monolithic and stable than it actually was. That the tradition itself expresses concern with textual corruption, even from a relatively early period, is attested in the Mūlasarvāstivāda Vinaya's story of a monk reciting a verse incorrectly and nonsensically. His own preceptor rejecting the correction offered by the Buddha's direct disciple Ānanda, the monk continues to recite the meaningless verse, and, thoroughly disgusted, Ānanda deems it time to enter nirvāṇa (Brough, 1962, 45–48). This story also bears witness to the anxiety, already evident at this stage of the tradition, over the future loss and decay of the teachings. But variety, as noted above, need not originate in error; it is often an integral part of the textual tradition ab initio, this only magnified in the translation and transmission process.

Relatively early on in Chinese Buddhism, as a way of coming to terms with multiple versions of a single text, synoptic editions (*heben* [合本]) were prepared, through which Chinese exegetes tried to get close to the meaning of a text by comparing different translations (Zürcher, 1959, 99–100). There are also a number of examples of attempts in various regions of the Buddhist world to establish, in something approaching a scientific fashion, forms of texts which reveal an awareness of textual change, and the need for textual criticism. In fact, most canon projects require, explicitly or implicitly, a form of textual criticism, and some of the results of those processes have been recorded. One dramatic example is found in the notes of the 13th-century Korean editor Sugi (守其; Buswell, 2004), who collated the texts for the so-called Second Koryŏ edition in his *Koryŏguk sinjo taejang kyojŏng pyŏllok* (高麗國新雕大藏校正別錄; Supplementary Record of Collation Notes to the New Carving of the Great Canon of the Koryŏ Kingdom; K. 1402). In the course of his collation project Sugi frequently criticizes and corrects the authoritative *Kaiyuan shijiao lu*, arguing for the establishment of texts on remarkably modern-sounding philological grounds. A somewhat different task was taken up by an 18th-century Mongol scholar, probably A lag sha Ngag dbang bstan dar (alias Bstan dar Lha ram pa; 1754-1840), who collated, in the first place, the Narthang Kanjur, comparing it with the editions of Urga, Cone, Derge, and Peking (Anonymous, 1982; the work is found at TBRC W00EGS1016292; see Damdinsuren, 1983).

As mentioned above, in another contrast to the intentionally sectarian organization of the Tibetan canons, from which non-Mūlasarvāstivāda material was in principle excluded, the *Dazangjing* was seen as a homogeneous collection, in that materials with demonstrably diverse sources, from a sectarian or other point of view – as for example the above-mentioned four collections of Āgamas – are nevertheless treated on even ground. When they are treated differentially, the basis for this is doctrinal, as demonstrated in the various *panjiao* (tenet classification [判教]) systems (in general, Mun, 2006).

The first to have presented such a system may have been the monk Daosheng (道生; 317–420), a disciple of the famous Kumārajīva (Hu, 2014, 70), but a number of systems competed over time; as the author of the most influential system, the Tiantai (天台) founder Zhiyi (智顗; 538–597), noted, there were three such systems in southern Chinese Buddhism, based on the chronological order of Buddha's preaching (the Three Periods [三時], Four Periods [四時], and Five Periods [五時]), while in the north there were seven systems (Hu, 2014, 71). The chronology of the Buddha's preaching is considered here to be of utmost significance, with priority placed on his last and final teaching. This contrasts with at least some Indian interpretations of the stock phrase introducing *sūtras*, "at one time the Blessed One . . .": some commentaries suggest

ase introducing *sūtras*, "at one time
e…": some commentaries suggest

that no specific indication of time is given because the exact time is not of importance, but clearly Chinese exegetes disagreed. Zhiyi himself in his *Fahua xuanyi* (法華玄義; T. 1716) arranges the Buddha's teaching into five phases:

1. Buddha's first preaching, the *Buddhāvataṃsaka-sūtra* for all disciples (3 weeks);
2. the *Āgama* for Hīnayāna generally (12 years);
3. the *Vaipulya* (*Fangdeng jing* [方等經]) for Mahāyāna common teaching (8 years);
4. the *Prajñāpāramitāsūtra* for Mahāyāna special teaching (22 years);
5. the *Lotus* and *Nirvāṇa Sūtras*, for the perfect teaching of Mahāyāna (8 years; Hu, 2014, 82).

Different *panjiao* systems advocate different final and ultimate teachings, even while acknowledging the validity of all the Buddha's teachings. For Jizang (吉藏; 549–623), all Mahāyāna *sūtras* display the path without ever the slightest difference (*Fahua xuan lun* [法華玄論]; T. 1720 [XXXIV] 378c14–15; and *Fahua yishu* [法華義疏]; T. 1721 [XXXIV] 518c16; Hu, 2014, 89). In contrast to this perspective, however, many believed that the scriptures could be arranged into hierarchies of importance.

Decanonization

De facto functional canons, as groupings in which some texts receive attention while others do not, are probably ubiquitous. But a more specific tendency is the generation of a self-conscious focus on a limited body of literature, a narrowing of attention which sometimes has extreme results. This process of focusing perforce excludes other materials, and while it need not, in some circumstances it can, be understood as "decanonization," namely, the logical opposite of canonization, with the difference that decanonization begins with an assumption of canonicity: otherwise, disregard of some work or text is simply benign neglect. Decanonization is a more violent and aggressive process.

We do not know how decanonization functioned in Indian Buddhism. What evidence we have suggests, for example, that Mahāyāna Buddhists, while vastly expanding the realm of the canonical with new scripture production, did not reject outright, or explicitly contradict, the existing body of scripture; to do so indeed would have constituted a rejection of Buddhism tout court. Rather, they both reinterpreted this material (through categories such as the above-mentioned "skillful means"), incorporating and reemphasizing elements (the central doctrine of emptiness, for instance, is a logical extension of pre-Mahāyāna ideas), and otherwise simply disregarding or ignoring some things. Mahāyānists did, however, have to face the rejection of their own textual productions by non-Mahāyānists, and not only early on. The Pali anthology *Sārasaṅgaha*, which may belong to the 13th or 14th century (von Hinüber, 1996, § 385), rejects Mahāyāna *sūtras* and *tantras*, even by name, as "not the word of the buddha," (*abuddhavacana*; Sasaki, 1992, 46,6–11), demonstrating thereby a familiarity with this literature in some detail. Mahāyāna texts themselves frequently report their own rejection (as a class), as we see for instance in the *Sandhinirmocanasūtra* (VII.22–23), which reports the accusation that "[t]his is not the word of the Buddha; this has been said by Māra" (Tola & Dragonetti, 1996, 234–236; and elsewhere for other examples from a wide variety of sources). Theravāda sources, at least as far back as the *Samantapāsādikā* commentary on the Vinaya (Sp iv.742–743), criticize what they call the *Vedaḷapiṭaka* or *Vedallapiṭaka*, again characterized as not the word of the Buddha (*abuddhavacana*), this being generally understood also to be a reference to Mahāyāna teachings (Skilling, 2013b, 89, with notes). At least one polemical context of this is clear, in that the Mahāvihārins deploy this criticism against their rivals the Abhayagiri monks for using texts of the *vetullavāda* (extensive doctrine). The role of political power here is clear:

> Later triumphalist chronicles [such as the 14th-cent. Singhalese *Nikāyasaṃgrahawa*] condemn with increasing vehemence the heresy of these unacceptable texts, and tell of repeated book-burnings by pro-Mahāvihārin kings. (Collins, 1990, 98)

A different type of decanonization can be seen in the case of the *Mahāvastu*, a portion of the Mahāsāṃghika-Lokottaravāda Vinaya. Like other such texts, it is full of stories, and comes, rather late, to be called an *avadāna*, a collection of story literature, erasing its identity as a Vinaya text (Tournier, 2012, 92–93).

Specific texts, as well as classes of texts, can be explicitly rejected as well, sometimes with great energy. In the late 8th century, the monk Kaimyō (戒明) brought to Japan the ten-fascicule *Śūraṃgamasūtra* (*Da foding jing* [大佛頂經], from Chn. Great Scripture on the Buddha's Crown), which a group of monks demanded be burnt because they rejected its authenticity, this taking place in the context of a doctrinal debate between Sanron (三論) and Hossō (法相) school monks over emptiness (Lowe, 2014, 243–244). Sometimes the opposition is not quite so fierce. The *Renwang boruo boluomi jing* (仁王般若波羅蜜經; Perfection of Wisdom Scripture for Humane Kings; T. 245) is of great importance in East Asia, but that did not prevent Emperor Wu of the Liang (梁武帝; 464–549) from declaring that "it is already widely recognized as an apocryphal *sūtra* (*yijing* [疑經]), so I will set it aside and not discuss it" (T. 2145 [LV] 54b19–20; Swanson, 1998, 251; Orzech, 1998, 75). Just what should be accepted remained a contentious issue into modern times, as demonstrated by debates at the dawn of the 20th century in Japan over the status of the Mahāyāna as the teaching of the Buddha (*Daijō hibussetsuron* [大乘非佛說論]; Sueki, 2005). These discussions, however, are at least as old as the early Mahāyāna, as discussed above, and were theorized already by Indian scholastics.

Although not a rejection of scripture as such, much less one of specific scriptures in the fashion just described, a different approach to a normative vision of canon can be noticed among Indian Buddhist philosophers, particularly Dharmakīrti, albeit in an abstract, theoretical mode.

> [W]hereas early Yogācāra views scripture as a means of proof working additionally but co-equally to perception and inference, the epistemologists deny scripture any probative value, at least as far as the empirical sphere is concerned. (Eltschinger, 2014, 198)

Before the 6th century CE, at least ideally arguments were offered on the dual bases of reasoning (classified most compactly as perception and inference, *pratyakṣa* and *anumāna*) and scriptural authority, *yukti* and *āgama*, respectively. However, appeals to the authority of Buddhist scripture avail only if one's opponent is equally a Buddhist, accepting the authority of such scripture. It is for this reason – namely that their opponents are non-Mahāyāna Buddhists – that in principle many Mahāyāna treatises rely for their proof texts on Āgamas, rather than Mahāyāna *sūtras*, and it is possible to speculate about the imagined opponent of a certain argument in part on the basis of the sort of evidence deployed on its behalf. (However, it is also a pattern that some argumentation begins with reference to non-Mahāyāna sources, but ends with Mahāyāna *sūtras*. "[I]n [Candrakīrti's] *Prasannapadā* . . . chapters . . . usually begin with Nikāya scriptural sources justifying the counterargument at the beginning, which are generally contrasted with the Mahāyāna *sūtra* passages marking a triumphant end. Thus, this pattern structurally signifies the supersession of Nikāya Buddhist scriptures by their Mahāyāna counterparts" [Li, 2012, 185].) Dharmakīrti goes further by engaging not with fellow Buddhists but with outsiders. For him, moreover, as a partisan of reason, authority cannot come even from authoritative persons (see above), and thus scripture in itself can only be reliable with regard to the supersensible realm. Once scripture is proved reliable in realms in which reason applies (through direct perception and inference), then and only then are we authorized to accept its claims about domains which remain beyond our ken. As a Buddhist, Dharmakīrti cannot explicitly reject the word of the Buddha, but he goes very far along the path toward so doing (Eltschinger, 2014, 201). This stance, moreover, finds some sanction in considerably older sources, such as a verse in the *Buddhacarita* of the 2nd-century CE poet Aśvaghoṣa, in which the Buddha is made to say:

> Clever people should accept what I say after putting it to the test, just as they accept gold after testing it by melting it, scratching it and scraping it on whetstone. They should not believe what I say out of deference to me. (*Buddhacarita* 25.45, rephrased by Śāntarakṣita in his 8th-cent. *Tattvasaṃgraha* [Shastri, 1981–1982, 1063,18]; trans. Hayes, 1984, 664; Eltschinger, 2014, 215)

Whether through direct appeals to the Buddha's criteria or not, many in positions of power throughout Buddhist history rejected materials some others were willing to accept as scripture. Some control over acceptable scripture involves what lawyers might call "prior restraint." During the reign of King Khri gtsug lde btsan (Ral pa can; r. 815–838), by royal edict the Tibetan court forbade translation of any non-Mūlasarvāstivāda Śrāvakayāna texts, saying "it was prescribed that the Hīnayānistic Scripture other than that acknowledged by the Mūlasarvāstivādins and the secret charms [*dhāraṇī*] were not to be translated" (Obermiller, 1932, II.197, modified; Vogel, 1985, 109–110; Szerb, 1990, 46.6–9, and n8). In spite of this sectarian restriction, Tibetan Kanjurs contain 13 Theravāda texts, with a few further examples found as well in the Tanjur (Skilling, 1993). In the commentary on the *Mahāvyutpatti*, the bilingual glossary compiled to assist in the systematization of translations from Sanskrit, the *Sgra sbyor bam po gnyis pa* (On Word-Compounds in Two Volumes), written during the reign of King Sad na legs (c. 800–815 CE), the translation of tantric works was prohibited without special permission: "[H]enceforth with regard to

dhāraṇīs, mantras and tantras, unless permission for translation is given, tantras and mantra expressions are not permitted to be collected and translated" (Ishikawa, 1990, 4; Snellgrove, 1987, 443). Sometimes the perceived risk is stated explicitly: in the Ordinance (*bka' shog*) of King Ye shes 'od of approximately 985 CE, the ruler says that the false doctrine (*chos log*) of the Rdzogs chen, identified by its opponents with the tradition of the Chinese Chan monk Hva shang (< Chn. *heshang* [和尚], "monk," properly named Moheyan [摩訶衍], Mahāyāna) rejected at the so-called Bsam yas debates in the 8th century, was able to flourish in Tibet due to the deterioration of rule of law (*rgyal po'i khrims*; Karmay, 1980, 156). This statement demonstrates a conscious awareness of the role of authority and power in enforcing canonicity.

Choosing to ignore some texts is one thing. Decanonization proper concerns not the mere rejection of certain texts but their wholesale refusal. One example can be seen in the reception accorded "Old Tantras" of the Rnying ma in Tibet (see below), and again from the official prohibition against publication of a modern Burmese translation of the *Lotus Sūtra* (from Kern's English; personal communication from U Bo Kay, Pagan, 1982). This differs importantly from the focus seen, for instance, in some East Asian traditions, which direct the bulk of their attention to an attenuated body of literature. Pure Land traditions such as the Japanese Jōdoshin shū (淨土眞宗) concentrate on the so-called Pure Land Triple *Sūtra*, the Larger and Smaller *Sukhāvatīvyūha sūtras* along with the *Guan Wuliangshou jing* (觀無量壽經; T. 365), and a few other works. But as the magnum opus of Shinran, his *Kyōgyōshinshō* (教行信證; more fully *Kenjōdo Shinjitsu Kyōgyōshō Monrui* [顯淨土眞實教行證文類]; T. 2646), replete with extensive scriptural quotations, so dramatically demonstrates, at least the masters of the tradition in no way ignored other literature. Moreover, even a rhetoric of rejection can be deceptive.

An often cited "catch phrase" of Chan Buddhism claims that it is a tradition of "A separate transmission outside the teachings; not dependent on words, it directly points to the human mind, enabling one to see one's nature and become a buddha" (教外别傳 不立文字 直指人心 見性成佛). The first line of this verse is probably earliest found in a text of 952 (in the *Zutang ji* [祖堂集; Anthology of the Patriarchal Hall]; Foulk, 1999), and only later attributed to the putative founder of Chinese Chan, Bodhidharma. What is most important, however, is that there is a historical context for this apparent rejection of scripture, or seeming radical decanonization, namely, that the claim occurs in a context of contention for court patronage, a battle the Chan lineage eventually would win. The teachings (*jiao* [教]) rejected here refer to the Tiantai lineage, and its tradition of scriptural exegesis. The Chan claim is that by creating buddhas it provides direct access to awakening and buddhahood, whereas its opponents the Tiantai offer no more than secondary and textually mediated access. However, when we recall the considerable attention given texts such as the *Laṅkāvatārasūtra* by Chan scholars, and their own massive textual production (mocked already in the 13th cent. within the tradition through a homophonous play on *bu li wenzi* [不立文字, "not dependent on words"], reading it as 不離文字, "never separated from words"; Schlütter, 2004, 181–182), we see this famous expression of "decanonization" in a different light. The Chan tradition does not, even theoretically, reject scripture or teachings. Rather, it argues for the greater legitimacy of its own transmissions, and thus its greater qualification for state patronage and support (see Foulk, 1999, 221).

Clear examples of true decanonization may be seen in Japan, often if not always in highly polemical contexts. For example, Hōnen's (法然; 1133–1212) Pure Land followers claimed that those who recite the *Lotus Sūtra* would fall into hell (Stone, 2013, 116). Although this example focuses on the rejection of the *Lotus Sūtra*, it is the partisans of this very *sūtra* who would go the furthest. For Nichiren (日蓮; 1222–1282), it is only the *Lotus Sūtra*, and especially its chapter 16, which conveys the essence of the Buddha's awakening. But Nichiren went further still. For him, the text is so special that its very title consolidates its power, this title to be recited in the form *namu myōhō rengekyō* (南無妙法蓮華經), "Hail to the Wonderful *Lotus Sūtra*!" Nichiren, however, did not innovate this approach: a story of the 12th century tells of a Chinese Sui dynasty monk taught to recite only the *Lotus Sūtra*'s title, and while it was certainly not an exclusive practice, the oldest Japanese source for *namu myōhō rengekyō* dates to the late 9th century (Stone, 1998, 131–132). Moreover, Nichiren did not quite reject all other literature, and in fact explicitly accepted as an authority not only the Triple *Lotus Sūtra* (*Fahua sanbu jing* [法華三部經]; Jpn. *Hokke sambukyō*, namely, the *Lotus* along with two other texts, which precede and follow it as a triad: *Wuliangyi jing* [無量義經; Innumerable Meanings *Sūtra*; T. 276] and the *Puxian jing* [普賢經; *Sūtra* of [Meditation on] Samantabhadra; T. 277]), but also the commentaries of the Tiantai founder

Zhiyi (智顗; 538–597), the exegesis of Zhanran (湛然; 711–782), and the works of the Japanese Tendai founder Saichō (最澄; 767–822; Dolce, 1998, 235). Still, for Nichiren, a single utterance of the title of the text itself, the *daimoku* (題目), was equivalent to reciting the entire *sūtra* (Stone, 1998, 138). As he wrote,

> The five characters *Myō hō ren ge kyō* . . . are the essence of the eight volumes of the *sūtra*. Furthermore, they are the essence of the whole canon (*issaikyō*). They are the correct Law [that stands] above all buddhas and bodhisattvas. . . ." (*Hōonshō* [報恩抄], Teihon 1241, in Dolce, 1998, 240)

Nichiren's argument for the priority of the title itself is that since in editions of the *sūtra* the title is written before the opening phrase of the scripture itself, "Thus I have heard," it must be even more important, the very pith of the entire teaching.

The focus on the *daimoku* highlights another interesting and wide-spread phenomenon, namely the retention in memory, or reading and recitation, of texts which one does not necessarily understand. In fact, generally speaking, in most places and times in Buddhist history, most texts have probably not been "understood" by most who have used them. Transmission and understanding need not go hand-in-hand. A particularly interesting example is found in Tibet with the institution of the *lung*, "reading transmission." Receiving a *lung* is often a prerequisite for studying and debating the contents of a text. Sometimes such a teaching transmission is given before, other times after, the teaching of the text.

> It is clear from the importance placed on this practice that, written or oral, a text is not words or meaning alone. Texts also include sound, power, and blessings . . . During the transmission of *lung* the text is read so rapidly that conceptual grasp of it is minimal; this is a time when the spoken word must be heard, not necessarily understood. (Klein, 1994, 293)

In this practice,

> an audience receives the transmission just by hearing it. A text becomes authoritative in the act of its being recited out loud by an authorized teacher, who has himself received the transmission from his teachers and so on.

Although G. Dreyfus somewhat downplays the role of the *lung* in Dge lugs scholasticism, he emphasizes that it is more important for the Rnying ma tradition (Dreyfus, 2003, 155–156). The example of the *lung* highlights the central role of language.

Language

In receiving and transmitting sacred texts, any community, whether it "understands" a text or not, has the option of retaining the text in the language in which it is received, or of translating it into their own. Even in early India this was an issue, with the tradition deciding that local adaptation was preferable. As a result, *buddhavacana* was transmitted in a variety of linguistic forms. The original form of any teaching must, of course, have been directly comprehensible to its audience. At some point, however, and in some places, different decisions were made. Therefore, although Pali is an "artificial language," in the sense that it does not represent an actually spoken dialect of a particular time and place, being an amalgam of various sources, it is nevertheless a form of Middle Indic. However, the Pali literature transmitted to Sri Lanka and Southeast Asia entered a domain which was, linguistically speaking, utterly foreign (in the case of mainland Southeast Asia, even the language family was different, Indo-European in contrast to Austroasiatic and Tibeto-Burman, to which belong Pyu and Burmese). The texts, however, were not translated into local languages as such, but rather retained in the form in which they were received (although interlinear or interphrasal translations [*nissaya*] and vernacular retellings of Pali sources did exist since at least the 15th cent., if not already in the 13th). Pali in Southeast Asia then takes the form of a "Church Language" (Nattier, 1990) and a prestige medium of expression. (In Sri Lanka, the process, at least according to tradition, also worked in reverse: commentaries composed in the local Sinhala language – which themselves were originally in Pali – were translated into Pali, and retained and transmitted only in the latter form.) Direct access to core Buddhist literature requires knowledge of Pali (although, as e.g. in contemporary Thailand, the pronunciation of the language may be highly localized), or one may approach the literature through vernacular retellings – of Buddha biographies, Vinaya texts, cosmologies, chronicles, and much more –through oral renditions in the context of preaching, but also through mural paintings (with captions), dramatic performances of Buddhist literature, puppet plays, and so on.

A somewhat different model is found in Khotan, in Central Asia. According to the famous statement from the scripture anthology called the *Book of Zambasta*,

> the Khotanese do not value the Law [i.e. the Buddhist teachings] at all in Khotanese. They understand it badly in Indian. In Khotanese it does not seem to them to be the Law. For the Chinese the Law is in Chinese.... To the Khotanese that seems to be the Law whose meaning they do not understand at all. (Emmerick, 1968, 343–345; VI.4)

This does not mean, however, that Khotanese translations were not produced, but at least to the author(s) of the *Book of Zambasta*, these were not as respectable as texts in Indic form which, however, the Khotanese could not well understand. In contrast, as this passage states, when Buddhist texts were transmitted to China, they were translated into a form of written Chinese (often accompanied, it is clear, by oral explanation), rather than being retained in their Indic form, and the same phenomenon of translation took place in Tibet. However, once Buddhist texts were translated into Chinese, they were retained in this form as the texts were subsequently transmitted throughout East Asia. The Chinese shape of the texts thus became a second form of Church Language in Korea, Japan, and Vietnam, despite the fact that the local languages of these regions differ dramatically from Chinese. While Buddhist texts were also translated into Mongolian and Manchu, in fact these translations were carried out for political reasons, and despite the existence of Kanjurs in Mongol and Manchu, Buddhist texts were generally accessed in their, respectively, Tibetan and Chinese forms, and at least Mongol authors as a rule wrote in Tibetan as well. In the Tangut Kingdom, texts apparently circulated both in Chinese and in Tangut, a phenomenon of bilingualism (or in some cases multilingualism) we also see elsewhere.

Despite these general patterns, even in contexts in which translation is otherwise the rule, some materials were judged inherently incapable of translation. In the Chinese case in particular, this includes some significant vocabulary, including as common examples *buddha* (Chinese *fo* [佛], a loan word probably from Gandhari, through the form **but/bud*), *nirvāṇa* (*niepan* [涅槃] or *niehuan* [泥洹]), and *bhikṣu* (*biqiu* [比丘]), words which quickly became entirely absorbed into Chinese. Modern translators into Western languages have made similar choices: in English, for instance, we retain terminology such as buddha, nirvana (naturalized without diacritical marks), and so on (Jackson, 1982). In addition to the case of specific words, there is the matter of "magical formulae," *dhāraṇī*. These texts are in fact usually not understandable even in their original Indic form, at least in a normal linguistic sense; hence, it would be impossible to "translate" them as such: it is only and precisely their sound which is powerful. They were, moreover, not merely transliterated into Chinese script; at least in some cases in later Chinese imperial history, the importance of the proper pronunciation of the transcribed sounds was acknowledged, and in light of an awareness in shifts in the pronunciation of Chinese characters, the *dhāraṇīs* were rewritten in characters which would allow the proper pronunciation of the intended sounds.

When Sri Lankan lay followers recite *paritta* or protection texts, they do not, as a rule, understand the Pali they recite. When Japanese Pure Land Buddhists recite the Smaller Pure Land *Sūtra* (*Amidakyō* [阿彌陀經]), they do so in the Japanese pronunciation of the Chinese translation; but since Japanese and Chinese are entirely different languages, those who recite the text cannot, with very few exceptions, understand the text they are reciting either (comp. Rambelli, 2007, 88). A further step in this process is seen in modern Buddhism, in which, for example, American followers, reading a romanized text, recite the Japanese pronunciation of the Chinese translation of an Indic text. This process, however, is not new. The Dunhuang manuscripts contain a number of examples, at least as old as the 8th century, of texts written in the Chinese language, but in Tibetan script, evidently for the use of those who wished to recite texts in Chinese but who, while able to read the Tibetan script, could not read Chinese characters (Thomas & Clauson, 1927). Chinese scripture is also found in Brahmi script (Emmerick & Pulleyblank, 1993). In Japan from at least the 17th century, we have transcriptions of *sūtras* in a combination of the phonetic *katakana* script and characters, the latter however chosen entirely for the sound value in order to serve as bases for recitation (Watanabe, 2015, 328–330). Use of such objects, however, requires some familiarity with writing, even if not an ability to read Chinese as such. A further step is the so-called blind *sūtra* (*mekurakyō* [盲經], which refers not to a visual disability but to illiteracy), in which the entire text of a scripture is represented not in Chinese characters or Japanese syllabary but rather in rebus form. The first element of the title of the so-called *Heart Sūtra*, *mahā* in Sanskrit, is written 摩訶 in Chinese, pronounced *maka* in Japanese. This is represented by an image of an upside-down rice kettle, *kama*, inverted *maka*. Such a presentation serves as an aide-mémoire; one cannot read it as such, but it serves as a reminder of the sounds one is expected to produce in recitation. An early example of such a "blind *sūtra*" dates from the beginning of the 18th century (Watanabe, 2012; 2015, 331–334).

It is a very small step from individually reciting a text one does not understand to doing other things with the text that do not involve reading comprehension at all. In Tibetan areas, mass recitations of the Kanjur are undertaken, in which the entire collection is voiced, but individuals read, out loud, different texts simultaneously: the result is a cacophony. In a Sherpa community in Nepal, an abbot averred that the reason for such mass recitations, which are common, include "for rain, for the crops, for less sickness and misfortune, for peace in the villages and so that in the future, we will all be like the Buddha" (Childs, 2005, 48n3, and passim). One Japanese parallel to this mass recitation might be the *ichinichi issaikyō* (一日一切經), the group copying of the entire Buddhist canon of over 5,000 volumes in a single day (O'Neal, 2012, 122). A perhaps even closer Japanese parallel to the Tibetan mass recitation of the Kanjur is the very striking *tendokue* (轉讀會), during which the entire Chinese canon, or a section thereof (such as the Larger Perfection of Wisdom *Sūtra*), in woodblock-printed accordion-fold booklets, is "read through" by recitation of a few lines from the beginning, middle, and end of each fascicule, after which each accordion book is dramatically fanned through the air to expose all of its pages. Much more can be done with texts that does not involve reading them at all, one aspect of which has to do with their production.

In South Asia, Buddhist texts are normally written on palm leaves or birch bark and later on paper, but a variety of other surfaces have been used. Most writing was probably intended in the first case to present a readable text, but throughout the Buddhist world we find examples of many other goals as well. The "tamarind-seed" script used to write richly decorated Burmese and Mon *kammavācā* manuscripts, containing texts recited in formal acts of the saṅgha (*saṅghakamma*), clearly privileges scriptural ornamentation and the adornment of text-as-object over readability. (for examples, see the beautifully illustrated Singer, 1993). *Sūtras* were, of course, also illustrated with manuscripts adorned with painted images and woodblock prints furnished with elaborate frontispieces. In Japan a number of highly elaborated variants were developed, such as the *Kinji hōtō mandara* (金字寶塔曼荼羅), in which text is written in gold in the shape of a pagoda, the *Ichiji butsu Hokekyō* (一字佛法華經), in which each character of the *Lotus Sūtra* is accompanied by a Buddha, or the *Ichiji rendai Hokekyō* (一字蓮台法華經), in which each character of the *Lotus Sūtra* sits upon its own lotus pedestal (O'Neal, 2012).

Much has been made of the hypothesis that one key characteristic of Mahāyāna Buddhism in its earlier Indian phases was its "cult of the book," in which worship of physical books and the places in which they were enshrined replaced an earlier focus on stūpa worship (Schopen, 1975; Drewes, 2007; Schopen, 2010). While the hypothesis in its strong form seems to go too far, Buddhist traditions in general do pay very special attention to books as physical objects, as just mentioned with respect to their preparation. After their production, they may be placed on altars, in special kinds of bookcases, within stūpas, and into images. Ritual treatment of the canon has a long history in Tibet. For example, already in 797, the emperor Mu ne btsan po "instituted the ritual worship of the Tripiṭaka at Bsam yas," the first Buddhist temple in Tibet (Skilling, 1997b, 90). The ritual placement of Kanjurs on altars is also a common feature of Tibetan monastery main halls. The display of books need not be merely static, however. While it is not known just how old revolving bookcases are, they were known in China by the 9th century (an inscription of 823 mentions *zhuanlun jingzang* [轉輪經藏], "revolving *sūtra* storehouse"; Goodrich, 1942, 133), although legendarily they go back to the mid-5th century (Goodrich, 1942, 132). The principle of their use is the same as what we find in Tibet, where so-called prayer wheels are, of course, quite famous, and may have been inspired by the Chinese model. Inside these sometimes very large, but more often handheld, devices are placed texts, usually but not always *dhāraṇīs*. The revolution of the device "substitutes" for recitation of the texts contained therein. Texts are also placed within images as part of their consecration, these objects then sometimes being explicitly considered a type of relic, not of the body of the Buddha or as a relic of use but as a relic of the dharma itself (Skt. *dharmaśarīra*; Bentor, 1995; 2003; and the striking visual documentation in 1994).

Of course, the above should not be understood to mean that Buddhists do not ever read their texts, or do not care what is written within them. They do, both in detail and collectively.

Focused Canons or Canons within Canons

A counterpart of the exclusive focus on a small body of material, such as we see in Nichiren's exclusive focus on the *Lotus Sūtra*, is the attempt to collect a larger but still limited "functional canon," albeit in a quasi self-conscious fashion. While it is clear that "canon" is an entirely relative, rather than an absolute, concept, it is still the case that, alongside the functional canons discussed above, we find numerous more formal attempts in Buddhist history to create either what were intended to be, or might look to us like, "mini canons," subsets, as it were, of materials which were imputed special status, what might be called, "canon with the canon," an expression used, for instance, by Biblical scholars. Such formations do not necessarily imply that their creators rejected other works, much less all other works, but only that, perhaps for limited, circumstantial reasons, they felt it important to create a smaller body of work set apart, to which they paid special attention. One example of this sort of project may be the assembly of anthologies of passages, such as is found in Sanskrit with the *Śikṣāsamuccaya*, while in Pali we have at least one text which assembles a small collection of whole (although compared to Mahāyāna scriptures, quite short) texts, the *Suttasaṅgaha*. It is not possible to judge whether or in what sense such anthologies are attempts at mini-canonization, but other examples are clearer. It is possible that the *Mahāratnakūṭa* collection is one such case.

This grouping of 49 texts is extant as a unit only in Chinese (T. 310) and Tibetan (D 45–81/P 760), and despite the emic claim that its Chinese form represents a rendering of an Indian prototype (Pedersen, 1980, 60), it seems most likely that it was organized (finalized in 713) by its editor, Bodhiruci (?–727), although perhaps on the basis of some preexisting notion of affinity so far unknown. A number of factors suggest the collection as a Chinese creation, including the absence of any trace of the grouping of the texts in any known Indian source, and the fact that the Tibetan collection is based on that found in the Chinese *Dazangjing*, as well as the inclusion of two versions of the same text, the *Garbhāvakrāntisūtra* (Kritzer, 2014; T. 310 [13, 14]), a *sūtra* which exists in the Mūlasarvāstivāda Vinaya's *Kṣudrakavastu* as well. It is very suggestive that the range of texts assembled together gives the impression of being a survey of influential earlier Mahāyāna works, including the so-called *Kāśyapaparivarta* (more properly the *Ratnakūṭasūtra*), the obvious core of the collection; the Larger *Sukhāvatīvyūha*; the *Akṣobhyatathāgatavyūha*; the *Bodhisattvapiṭaka*; and the *Rāṣṭrapālaparipṛcchā*, among others. That several texts are dedicated to Maitreya and a number involve strong female characters (including the *Śrīmālādevīsiṃhanāda*) is very suggestive in view of the fact that, although finished only some years after her downfall, the bulk of the collection was edited and translated during the reign of the Empress Wu Zetian (武則天), the Zhou (周; 690–705) interregnum in the Tang, and it is more than plausible that a number of texts in the collection were selected for their possible associations with strong women and Maitreyan millenarianism, important tropes during the Zhou.

Other examples of "mini canon" include the *navadharma* or *navagrantha*, the Nine Dharmas of Nepalese Buddhism, a group of nine texts whose preservation is due to their ceremonial rather than any doctrinal importance in Nepal. This collection, whose fame in the West is out of proportion to its historical significance, can thus be considered a "mini canon" defined by ritual use in *maṇḍalas* and in recitations. The texts included in this category were originally the *Aṣṭasāhasrikā Prajñāpāramitā*, *Pañcarakṣā*, *Nāmasaṅgīti*, *Gaṇḍavyūha*, *Daśabhūmika*, *Samādhirāja*, *Saddharmapuṇḍarīka*, *Lalitavistara*, and *Laṅkāvatāra*, but at some point the *Pañcarakṣā* and *Nāmasaṅgīti* were replaced by the *Suvarṇabhāsottama* and *Tathāgataguhya*. The last named was in its turn at some point confused with a similarly titled tantric text, the *Guhyasamāja*, this process resulting in three distinct sets of the Nine Dharmas (Skilling, 2013a, 229; Tuladhar-Douglas, 2003; 2006, 130–133). It is thanks to the ritual status of these texts in Nepal that their Sanskrit manuscripts were regularly copied, making possible their preservation until today.

De facto "mini canons" can be formed in any number of other ways as well. For example, we are fairly sure that the texts translated into Chinese, at least in earlier periods, arrived in China in an entirely unsystematic fashion. While not everything that arrived in China in manuscript or in the memory of monks made its way into Chinese translations, it was upon the basis of available materials that doctrinal systems were constructed in China. Thus, to take a very early example, the relatively limited translation output of the first translator on Chinese soil, An Shigao (安世高; late 2nd cent.), was taken to form a hermeneutical continuum (Zacchetti, forthcoming). We are, in fact, particularly poorly apprised about the supply side of the process through which Buddhist literature was brought to China. That we simply do not know what shape and content Buddhist literature had in India and Central Asia makes informed discussion of the process of adoption and adaptation in China next to impossible. For example, An Shigao prepared *Ekottarikāgama* and *Samyuktāgama* anthologies (Harrison, 1997; 2002, 24–25). While it is not unlikely that these are translations of existing anthologies, they might also represent selections made in China; in light of our ignorance of the source materials available to Chinese translators, we cannot determine the true situation.

Another factor to consider in this regard is the question how readers conceptualized the locations of texts they knew or used. Did they think of the *Dhammacakkappavattanasutta* (Setting in Motion the Wheel of the Teaching, the putative first sermon of the Buddha) as part of the *Saṃyuttanikāya*, or the Larger *Sukhāvatīvyūhasūtra* as belonging to the Mahāratnakūṭa collection? We usually do not know how the placement of texts within collections was understood, although manuscript evidence suggests that in circulation texts were often grouped together entirely differently from the way in which they are arranged in formal canons. This fact is brought to the fore by the differences we confront when examining the diverse texts gathered together in single manuscripts. An example is the so-called "Mahāyāna *Sūtra* Manuscript" in the Schøyen collection (Braarvig, 2000, 63) which contained (in addition to other materials now lost) the *Śrīmālādevīsiṃhanādanirdeśa*, *Pravāraṇāsūtra*, *Sarvadharmāpravṛttinirdeśa*, and *Ajātaśatrukaukṛtyavinodanāsūtra*, or the manuscript from the same collection which contains together the *Vajracchedikā* and *Bhaiṣajyagurusūtra* (Harrison & Watanabe, 2006, 95), both displaying conjunctions of texts unknown to canonical collections. Another example is the partially preserved Sanskrit *sūtra* collection which contains 20 texts (how many more were in the complete manuscript is unknown; Vinītā, 2010; Silk, 2013). Some of these texts were previously unknown, or are excerpted versions of known texts, but even when known, their arrangement is new. Another example of such an arrangement, this time however rather better known, is the collection of six *sūtras* called *ṣaṭsūtraka* that appear to have been very popular at least in Central Asia. This collection contains the *Daśottara*, *Arthavistara*, *Saṅgīti*, *Catuṣpariṣat*, *Mahāvadāna*, and *Mahāparinirvāṇa sūtras*, a grouping which "appears to be based on a balanced and deliberate arrangement" (Hartmann, 2014, 144). While it may be, on the whole, better to think of the known arrangements found in canonical collections as to some extent random (albeit perhaps indeed intentional and purposive) preservations of one type than as normative, instances such as the *ṣaṭsūtraka* collection appear to serve as counter examples.

All collections start out as local, and all collections are, typologically, anthologies by nature. Therefore, it should not be surprising that what we actually encounter in specific times and places is a great variety of such combinations of sources. In most of the cases noted here, the ways in which the *sūtras* are placed together are uninstanced elsewhere. Although limited in extent, these examples suggest that the actual organization of texts was much more flexible and variable than the ordered presentations in canonical corpora would suggest.

What independent evidence we do have suggests that our picture of the scope of premodern Buddhist literature as a whole is fragmentary, perhaps radically so. A series of discoveries over the past century and a half, including the Sanskrit manuscripts found in Gilgit, in the northwest of the Indian subcontinent, the recently discovered Gandhari manuscripts from Afghanistan and Pakistan, Sanskrit manuscripts from the Silk Road and those from Tibetan collections (Harrison & Hartmann, 2014), Chinese manuscripts from the Nanatsudera (七寺) in Nagoya, Japan, and other Japanese temple archives, the multilingual treasures from the Dunhuang caves, and much, much more, give us some vibrant hints as to how much has been lost, usually without our knowing even that it once existed.

Meanings of Canon

The mere existence of Buddhist texts and even of canonical collections does not necessarily signal an interest in the corpus in itself. The case of the Manchu canon is illustrative. In this collection, the *sūtras* were translated from Chinese, the Vinaya from Tibetan. The work was ordered by the Qianlong emperor in 1772, completed around 1790, and printed by 1794. However,

> [t]here is no evidence that Buddhism was part of the Manchu religious identity before their takeover of China, and it did not play a privileged role among them in the centuries that followed it. The translation of the Buddhist canon into Manchu was one of the many imperial ges-

> tures, both helpful and commanding, by which Buddhism was co-opted into Manchu rule. (Bingenheimer, 2012/2013, 206)

Most canon projects were probably not carried out for such blatantly and baldly political ends. Such projects often aimed at multiple goals, as described above. One of those goals was the preservation of the Buddha's liberative teaching, securing it against both loss and distortion.

One prominent purpose of preservation is connected with the ideology of the decline of the teaching (Chn. *mofa*; Jpn. *mappō* [末法]). In light of the perception, present in virtually every age, that times were difficult and getting worse, it was felt important to preserve the Dharma against its future disappearance. This led not only to copying and publication through printing, but more permanently to projects such as the inscription of scriptural corpora in stone in Chinese caves and mountainsides (Ledderose, 2005) or the ritual preservation, in Japan, primarily from the early 11th through the 12th century, of *sūtras* against the future apocalypse. Texts were placed into stūpa-shaped containers and interred. (A subset of this practice is the preparation of *gakyōzuka* [瓦經塚], roof-tile *sūtra* mounds; the inscribed roof tiles were "permanent," and therefore could remain until the coming of the next buddha, Maitreya [Muraki, 2002–2003]. In contrast, according to Theravāda ideas, all texts *must* disappear before the next buddha, Metteya, can appear.) In apparent contrast to the practice at at least some sites in China, at which complete canons were inscribed, in Japan not all *sūtras* received such treatment, but the choice was not random. The most common text treated in this manner was no doubt the *Lotus Sūtra*, often interred together with the *Suvarṇabhāsottama* and the Scripture of Benevolent Kings. Occasionally, burials are found with the three Pure Land *sūtras*, or the three Maitreya *sūtras* (T. 452, 453, 456). The choice of the *Suvarṇabhāsottama* and the Scripture of Benevolent Kings was motivated by their close relation to the ideology of Buddhist support for the state, although somewhat later the main purpose of the practice shifted from the preservation of the teaching against the future advent of Maitreya to the production of merit toward rebirth in the paradise of Maitreya or Amitābha (Moerman, 2010). The Tibetan practice of *gter ma*, "treasure [texts]," is also palpably related to protection of the Dharma from difficult times. Such Tibetan practices are foreshadowed by the mention in the *Pratyutpannabuddhasaṃmukhāvasthitasamādhisūtra* of the practice of the writing of copies of a text and placing it in a sealed casket, which is then hidden in a stūpa against the future destruction of the dharma (Mayer, 1996, 76–77), and by the *Sarvapuṇyasamuccayasamādhisūtra* (D 134/P 802; also known as the *Nārāyaṇaparipṛcchā*), which speaks of "treasures of the dharma . . . deposited in the interiors of mountains, caves and trees for bodhisattvas and mahāsattvas wanting the dharma, and endless dharma-teachings in book-form come into their hands," quoted in this regard for instance by the contemporary Rnying ma master Dudjom Rinpoche (1991, 743, 747, 928; Harrison, 2003, 125). In the *Pratyutpanna* the Buddha is the originator of the treasure teaching, but in the contemporary Rnying ma system it is Padmasambhava, or Samantabhadra with Padmasambhava as the medium of transmission of his teachings (Mayer, 1996, 79). The practice of *gter ma* differs from the burial of scriptures in East Asia, however, in that the latter are intended for a future aeon (*kalpa*), not for recovery in our own times. For the Rnying ma, *gter ma* serve as a source of ongoing revelation, either from the past or from buddhas outside of space and time. This type of revelation, and the claim more broadly to a certain kind of textual transmission, is not universally welcomed in Tibet, however, and while some schools like the Rnying ma, Bka' brgyud, and some Sa skyas and Dge lugs accepted the Rnying ma collections into the canon, others did not, holding the Rnying ma *tantras* to be "apocryphal" (Mayer, 1996, 14).

It is not only in Tibet that there is a culture of ongoing scripture production. This continues at least into the Medieval period in a variety of regions in Buddhist Asia. In 13th-century Korea we find a dialogue between the monks Wŏnsan (元昰) and Naksŏ (樂西) presented in a text titled *Hyŏnhaeng sŏbang kyŏng* (現行西方經), that is, the work is labeled with the word which normally signifies "*sūtra*" (經), even though it purports to record a historical discussion between two monks; the Buddha does not appear at all (Yamanaka Yukio, 2009; Han Taesik, 1996). (Such usage is, however, not entirely uninstanced earlier: the *Milindapañha*, for example, was translated into Chinese under the title *Naxian biqiu jing* [那先比丘經; T. 1670B].) Similar texts include the *Samsipp'al pun kongdŏk sogyŏng* (三十八分功德疏經) and the *Yŏmbul inyu gyŏng* (念佛因由經), all advocating a Pure Land approach to salvation. Other examples of ongoing scripture production in East Asia must include the so-called Platform *Sūtra* of the Sixth [Chan] Patriarch (*Liuzu tanjing* [六祖壇經]), probably originally composed in the 8th century, but heavily revised and supplemented in following centuries (Schlütter & Teiser, 2012). This text, as the Korean works, despite its title does not resemble a traditional *sūtra* in respect to its formal structure, personae, and so on. In other regions, scripture production also continued, although formally speaking in somewhat more traditional form, in that the products looked more like traditional *sūtras*. As mentioned above, in Southeast Asia, scriptures continued to be produced in Pali, only a few examples of which have been studied so far (Hallisey, 1990; 1993; Skilling in Harrison & Hartmann, 2014, 355–361), but these closely resemble other *suttas* in the otherwise accepted Pali canon. (Likewise, commentarial literature, much of which for the tradition was equally "canonical," also continued to be produced.)

In China from a relatively early period there was a vibrant production of revelation, presented as *sūtra*, and accessed in a variety of ways: genuine teachings of the Buddha could have been learnt in a former life and spontaneously recalled and chanted; they could have been heard in a dream or presented by a god who, long-lived, heard the preaching in question directly from the Buddha in India, or from the future buddha Maitreya, now a bodhisattva in his heaven Tuṣita. This type of access, which cannot but appear to us highly shamanic, transcends gender boundaries, and a number of the documented cases involve young female oracles (Campany, 1993). This type of scriptural revelation was often perceived as dangerous, though this response is not universal. One fear was that contemporary political issues could be addressed in the guise of, and with the authority of, the Buddha's teachings. We see the reactions most clearly in the work of the normative bibliographers, in which, alongside the political context, doctrinal concerns can also be particularly visible.

> [U]nlike many other scripture cataloguers, Daoxuan [道宣; 596–667; author of the *Datang neidian lu* (大唐内典録); T. 2149] was most likely to label texts suspicious or spurious not because of their indigenous origin but because of what he regarded as their popularizing contents. Texts which catered to the interests of non-elite Buddhists by adapting doctrine to fit the capacities of common people were, in his eyes, suspect. (Campany, 1993, 12)

From a different perspective, and in a much later period, the monk Qisong (契嵩; 1007–1072), thinking this was the best way to assure preservation of such works, campaigned for the inclusion of Chan texts into Imperially sponsored collections, following on earlier successful arguments for the inclusion, for instance, of several Chan lineage works and the works of Zhiyi, the Tiantai founder (Morrison, 2010, 146). Similar debates are recorded elsewhere. In Tibet, Sa skya Paṇḍita Kun dga' rgyal mtshan (1182–1251) in his *Sdom pa gsum gyi rab tu dbye ba* (Clear Differentiation of the Three Codes) speaks of *sūtras* which, he says, were composed by Tibetans, and therefore are not to be accepted (Rhoton, 2002, 167, vs. 539). For Sa skya Paṇḍita there are five types of inauthentic works: (1) volumes recovered from hidden caches, (2) religious traditions stolen from others, (3) doctrines one has composed [oneself], (4) doctrines based on dreams, and (5) doctrines which had been [merely?] memorized (Jackson, 1994, 105–116). It is interesting, however, to note that the same author's *Tshad ma rigs pa'i gter*, a Tibetan composition, is called in all editions *Pramāṇayuktinidhi* (van der Kuijp, 2014, 172), which perhaps reinforces rather than challenges the value which the author placed on Indian origins. To ascribe a Sanskrit title to a work is not necessarily to claim for it Indian authorship, but it certainly is a strong indication of the authority and charisma attached in Tibet to both the Sanskrit language and to Indianness. For this reason, Tibetan scripture catalogues regularly offer Sanskrit titles for works, including those modern scholarship determines to have no genuine Indian origin at all, such as works composed in China or in Tibet itself. This tradition continues into modernity, and one all too often encounters entirely spurious Indic titles for non-Indic works, one classic example being the citation of the *Guan Wuliangshou jing* as **Amitāyurdhyānasūtra*, a pure fiction. This is, however, not the only form of fiction imposed by modern scholarship.

Into the Present

Modern editions can promote a form of canonization which, while seemingly scientific, is as ideological as any traditional system. The laudable and much appreciated efforts of the Pali Text Society since 1881 to produce editions of Pali texts, and accompanying English translations, have, however, resulted in a tacit concealment of the complexity of the historical textual situation (and a normative definition of the scope of the canonical). As was inevitable, the first editions were produced on the basis of the narrow available textual basis. Yet, after more than a century, very few of these have been replaced with scientifically established editions (despite the existence of, e.g. numerous Thai and

stence of, e.g. numerous Thai and

Burmese editions, not to mention manuscripts), and comparatively little attention has been paid to "extra-canonical" materials. A different but equally clear case is that of the *Taishō Shinshū Daizōkyō* (大正新脩大藏經), published between 1922/24–1934 at the astonishing rate of one volume a month. This edition, while based of course on Chinese canons, rearranged texts – which in traditional *Dazangjing* editions were organized as discussed above – into a putatively chronological sequence, entirely disrupting and effacing the indigenous ordering. On the other hand, the Taishō edition is traditional in that, like many earlier canons produced in China, it continues to include materials not found in other canons, including texts which were earlier explicitly decanonized, such as those found in the Dunhuang caves (included mostly in volume 85), and works written in Japan. During the same or a similar period, other large-scale projects were also undertaken in Japan to collect, and in some cases translate, Chinese and/or Japanese Buddhist literature. Examples include the *Nihon Daizōkyō* ([日本大藏經]; 48 vols. between 1914–1921); *Dainihon Bukkyō Zensho* ([大日本佛教全書]; 150 vols. between 1912–1922); *Kokuyaku Daizōkyō* ([國譯大藏經]; 30 vols. between 1917–1928); *Kokuyaku Issaikyō* ([國譯一切經]; 155 vols. between 1930–1936, and another 66 volumes of Chinese texts between 1936–1944); and *Kokuyaku Nanden Daizōkyō* ([國譯南傳大藏經]; from Pali; 65 vols. between 1935–1941; Stone, 1990, 227). A further step still toward a modern canonization can be seen in projects of individual sects in Japan to publish the "collected works" of the sect, such as the *Shinshū Zensho* (眞宗全書; 74 vols. between 1913–1917), *Shinshū Taikei* (眞宗大系; 37 vols. between 1917–1925); *Jōdoshū Zensho* (淨土宗全書; 22 vols. between 1928–1936); *Sōtōshū Zensho* (曹洞宗全書; 20 vols. between 1929–1935); *Shingonshū Zensho* (眞言宗全書; 44 vols. between 1933–1939); *Tendaishū Zensho* (天台宗全書; 25 vols. between 1935–1950), and so on. Other efforts are even more explicitly "canonizing," such as the publication of the self-consciously normative *Sōtō kyōkai shushōgi* (曹洞教会修証義; Meaning of Practice and Verification for the Sōtō Sect Teaching Assembly), published at the end of the 19th century and subject to an extraordinary degree of well-documented debate (LoBreglio, 2009). It is important to notice that publication and canonization, while certainly related, are not the same processes, nor even on the same logical level: the latter must precede the former, even if it does so primarily implicitly, as in most of the cases noted above.

Modern scientific editions and studies of Buddhist literature approach the history of texts in a way unique in Buddhist history, in that they are often avowedly non-sectarian, and confront and juxtapose witnesses which, historically speaking, were never in contact with one another. As an example, a modern edition of the *Dharmapada* may align versions of a verse in Pali, Sanskrit, Middle Indic, Chinese, and Tibetan, mixing sources which belonged to distinct sectarian lineages and stem from different places and times. While this can promote a sophisticated diachronic view of Buddhist literature, highlighting textual history and variety, it also runs the risk of creating a new and unprecedented form of imagining the Buddhist literary tradition, one which synchronically conflates historically distinct evidence. In the quest to better understand not only what texts say but also what they mean, it is certainly advantageous to draw upon the largest and best body of evidence possible. One result of such studies is also the preparation of accessible versions of texts, including translations into modern languages.

In Japan until relatively recently, despite the fact that Japanese cannot read Chinese without considerable training, there was little tradition of translating Buddhist texts into modern Japanese, and projects such as the just mentioned *Kokuyaku Daizōkyō* are less translations than grammatical reading guides to the base Chinese text. These remain inaccessible to most Japanese (although at the time they were produced they were no doubt quite readable by their target audience of scholars). There is probably still a sense in Japan that the authentic language of scripture is Chinese, despite the existence since at least 1905 of a sort of "Buddhist Bible" in the modern language (*Bukkyō Seiten* [佛教聖典], lit. Buddhist Holy Texts; Maeda & Nanjō, 1905), followed by several similar efforts. Since the 1970s, with the publication of the series Daijō Butten (大乗仏典; Nagao, 1973–1976), there has been an increasing trend for modern translations, not only from faith-based groups but also among scholars. The same trends can be seen in the West, as it were in the opposite direction, with most earlier translations produced by and for scholars, while more recently and at an increasing rate, faith-based translations have appeared. Some anthologies were published quite early, such as S. Beal's *A Catena of Buddhist Scriptures from the Chinese* (1871), or the English-language *Buddhist Bible* of D. Goddard (privately published in 1932, more formally in 1938), interesting among other things for the explicit canonizing intent of its title. In this regard we should note the observation of F. De Simini and F. Sferra (forthcoming) that early modern efforts to translate Buddhist texts into Latin in Europe (such as the *Dhammapada* of Fausbøll, 1855) were at least in part motivated by the idea of legitimately setting them beside other "canonical" classics, by definition those of the Classical world. Efforts are not only continuing, but surely growing in volume and scope, to render Buddhist scriptures into modern languages. Alongside many translations of, for instance, classic Tibetan works, often accompanied by contemporary commentaries of living teachers, at present there are at least two major canon-scale projects, the 84000 (http://84000.co; the reference is to the mythical number of the Buddha's teachings), which aims in principle to translate the entire Derge Kanjur into English, and the project of the Bukkyō Dendō Kyōkai to translate the Taishō Tripiṭaka into English, the BDK Tripiṭaka Translation Series, as well as projects devoted to translation into other languages (Chinese, Thai, and so on).

Tripiṭaka

Tripiṭaka is the title of the collection of Buddhist canonical scriptures in three parts: rules for the Buddhist monks and nuns (Vinaya), discourses of the Buddha (Sūtra), and texts on things relating to the teaching (Abhidharma). Only the Tripiṭakas extant in Indian languages are dealt with in the following mostly under formal aspects. For the Chinese and Tibetan Tripiṭakas, see the articles "Dazangjing" and "Kanjur/Tanjur," and for details of the content, see "Vinaya," "Āgama/Nikāya," and "Abhidharma" (bibliographical survey: Grönbold, 1984; Oberlies, 2003).

Tripiṭaka is a Sanskrit word (Pal. Tipiṭaka) used by Buddhists and Jainas to describe the divisions of their canonical scriptures. In spite of the straightforward translation of the word Tripiṭaka/Tipiṭaka ([A Unit of] Three Baskets), it is not clear why this division was chosen. Various explanations have been put forward (Winternitz, 1913, 8n1). Moreover, the Danish pioneer of Pali studies, C.V. Trenckner, pointed out that the oral Vedic tradition is once called *piṭakasampadāya* (a tradition [like (?)] baskets; MN I.520.5; II.169.13; Trenckner, 1908, 119; comp. Eltschinger, forthcoming, § 1.4 with n43). This is perhaps to be understood as a simile: "handed down like a basket from one worker to the next when digging the earth(?)." At any rate, this paragraph in the *Majjhimanikāya* underlines that the word *piṭaka* was used to describe text traditions by different communities. Various collections of Buddhist texts called "*piṭaka*" are discussed by P. Skilling (2009 [2013], 201; comp. Pagel, 1995).

Besides Tripiṭaka, there is a second principle to arrange the scriptures also known and used by Buddhists and Jainas alike, when the canon is divided into *aṅga*s (limbs). While the Buddhists ultimately gave up the division into *aṅga*s and preferred the *piṭaka* division, the Jainas did the opposite, opted for the *aṅga*s, and only rarely employed *duvālasaṅga gaṇipiḍaga* (Ardhamāgadhī; the basket of the teacher containing 12 *aṅga*s; Schubring, 1935, § 37).

As the principle of a division of texts into *aṅga*s was also applied to Vedic literature to arrange the exegetical appendices to the Veda into the six *vedāṅga*s (limbs, i.e. appendices, to the Veda), it was perhaps common at the end of the Vedic period when Buddhism and Jainism originated.

Only three *aṅga*s are mentioned in the earliest occurrence of this text division (von Hinüber, 1994b) in the *Majjhimanikāya: suttaṃ geyyaṃ veyyākaraṇaṃ* (MN III.115.18) arranged as formulas (2+2+5) are in the oral tradition of Buddhist texts (von Hinüber, 1994a). The number of *aṅga*s was expanded soon by adding *abbhutadhamma*: *suttaṃ geyyaṃ veyyākaraṇaṃ abbhutadhamma* (2+2+5+5).

To understand the meaning of these terms, it is necessary to recall that within the Theravāda Tipiṭaka, *sutta* and *suttanta* are two distinct designations, the former referring to the *Pātimokkha*, the only "true" *sutta* (Skt. *sūtra*) text in the canon, while *suttanta*, side by side with the perhaps earlier terms *veyyākaraṇa* (explanation) or *dhammapariyāya* (discourse on the teaching), designates the individual texts in the *nikāya*s. Within the *aṅga*s, the word *veyyākaraṇa* was preferred to *dhammapariyāya* (six syllables), because the latter is longer than *abbhutadhamma* (five syllables) and therefore does not fit into the formula from a rhythmic point of view. The term *geyya* (what is to be sung/recited) is a very rare word even in the Vedic language and probably was obsolete at an early date. It occurs in the Theravāda Tipiṭaka only in this formula obviously referring to verse texts. Lastly, *abbhutadhamma* (wonderful things [events]) seems to comprise early texts concerning the life of the Buddha such as the *Acchariyabbhutadhammasuttanta, Majjhimanikāya* 123 (no. 123; MN III.118–124), describing the descent of the Bodhisatva from the Tusita heaven and the subsequent events until his birth.

Consequently, this is a systematic enumeration, because all four terms refer to groups or categories of texts. In course of time, though still at a very early date, the sequence of four *aṅga*s was expanded in different ways, when various individual texts were added. This process destroyed the formulaic structure of the enumeration: *sutta, geyya, veyyākaraṇa, gāthā, udāna, itivuttaka, jātaka, abbhutadhamma, vedalla* (2+2+5/2+3+5/3+5+3). Perhaps another formula is added with *gāthā udāna itivuttaka* (2+3+5), where *gāthā* (verse), a term borrowed from Vedic literature (Horsch, 1966), might replace the perhaps outdated *geyya*, while *udāna* can refer to the text of that name or to a class of "utterances" and

itivuttaka to a collection of *suttantas*, both found in the *Khuddakanikāya*. The inclusion of *jātaka* confirms the high age and early popularity of “birth stories” of the Bodhisatva, while the exact meaning and etymology of *vedalla* (Skt. *vaipulya*) is obscure (for different attempts to explain this word, see Skilling, 2013, 84). The enumeration of the nine *aṅgas* is found only in the Vinaya, the *Majjhimanikāya*, and the *Aṅguttaranikāya*.

Formulations in canonical texts such as “he masters the *dhamma*,” explained by the list of the nine *aṅgas*, demonstrate that, at an early date, the *aṅgas* – the expression *navaṅga* (nine *aṅgas*) occurs only in later canonical texts – once comprised the complete corpus of Buddhist literature. Therefore, it does not seem unlikely that at least the three or four *aṅgas* date back to the period of the “pre-canonical language” (*langue précanonique*) postulated by S. Lévi (1863–1935; see Lévi, 1912), and consequently, they represent the pre-canonical text structure. Once the nine *aṅgas* were superseded by Tripiṭaka/Tipiṭaka as the predominant principle of arranging texts, their original meaning was soon forgotten in spite of the fact that the list of *aṅgas* was expanded even further, finally into 12 limbs (Lamotte, 1980, 2281–2305), perhaps following the Jaina model(?). The original meaning of the *aṅgas* – particularly that both text divisions *aṅga* and T(r)ipiṭaka are mutually exclusive, one replacing the other – was forgotten very early. Therefore all attempts, ancient or modern, to harmonize the two divisions in order to explain their origin are doomed to failure.

In canonical Theravāda literature, the word *tipiṭaka* occurs only once in a late appendix to the Vinaya, the *Parivāra* (1st cent. CE[?]) in an enumeration of 30 Vinaya teachers, who handed down this text in Ceylon. The 14th is Khema Tipeṭaka (“Khema Who Knows the Tipiṭaka”; Vin V.3.14). Moreover, *piṭaka* as a text division is mentioned in the *uddāna* (summary of content; see below) to chapter 11 in the *Cullavagga* of the *Khandhaka* (Vin II.293.5), which, however, may also be a later addition to the text. In noncanonical literature, the first reference is in the *Milindapañha*, where the monk Nāgasena is said to have grasped the complete “word of the Buddha as arranged in the Tipiṭaka” (*tepiṭakaṃ buddhavacanaṃ*; Mil 18.10) after one single instruction, and all the monks accompanying him were also versed in either the Tipiṭaka or at least four or five *nikāyas* (Mil 22.10).

The first roughly datable references to *tipiṭaka* are, however, found in the Bharhut inscriptions dating from the 2nd century BCE (Lüders, 1963, 37, no. A56), where a monk is called *peṭakin* (versed in the [Tri]piṭaka), while a *trepiṭikā* (a nun versed in the Tripiṭaka) appears in an inscription from around 100 CE (Lüders, 1941, 175; Lamotte, 1958, 164). Most likely, the change from *aṅga* to *tipiṭaka* had taken place long before the 2nd century BCE, according to the Buddhist tradition already during the first council as described in the Ceylonese chronicle, the *Dīpavaṃsa* (Dīp IV.14–16), where it is said that the *aṅga* division was superseded at that occasion when the Vinaya texts were recited by Upāli and the texts of four *nikāyas* of the *Suttapiṭaka/Sūtrapiṭaka* by Ānanda respectively.

This, at the same time, may be considered the beginning of the *bhāṇaka* (reciter) tradition, a term designating monks specializing in different parts of the *Suttapiṭaka*. The first *bhāṇaka* of the *Dīghanikāya* was Ānanda himself, of the *Majjhimanikāya* the pupils of the deceased Sāriputta, of the *Saṃyuttanikāya* Mahākassapa, the leader of the first council, and of the *Aṅguttaranikāya* Anuruddha (von Hinüber, 1996, § 228); there were, moreover, also *Jātakabhāṇakas* (Adikaram, 1946, 25). The *bhāṇaka* traditions seem to have lost their importance when Buddhaghosa composed his commentaries on the four *nikāyas*, although texts continued to be memorized and recited.

During the period of oral text transmission, the texts were also divided into *bhāṇavāras* (units of recitation) comprising eight thousand syllables (Pal. *akkhara*; Skt. *akṣara*) equaling 250 “texts” (*ganthas*) with 32 syllables each, which equals one verse in the *śloka* meter (4x8 syllables). The *bhāṇavāras* are, however, kept even in the manuscript tradition to determine the length of texts with, for example, the *Dīghanikāya* comprising 64 *bhāṇavāras* (von Hinüber, 1996, § 12n29). In order to facilitate memorizing voluminous texts, some were handed down in a compressed form such as *Dīghanikāya* no. 14 with *Mahāpadānasuttanta* abbreviated into three *bhāṇavāras*, which can be expanded to 21 or even 2,600 (!) *bhāṇavāras*. Consequently, this *suttanta* is considered the “king of *suttantas*” (*suttantarājā*; von Hinüber, 1996, § 237). Furthermore, a large part of the *Saṃyuttanikāya* is handed down only as a “skeleton text” that can be expanded from certain key words (von Hinüber, 1996, § 70); a complicated method is used to expand Vinaya texts. Among all texts of the Tipiṭaka, the *Paṭṭhāna* in the *Abhidhammapiṭaka* is considered the longest with an incalculable number of *bhāṇavāras*, because it can be expanded almost infinitely (von Hinüber, 1996, § 154).

The correct arrangement of the huge mass of texts was guaranteed particularly during the period of oral text transmission by using *uddānas*, which are lists of key words referring to *suttantas* or parts thereof arranged in verses: "The *uddāna* verses were inserted by the participants of the (first) council in order to help the monks studying the Vinaya to learn more easily" (Sp 272.4). Thus, for example, the *Mūlasarvāstivādavinaya* is divided into *vastus* (chapters); within the *vastus*, *piṇḍoddānas* (core *uddānas*) containing key words extracted from *uddānas* fix the correct sequence of texts. Occasionally *antaroddānas* (inner *uddānas*) refer to the arrangement of individual chapters (von Hinüber, 2003/2009, 222ff. /944ff.).

At an uncertain but later date, an inventory of the complete Theravāda Tipiṭaka was prepared in Southeast Asia(?), the *Piṭakamālā* (Garland of the Piṭakas), which enumerates all texts of the Tipiṭaka down to even the shortest *suttanta* (Pakdeekham, 2011; see also Borsani, 1942).

The report of the first council mentions neither the fifth *nikāya* (*Khuddakanikāya*) nor the *Abhidhammapiṭaka*. The first trace of the fifth *nikāya* is preserved in an inscription at Sanchi: *pa(ṃ)canekāyika* (versed in five *nikāyas*; Lüders, 1941, 175), while Abhidhamma specialists (*ābhidhammika*) are first mentioned in the *Mahāniddesa* and the *Milindapañha*.

Once there was a complete set of the Tripiṭaka, it could be and was compared to the three Vedas of the Brahmanic tradition (*Ṛgveda, Yajurveda,* and *Sāmaveda*): *tayo vedā viya… tīṇi piṭakāni* (the three Piṭakas are like the three Vedas; Ps I 195 138,5 [commentary on MN no. 5 Anaṅgaṇa-s]) or *tiṇṇaṃ vedānaṃ uggahaṇaṃ tiṇṇaṃ piṭakānaṃ uggahaṇaṃ* (learning the three Vedas, learning the three Piṭakas; Buddhaghosa, Vism 384.3). It is even claimed that at the time of the Buddha Kassapa (Skt. Kāśyapa), the content of the Tripiṭaka and of the three Vedas was identical, and only later Brahmans introduced contradictions to the *buddhavacana* into the Vedic texts (Sv 273.31–34).

The arrangement of the Tripiṭaka varies from school to school. The only complete Tipiṭaka extant in an Indian language is that of the Theravāda Buddhists, which is preserved in Pali in Ceylon and Southeast Asia (Burma, Thailand, Laos, and Cambodia). In this tradition, the first part of the Tipiṭaka is the *Vinayapiṭaka* (Basket of the Discipline) divided into two parts to which the *Parivāra* (Appendix [?]) is added as a kind of handbook (von Hinüber, 1996, § 12). The *Vinayapiṭaka* begins with the *Suttavibhaṅga* (Exposition of the [*Pātimokkha*] *sutta*). *Pātimokkha* as the title of a set of rules is derived from Pali *pātimokkhuddesa*, perhaps meaning "obligatory recitation" originally (von Hinüber, 1985, 61).

The *Pātimokkha*, or *Prātimokṣa(sūtra)* of the schools using Sanskrit, is divided into seven groups of rules arranged according to the gravity of offences:

1. offences entailing expulsion from the saṅgha: *pārājika* (What Leads to Expulsion; derived from Vedic *parā + aj-*, to chase away);
2. offences entailing temporary suspension: *saṃghādisesa* (Where the *Saṃgha* is the Beginning and the End [(? i.e. Decides]; von Hinüber, 1995, 9);
3. undetermined offences: *aniyata* (Undetermined);
4. offences entailing giving up possessions: *nissaggiya* (What Ought to Be Abandoned);
5. offences entailing atonement: *pācittiya* (What Entails Atonement; derived from Vedic *prāyaścitta*, expiation);
6. offences that need confession: *pāṭidesanīya* (What Ought to Be Indicated); and
7. offences concerning correct behavior: *sekhiya* (What Needs Training)
8. The last part is called *adhikaraṇasamatha* (Settlement of Legal Questions) and does not contain rules of conduct but an enumeration of legal procedures (for the corresponding Skt. terms, see von Hinüber, 1985, 67).

The *Pātimokkha* for nuns runs parallel to that for the monks but contains many additional rules.

The text of the *Pātimokkha* is embedded in the *Suttavibhaṅga*, where all rules are introduced by a story, which gives the background for laying down the rule. Not all stories really fit the following rule in the Theravāda tradition (Schlingloff, 1964) and, moreover, Vinayas of different schools may attach different stories to the same rule. Both point to a certain distance in time between rule and story. After a rule is formulated in its final form, it is commented on. The meaning of individual words of the rules is explained, and different applications of the rule are enumerated in a casuistry. At the end, the conditions are given under which there is no offence.

The *Pātimokkha* is generally ranked among the older texts in the Buddhist canon. Still, it is possible to trace the development of the shape of the *Pātimokkha* over a period of time (von Hinüber, 1999; 2001).

The second part of the *Vinayapiṭaka* is the *Khandhaka*, called *Vinayavastu* in Sanskrit. The *Khandhaka* is divided into the *Mahāvagga* (Great Section) and *Cullavagga* (Small Section), both

equally divided into ten chapters. The starting point of the *Mahāvagga* is the enlightenment of the Buddha. After beginning to teach at Sarnath, the Buddha lays down the rules for ordination to establish the community of Buddhist monks. At the end of the *Cullavagga*, there is a chapter on the foundation of the order of nuns, which in all probability happened only after the death of the Buddha (von Hinüber, 2008a), followed by two appendices (chs. 11 and 12) describing events also occurring after the nirvāṇa: the story of the first council at Rājagaha (Skt. Rājagṛha) and the second at Vesāli (Skt. Vaiśālī). Thus the plan according to which the *Khandhaka* was built seems to be a description of the sequence of events from the enlightenment up to the second council. If this explanation of the *Khandhaka*'s structure is correct, this is the first attempt in ancient India to compile a large structured textual unit with innumerable small texts embedded (see below on the *Mahāparinibbānasuttanta*).

The *Khandhaka*/*Vinayavastu* of the different schools was investigated by E. Frauwallner (1956), who provided a still very useful survey of the texts. E. Frauwallner surmised that the *Khandhaka* may have been structured following a model from Vedic literature, particularly the Brāhmaṇas, which also collect many separate small texts putting them together without, however, any overarching structure as found in the Vinaya. Some of the results of E. Frauwallner's pioneering investigations need correction or improvement (Lamotte, 1958, 195; Clarke, 2004).

The largest Vinaya text that survives in Sanskrit is a substantial part of the *Mūlasarvāstivādavinaya* discovered in Naupur near Gilgit in 1931 (Wille, 1990; Clarke, 2014). Numerous but generally small Sanskrit fragments – particularly of the *Sarvāstivāda*, but also of the *Dharmagupta* Vinayas – were recovered from Central Asia. The *Mahāsāṃghikalokottaravāda* version of the *Prātimokṣasūtra* is extant in a Sanskrit manuscript preserved in Tibet (Tatia, 1975) and in fragments from Afghanistan (Karashima, 2013) besides fragments from the *Vinayavibhaṅga* (von Hinüber, 1986) and the *Mahāvastu* preserved in Nepal (Tournier, 2012).

While the *Suttapiṭaka* is the second part of the Tipiṭaka in the Theravāda tradition, the canon of most schools begins with the *Sūtrapiṭaka* (Lamotte, 1958, 164ff./149ff.). The subdivision of the *Suttapiṭaka*/*Sūtrapiṭaka* found in all schools are the four *nikāyas* (groups [of texts]) in Thervavāda, and *āgama* (tradition) in other schools, though neither is the term *āgama* totally alien to Theravāda literature, nor is *nikāya* to the Sanskrit tradition (Tournier, 2014, 25n95). The fifth *nikāya*, the *Khuddakanikāya* (Skt. *Kṣudrakāgama*; Group [Skt. Tradition] of Small Texts), is a later collection that did not find universal recognition as part of the *Suttapiṭaka*. Its content and position consequently vary from school to school. In the following, the structure of the *nikāyas* is described following mainly the Theravāda tradition, in which all five *nikāyas* are completely preserved in their original Indian language. Fragments of texts from various *nikāyas* are extant in Gandhari (Allon, 2008) and in Sanskrit from Turfan and Gilgit.

The four collections of *suttantas* are the *Dīghanikāya*/*Dīrghāgama* (Group/Tradition of Long Texts), *Majjhimanikāya* / *Madhyamāgama* (Group/Tradition of Middle[-length] Texts), *Saṃyuttanikāya*/*Saṃyuktāgama* (Group/Tradition of Connected Texts), *Aṅguttaranikāya*/*Ekottarik* (or *Ekottar*) *āgama* (Group/Tradition of Texts [Arranged according to an] Increasing [Number of] Items).

The *Dīghanikāya* (von Hinüber, 1996, § 52–62) comprises 34 *suttantas* divided into three groups: the *Sīlakkhandhavagga* (Section [*vagga*] of the Collection [*khandha*] on Good Behavior [*sīla*]) comprises *suttantas* 1–13, followed by the *Mahāvagga* (Great Section); *suttantas* 14–23) and the *Pāṭikavagga* (Section Beginning with the *Pāṭika*[*suttanta*]; *suttantas* 24–34). The individual *suttantas* begin regularly by *evaṃ me sutaṃ* in Pali (thus I have heard; Skt. *evaṃ mayā śrutam*; Klaus, 2007; on the *Itivuttaka*, see below). The person speaking is Ānanda, who “heard” the texts immediately from the Buddha himself, and who, according to tradition, answers the questions of Mahākassapa (Skt. Mahākāśyapa) during the first council at Rājagaha (Skt. Rājagṛha). This introduction called *nidāna* (ground) of the *suttanta* continues with a place name, very often Sāvatthi (Skt. Śrāvastī), followed by the name of a monastery or other locations where the Buddha was staying while delivering a discourse. An ancient form of the *nidāna* preserved only in the Theravāda tradition gives the place name using a particular formulation found otherwise only in Vedic texts and mentioning Brahman villages (never towns) without ever giving the name of a monastery. Obviously, this points to a very early stage of the text formation (von Hinüber, 2006).

The middle part of the *suttantas* (and Vinaya texts) contains conversations among different persons with the Buddha as the prominent interlocutor.

In this way, they seem to mirror the early oral text formation by creating a "fictitious orality" (von Hinüber, 1996, § 55).

The end of the *suttantas* is less formalized than the beginning and may contain formulations such as "thus spoke the Buddha (or a monk, who delivered the discourse). Delighted, the monks (or a person addressed in the text) approved to what the Buddha said." Sometimes, the Buddha names the title of a discourse, for example, *Brahmajāla* (DN no. 1) but never *Brahmajālasuttanta*.

The first section of the *Dīghanikāya* contains many debates (Manné, 1990; 1992), while the second preserves texts on the Buddha legend and on his death in the long *Mahāparinibbānasuttanta* (DN no. 16; Skt. *Mahāparinirvāṇasūtra*), of which also substantial Sanskrit fragments exist (Waldschmidt, 1951). This *sūtra* is the first attempt in ancient India to create a long literary composition (von Hinüber, 1996, § 60). A text unusual in many ways is *Sakkapañhasuttanta* no. 21 (The Discourse on Sakka's [Indra's] Questions). The location of the discourse in the Indasālaguhā near Rājagaha is described with unusual precision. To please the Buddha, the *gandhabba* (celestial musician; Skt. *gandharva*) Pañcasikha sings a very erotic love song of which the Buddha enthusiastically approves (fig. 1).

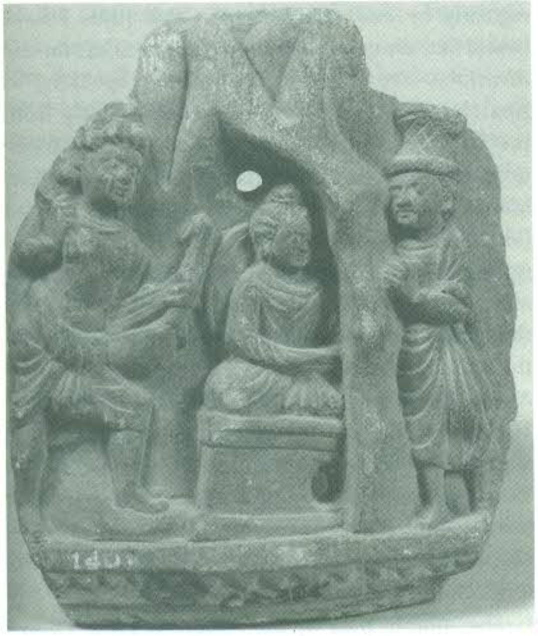

Figure 1: The musician Pañcasikha (left) and Indra (right, wearing his typical crown) before the Buddha meditating in the Indasālaguhā near Rājagaha. Gandhara, 3rd century CE.

The last two *suttantas* – no. 33, *Saṅgītisuttanta* (Communal Recitation), and no. 34, *Dasuttarasuttanta* ([Groups of Concepts] Ending [in the Group of] Ten) – comprise basic concepts of Buddhism and can be understood as one of the roots of the Abhidhamma texts (Anālayo, 2014).

The 152 *suttantas* of the *Majjhimanikāya* (von Hinüber, 1996, § 63–68) are organized as three units: the *Mūlapaṇṇāsa* (Basic Group of 50), *Majjhimapaṇṇāsa* (Middle Group of 50), and *Uparipaṇṇāsa* (Additional Group of 50). The content of the *Majjhimanikāya* is much more varied than that of the *Dīghanikāya* with only a few debates. Some texts are ascribed to pupils of the Buddha and were spoken only after the nirvāṇa (nos. 84, 94, and 124). It is sometimes surmised that the texts of the *Majjhimanikāya* were meant to instruct converts (Franke, 1915; Manné, 1990, 71, 78ff.).

The texts preserved in the *Saṃyuttanikāya* and in the *Aṅguttaranikāya* are much shorter. The exact number of *suttantas* in both these *nikāyas* is difficult to determine, because the traditional numbers (7762 for SN and 9557 for AN) cannot be verified (von Hinüber, 1996, § 48; 2013, XXVIII).

The *Saṃyuttanikāya* (von Hinüber, 1996, § 69–75) contains five sections (*vaggas*). The first one, the *Sagāthavagga* (Section [Containing Texts] Accompanied by Verses) comprises partly very old material presented in the diction of the Vedic texts. In sections 2–5 (*Nidānavagga* [Section Explaining the *Nidāna* (i.e. the *paṭiccasamuppāda*, dependent origination)]; *Khandhavagga* [Section Explaining the (Five) *Khandhas*]; *Saḷāyatanavagga* [Section Explaining the Six Sense Organs with Their Objects]; and *Mahāvagga* [Great Section]), technical matters of the *dhamma* are discussed.

The *Aṅguttaranikāya* (von Hinüber, 1996, § 76–82), which is rarely also called *Ekuttara* (One More) in Pali, enumerates sets of concepts beginning with one item and ending with 11. Consequently, it is divided into 11 chapters (*nipātas*) beginning with the *Ekanipāta* (Chapter of Ones) and ending with the *Ekādasakanipāta* (Chapter of Elevens). However, this system works only up to the *Pañcakanipāta* (Chapter of Fives), because in later parts, the necessary number is often reached only by adding up groups of 3+3 or even 3+3+3+2. Originally, the *Aṅguttaranikāya* seems to have ended with the *Dasakanipāta* (Chapter of the Tens; von Hinüber, 1996, § 77). The inner structure of the *Aṅguttaranikāya* differs considerably from the preceding three *nikāyas*. Although the form of a *suttanta* is preserved by introducing the text with a

nidāna (often only one *nidāna* at the beginning of a *nipāta*), the text consists basically of enumerations.

The structures of *Dīghanikāya* and *Majjhimanikāya* are similar as two collections of long *suttantas*. In contrast, the individual texts of the *Saṃyuttanikāya* (with the exception of the *Sagāthavagga*) and the *Aṅguttaranikāya* are often rather brief and follow a standardized pattern (von Hinüber, 1996, § 83). In the *nidānas* of these *nikāyas*, the city Sāvatthi is prominent (736 times in SN) in contrast to the *Dīghanikāya*, where there are even texts repeated almost *verbatim* with only the names of persons and the location where the *suttanta* was spoken by the Buddha being changed (von Hinüber, 1996, § 57). This was perhaps done to avoid conflicts and to enhance acceptance, if different traditions existed in various Buddhist communities that a specific *suttanta* originated with them. In later times, beginning with the standardized *suttantas* of *Aṅguttaranikāya* and *Saṃyuttanikāya*, the location became less and less important, and Sāvatthi could be inserted everywhere (Schopen, 1997).

The *Khuddakanikāya* (von Hinüber, 1996, § 84–128, also for editions and translations) comprises a large variety of texts in prose or verse. The sequence and the number of texts included in this *nikāya* were and are a matter of controversy (von Hinüber, 1996, § 85); titles and arrangement of individual texts differ in various Buddhist schools (Bechert, 1961, 14ff.). This *nikāya* was open to additions longer than any other part of the canon. Therefore very different types of texts included late into the Tipiṭaka are found here.

The Theravāda *Khuddakanikāya* comprises the following 15 texts in the sequence accepted in the Mahāvihāra, which differs from the one mirrored in Dhammapāla's commentaries:

1. *Khuddakapāṭha* (Short Recitation; commentary: *Paramatthajotikā I*). The nine texts of this collection are gleaned from different parts of the Tipiṭaka and assembled, it seems, for ritual purposes.

2. *Dhammapada* (Words of the Teaching; commentary: *Dhammapadaṭṭhakathā*). This collection of 423 verses divided into 26 sections (*vaggas*) contains besides typically Buddhist texts many general aphorisms, which sometimes run parallel to verses in the Hindu epic *Mahābhārata* (von Hinüber, 1996, § 89). There are many *Dhammapada* collections assembled in different Buddhist schools besides Theravāda such as the *Khotan* (formerly termed *Gāndhārī*) *Dharmapada* (Brough, 1962) of the Dharmaguptakas (?), the *Patna Dharmapada* (Cone, 1989; Roth, 2000 with a facsimile of the text) of the Sāṃmitīyas (Skilling, 1997) and the Sanskrit *Udānavarga*, which was in course of time transformed from a text parallel to the *Udāna* into a "*Dharmapada*" (Bernhard, 1969; on school affiliation and different recensions, see Schmithausen, 1970). In the recent past, new versions were discovered among the Gandhari Buddhist fragments (Lenz, 2003). In spite of many attempts, it is impossible to reconstruct an *Ur-Dhammapada*.

3. *Udāna* (Inspired Utterances; commentary by Dhammapāla: *Paramatthadīpanī I*). The text is divided into eight *vaggas* (sections) with ten brief texts each. The individual *udānas* are verses introduced by a prose text in the shape of a *suttanta*, which is not rarely borrowed from other parts of the canon (Anālayo, 2009).

4. *Itivuttaka* ([Texts Beginning with] This Was Spoken; trans. Masefield, 2000; commentary by Dhammapāla: *Paramatthadīpanī II*). The title of this text in four *nipātas* (chapters), which are subdivided into *vaggas* (sections) with about ten *suttantas* each and with altogether 112 brief *suttantas*, is derived from the unusual beginning *vuttaṃ hetaṃ bhagavatā vuttam arahatā ti me suttaṃ* (this was said by the Lord, said by the Arhant, thus have I heard). A similarly unique wording is found at the end of the individual *suttantas*, "this topic was also explained by the Lord, thus have I heard." According to a tradition preserved in the commentary, this collection was not "heard" by Ānanda but by the laywoman Khujjuttarā at Kosambi (Skt. Kauśāmbī). It is not impossible that the unusual shape of the beginning of the *suttantas* is a trace of an old formalization (*itivuttaka* is mentioned in the list of *aṅgas*) of the introduction to *suttantas* used in Kosambi in contrast to the beginning *evaṃ me sutaṃ* preferred in Sāvatthī, which ultimately prevailed everywhere. This is the only *buddhavacana* said to be handed down by a woman.

5. *Suttanipāta* (Group of Discourses; trans. Norman, ²2001; commentary: *Paramatthajotikā II*). The five *vaggas* of the *Suttanipāta* contain a large variety of metrical and prose texts, some of which are among the oldest extant in Buddhist literature. This is particularly true for the *Aṭṭhakavagga* (Chapter of the Eights [?]; Norman, ²2001, 323; Shulman, 2012) and the *Pārāyaṇavagga* (Chapter on Going to the Far Shore), which seem to have existed as separate texts, because they are commented upon in the *Niddesa*. The *Aṭṭhakavagga* is perhaps referred to in the *Divyāvadāna* as *arthavargīyāni sūtrāṇi* (discourses about the goal; Rotman, 2008, 85ff.). The same text mentions, besides the *Udāna* and so

on, also the *Munigāthā* (Verses of the Sage), which may correspond to the *Munisutta* (Sn I.12) and to the *munigāthā* recommended for study by Aśoka in his edict at Bairāṭ/Bhābhrā besides the *moneyasuta* (*suttanta* about the sage; corresponding to Sn vss. 699–723?) and other discourses (*dhaṃmapaliyāya*; Bloch, 1950, 154). Parallels of individual texts of the *Suttanipāta* are found elsewhere in the canon and in other Buddhist traditions (Salomon, 2000, 5).

6. *Vimānavatthu* ([Texts Having] the Heavenly Palaces as Their Topic) and

7. *Petavatthu* ([Texts Having] the Departed [Ghosts] as Their Topic; commentaries by Dhammapāla: *Paramatthadīpanī III, IV*). The longer *Vimānavatthu* in 1,282 and the shorter *Petavatthu* in 814 verses spoken by gods or ghosts describe the consequences of their good or bad deeds in subsequent births. In the commentaries, lengthy stories accompany and explain the verses in *Vimānavatthu* and *Petavatthu*, which are an interesting source for popular religion but often of mediocre poetic quality. A few very small Sanskrit fragments of a *Vimānāvadāna* and a *Pretāvadāna* containing parallels to *Vimānavatthu* and *Petavatthu* are known from the Turfan collection (Bechert, 1974).

8. *Theragāthā* (Verses of the Elder Monks) and

9. *Therīgāthā* (Verses of the Elder Nuns; commentaries by Dhammapāla: *Paramatthadīpanī V, VI*). Clearly, the 1,279 (according to tradition 1,360) verses spoken by 264 monks and the 522 (according to tradition 494) verses spoken by 73 (according to tradition 116) nuns cannot be classified as *buddhavacana* (word of the Buddha). Neither the date of the collections, which grew over an extended period of time until long after the nirvāṇa, nor the sources are known. Individual monks and nuns may be remembered in the *Theragāthā*/*Therīgāthā*, although mostly connections between name and verse seem arbitrary. Some of the verses in the *Therīgāthā* seem to be spoken to (not by) nuns, who are addressed. The problem which, if any, verses were really composed by women is yet to be solved. Not all of the *Theragāthā/Therīgāthā* verses are strictly Buddhist, and some allow a precious glimpse into very early ancient secular Indian poetry otherwise lost (Lienhard, 1984, 75–79). There are Sanskrit fragments of a Sarvāstivāda (?) *Sthaviragāthā* (Pal. *Theragāthā*) in the Turfan collection (Bechert, 1961, 14ff., 59ff.).

10. *Jātaka* (Stories of the [Previous] Births [of the Buddha]; Skilling, 2006; commentary: *Jātakatthavaṇṇanā*). Only the approximately 6,500 verses of the 547 extant *jātakas* (of originally probably 550) are considered canonical. They are arranged numerically in 22 *nipātas* (chapters) beginning with *jātakas* with one verse (*ekanipāta*), two verses (*dukanipāta*), and so on. The *Terasanipāta* (Chapter [of *Jātakas*] with 13 Verses) is followed by the *Pakiṇṇakanipāta* ([14th] Chapter with [*Jātakas* of] Miscellaneous [Length]), which marks the end of the first part containing 496 (or 499) *jātakas* and approximately 2,500 verses. The following seven chapters of the second part begin with the *Vīsatinipāta* (Chapter [of *Jātakas*] with 20 Verses) to the *Asītinipāta* (Chapter [of *Jātakas*] with 80 Verses) followed by the ten *jātakas* of the *Mahānipāta* (Chapter [Comprising] Great [Long] *Jātakas*) containing altogether about 4,000 verses and comprising small epics, among them the long and very popular *Vessantarajātaka* (Cone & Gombrich, 1977), which can be read as stories even without the accompanying prose of the commentary. The number of verses in each *nipāta* does not always match the required number (e.g. there are 95 instead of 80 verses in the ten *jātakas* of the Chapter of Eights). Particularly the verses of the first part rarely contain anything specifically Buddhist. Only the accompanying stories preserved in the commentary integrate them in a Buddhist context.

There were also *Jātaka* collections in other Buddhist schools: the Chinese translation of the *Mahāsāṃghikavinaya* refers to a lost *jātaka* book (Karashima, 2012, 565). Individual *jātakas* of various schools are found embedded in canonical texts of various schools such as the Theravādins, Mahāsāṃghika-Lokottaravādins, and (Mūla)sarvāstivādins (von Hinüber, 1998, 192–205; Karashima, 2012, 332–338).

Titles of *jātakas* are preserved epigraphically from the 2nd century BCE onward in Bharhut (von Hinüber, 1998, 7–16; Lüders, 1963, 120–163) and later in Kanaganahalli (Nakanishi & von Hinüber, 2014, 85–91). As a quotation from the first verse of a *jātaka* can be used as a title, these are the oldest immediate traces of any canonical Buddhist text preserved in India (Lüders, 1941, 174), while the Aśokan inscription of Bairāṭ enumerates only titles of canonical texts.

11. *Mahāniddesa* and *Cūlaniddesa* (Large and Small Explanation; commentary by Upasena: *Saddhammapajotikā*). This text in two parts, which originally formed a unit under the title *Suttaniddesa* (Explanation of *Suttas*) and which is ascribed to Sāriputta, is a commentary on the *Aṭṭhakavagga* (Nidd I) and on the *Pārāyaṇavagga* together with the *Khaggavisāṇasuttanta* (Nidd II) of the

considered canonical. They are
ically in 22 *nipātas* (chapters) begin-
as with one verse (*ekanipāta*), two
āta), and so on. The *Terasanipāta*
akas] with 13 Verses) is followed by
ipāta ([14th] Chapter with [*Jātakas*
us [Length]), which marks the end
t containing 496 (or 499) *jātakas*
tely 2,500 verses. The following

commentary on the *Aṭṭhakavagga*
on the *Pārāyaṇavagga* together
avisāṇasuttanta (Nidd II) of the

Suttanipāta. Individual words found in the verses are explained by long series of synonyms, which are frequently formulas taken over from canonical texts. The date of the *Niddesa* is a matter of controversy with suggestions ranging from the time of Aśoka to the (more likely) 2nd century CE (von Hinüber, 1996, § 118). Together with the *Paṭisambhidāmagga*, the *Niddesa* is one of the latest texts included in the *Khuddakanikāya*. According to a remark in the commentary on the *Vinayapiṭaka* (Sp 695ff.), the *Niddesa* was almost lost during the period of oral text transmission when once only one single monk was left who knew the text by heart. The edition of the *Cūlaniddesa* by the Pali Text Society is rearranged and, consequently, differs markedly from the text as transmitted in the manuscripts and printed in oriental editions.

12. *Paṭisambhidāmagga* (Path of Discrimination [Ñāṇamoli]; commentary by Mahānāma: *Saddhammapakāsinī*). This Abhidhamma text was created too late (2nd cent. CE[?]; Frauwallner, 1995, 42) to be included into the *Abhidhammapiṭaka*, which was already closed, and therefore could be accommodated only in the *Khuddakanikāya*. As in other Abhidhamma texts, the *Paṭisambhidāmagga* begins with a *mātikā* (summary) containing 73 different aspects of *ñāṇa* (knowledge) to be explained in the first of the three *vaggas* (sections). Occasionally, the *Paṭisambhidāmagga* comments on *suttantas* first of all from the *Aṅguttaranikāya*. The *Paṭisambhidāmagga* may be an early attempt to create a handbook and would be as such a predecessor to the *Vimuttimagga* (Path to Liberation) and Buddhaghosa's *Visuddhimagga* (Path to Purity; Frauwallner, 1995, 87–95).

13. *Apadāna* ([Book of] Great Deeds; Mellick Cuttler, 1994; commentary: *Visuddhajanavilāsinī*). The meaning of the title *Apadāna* is controversial (von Hinüber, 2008b, 88ff.). The *Apadāna*, which might be the youngest text in the Tipiṭaka, existed in three recensions (Bechert, 1958, 18). It is divided into four parts: (1) on buddhas and their fields; (2) on *paccekabuddhas* (individual buddhas), who gained sudden enlightenment and did not teach; (3) on Theras; and (4) on Therīs. The originally 550 *apadānas* were reduced to 547 to concur with the number of *jātakas*. There are parallels to the *Apadāna* in the *Anavataptagāthā* (Verses Spoken at Lake Anavatapta), extant as a separate text in a Gandhari version (Salomon, 2008), in Sanskrit fragments in the Turfan collection (Salomon, 2008, 24), and in the Vinaya of the Mūlasarvāstivāda canon (Bechert, 1961, 29). The cultural context of the *Apadāna* together with *Buddhavaṃsa* and *Cariyāpiṭaka* is discussed by J.S. Walters (1997).

14. *Buddhavaṃsa* (Lineage of the Buddhas; commentary: *Madhuratthavilāsinī*). The verses of the *Buddhavaṃsa* describe the biographies of his 24 predecessors and of the Buddha himself. An inscription in Burma contains a different version of this text (Braun, 1996, 200, no. 576) and a quotation of a **Dvādasasahassabuddhavaṃsa* perhaps belonging to the texts used by the Abhayagirivihāra school can be traced in the Tibetan translation of Bhavya's *Tarkajvālā* (Skilling, 1993).

15. *Cariyāpiṭaka* (Basket of Conduct; commentary by Dhammapāla: *Paramatthadīpanī* VII). The verses of the *Cariyāpiṭaka* relate 35 stories from the former lives of the Buddha arranged according to the "perfection" (*pāramī* / *pāramitā*) acquired in each birth. Some stories are quoted in the *Jātakatthavaṇṇanā* and in its introduction, the *Nidānakathā* (Alsdorf, 1957, 2–14). These are not always identical with those found in the *Cariyāpiṭaka* and may represent the true Ceylonese recension, while Dhammapāla, who also uses a different version of the *Apadāna*, might comment on his South Indian text of *Cariyāpiṭaka*.

The following four para-canonical texts (von Hinüber, 1996, §§ 156–180) are included in the *Khuddakanikāya* only in Burma according to the *Piṭakat-samuiṅ* (von Hinüber, 1996, § 4), a catalogue of texts known in Burma composed by the last royal librarian in 1888 (*Catalogue of the Piṭaka and Other Texts in Pāḷi, Pāḷi-Burmese, and Burmese* [*Piṭakat-tō-sa-muiṅ:*], 2012, 48, nos. 38–41):

1. *Suttasaṅgaha* (Collection of *Suttantas*; commentary by Ariyavaṃsa: *Suttasaṅgahaṭṭhakathā*). Although enumerated as a para-canonical text in the *Piṭakat-samuiṅ*, the *Suttasaṅgaha* was not accepted into the *Chaṭṭhasaṅgāyana* edition of 1956. The text is compiled for practical purposes and contains selected *suttantas* in addition to excerpts from commentaries (Salomon, 2011, 196). Neither author nor date is known.

2. *Nettipakaraṇa* (Guide; commentary by Dhammapāla: *Nettiaṭṭhakathā*) and

3. *Peṭakopadesa* (Piṭaka Disclosure [Ñāṇamoli]; no commentary) are two handbooks containing guidelines for explaining the Tipiṭaka.

4. *Milindapañha* (Questions of [King] Milinda; commentaries: *Milindaṭīkā* and *Milindaṭṭhakathā*, Tokyo, 1999). The *Milindapañha* is an ahistorical text with a conversation (in the tradition of the Upaniṣads) between the historical Indo-Greek king Menandros (2nd cent. BCE; Fussman, 1993) and an otherwise unknown monk, Nāgasena, on various points of the

Buddha's teachings. Except for the distorted name of the king (Grk. Menandros > Pal. Milinda), there is no traceable Greek influence. As the 4th-century Chinese translation (an earlier 3rd-cent. [?] translation is lost) under the title * *Nāgasenabhikṣusūtra* indicates, the original text was markedly shorter comprising roughly the first quarter of the present Pali text (Demiéville, 1924; Guang Xing, 2007). It is likely that the *Milindapañha*, which is occasionally referred to in Buddhist literature (Skilling, 1998), was originally composed in northwestern India perhaps between 100 BCE and 200 CE and recast into Pali, with the second, much longer part being added later in Ceylon before the time of Buddhaghosa's commentaries (5th cent.). There are different Pali versions of the *Milindapañha* (Skilling, 2010).

The *Abhidhammapiṭaka* (Basket [Containing Texts] Relating to the Teaching), which was not recited during the first council, was constituted independently in the different schools considerably later than the first two Piṭakas. This explains the variation in content and number of texts included into the different versions in marked contrast to the more uniform *Vinayapiṭakas* and *Suttapiṭakas* (Lamotte, 1958, 198). History and structure of the Abhidhamma texts were investigated by E. Frauwallner in a series of seminal articles between 1963 and 1973 (Frauwallner, 1995).

Only a few fragments of at least partly canonical Abhidharma texts survive also in the Indian languages Gandhari and Sanskrit. The earliest are Kharoshthi fragments perhaps belonging to the Kāśyapīya school (Cox, 2014). Fragments from the Sanskrit Abhidharma of the Sarvāstivāda school are extant in the Turfan collection (Dietz, 2004) and perhaps of the Mūlasarvāstivāda school in Gilgit (von Hinüber, 2014, 117). Numerous, mostly as yet unidentified but possibly also canonical, Abhidharma fragments, among them the Śāriputra Abhidharma (T. 1548), are found in the Schøyen collection (Matsuda, 2002). (For the different collections, see the article "Manuscript and Printing: South, Southeast, and Central Asia").

A complete *Abhidhammapiṭaka* in Pali is preserved in seven texts (*pakaraṇa* [treatise]) of the Theravāda school (von Hinüber, 1996, §§ 129–155): (1) *Dhammasaṅgaṇi* (Collection of Dhammas), (2) *Vibhaṅga* (Explanation), (3) *Dhātukathā* (Discussion of the Elements), (4) *Puggalapaññatti* (Concepts of Person), and (5) *Kathāvatthu* (Text Dealing with Disputes). The last two texts, (6) *Yamaka* ([Text of] Pairs) and (7) *Paṭṭhāna* (Basis [of All Abhidhamma Texts]) are of enormous length and *have never been printed in full. According to* the tradition, it is impossible to calculate the extent of the *Paṭṭhāna*, which is also called *Mahāpakaraṇa* (Great Treatise; see above).

With the exception of the *Kathāvatthu*, the Abhidhamma texts begin with a *mātikā* (list; Skt. *mātṛkā*) of concepts perhaps originally created for easy memorization, which are explained in the subsequent text. This structure seems to have been adopted from early legal texts (von Hinüber, 1994c).

The *Kathāvatthu*, an invaluable but somewhat neglected source for early Buddhist philosophy, is different in structure containing questions and answers aiming at the refutation of about two hundred heretical views, which are ascribed to specific Buddhist schools only much later in the commentary. The unusual "pre-logical" way of arguing in the *Kathāvatthu* is often difficult to understand (Ganeri, 2001). The *Kathāvatthu*, which is thought to have been composed by Moggaliputtatissa 218 years after the nirvāṇa, is the only long canonical text that is dated and ascribed to an author by tradition. The canonicity of *Kathāvatthu* was not universally accepted.

According to Buddhist traditions, the Tripiṭaka will gradually be lost when Buddhism begins to decline (Nattier, 1991). The first text to disappear will be the *Paṭṭhāna*; the last will be the *Pātimokkha* (von Hinüber, 1996, § 85).

Āgama/Nikāya

The *āgamas/nikāyas* are collections of the Buddhist canonical scriptures found in the *Sūtrapiṭaka* (Basket of Discourses).

The basic sense conveyed by the term *āgama*, transcribed in Chinese as *āhán* (阿含) and translated in Tibetan as *lung*, is what has "come down" by tradition. The term *nikāya* stands for a group, collection, or assemblage (which in the present context refers to texts, but elsewhere can denote an ordination lineage).

The usage of the term *āgama* for the discourse collections is widespread among Buddhist schools, although the Theravāda tradition employs the term *nikāya* instead. Nevertheless, the term *āgama* does appear in Theravāda canonical scriptures in expressions like *āgamaṃ pariyāpuṇassu* (AN V.80; Vin II.249). Here a monk who has not yet memorized the discourses is told that he "should learn an/the *āgama*." A learned monk is then referred to as *āgat' āgama*, one who has "come to an/the *āgama*" in the sense of being well versed in it (e.g. Vin I.119; DN II.125; MN I.221; AN I.117, etc.). A comparable expression can be found in Jaina texts and in Aśoka's 12th Rock Edict (Bloch, 1950, 123), attesting to its antiquity. The term *nikāya* in the sense of a collection of texts occurs in the Theravāda account of the first "communal recitation" or "council," *saṃgīti*. This account reports the recitation of five *nikāyas* (Vin II.287), an expression also attested in early inscriptions at Bharhut and Sanchi (Lüders, 1941, 175).

The Vinayas of different Buddhist schools report that during this first *saṃgīti*, which according to tradition was held soon after the Buddha's decease, the *āgamas/nikāyas* were adopted as a basic principle to divide the discourses into sizeable groups for oral transmission. The same Vinayas disagree, however, on the sequence in which they list these collections. Variations exist also in the sequential arrangement of discourses in a collection. Even the allocation of discourses to an *āgama/nikāya* shows disagreement among different schools. This gives the impression that a common principle was applied individually by various reciter traditions. This common principle groups the discourses as follows (adopting the Theravāda sequence of listing):

1. *Dīrghāgama* or *Dīghanikāya* (long discourses).
2. *Madhyamāgama* or *Majjhimanikāya* (medium-length discourses).
3. *Saṃyuktāgama* or *Saṃyuttanikāya* (topically arranged discourses).
4. *Ekottarikāgama* or *Aṅguttaranikāya* (numerically arranged discourses).

The *Dīghanikāya* and the *Dīrghāgama*

Three collections of long discourses are extant: one of these is preserved in Pali and has been transmitted within the Theravāda tradition; another version is preserved in Chinese translation under the title *Cháng āhán* (長阿含; T. 1). This was translated in 413 CE by Zhú Fóniàn (竺佛念), based on an original recited by Buddhayaśas that with high probability stems from a Dharmaguptaka line of transmission and appears to have been in Prakrit. In addition to these two, large parts of a Sarvāstivāda/Mūlasarvāstivāda collection of long discourses are extant in the form of substantial Sanskrit fragments (Hartmann, 2004; for a survey of recent fragment discoveries, see Allon, 2008).

Regarding the different Buddhist schools that transmitted these *āgamas* or *nikāyas*, each of these discourse collections is not so much the product of a school as the final result of oral transmission over long periods by successive generations of Indian reciters, of which only the last generations could be considered members of a particular school. Thus, while school affiliation is certainly an important aspect to be taken into consideration, the vicissitudes of oral transmission have affected these discourses right from the time they came into existence, not only since they were transmitted by reciters who considered themselves as members of one or another of the Buddhist schools. In other words, variations among parallel versions need not invariably be the result of sectarian agendas.

Besides the three complete *Dīghanikāya/Dīrghāgama* collections, individual long discourses are preserved in Chinese translation (T. 2–25). Versions of some long discourses are also extant in Indic-language fragments that do not belong to

three complete *Dīghanikāya/*
ections, individual long discourses
Chinese translation (T. 2–25).
long discourses are also extant
fragments that do not belong to

the Sarvāstivāda/Mūlasarvāstivāda collection mentioned above, as well as in Tibetan translation.

The Theravāda *Dīghanikāya* adopts a tripartite division of its discourses that begins with a chapter on the "aggregate of morality," the *Sīlakkhandavagga* (13 discourses). A rationale for this grouping could be the circumstance that most discourses in the *Sīlakkhandavagga* share an account of the gradual path of training (not found in the first discourse, the *Brahmajālasutta* [Discourse on the Supreme Net], which, however, has three graded sections on morality). This account describes in detail the gradual progress of the disciple from going forth via various practices related to restraint and mental cultivation to the gaining of awakening. In an oral setting, such a grouping of discourses is easily memorized because of the substantial amount of text common to the discourses, which thus needs to be learned only once. After transmission has shifted to the written medium, the full text needs to be written out only at its first occurrence and can be abbreviated for subsequent discourses, thus saving both time and writing material, the latter probably being an important concern in a manuscript culture.

The Theravāda *Dīghanikāya* continues after the chapter on the aggregate of morality with the *Mahāvagga* (10 discourses), in which seven out of ten discourses begin with the qualification "great" (*mahā*), and the *Pāṭikavagga* (11 discourses), a chapter named after its first discourse, the *Pāṭikasutta* (Discourse to Pāṭika[putta]; DN 24).

The 30 discourses of the Dharmaguptaka *Dīrghāgama* are divided into four recitation sections and occupy 22 fascicles (T. 1). The first recitation section in this collection comprises 4 discourses, the second 15, the third 10, and the last only 1 discourse.

The Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama* adopts a threefold grouping. This begins with the *Ṣaṭsūtrakanipāta*, which, as its title indicates, collects "six discourses." This is followed by the *Yuganipāta* (18 discourses), a section on "pairs" of discourses, and the *Śīlaskandhanipāta* (23 discourses), a section on the "aggregate of morality."

Regarding the threefold grouping found in the Theravāda *Dīghanikāya* and the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama*, it is worthy of note that the last discourse in the Dharmaguptaka *Dīrghāgama* not only is exceptionally long but also has detailed cosmological descriptions that seem different from the type of thought usually reflected in the early discourses. If this text should be a later addition to the collection, then the *Dīghanikāya* and the two *Dīrghāgamas* would originally have agreed in adopting a basic threefold grouping of their discourses.

The Theravāda *Dīghanikāya* has 34 discourses, the Dharmaguptaka *Dīrghāgama* has 30, and the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama* has 47. In the case of the Theravāda *Dīghanikāya*, its *Jāliyasutta* (DN 6) appears to be without a counterpart in the discourse collections of other schools, while its *Mahāsudassanasutta* (DN 17) in other traditions usually forms part of their version of the *Mahāparinirvāṇasūtra*. Three discourses in the Dharmaguptaka *Dīrghāgama* (11, 12, and 30) and apparently 12 discourses in the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama* (Hartmann, 2004) are not known in the Theravāda tradition.

In addition to differences in the overall count of discourses and the absence of parallels in some cases, discourses common to the three collections usually occur at a different place within the respective *āgama* or *nikāya*. For example, the *Brahmajālasūtra*, a survey of the grounds for various philosophical views, is the first discourse in the Theravāda *Dīghanikāya*, the 21st discourse in the Dharmaguptaka *Dīrghāgama*, and the last discourse in the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama* (Hartmann, 2004).

Indications made so far regarding the overall count and structure of the Sarvāstivāda/Mūlasarvāstivāda collection of long discourses are based on reconstructions with the help of fragments that preserve the summary verses, *uddānas* (Hartmann, 2004). Such *uddānas*, found frequently in the *āgama* and *nikāya* collections, list key words that refer to the titles or other prominent aspects of the discourses assembled in a particular section of the text. These summary verses, some of which are actually in prose, were probably intended to serve as a mnemonic aid for the reciters, ensuring that no discourse was overlooked and that the sequence in which these were to be recited was maintained.

A text of special significance among the material common to the three collections is the *Mahāparinirvāṇasūtra* (Discourse on the Great Decease), which reports the Buddha's last days, his passing away, and his funeral. An interest in narration of a historical type is also evident in the *Mahāvadānasūtra* (Discourse on the Great Lineage), a record of key events said to have happened in the lives of previous buddhas. In each of the three collections, this discourse is located close to the *Mahāparinirvāṇasūtra*; in the Dharmaguptaka *Dīrghāgama*, it in fact opens the collection, immediately followed by the *Mahāparinirvāṇasūtra*.

Besides the interest in some form of historical record keeping, another significant tendency is the mapping of central doctrines reflected in two discourses also found in all of the three collections. These are the *Saṃgītisūtra* (Discourse on the Group Recital) and the *Daśottarasūtra* (Discourse on Increasing Decades), whose speaker is Śāriputra, a leading disciple of the Buddha renowned in the tradition for his wisdom. The two discourses provide numerically arranged listings of doctrinal terms and key aspects of the teachings in a manner akin to Abhidharma analysis, where the development of summaries (*matṛkās*) of doctrinal topics became an important exegetical tool. The employment of such summaries is also reflected in Vinaya literature, where the code of rules to be kept by monastics, the *prātimokṣa*, is perhaps the *matṛkā* par excellence. While in the Theravāda *Dīghanikāya* these two discourses are the last of the collection, in the Dharmaguptaka *Dīrghāgama*, they come in the ninth and tenth positions, and in the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama*, the *Saṃgītisūtra* and the *Daśottarasūtra* stand at the beginning as the third and first discourses, respectively.

The first six discourses in the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama*, found in the *Ṣaṭsūtrakanipāta*, form a group of their own that was at times handed down independently of the whole collection, perhaps reflecting their particular attraction or relevance for Sarvāstivāda/Mūlasarvāstivāda reciters and their audience. The six discourses in this group are concerned either with mapping of central doctrines or else with providing a history of the Buddhist tradition. Besides the *Daśottarasūtra* and the *Saṃgītisūtra*, this group contains another discourse of comparable type, the *Arthavistarasūtra* (Discourse on Extended Meanings), which has no parallel in the Theravāda canon or the Dharmaguptaka *Dīrghāgama*. Again, besides the *Mahāvadānasūtra* and the *Mahāparinirvāṇasūtra*, another discourse similar to these two in this group of six is the *Catuṣpariṣatsūtra* (Discourse on the Four Assemblies), a history of the coming into existence of the four assemblies of Buddhist disciples (monastic and lay, male and female). This discourse has its counterparts in other Buddhist schools in the respective Vinayas, a situation that points to a process of textual movement between the *Vinayapiṭaka* (Basket of Vinayas) and the *Sūtrapiṭaka*. Even the *Mahāparinirvāṇasūtra* may have originally been a Vinaya narrative that was then subsequently shifted to the *Sūtrapiṭaka*. Such shifting of texts could in principle have happened in either direction, not only from the *Vinayapiṭaka* to the *Sūtrapiṭaka*.

The distribution of discourses among the different *āgamas*/*nikāyas* according to principles such as length for the purpose of facilitating their memorization would have naturally provided reciters specializing in a particular collection with a somewhat specific coverage of topics.

Such specific coverage appears to be recognized in an explanation given in the Sarvāstivāda *Vinayavibhāṣā* that relates the long discourses collected in the *Dīrghāgama* especially to the refutation of heterodox philosophies (T. 1440 [XXIII] 504a1). This seems to hold also for the *Dīghanikāya*, where the Buddha's ability to convert outsiders and to stand his ground successfully in debate are prominent themes, together with the inspiration to be gained from the Buddha's exceptional nature and qualities. As debates and eulogies can easily become prolonged, it would only be natural if a collection of long discourses ends up containing much material of this type. The exceptional nature of the Buddha as an important topic in the *Dīghanikāya* is reflected in a tale found in the Pali commentarial tradition, which reports that the transmission of this collection was taken up by the disciples of the Buddha's attendant Ānanda (Sv I.15). In early Buddhist thought, Ānanda stands representative for a deeply devoted attitude toward the Buddha. Thus, from the viewpoint of the commentarial tradition, his personal inclinations (which would presumably have attracted similarly inclined disciples) fit this particular discourse collection. In other words, the collection of long discourses would have a particular appeal for disciples who feel strong devotion toward the Buddha as their teacher as well as for disciples who are engaged in winning converts to the tradition and disciples who have to defend Buddhist doctrine against heterodox philosophies and beliefs.

The *Majjhimanikāya* and the *Madhyamāgama*

The *Majjhimanikāya* (Collections of Medium-Length Discourses) and the *Madhyamāgama* are extant in Pali, transmitted by the Theravāda tradition, and in a Chinese translation by Saṅghadeva undertaken in 398 CE. Saṅghadeva's translation apparently replaced an earlier translation by Zhú Fóniàn, based on a *Madhyamāgama* transmitted by

a Chinese translation by Saṅghadeva
in 398 CE. Saṅghadeva's translation
placed an earlier translation by Zhú
l on a *Madhyamāgama* transmitted by

Dharmanandin. The *Madhyamāgama* now extant in the Taishō edition as entry number 26 under the title *Zhōng āhán* (中阿含) appears to have been based on a Prakrit original that with considerable probability stems from a Sarvāstivāda line of transmission (Anālayo, 2012a, 516ff.). Besides these two complete collections, medium-length discourses are preserved individually in Chinese translation (T.27–98). In addition, a number of *Madhyamāgama* discourses are extant in Indic-language fragments (Chung, 2011), and a few exist also in Tibetan translation.

The *Majjhimanikāya* has 152 discourses grouped into 15 chapters that are arranged into 3 main divisions. The *Madhyamāgama* contains 222 discourses grouped into 18 chapters, which are arranged into 5 recitation sections that occupy 60 fascicles in the Taishō edition.

In the case of the *Majjhimanikāya*, closer inspection suggests that its tripartite division may be related to the need of facilitating oral transmission (Anālayo, 2011, 1ff.). The Pali commentarial tradition indicates that reciters of the *Majjhimanikāya* had to memorize at the very least the first group of 50 discourses (Sp IV.789). The group with the first 50 discourses contains a selection of basic teachings that would equip reciters of limited memorization skill with the necessary material for teaching and for their own practice. Adding the middle section would augment this basic set with material appropriate for popular teaching, reflected in the circumstance that the chapters in this part of the *Majjhimanikāya* contain teachings given to different audiences, namely householders, monks, wanderers, kings, and Brahmans. Reciters able to memorize also the last section, thereby mastering the entire *Majjhimanikāya*, would have at their disposition the more detailed teachings on meditation and doctrinal themes provided in this third part of the collection. Thus the tripartite division of the *Majjhimanikāya* appears to enable reciters to portion off parts of the collection according to their memorization skill.

The same could also apply to the *Dīghanikāya*, where the tripartite division may have had the same purpose, only here, according to the commentarial tradition, it is the middle section (the *Mahāvagga* containing the Buddha biography) that should above all be memorized. In the case of the *Saṃyukta* and *Ekottarika* collections (see below), the respective arrangement by way of topics or numbers would naturally have been amenable to a comparable partitioning of the collection.

The *Majjhimanikāya* is fairly consistent in adopting a pattern of ten discourses per chapter, the sole exception being its penultimate chapter with 12 discourses. The count of discourses per chapter in the *Madhyamāgama* shows greater diversity. Although a grouping of ten appears to be the most common count, chapter 11, for example, has 25 discourses. The sequences of the discourses in the two collections have little in common.

A total of 96 *Madhyamāgama* discourses have a parallel in the *Majjhimanikāya* (indications given are based on a revision of the parallels identified by Akanuma, 1929). Most of the remaining discourses have their counterparts in other Pali *nikāyas*, while 18 *Madhyamāgama* discourses have no Pali parallel (among the discourses or the *Vinayapiṭaka*). In the case of the *Majjhimanikāya*, seven discourses have no parallel in the Chinese *āgamas*, in Sanskrit fragments or in Tibetan translation.

The absence of a parallel when comparing discourses in the Pali *nikāyas* with the Chinese *āgamas* does not necessarily imply lateness of the text in question. A case in point is the *Jīvakasutta* (Discourse to Jīvaka) of the *Majjhimanikāya* (MN 55), which has no parallel in any of the Chinese *āgamas*. Yet, a version of the *Jīvakasūtra* has been found among the recently discovered fragments of the Sarvāstivāda/Mūlasarvāstivāda *Dīrghāgama* (DN 43; see Hartmann, 2004). Thus the fact that no parallel to this discourse is extant in the Chinese *āgamas* can be concluded to be due to differences in distribution of discourses among the *āgamas*/*nikāyas* in various schools. In the case of the Sarvāstivāda/Mūlasarvāstivāda tradition, this discourse was evidently judged to fit the category of a long discourse, whereas the Theravāda tradition included its version in the collection of medium-length discourses. The *Dīrghāgama* preserved in Chinese stems from the Dharmaguptaka tradition, whose reciters did not include a version of the *Jīvakasutta* among their long discourses, although they may have had a version of this discourse among their medium-length discourses or elsewhere. Thus in the textual corpus of the Chinese *āgamas*, this discourse is unknown. Had it not been for the recent fragment discoveries, the *Jīvakasutta* would belong to the category of Pali discourses lacking known parallels.

Differences in distribution of discourses over the *āgamas*/*nikāyas* appear to be the result of an ongoing process of shifts in location. Perhaps even whole groups of discourses were moved from one collection to another. This seems to have happened in the case of the first chapter in the *Madhyamāgama*, for example, in which all of the ten discourses involve the number seven. The majority of the discourses in this chapter have their counterparts among the section on sevens of the *Aṅguttaranikāya*. This gives the impression that these discourses could originally have been assembled as part of an *Ekottarika* collection of sevens and were then subsequently inserted at the beginning of the *Madhyamāgama*.

A similar process might have happened in the case of the *Majjhimanikāya* in relation to its last chapter, which combines discourses that in one way or another deal with the topic of the six senses. Parallels to these discourses are found in the *Saṃyuktāgama*, which – like its Pali counterpart, the *Saṃyuttanikāya* – has an entire section dedicated to the six senses. Thus in this case, it seems possible that these ten discourses originally became a group in a topically organized collection and only subsequently made their way into the *Majjhimanikāya*.

The rationale behind such moves would be to ensure that reciters of each collection had a good coverage of various aspects of the teachings, which would have led some reciters to incorporate material from other collections that they considered important. The same would also explain the not infrequent doubling of discourses, where the same text appears in whole or in part in more than one collection.

Another aspect of the influence of oral transmission can be illustrated with the example of the *Mahācattārīsakasutta* (Discourse on the Great Forty) of the *Majjhimanikāya* (MN 117). This discourse presents an exposition of the supramundane path factors whose philosophical and philological aspects show clear signs of lateness, confirmed by the circumstance that the whole exposition is absent from its Chinese and Tibetan parallels (Anālayo, 2012a, 289ff.). The intrusion of such later material points to a recurrent pattern, in which what originally would have been of a commentarial or explanatory nature during oral transmission became part of the text on which it commented (Anālayo, 2010).

Besides addition, oral transmission can at times also result in a loss of text. An illustrative case is the *Chabbisodhanasutta* (Discourse on Sixfold Purity) of the *Majjhimanikāya* (MN 112). In spite of the explicit reference to six in its title, the Pali discourse expounds only five types of purity of an *arahant*. The commentary reports several explanations for this inconsistency, one of them being that, according to the reciters from India, an *arahant*'s detachment in regard to the four "nutriments" (edible food, contact, volition, and consciousness) should be added (Ps IV.94f.). That this is indeed the solution can be gathered from the *Madhyamāgama* parallel discourse, which, besides the five purities mentioned in the Pali discourse, lists the four nutriments as another purity (T. 26 [I].732b13).

This case is remarkable not only because it shows that substantial portions of a discourse could get lost during oral transmission from India to Sri Lanka but also for the fact that the discrepancy between title and content of the *Chabbisodhanasutta* did not result in an adjustment. It would have been easy for the Sri Lankan reciters to insert an exposition on the four nutriments from another discourse on the strength of the commentarial suggestion. Still easier would have been a change of the title to "Discourse on Fivefold Purity." Yet, the Pali discourse was handed down in its apparently truncated state. This gives the impression of a degree of fidelity of the reciters in their attempts (clearly not always successful) to pass on a discourse in the way they had received it.

Another indication regarding the transmission of the early discourses can be gathered from the *Bakkulasutta* (Discourse to Bakkula) of the *Majjhimanikāya* (M 124), which in agreement with its *Madhyamāgama* parallel reports that its protagonist had been a Buddhist monk for 80 years (T. 26 [I].475a21). This obviously implies that the discourse could only have come into being at a time considerably later than the Buddha's demise after his 45 years of teaching activity. The Pali commentary then indicates that the *Bakkulasutta* was included in the canonical collections at the second communal recitation, *saṃgīti* (Ps IV.197). Thus the commentarial tradition was clearly aware that the *nikāyas* could not have been recited in their final form at the first communal recitation reckoned by tradition to have been held soon after the Buddha's death. Several other discourses in the same *Majjhimanikāya* in fact explicitly note that the Buddha had already passed away (MN 84; 94; 108).

Regarding the somewhat different emphases in the long, medium-length, and other discourse collections, according to the Sarvāstivāda *Vinayavibhāṣā*, the *Madhyamāgama* presents profound doctrines for an intelligent audience (T. 1440 [XXIII].503c28). The Pali commentarial tradition associates the transmission of the *Majjhimanikāya* with the disciples of Sāriputta, who in the tradition represent the quality of wisdom par excellence (Sv I.15). Thus the perspectives provided by these two works agree in indicating that the middle-length collections would

be of particular relevance for di
to deepen their understanding
order to develop their wisdom.

The *Saṃyuttanikāya* and the *Saṃyuktāgama*

The *Saṃyuttanikāya* (Collections of Topicwise Arranged Discourses) and the *Saṃyuktāgama* are extant in Pali, transmitted by the Theravāda tradition, and in a Chinese translation by Bǎoyún (寶雲) begun in 435 CE. This translation was based on an original recited by Guṇabhadra and is now found in the Taishō edition as entry number 99 under the title *Zá āhán* (雜阿含). Bǎoyún's translation appears to have been based on a Sanskrit original that stemmed from a Mūlasarvāstivāda line of transmission. While in view of the language and school affiliation this may appear surprising, it nevertheless seems as if the manuscript of this discourse collection was acquired by the Chinese pilgrim Fǎxiǎn (法顯) in Sri Lanka (Glass, 2010, 200), where he stayed at the Abhayagiri Monastery, which at that time had lively contacts and exchange with various other Buddhist schools in India.

Besides these two complete collections, a partially preserved Chinese translation of a *Saṃyuktāgama* of uncertain school and translator can be found as entry number 100 in the Taishō edition (Bingenheimer, 2011), followed by another short *Saṃyuktāgama* fragment as entry number 101 (Harrison, 2002) and by several individually translated *Saṃyuktāgama* discourses (T. 102–124). Besides Indic-language fragments (Chung, 2008), a considerable number of *Saṃyuktāgama* parallels are extant in Tibetan translation. These appear for the most part in Śamathadeva's *Upāyikāṭikā* (Indispensable Commentary) on the *Abhidharmakośabhāṣya* (D 4094 / P 5595; see Honjō, 1984).

The circumstance that the *Saṃyuttanikāya* and the *Saṃyuktāgama* are arranged according to topics makes it natural that a considerable number of their discourses deal with doctrinal themes like dependent arising, the aggregates, the senses, and aspects of the path. In this way, the two collections provide a range of closely related spotlights following each other in immediate succession on central themes of early Buddhist philosophy and practice. The collection of connected discourses would thus have been of special interest for disciples wishing to develop a comprehensive understanding of a specific aspect of the teachings.

The Sarvāstivāda *Vinayavibhāṣā* in fact indicates that the *Saṃyuktāgama* is particularly appropriate for providing topics for meditation (T. 1440 [XXIII].503c29). The Pali commentarial tradition associates the transmission of the *Saṃyuttanikāya* with the disciples of Mahākassapa (Sv I.15), who in the tradition exemplifies the austere forest monk given to ascetic practices, which in turn are often seen as related to intensive meditation. Thus these two works seem to agree in seeing the topically arranged collection as providing teachings suitable for meditative reflection, ideally undertaken in seclusion.

As a result of the emphasis on doctrinal teachings in the topically organized collections, the *Abhidharmakośabhāṣya* draws its discourse quotations from the *Saṃyuktāgama* to a greater extent than from the other three *āgamas* taken together. This in turn has made Śamathadeva's compendium of discourse quotations from the *Abhidharmakośabhāṣya*, preserved in Tibetan translation, a rich source for *Saṃyuktāgama* discourse material.

No entire *āgama* is found in the Tibetan canon, and only a few discourses were individually translated into Tibetan, some of which form a group under the title of *Mahāsūtra* (Great Discourses; Skilling, 1994). The lack of entire *āgamas* in Tibetan translation needs to be considered together with the circumstance that, some four centuries before the beginning of translation activities in Tibet, single *āgamas* from different schools were rendered into Chinese, yet this did not lead to a subsequent effort at translating a whole set of four *āgamas* of a single school. A telling contrast to this is the attention given to Mahāyāna *sūtras*, where the Chinese canon often contains several translations of a particular text, undertaken by different translators at successive times. This suggests an overall picture of a gradual decline of interest in *āgama* discourses, which presumably were no longer studied for their own sake but mainly served as a backup for quotations found in shastric treatises or Mahāyāna *sūtras* and elsewhere.

The *Saṃyuttanikāya* of the Theravāda tradition has five chapters covering 56 topical divisions, *saṃyuttas*. The first of these five chapters, the *Sagāthavagga*, collects discourses that are accompanied by verse. Discourses on conditionality and so on are found in the *Nidānavagga*, discourses on the aggregates and so on are collected in the *Khandhavagga*, and discourses on the six senses and so on are included in the *Saḷāyatanavagga*. The discourses assembled in the great division, *Mahāvagga*, cover various aspects of the path.

The complete *Saṃyuktāgama* (T. 99) comes in 50 fascicles, of which only 48 correspond to the original text. Owing to a misplacement of fascicles at some time in the past, the order of the collection fell into disarray, and two fascicles that do not belong to the collection have been accidentally included: the 23rd (containing S 604) and the 25th (containing S 640, 641). With the help of a partial commentary on the *Saṃyuktāgama* preserved in the *Vastusaṃgrahaṇī* of the *Yogācārabhūmi* (fascicles 85–98), the order of the *Saṃyuktāgama* can be restored, after removal of the two unrelated fascicles (Anesaki, 1908, 70–74).

The reconstructed *Saṃyuktāgama* follows the same basic fivefold division as the *Saṃyuttanikāya*. A difference is that the reconstructed *Saṃyuktāgama* has a chapter of sayings by disciples and a chapter with sayings by the Buddha or the Tathāgata. More than two-thirds of the discourses in the *Saṃyuktāgama* have parallels in the *Saṃyuttanikāya*.

The precise number of discourses in the two collections is difficult to determine, because in both a discourse is often followed by an indication that the same exposition should be repeated in relation to a series of related terms or topics, resulting in permutations that at times can be interpreted in different ways. The actual count of the *Saṃyuttanikāya* discourses appears to be around 2,900 in most editions, a count that includes the repetitions, although a different mode of executing the repetitions in the Ceylonese edition results in over 7,600 discourses (Gethin, 2007, 369), closer to the total count of discourses given in the Pali commentarial tradition for the *Saṃyuttanikāya*. In the case of the *Saṃyuktāgama*, the numbering of discourses in the Taishō edition goes up to 1,362 (from which the above-mentioned three discourses that do not belong to the collection would need to be subtracted), but this count does not include the repetitions. If these are taken into account, the number of discourses in the *Saṃyuktāgama* would be considerably more than the count in the Ceylonese edition of the *Saṃyuttanikāya* (Yìnshùn, 1983, arrives at 13,412 discourses).

At times, a discourse in the *Saṃyuktāgama* appears to be so late that its counterpart has found inclusion only in the Pali commentarial tradition. An example is the tale of the Buddha's descent from Trayastriṃśa (Heaven of the Thirty-three), after a rainy-season retreat spent there teaching the gods and his mother (T. 99 [II].134a7; Dhp-a III, 216ff.). This suggests that the *Saṃyuktāgama* as a whole would not be distinctly earlier than other *āgamas* or *nikāyas*. Nor does it seem probable that the topical division employed as the structuring principle for the *Saṃyuttanikāya* and *Saṃyuktāgama* collections was the earliest principle used for assembling discourses during the formative stages of the Buddhist canonical collections (Anālayo, 2011, 697f.).

While the tale of this sojourn of the Buddha in heaven is clearly late, the same qualification does not necessarily hold for other discourses that refer to gods and celestial travels. The *Saṃyuktāgama*, as well as the *Saṃyuttanikāya*, has entire topical divisions (*saṃyuktas*) dedicated to discourses that show the Buddha and his disciples in lively interaction with various gods, flying to their heavens for shorter or longer visits, and discussing various topics with them. Several of these discourses appear to be rather early and show similarity to Vedic texts (von Hinüber, 1997, 38). It would hardly do justice to such material if one were to consider only the doctrinal teachings as authentic aspects of early Buddhism. As far as the texts allow us to judge, supernatural tales and events were an integral aspect of early Buddhist thought right from the outset. Alongside such supernatural elements, however, the emphasis in the *Saṃyuttanikāya* and the *Saṃyuktāgama* is clearly on doctrinal topics, while narrative elements are considerably less frequent than in the *Dīrghāgama* and *Madhyamāgama*.

The *Aṅguttaranikāya* and the *Ekottarikāgama*

The *Aṅguttaranikāya* (Collections of Numerically Arranged Discourses) and the *Ekottarikāgama* are extant in Pali, transmitted by the Theravāda tradition, and in a Chinese translation by Zhú Fóniàn, undertaken in 384 CE and based on what appears to have been a Prakrit original recited by Dharmanandin. The school affiliation of the *Ekottarikāgama* now extant in the Taishō edition as entry number 125 under the title *Zēngyī āhán* (增壹阿含) has been a subject of ongoing discussion among scholars. While a Mahāsāṃghika affiliation is the most often-mentioned hypothesis, for the time being, it seems best to consider the provenance of the *Ekottarikāgama* as uncertain.

In addition to these two complete collections, the Chinese canon has preserved a partial *Ekottarikāgama* collection (T. 150a; see Harrison, 1997) translated by Ān Shìgāo (安世高) as well as individual discourses preserved in Chinese translation (T. 127–149). Parts of a collection of numerical

discourses are extant in Sanskrit (Tripathi, 1995), besides other fragmentary parallels and a few counterparts in Tibetan translation. A commentary on the first part of the *Ekottarikāgama* is found in the *Fēnbié gōngdé lùn* (分別功德論; T. 1507).

The basic principle adopted in the *Aṅguttaranikāya* and the *Ekottarikāgama* groups together discourses that are in some way related to a particular number. The numbers taken into consideration proceed one by one, which would have earned the collections their title, beginning with a section on ones and coming to a conclusion with a section on elevens. Not all numerical topics are necessarily covered, however, since items like the four noble truths or the noble eightfold path have found inclusion in the topical arrangement in the *Saṃyukta* collections instead (the noble eightfold path does, however, appear as part of the tenfold path among the section on tens; AN V.223). The division between the *Saṃyukta* and *Ekottarika* collections is not always clear-cut, and at times, items are present in both collections.

As a result of the inclusion of discourses with an emphasis on doctrinal matters in the topical arrangement in the *Saṃyukta* collections, the discourses left for assignment according to the numerical principle tend to cover more practical matters and everyday issues, which makes the numerical collection particularly suited to the concerns of the laity, although the collection also has some passages that are related to monastic discipline. The spiritual and mundane needs of the laity are in fact taken into account in a number of early discourses in the *āgamas*/*nikāyas*, clearly indicating that early Buddhism was not solely concerned with teaching monastics. Thus, for example, a listing of disciples outstanding for particular qualities in the *Aṅguttaranikāya* and in the *Ekottarikāgama* covers not only monks and nuns but also male and female lay disciples.

An emphasis on practical teachings appears to be also reflected in the indication given in the Sarvāstivāda *Vinayavibhāṣā* that various teachings "for gods and humans" are assembled in the *Ekottarikāgama* (T.1440 [XXIII].503c27). The Pali commentarial tradition attributes the transmission of the *Aṅguttaranikāya* to the disciples of Anuruddha (Sv I.15), who was famous for his exercise of a supernatural ability called the divine eye. According to tradition, with the help of the divine eye, a practitioner is able to see events far away and in various heavenly spheres, which would presumably have furnished Anuruddha with the kind of information relevant to the concerns of gods and humans.

Among the Pali *nikāyas*, the *Aṅguttaranikāya* is the largest collection, according to a commentarial count covering 120 recitation sections, *bhāṇavāras*, whereas the *Dīghanikāya* consists of 64, the *Majjhimanikāya* of 80, and the *Saṃyuttanikāya* of 100 such recitation sections (Sp-ṭ I.63).

In its original layout, the *Aṅguttaranikāya* may have gone from ones to tens only, since the final section of tens contains discourses with 20, 30, and 40 items (AN V.304ff.). This suggests that the idea behind this collection would have at first been based on the standard count of ten – which is the regular number used in the *āgamas*/*nikāyas* for the formation of chapters – to which a section on elevens was subsequently added.

The discourses in the *Aṅguttaranikāya* are often terse, a feature also found in the *Saṃyuttanikāya*. In both collections, narrative introductions are regularly abbreviated or even completely dispensed with, as happens also with the standard conclusion to a discourse. The large number of discourses in these two collections and the resulting frequency with which the standard introduction and concluding sections needed to be recited during oral transmission or written on manuscripts during the subsequent period of written transmission would have recommended such abbreviations. Another feature shared by these two collections is the occurrence of discourses that deal with the same theme with only minor variations, possibly reflecting multiple instances of the same basic teaching given at different times.

The influence of the labor division among reciters of different *āgamas*/*nikāyas* shows itself not only in relation to the standard introduction and conclusion phrases of a discourse but also in the account of the same event, which may differ depending on the discourse collection in which a record of this event has been transmitted. An example is the last meeting between Māra and the Buddha. A discourse in the *Dīghanikāya* indicates that Māra approached the Buddha, stood at one side, and then addressed the Buddha (DN II.104); a version of the same event in the *Saṃyuttanikāya* only mentions that he approached the Buddha, without indicating that he stood at one side (SN V.260); and a version in the *Aṅguttaranikāya* does not describe his approach at all (AN IV.310). Another example is a visit paid by the minister Vassakāra to the Buddha. The *Dīghanikāya* version describes in detail how Vassakāra got his chariot ready, drove with it up to the place where the Buddha was staying, and then descended to proceed on foot (DN II.73). An *Aṅguttaranikāya* record of the same meeting only mentions that Vassakāra approached the Buddha, without indicating in what way he had come (AN IV.18). These cases illustrate a tendency toward more succinct presentation in the *Saṃyuttanikāya* and all the more so in the *Aṅguttaranikāya*, even in the case of reporting the same story.

The *Ekottarikāgama* has 52 chapters that contain 472 discourses, of which fewer than one-third have counterparts among the over 2,300 discourses of the *Aṅguttaranikāya*. Compared with the *Aṅguttaranikāya*, certain discourses in the *Ekottarikāgama* show distinct signs of lateness, such as the influence of Mahāyāna ideas. Thus one discourse reports Maitreya inquiring from the Buddha about the six perfections (T. 125 [II].45b1), another two discourses mention the arousing of the "mind [that aspires to] the awakening [of a Buddha]," *bodhicitta*, in those who have not yet cultivated it, presenting such arousal as something that necessarily accompanies the appearance of a tathāgata (T. 125 [II].699a6; T. 125 [II].703b18). In yet another discourse, the Buddha even uses the derogatory term "Hīnayāna", (*xiǎoshèng*; 小乘), when disclosing four of his qualities that followers of the "Inferior Vehicle" cannot understand (T. 125 [II].640a5). The collection also reflects developments in ancient Indian art in which, following an aniconic phase, the Buddha was represented in sculpture and painting. The actual making of Buddha statues is then reported in one *Ekottarikāgama* discourse (T. 125 [II].706a11), a clear sign of the lateness of this particular passage.

Even though among the complete *āgama*s extant in Chinese the *Ekottarikāgama* was the first to be translated, in terms of content it contains material that is much later than that found in other *āgamas*/*nikāyas*. In fact, some material appears to have become part of this collection only in China (Anālayo, 2013).

However, this does not mean that all *Ekottarikāgama* discourses are late. On the contrary, some of its discourses have preserved a presentation that appears to be earlier than their Pali counterparts. Speaking of the lateness of the *Ekottarikāgama* as a whole thus only means that the material found in this collection reflects a broader time span in the development of Buddhist thought than do the other *āgamas*/*nikāyas*, since the *Ekottarikāgama* preserved in Chinese translation has remained open to addition and change for a longer period.

In contrast to the *Ekottarikāgama*, the other *āgamas*/*nikāyas* do not show such explicit influence of Mahāyāna ideas or of the development of Buddhist iconography. In terms of transmission, the four Pali *nikāyas* appear to have come to closure, leaving aside minor variants, by the 1st century BCE when, according to tradition, they were committed to writing. Since the Pali discourses do not refer to the famous king Aśoka and their political and geographical awareness reflects pre-Aśokan conditions in India, the four Pali *nikāyas* and their parallels in the Chinese *āgamas* have the potential of taking us back to early stages in the development of Buddhist thought (Anālayo, 2012b).

During the period up to the writing down of the texts, the impact of oral transmission on the discourses has left clear marks. Thus a proper appreciation of the textual material found in the *āgamas*/*nikāyas* needs to be based on a clear recognition of the nature of these discourses, which came into being in an oral setting, were transmitted by oral means, and functioned as part of an oral performance. This, in turn, makes a comparative study of the extant parallels imperative. Leaving aside the late parts in the *Ekottarikāgama*, a comparative study of the oral literature collected in the *āgamas*/*nikāyas* offers an important window on a range of aspects of Buddhist thought in the initial stages of its development.

ANĀLAYO

Vinayas

The Sanskrit and Pali term "Vinaya" (Tib. *'Dul ba*; Chin. *lü* [律]) refers to the body of teachings concerning monastic discipline or law attributed to the historical Buddha. In theory each ordination lineage or school possessed its own Vinaya. However, only six seemingly complete Vinayas have come down to us, belonging to schools (*nikāyas*) from both sides of the so-called great schism in Buddhist history purportedly a century or so after the Buddha's death: one is a Vinaya belonging to the Mahāsāṅghikas ("Majority"; with significant sections from an offshoot school, the Mahāsāṅghika-Lokottaravādins), and five stem from the branch known as the Sthaviras ("Elders"): (1) Theravāda (Mahāvihāra), (2) Dharmaguptaka, (3) Mahīśāsaka, (4) Sarvāstivāda, and (5) Mūlasarvāstivāda. In addition, we have some materials from the Kāśyapīya and Sāṃmitīya. As for the Vinayas of schools whose literatures have not survived, little can be said. In at least one well-documented case, a quotation from a lost Theravādin Vinaya (of the Abhayagiri school) has survived (von Hinüber, 1996, 22–23).

The Vinaya texts deal with rules and procedures, that is, they (1) dictate proper deportment and behavior of *bhikṣus* and *bhikṣuṇīs* (monks and nuns) and (2) govern the actions of the monastic community or saṅgha as a corporate entity. These two foci are reflected in the twofold division in this textual corpus between (1) *vinayavibhaṅgas* (explanations of the Vinaya) or *sūtravibhaṅgas* (explanations of the [*Prātimokṣa*] *sūtra*) and (2) *vastus* (Pal. *khandhaka*; chapters). The former are two separate canonical analyses of the rules for monks and nuns contained in their respective *Prātimokṣasūtras*, ritual texts containing lists of approximately 250 rules for monks (350 for nuns) to be recited fortnightly by all ordained monastics to ensure the purity of the community by allowing for the confession of any infractions. The latter are a series of approximately 20 thematically arranged chapters on various topics such as confession (recitation of the *Prātimokṣasūtra*); ordination; penance and probation (for transgressions of the second class of *prātimokṣa* offenses); rains' retreat; schisms; and the use of leather, medicines, and robe cloth.

Not all Vinayas or monastic-law codes contain the same sections. In addition to the *vibhaṅgas* and *vastus*, the two most important sections are the *Parivāra*, the third and final section of the Theravāda Vinaya, and the *Uttaragrantha*, the fourth and final section of the *Mūlasarvāstivādavinaya*. Whereas, in comparison with other sections of the same Vinaya, the *Parivāra* is a much later or younger (1st/2nd cents.[?]; von Hinüber, 1996, 22) section, the opposite seems to be true of the *Uttaragrantha*. Most of the material common to all extant Vinayas is found in the *vibhaṅgas* and *vastus*; unlike the *Parivāra* or *Uttaragrantha*, these sections lend themselves particularly well to comparative studies and discussions of historical, textual development, whether it be in terms of enlargement from some hypothetical urtext (e.g. Frauwallner, 1956) or borrowing and leveling (e.g. Schopen, [1985] 1997, 25–29; [2012] 2014, 128–129n7).

Structure of the *Vibhaṅgas*

The basic structure of the *vibhaṅgas* of all Vinayas is similar, albeit with some important differences. As a rule, the *vibhaṅgas* follow the order of presentation of rules found in the *Prātimokṣasūtras*: the rules are presented in categories of descending order of gravity of offense, seven in total, with the addition of an eighth category being a listing of seven formal procedures for dispute resolution. The eight categories are as follows (with representative but not exhaustive Indian terminology and Chinese and Tibetan transcriptions and translations; for an indication of the number of rules in each category in extant Vinaya texts, see table 1 below):

1. offenses entailing excommunication from the saṅgha (Skt./Pal. *pārājika*; Chn. *boluoyi* [波羅夷]; Tib. *pham par 'gyur ba*);
2. offenses entailing temporary penance (Skt. *saṅghāvaśeṣa/saṃghātiśeṣa*; Pal. *saṅghādisesa*; Chn. *sengqieposhisha* [僧伽婆尸沙]/*sengcanfa* [僧殘法]; Tib. *dge 'dun lhag ma*);
3. undetermined offenses (Skt./Pal. *aniyata*; Chn. *buding* [不定]; Tib. *ma nges pa*);

4. offenses entailing atonement with confiscation (Skt. *naiḥsargika-pāyantikā*; Pal. *nissaggiya-pācittiya*; Chn. *nisaqiboyiti* [尼薩耆波逸提]/*sheduofa* [捨墮法]; Tib. *spang ba'i ltung byed*);
5. offenses entailing atonement (Skt. *pāyantikā/pātayantikā/pācattika*; Pal. *pācittiya*; Chn. *boyiti* [波逸提]/*duofa* [墮法]; Tib. *ltung byed*);
6. offenses entailing confession (Skt. *pratideśanīya/pratideśanika*; Pal. *pāṭidesanīya*; Chn. *boluotitisheni* [波羅提提舍尼]/*huiguofa* [悔過法]; Tib. *so sor bshags par bya ba*);
7. rules dictating etiquette (Skt. *śaikṣa*; Pal. *sekhiya*; Chn. *zhongxuefa* [衆學法]; Tib. *bslab pa'i chos*); and
8. legal procedures for dispute resolution (Skt. *adhikaraṇaśamatha*; Pal. *adhikaraṇasamatha*; Chn. *miezhengfa* [滅諍法]; Tib. *rtsod pa zhi bar bya ba'i chos*).

The individual rules of the *Prātimokṣasūtras* are presented in detail in the *vibhaṅgas* according to a fivefold structure, again with some variation. The names of these five sections are known primarily from the *Samantapāsādikā*, extant in Pali (von Hinüber, 1996, 13): (1) narrative frame (*vatthu*), (2) establishment of rule (*paññatti*), (3) amendment of rule (*anupaññatti*), (4) word analysis (*padabhājaniya*) including casuistry dealing with hypothetical situations, and (5) exception clauses (*anāpatti*). Some rules have another section (*vinītavatthu*) dealing with "case law," included in the Theravāda Vinaya between the word analysis and the exception clauses but found in the *Mūlasarvāstivādavinaya* and all other extant Vinayas in distinct and separate sections outside the *vibhaṅgas*.

Each category of analysis is not necessarily found for every rule in the extant Vinayas. In general, most of the some 250 individual rules of training (*śikṣāpada*) for monks are introduced with a narrative frame story. Some of the rules dictating protocols of etiquette (*śaikṣa*) have highly abbreviated or even no frame stories, and most have little in terms of the other categories of analysis mentioned above. Moreover, in some Vinayas the frame stories for rules applicable to both monks and nuns are abbreviated in the nuns' *vibhaṅga*. In narratively rich traditions such as the *Mūlasarvāstivādavinaya*, even for the shared rules, there are separate frame stories and other categories of analysis for nuns' rules.

Structure of the *Vastus*

Structurally, although not necessarily in terms of content, it is the *vastus* and what are usually taken to be their Mahāsāṅghika counterparts (the 14 *vargas* of the *bhikṣuprakīrṇaka* and, to a lesser extent, the 7 *vargas* of the *Abhisamācārikā dharmāḥ*; Frauwallner, 1956, 198) in which we see the greatest divergence between the Sthavira Vinayas and the non-Sthavira *Mahāsāṅghikavinaya* (*Mohesengqi-lü*; 摩訶僧祇律; T. 1425). Among the Sthavira Vinayas, there is more or less agreement in terms of the chapter titles and their general content. We may differentiate a total of 22 chapters as follows (Sanskrit titles from the *Mūlasarvāstivādavinaya* where extant):

1. *Pravrajyāvastu* (Chapter on "Going Forth" or Ordination);
2. *Poṣadhavastu* (Chapter on Monks' and Nuns' Fortnightly *Prātimokṣasūtra* Recitation and Confession Ceremony on *Poṣadha* ["Fast"] Days of the Full and New Moons);
3. *Pravāraṇāvastu* (Chapter on the *Pravāraṇā* ["Invitation"] Ceremony Marking the End of the Rains' Retreat When Monks and Nuns are Invited to Point out Any Offenses That They Have Seen, Heard, or Suspected during the Rains' Retreat);
4. *Varṣāvastu* (Chapter on the Three-Month Rains' Retreat);
5. *Carmavastu* (Chapter on the Use of Leather);
6. *Bhaiṣajyavastu* (Chapter on the Use of Medicines);
7. *Cīvaravastu* (Chapter on the Use of Robes and Other Property);
8. *Kaṭhinavastu* (Chapter on the *Kaṭhina* ["Rough Cloth"] Donated by Laypeople After the Rains' Retreat and the Ceremony That Exempts Monks and Nuns from Certain Vinaya Requirements For up to Five Months Thereby Allowing Them to Receive Donations of Robe Cloth Which They Then Make into Robes;
9. *Kauśāmbakavastu* (Chapter on the Kauśāmbaka Dispute);
10. *Karmavastu* (Chapter on the Campā Incident);
11. *Pāṇḍulohitakavastu* (Chapter on Formal Acts for Suspension and Other Disciplinary Measures);
12. *Pudgalavastu* (Chapter on the Six-Day *Mānatva/Mānāpya* Penance for the Commission of *Saṅghāvaśeṣa* Offenses);

60] 1999–2000, 21, 81).

13. *Pārivāsikavastu* (Chapter on the *Parivāsa* Probation for Concealment of *Saṅghāvaśeṣa* Offenses);
14. *Poṣadhasthāpanavastu* (Chapter on the Suspension of the Fortnightly *Poṣadha* Confession Ceremony);
15. *Śayanāsanavastu* (Chapter on the Use of Lodgings);
16. *Adhikaraṇavastu* (Chapter on Disputes);
17. *Saṅghabhedavastu* (Chapter on Schisms);
18. Chapter 18 is not properly counted among the *vastus* and is treated as a separate section in the Mūlasarvāstivādin tradition: *Kṣudrakavastu* (Chapter on Miscellanea). This chapter contains material that is found in multiple sections in other Vinayas including the following four (Pali titles):
19. *Vattakkhandhaka* (Chapter on Deportment);
20. *Bhikkhunīkkhandhaka* (Chapter on Nuns);
21. *Pañcasatikakkhandhaka* (Chapter on the First Council of 500 Arhats); and
22. *Sattasatikakkhandhaka* (Chapter on the Second Council of 700 Arhats).

Unlike the above chapters, which comprise the section governing the actions of the saṅgha as a corporate body, the Mahāsāṅghika counterpart is divided into numbered but untitled *vargas* or sections. There is no one-to-one correlation between the Sthavira chapters and the *vargas* of the Mahāsāṅghika counterparts. Although the first *varga* of the extant *Mahāsāṅghikavinaya* may at first glance seem similar to the first of the Sthavira chapters, namely the chapter on ordination, the Mahāsāṅghika section contains not only a discussion of ordination but also a technical discussion on *karmans* or formal acts. This same order of topics is also found in a separate text known in the *Shisong-lü* (十誦律; T. 1435), the *Modeleqie* (摩得勒伽; T. 1441), and the *Mūlasarvāstivādavinaya* as the *Mātṛkā*. Moreover, the style of the Mahāsāṅghika *vargas* also corresponds with that of the *Mātṛkās*. The *Mātṛkās*, however, are very different in style from the *vastus*, which generally begin with and contain numerous narratives, something almost entirely lacking from the *Mātṛkās*. Strictly in terms of the development of Vinaya literature, we may compare the structure of the thematic sections of the *Mahāsāṅghikavinaya* not with the *vastus* of the Sthavira Vinayas but with the *khaṇḍakas* of the various Sthavira *Mātṛkās*, thus relieving us of the necessity of engaging in textual gymnastics in order to posit some hypothetical rearrangement that might explain the structural differences between the *Mahāsāṅghikavinaya* and the Sthavira Vinayas (Clarke, 2004a).

The following select survey of the extant corpus of canonical Indic Vinaya literature, including works preserved in Chinese and Tibetan translation but excluding indigenous Chinese or Tibetan works and the numerous *karmavācanā* (formularies of formal ecclesiastical acts) collections, is arranged according to sectarian divisions as presently understood. Important texts including the *Pinimujing* (毘尼母經; T. 1463; Haimavata school[?] or Dharmaguptaka school[?]) and *Foshuo bichu wufajing* (佛說苾芻五法經; T. 1479) have not been included due to space limitations and the fact that their sectarian identity remains disputed or unclear.

(Surveys of Vinaya literature include Frauwallner, 1956; Banerjee, 1957, 28–50, 79–246; Lamotte, [1958] 1988, 165–179; Hirakawa, [1960] 1999–2000; Tokuda, 1974; Yuyama, 1979; Hirakawa, 1982, 6–14; Tsedroen, 1992; Prebish, 1994; Wang, 1994; and Heirman, 2007. For Central Asian Vinaya texts, see Inokuchi, 1995, 329–351. For Dunhuang Vinaya texts in Chinese, see Tsuchihashi, 1980, 661–886. For Dunhuang Vinaya texts in Tibetan, see Okimoto, 1985. For Mūlasarvāstivādin Vinaya texts in Tibetan, with reference to Yijing's Chinese translations, see Sakurabe, 1928. For an update to Yuyama, 1979, in light of Indic manuscript finds, see Yamagiwa, 2007. For catalogues of Sanskrit fragments from the Sarvāstivādin and Mūlasarvāstivādin Vinayas, see Chung, 2002; Hartmann & Wille, 2014a; 2014b; 2014c; Wille, 2014a; 2014b. For the Gilgit Vinaya texts, see Clarke, 2014. For Gandhari Vinaya texts – especially on the two versions of rules from a *prātimokṣasūtra* preserved on different sides of the same folio [obverse seemingly Dharmaguptaka/Kāśyapīya and reverse perhaps Sarvāstivādin/Mūlasarvāstivādin], see Falk & Strauch, 2014, 57–60; see also Strauch, 2014, 817–825. For manuscript evidence on the marginalia of SHT [V] 1068, suggestive of early Vinaya Studies in Central Asia, see Clarke, 2011.)

There is a substantial commentarial literature on the Vinayas extant in Tibetan and Chinese translations, but only a small number of commentaries are extant in Sanskrit. (For a useful but dated survey of Indian commentaries in Tibetan translation, with a few in Chinese, see Banerjee, 1957, 36–50; Maeda, 2001.)

Mahāsāṅghikas

Mohesengqi-lü

The *Mohesengqi-lü* (摩訶僧祇律; *Mahāsāṅghika-vinaya*; T. 1425 [XXII]; 40 fasc.) is the only extant, "complete" non-Sthavira Vinaya. Unlike most of the Sthavira Vinayas, this Vinaya preserves its sectarian identity in its title, albeit in transcription. It was translated by the Indian Buddhabhadra (Fotuobatuoluo [佛陀跋陀羅]; 359–429 CE) in collaboration with Faxian (法顯; c. 337–422 CE) between 416 and 418 CE on the basis of a manuscript copied and brought back to China by Faxian from Pāṭaliputra. This Vinaya contains a large number of quotations from *āgama* and *jātaka* material (Hirakawa, vol. II, [1960] 1999–2000, 361–369). It is arranged as follows:

(1) [*Bhikṣu*] *prātimokṣavibhaṅga* (*boluotimucha fenbie* [波羅提木叉分別]; T. 1425 [XXII] 227a5–412b15; fasc. 1–22);

(2) Miscellaneous [i.e. *Bhikṣuprakīrṇaka*] Recitation of the *Varga* Dharmas (*zasong baqufa* [雜誦跋渠法]; T. 1425 [XXII] 412b20–499a16; 14 *vargas*; fasc. 23–33);

(3) *Abhisamācārikā dharmāḥ* (*weiyifa* [威儀法]; T. 1425 [XXII] 499a21–514a17; 7 *vargas*; fasc. 34–35);

(4) *Bhikṣuṇīprātimokṣavibhaṅga* (*biqiuni boluotimucha fenbie* [比丘尼波羅提木叉分別]; T. 1425 [XXII] 514a22–544c10; fasc. 36–40);

(5) Miscellaneous [i.e. *Bhikṣuṇīprakīrṇaka*] *Varga* (*za baqu* [雜跋渠]; T. 1425 [XXII] 544c11–548a28; 5 *vargas*; fasc. 40);

(6) Postscript (*siji* [私記]; T. 1425 [XXII] 548a29–b25; fasc. 40); and

(7) *Sūtra* on the Severity of Retribution for Transgression of Precepts Spoken by the Buddha (*Foshuo fanjiezuibaoqingzhongjing* [佛說犯戒罪報輕重經]; T. 1425 [XXII] 548b26–549a2; fasc. 40; this *sūtra* is almost identical to T. 1467 [XXIV], the translation of which is untenably attributed to An Shigao [安世高; *fl.* 148–180 CE]; the latter text, however, contains six extra verses after the prose section). The *sūtra* details the length of time to be spent in hell for the commission of various monastic offenses (on T. 1467, see Hirakawa, vol. I, [1960] 1999–2000, 198–200).

(The *bhikṣuṇīprātimokṣavibhaṅga*, the *bhikṣuṇīprakīrṇaka*, the section related to nuns in the *bhikṣuprakīrṇaka* [471a25–476b11], and the postscript have been translated into English by Hirakawa Akira [1982]. For a German translation of the *Abhisamācārikā dharmāḥ*, see Karashima, 2012; miscellaneous French translations are available in Chavannes, vol. II, 1910–1911, 270–335.) (See also Hirakawa, vol. I, [1960] 1999–2000, 144–147; Yuyama, 1979, § 1.55–1.57; Prebish, 1994, 57–60.)

Mohesengqi-lü dabiqiu jieben

The Chinese translation of this *bhikṣuprātimokṣa*, titled *Mohesengqi-lü dabiqiu jieben* (摩訶僧祇律大比丘戒本; *Mahāsāṅghikavinaya* Great *Bhikṣu* Precept Book; T. 1426 [XXII]; one fasc.), is ascribed to the Indian Buddhabhadra. A number of important discrepancies between this *prātimokṣa* and the *vibhaṅga* of the *Mohesengqi-lü* preclude the possibility that the former is merely an extraction from the *vibhaṅga*. (See also Hirakawa, vol. I, [1960] 1999–2000, 232–240; Yuyama, 1979, § 1.51; Prebish, 1994, 56–57.)

Mohesengqi biqiuni jieben

The Chinese translation of this *bhikṣuṇīprātimokṣa*, titled *Mohesengqi biqiuni jieben* (摩訶僧祇比丘尼戒本; *Mahāsāṅghika Bhikṣuṇī* Precept Book; T. 1427 [XXII]; one fasc.), is ascribed to Faxian and Buddhabhadra (Juexian [覺賢]). There are inconsistencies between this *prātimokṣa* and the *bhikṣuṇīvibhaṅga* of the *Mohesengqi-lü*, particularly in the number of *śaikṣa* rules: 77 in this *prātimokṣa*, with only 64 in the *vibhaṅga* (see table 1 above). This *prātimokṣa* is thought not to be a separate translation but an extract that became corrupt during its transmission in China (English translation in Kabilsingh, 1998, 44–79). (See also Hirakawa, vol. I, [1960] 1999–2000, 246–247; vol. II, [1960] 1999–2000, 76–77; Yuyama, 1979, § 1.52; Prebish, 1994, 57.)

Mahāsāṅghika-Lokottaravādins

Vinaya of the Mahāsāṅghika-Lokottaravādins

We do not possess a complete text of the Vinaya of the Mahāsāṅghika-Lokottaravādins. Our knowledge of the structure of this Vinaya is based on the Mahāsāṅghika parallels preserved in Chinese and the following limited corpus of Indian manuscripts. The attribution of fragments to this Vinaya is not entirely secure (Tournier, 2014); the attributions are generally based on similarities with Chinese parallels in the Vinaya of the Mahāsāṅghikas and various terminological peculiarities. The attribution of complete manuscripts, however, is secure, since these preserve colophons.

Although long considered an *avadāna*, the *Mahāvastu* (ed. Senart, 1882–1897; trans. Jones,

, vol. II, 1910–1911, 270–335.) (See also
I, [1960] 1999–2000, 144–147; Yuyama,
57; Prebish, 1994, 57–60.)

-lü dabiqiu jieben

translation of this *bhikṣuprātimokṣa*,
ngqi-lü dabiqiu jieben (摩訶僧祇律
Mahāsāṅghikavinaya Great *Bhikṣu*
T. 1426 [XXII]; one fasc.), is ascribed
Buddhabhadra. A number of impor-
ncies between this *prātimokṣa* and
of the *Mohesengqi-lü* preclude the
t the former is merely an extraction
ṅga. (See also Hirakawa, vol. I, [1960]

ika-Lokottaravādins

Mahāsāṅghika-Lokottaravādins

sess a complete text of the Vinaya
ghika-Lokottaravādins. Our knowl-
cture of this Vinaya is based on the
parallels preserved in Chinese and
mited corpus of Indian manuscripts.
of fragments to this Vinaya is not
(Tournier, 2014); the attributions are
on similarities with Chinese paral-
a of the Mahāsāṅghikas and various
peculiarities. The attribution of com-
pts, however, is secure, since these
ons.

ng considered an *avadāna*, the
. Senart, 1882–1897; trans. Jones,

1949–1956; Hiraoka, 2010) has clearly been shown by V. Tournier (2012) to be a part of the Vinaya of the Mahāsāṅghika-Lokottaravādins (as noted above, the *Mohesengqi-lü* contains a large number of quotations from *āgama* and *jātaka* material). A 12th–13th-century manuscript ("manuscript Sa") published by A. Yuyama (2001, xlvi–xlix) appears to be the oldest witness of the Nepalese *Mahāvastu* manuscript tradition (Tournier, 2012). In connection with the Mahāsāṅghika-Lokottaravādin Vinaya texts found in Tibet, one should not forget that Atiśa (982–1054 CE), a prominent figure in the *phyi dar* ("later spread") of Buddhist teachings into Tibet, was ordained in the Mahāsāṅghika lineage (Chattopadhyaya, 1967, 69–70). The *Abhisamācārikā dharmāḥ* and *bhikṣuṇīprātimokṣavibhaṅga* may have been copied in Vikramaśīla (Tournier, forthcoming a), a monastery closely associated with the Mahāsāṅghikas (Roth, 1970, xv–xvi). (For a detailed survey of Mahāsāṅghika-Lokottaravādin materials, see Tournier, forthcoming a.)

Mahāsāṅghika-Lokottaravāda: Bhikṣuprātimokṣavibhaṅga

A fragment (no. 7) first edited by S. Lévi (1932, 11–12), reedited and discussed by O. von Hinüber (1986), and studied by H. Matsumura (1988) and É. Nolot (1988), preserves a parallel to T. 1425 (XXII) 307a–b (*naiḥsargika* 11 but perhaps 12 for the fragment). S. Karashima (2002) transliterates and translates folio 136 from a manuscript written in Gilgit/Bamiyan Type I script (6th cent.) corresponding to T. 1425 (XXII) 336c26–29 (*pācattika* 6) and fragments from folio 14(x) corresponding to T. 1425 (XXII) 337a19–24 (*pācattika* 7). S. Karashima (2000a) transliterates and translates a fragment (Gilgit/Bamiyan Type I) corresponding to T. 1425 (XXII) 341a23–b17 (*pācattika* 13) and fragments from two folios in early Western Gupta script (4th cent.) corresponding to T. 1425 (XXII) 391b7–c18 (*pācattikas* 83–84; Karashima, 2006; further folios are scheduled to appear in Schøyen, vol. IV, forthcoming; see also Braarvig, 2014, 164).

Mahāsāṅghika-Lokottaravāda: Bhikṣuprakīrṇaka

S. Lévi (1932, 5–8) edits and discusses a Gilgit/Bamiyan Type I fragment (no. 5) on the *pratisāraṇīyakarman* (a procedure for reconciliation made by a monk to laypeople whom he has offended), a parallel to which is found at T. 1425 (XXII) 425c–426a. A single fragmentary folio (no. 80) in North Western Gupta Brahmi (5th cent.) was edited by S. Sasaki and N. Yamagiwa (2006) but now should be studied in light of V. Tournier's remarks (2014). A quotation from the *bhikṣuprakīrṇaka* is preserved in Śāntideva's 8th-century *Śikṣāsamuccaya* (Yuyama, 2003; Tournier, 2014). (On a fragment in the Schøyen collection [MS 2379/72], presumably from the *pātrapratisaṃyukta* section of the *bhikṣuprakīrṇaka*, with parallels in the *Mahāvastu* [iii: 305.3–310.6] and the Mahāsāṅghika *Abhisamācārikā dharmāḥ* [T. 1425 (XXII) 501b2–11], see Tournier, forthcoming b.) A summary of the *bhikṣuprakīrṇaka* in the form of keywords (*prakīrṇakoddāna*) is appended to the *bhikṣuṇīvinaya* (*bhikṣuṇīprātimokṣavibhaṅga* and *bhikṣuṇīprakīrṇaka*; see Roth, 1970, 327–334; for a useful comparative listing of the *bhikṣuprakīrṇaka* and its Chinese parallels, see Chung, 2006, 183–187).

Mahāsāṅghika-Lokottaravāda: Abhisamācārikā dharmāḥ

A complete, 50-folio palm-leaf manuscript with colophon identifying sectarian affiliation was found by R. Sāṅkṛtyāyana in Zha lu Monastery in Tibet, the seat of Bu ston (1290–1364 CE; see below), and was first edited by Jinānanda (1969; see Bandurski, 1994, 95–96 [§ 55b]; the Anglophone reader may still profit from the translation in S. Singh & K. Minowa [1988]; a facsimile edition was published by Taisho University in 1998; various chapters have been edited and translated into Japanese by the Abhisamācārika Dharma Study Group at Taisho University; see Yonezawa & Nagashima, 2014, 331; for an edition and German translation, see Karashima, 2012).

Mahāsāṅghika-Lokottaravāda: Bhikṣuṇīprātimokṣavibhaṅga and *Bhikṣuṇīprakīrṇaka*

An Indic text with colophon identifying sectarian affiliation was edited by G. Roth (1970) on the basis of an 11th–12th-century, 80-folio palm-leaf manuscript found in Zha lu Monastery in Tibet by R. Sāṅkṛtyāyana (see Bandurski, 1994, 94–95 [§ 55a]; fol. 71b, not included in Roth, 1970, is edited in the second edition [2005]; for a French translation, see Nolot, 1991). (See also Hirakawa, vol. I, [1960] 1999–2000, 104–108; Yuyama, 1979, § 1.66–1.60; Prebish, 1994, 62–65.)

Mahāsāṅghika-Lokottaravāda: Bhikṣuprātimokṣa

A complete circa 12th-century Indic manuscript of a *bhikṣuprātimokṣa*, found by R. Sāṅkṛtyāyana in

a For ease of comparison with the *Mūlasarvāstivādavinaya*, the *vastus* of the other Vinayas are rearranged; numbers in parentheses represent the order of *vastus* in their respective Vinayas.

b This section of the *Shisong-lü* is traditionally divided into two sections, consisting of seven and eight chapters, respectively.

c The *khandhaka* section of the Theravāda Vinaya is traditionally divided into two sections, a greater and lesser *khandhaka*.

d This is not a *vastu* but a section known from the Mūlasarvāstivādin *Uttaragrantha* as the *Vinītaka*.

* Where one chapter in one column contains parallels to multiple chapters in the column directly before or after it, the correspondence between chapters is indicated by enclosing chapter titles with over- and underlines across the two columns.

Ngor Monastery in Tibet in 1934, was edited first by W. Pachow and R. Mishra (1952–1953; see Yuyama, 1979, § 1.61.S.1) and republished as a monograph in 1956 (also edited by Tatia, 1976; see Bandurski, 1994, 96–97 [§ 57]). An English translation of the inferior edition by W. Pachow and R. Mishra is available from C.S. Prebish (1975). Folios of a separate manuscript – 57[?], 59–71, and 82–101 with a supplementary leather folio between folios 82–83 and 115–116 reedited with a supplementary folio from 106r(?) covering *naiḥsargika* 30 to *pāyattikā* 46, *pāyattikā* 64 to *śaikṣa* 47(?), and the concluding verses – have been edited by S. Karashima (2013). Folios 72–81 and 102–116 with a supplementary folio from 106r(?) covering *pāyattikā* rules 46–64 and *śaikṣa* 48(?) to the concluding verses, with a Bactrian colophon, have also been edited by S. Karashima (2008). (See also Hirakawa, vol. I, [1960] 1999–2000, 106; Yuyama, 1979, § 1.61; Prebish, 1994, 61–62.)

Theravādins

On the Theravāda (Mahāvihāra) Vinaya, see the surveys by O. von Hinüber (1996, 8–22) and P. Kieffer-Pülz (2014, 46–62). A. Heirman's claim (2007, 190) that the Pali Vinaya was translated into Chinese in the late 5th century must be rejected. The evidence cited by her from Sengyou's (僧祐; 445–518 CE) catalogue of 518 CE, the *Chu sanzang ji ji* (出三藏記集), tells us only that a *tapili* (他毘利; transcribing perhaps a form of Sthavira, but not Theravāda and certainly not Pali) Vinaya text was translated into Chinese. Moreover, since Sengyou's catalogue does not record the number of fascicles (and when the number is recorded in subsequent catalogues, the text is said to be only one fascicle in length), this translation cannot possibly have been the (or even a) Pali Vinaya. At best, the *tapili* may have been a Sthavira *prātimokṣa*.

Dharmaguptakas

Sifen-lü

The *Sifen-lü* (四分律; Four-Part Vinaya; T. 1428 [XXII]; 60 fasc.) is traditionally ascribed to the Dharmaguptakas. With the exception of a few minor Sanskrit fragments (see Hartmann & Wille, 2014b, 219), the Vinaya of this school is extant only in a Chinese translation made by the Kashmiri Buddhayaśas (Fotuoyeshe [佛陀耶舍]; *fl.* 4th–5th cents.), who is said to have taught the (or a) Sarvāstivādin Vinaya to Kumārajīva (344–409/413 CE), and Zhu Fonian (竺佛念; *fl.* early 5th cent.) between 410 and 412 CE. Since displacing the *Mahāsāṅghikavinaya* and the Sarvāstivādin *Shisong-lü* in China (Wang, 1994, 183–184), at least nominally this Vinaya has been followed by most Buddhist schools in China, Korea, and Japan throughout Buddhist history. Unlike many of the other Vinayas extant in Chinese translation, there is a rich Chinese exegetical tradition on this Vinaya preserved in the literature of Daoxuan's (道宣; 596–667 CE) Nanshan "Southern Mountain" Vinaya school (南山律宗), Fali's (法礪; 569–635 CE) Xiangbu "Xiang Province" school (相部宗), and Huaisu's (懷素; 624/634–697/707 CE) Dongta "Eastern Pagoda" Vinaya school (東塔律宗). (On the Vinaya schools, see Tokuda, 1969; 1974; Satō, 1986, 208–227.)

The *Sifen-lü* is arranged as follows:

Preface (T. 1428 [XXII] 567a2–b19);

Part 1 (T. 1428 [XXII] 567b20–713c29; fasc. 1–21): introductory verses (T. 1428 [XXII] 567b23–568c5) and *bhikṣuvibhaṅga* (T. 1428 [XXII] 568c6–713c28);

Part 2 (T. 1428 [XXII] 714a1–835c11; fasc. 22–37): *bhikṣuṇīvibhaṅga* (*ming nijiefa* [明尼戒法]), chapter on ordination (1) (numbers in parentheses here and below refer to the chapter numbers from table 2 above) down to chapter on the rains' retreat (3); (for an English translation of the *bhikṣuṇīvibhaṅga* [T. 1428 [XXII] 714a4–778b14], see Heirman, 2002; for a partial [T. 1428 (XXII) 779a1–803a18] English translation of the chapter on ordination and a complete translation of the chapter on the rains' retreat, see the ongoing translation project at https://dharmaguptakavinaya.wordpress.com/downloads/);

Part 3 (T. 1428 [XXII] 835c12–936b17; fasc. 37–49): chapter on the *pravāraṇā* ceremony (4) down to chapter on deportment (18); (for complete English translations of the chapters on *pravāraṇā* and on nuns [17], see the ongoing translation project at https://dharmaguptakavinaya.wordpress.com/downloads/); and

Part 4 (T. 1428 [XXII] 936b18–1014b20; fasc. 50–60): chapters on lodgings (19) down to chapter on the council of 700 arhats (22) (T. 1428 [XXII] 936b21–971c2; fasc. 50–54). Part 4 also contains the following sections known from the *Uttaragrantha* (fasc. 55–60): *Vinītaka* (*tiaobu* [調部]; T. 1428 [XXII] 971c7–990b7) and **Ekottarikā* (*pini zengyi* [毘尼增一]; T. 1428 [XXII] 990b8–1014b19).

The division into four parts is not according to length, and it is unclear how the divisions work in terms of content (miscellaneous French translations in Chavannes, vol. II, 1910–1911, 352–354; Wieger,

vol. I, 1910–1913, 334–471). (See also Hirakawa, vol. I, [1960] 1999–2000, 138–142; Yuyama, 1979, § 1.35–1.39; Prebish, 1994, 72–76.)

Sifen-lü biqiu jieben

This *bhikṣuprātimokṣa*, titled *Sifen-lü biqiu jieben* (四分律比丘戒本; Four-Part Vinaya *Bhikṣu* Precept Book; T. 1429 [XXII]; one fasc.), was compiled in China by Huaisu, who extracted the applicable rules from the *vibhaṅga* of the *Sifen-lü*, translated by Buddhayaśas. It is not a separate translation (French translation in Wieger, vol. I, 1910–1913, 212–259; Japanese translation in Satō, 2008, 81–151). (See also Hirakawa, vol. I, [1960] 1999–2000, 247–250; Yuyama, 1979, § 1.31; Prebish, 1994, 70–71.)

Sifen seng jieben

This is a separate translation of a *bhikṣuprātimokṣa*, titled *Sifen seng jieben* (四分僧戒本; Four-Part Monks' Precept Book; T. 1430 [XXII]; one fasc.), and attributed to the translator Buddhayaśas. It is not an extract from the *vibhaṅga* of the *Sifen-lü*. Rather, this translation seems to have been produced prior to the translation into Chinese of the *Sifen-lü* (English translations in Beal & Gogerly, 1862; Beal, 1871, 206–239). (See also Hirakawa, vol. I, [1960] 1999–2000, 247–250; Yuyama, 1979, § 1.31; Prebish, 1994, 70–71.)

Sifen biqiuni jieben

This *bhikṣuṇīprātimokṣa*, titled *Sifen biqiuni jieben* (四分比丘尼戒本; Four-Part *Bhikṣuṇī* Precept Book; T. 1431 [XXII]; one fasc.), was compiled by Huaisu, who extracted the applicable rules from the *bhikṣuṇīvibhaṅga* of the *Sifen-lü*, translated by Buddhayaśas. It is not a separate translation (English translations in Tsomo, 1996, 25–73; Kabilsingh, 1998, 167–209; French translation in Wieger, vol. I, 1910–1913, 260–291; Japanese translation in Satō, 2008, 155–240). (See also Hirakawa, vol. I, [1960] 1999–2000, 247–250; vol. II, [1960] 1999–2000, 75–76; Yuyama, 1979, § 1.32; Prebish, 1994, 70–71.)

Mahīśāsakas

Wufen-lü

The Vinaya attributed to the Mahīśāsakas survives only in a Chinese translation known as the *Wufen-lü* (五分律; Five-Part Vinaya; T. 1421 [XXII]; 30 fasc.) translated between 423 and 424 CE from a manuscript brought back by Faxian from Sri Lanka. The translation was made by a team comprising, among others, the Kashmiri Buddhajīva (Fotuoshi [佛陀什]; *fl.* early 5th cent.), who himself was a Mahīśāsaka monk and Vinaya specialist, the Khotanese *śramaṇa* Zhisheng (智勝; *fl.* early 5th cent.), Zhu Daosheng (竺道生; 355–434 CE), and *bhikṣu* Shi Huiyan (釋慧嚴; 363–443 CE). Originally translated in 34 fascicles, it is now extant in 30 fascicles.

The full title is *Mishasaibu hexi wufen-lü* (彌沙塞部和醯五分律). Although the exact meaning of the term *hexi* (和醯) is unclear (see Hirakawa, vol. I, [1960] 1999–2000, 151), the sectarian identity (*Mishasaibu* [彌沙塞部]; i.e. *Mahīśāsaka* [**nikāya* (?)]) preserved in transcription in the title is relatively clear.

Although it is often stated that among the extant corpus of Chinese Vinaya translations, the *Wufen-lü* is closest to the Theravāda Vinaya in terms of content and wording, this was rejected already over 80 years ago by Nishimoto Ryūzan (1932, 15), who argued rather that the *Sifen-lü* is closer to the Theravāda Vinaya.

The *Wufen-lü* is arranged as follows:

Part 1 (T. 1421 [XXII] 1a2–77b20; fasc. 1–10): *bhikṣuvibhaṅga*;

Part 2 (T. 1421 [XXII] 77b21–101a5; fasc. 11–14): *bhikṣuṇīvibhaṅga*;

Part 3 (T. 1421 [XXII] 101a6–153c21; fasc. 15–22): chapters from ordination (1) to *kathiṇa* (9);

Part 4 (T. 1421 [XXII] 153c22–164a12; fasc. 23–24): chapters on dispute settlement (10) and formal ecclesiastical acts (11);

Part 5 (T. 1421 [XXII] 164a13–194b21; fasc. 25–30): chapter on *saṅghabheda* (12) down to the chapter on the second council (21) but also including a section known from the *Uttaragrantha: Vinītaka* (18) (T. 1421 [XXII] 182a5–185a27); and

Colophon (T. 1421 [XXII] 194b22–28).

The division into five parts is not according to length, and it is difficult to see how the divisions work in terms of content (miscellaneous French translations in Chavannes, vol. II, 1910–1911, 336–351; Wieger, vol. I, 1910–1913, 470–477; Jaworski, 1929; 1931). (See also Hirakawa, vol. I, [1960] 1999–2000, 149–151; Yuyama, 1979, § 1.45–1.47; Jong, 1981, 109–112; Prebish, 1994, 67–70.)

Mishasai wufen jieben

There are two separate *bhikṣuprātimokṣas* preserved under the same Taishō number. The first is the *Mishasai wufen jieben* (彌沙塞五分戒本; Mahīśāsaka Five-Part Precept Book; T. 1422 [XXII] 194c2–200b12; one fasc.), translated by Buddhajīva and the rest of the *Wufen-lü* translation team. The attribution to Buddhajīva is misleading, however, since this is not a translation but rather an extract from the *vibhaṅga* of the *Wufen-lü*. (See also Hirakawa, vol. I, [1960] 1999–2000, 232–240, 244–245; Yuyama, 1979, § 1.41; Prebish, 1994, 66.)

Wufen jieben

The second *bhikṣuprātimokṣa* is simply titled *Wufen jieben* (五分戒本; Five-Part Precept Book; T. 1422 [XXII] 200b13–206b19; one fasc.) with the additional title *Mishasai jieben* (彌沙塞戒本; Mahīśāsaka Precept Book). This translation is also attributed to Buddhajīva and his translation team. However, not only does the translation terminology not match that of Buddhajīva, but the number of rules and their order of presentation also differ from the *Wufen-lü*. This *bhikṣuprātimokṣa* is closest to the textual tradition of the Sarvāstivādins. (See also Hirakawa, vol. I, [1960] 1999–2000, 235, 244–245; Yuyama, 1979, § 1.41.)

Wufen biqiuni jieben

This *bhikṣuṇīprātimokṣa*, titled *Wufen biqiuni jieben* (五分比丘尼戒本; Five-Part *Bhikṣuṇī* Precept Book; T. 1423 [XXII]; one fasc.), was compiled from the *vibhaṅga* of the *Wufen-lü* by Shi Minghui (釋明徽) in 522 CE (English translation in Kabilsingh, 1998, 83–125). (See also Hirakawa, vol. I, [1960] 1999–2000, 245–246; vol. II, [1960] 1999–2000, 76; Yuyama, 1979, § 1.42; Prebish, 1994, 66.)

Sarvāstivādins

Shisong-lü

The *Shisong-lü* (十誦律; Ten-Recitation Vinaya; T. 1435 [XXIII]; 61 fasc.) is thought to belong to the Sarvāstivādins. Nothing in the title or the content of the text, however, confirms this sectarian affiliation. Following the problematic practice of using Sanskrit words for Chinese Buddhist terms even when unattested and without presenting a case for their adoption, the *Shisong-lü* is often referred to as the *Daśādhyāyavinaya* (Nanjio, 1883, 246) or *Daśabhāṇavāravinaya* (Hirakawa, 1982, 7).

The *Shisong-lü* was translated into Chinese between the years 404 and 409 CE by Kumārajīva (Luoshi [羅什]) in collaboration with the North Indian *Puṇyatāra (Furuoduoluo [弗若多羅]) and, after the death of *Puṇyatāra, *Dharmaruci (Tanmoliuzhi [曇摩流支]). *Puṇyatāra, who is said to have recited the work from memory, allegedly died when only two-thirds of the translation had been completed. A manuscript brought by *Dharmaruci allowed for completion up to fascicle 58. After the death of Kumārajīva, the Kashmiri Vimalākṣa (Beimoluocha [卑摩羅叉]; c. 338–414 CE), Kumārajīva's own Vinaya teacher, is said to have edited the text, reworking it into 61 fascicles and changing the title of the last section or recitation from *shansong* (善誦; Good Recitation or Well Recited) to *binisong* (比尼誦; Vinaya Recitation; variant: *biqiusong* [比丘誦]; *Bhikṣu* Recitation). The Sanskrit title of the Chinese *shansong* is unknown (comp. with Lamotte's [(1958) 1988, 168] **Kuśalādhyāya* and Chung's [2005, 1] **Kuśalaparivarta*). The *shansong*, however, contains unmistakable parallels to the *Uttaragrantha* of the *Mūlasarvāstivādavinaya*, a text which, at least judging from the Tibetan translation, may also have been called the *Uttamagrantha* (Vogel, 1985, 110n60). It is possible that *shan* (善; good; Lamotte's *kuśala*) translates *Uttama* and that *song* (誦; recitation [i.e. *adhyāya*]) translates *grantha*. If this proposal is accepted, the Sanskrit title of this Vinaya – if it had one – may have been **Daśagranthavinaya*, although this is unattested.

The *Shisong-lü* contains an important list of 18 *sūtras* known as the *Mahāsūtras* (see Hirakawa, vol. II, [1960] 1999–2000, 369–371; Skilling, 1997, 4–6, 20–24; for a survey of Sanskrit fragments corresponding to the *Shisong-lü*, see, with caution as to the identifications, since parallels in Tibetan generally have been overlooked, Chung, 2002; on Sarvāstivādin Vinaya fragments in Tocharian, see, among others, Ogihara, 2009; 2011; 2013; for Uighur fragments, see Elverskog, 1997, 32).

The title of the text reflects its division into ten recitations or sections as follows:

Recitations 1–3 (T. 1435 [XXIII] 1a2–147b16; fasc. 1–20): *bhikṣuvibhaṅga*. (On Sanskrit fragments of the *bhikṣuvibhaṅga* preserved in the Turfan collection, see Rosen, 1959; for listings of identified Sanskrit fragments, see Hartmann & Wille, 2014b, 216.)

Recitation 4 (T. 1435 [XXIII] 148a1–206b26; fasc. 21–28): chapters from ordination (1) down to robes (7) – traditionally known as the 7 *fa* (法). (For listings of identified Sanskrit fragments from recitations 4 and 5, see Hartmann & Wille, 2014b, 214–216, 219; 2014c, 251; Wille, 2014a, 193–195; 2014b, 232; for an edition of Sanskrit fragments from the *Upasaṃpadāvastu* [Chapter on Ordination] and a translation of the corresponding Chinese, see Chung, 2004; on the *Pravāraṇāvastu* [Chapter on the *Pravāraṇā*], see Chung, 1998; on the *Bhaiṣajyavastu* [Chapter on the Use of Medicines], see Chung & Wille, 2002; evidence of an earlier redaction of fasc. 27–28 may exist in a manuscript found at

Dunhuang; see Stein 797, 406 CE; Palumbo, 2013, 124–128.)

Recitation 5 (T. 1435 [XXIII] 206c1–256b24; fasc. 29–35): chapters from *kathiṇa* (8) down to disputes (15) – traditionally known as the 8 *fa* (法). (For a Sanskrit fragment from Kizil of the chapter on *kathiṇa* and a translation of the corresponding Chinese, see Boltz & Salomon, 1988.)

Recitation 6 (T. 1435 [XXIII] 257a1–302c8; fasc. 36–41): "miscellaneous recitation" (*zasong* [雜誦]), being the Devadatta chapter (*tiaodashi* [調達事]) on schisms (16) and a chapter on miscellanea (*zafa* [雜法]) (17).

Recitation 7 (T. 1435 [XXIII] 302c9–346a4; fasc. 42–47): *bhikṣuṇīvibhaṅga* and *gurudharma* rules for nuns. (For listings of identified Sanskrit fragments, see Wille, 2014a, 193; note also the fragments edited in Waldschmidt, 1926, 17–45, with a systematic analysis and miscellaneous translations of nuns' rules from Pali, Chinese, and Tibetan [1926, 71–184].)

Recitation 8 (T. 1435 [XXIII] 346a5–378c7; fasc. 48–51): *Uttaragrantha* counterparts – (a) *Nidāna*, (b) **Ekottarikā*, and (c) *Kathāvastu*. Recitations 8–10 need to be read in conjunction with the *Uttaragrantha* of the *Mūlasarvāstivādavinaya*, extant chiefly only in Tibetan, and the *Modeleqie* (摩得勒伽; T. 1441) in order to understand the, perhaps confused, shared underlying structure. (For listings of identified Sanskrit fragments from *Uttaragrantha* counterparts [recitations 8–10], see Wille, 2014a, 193–195; 2014b, 233, 237.)

(a) The first part of the text titled *zengyifa* (增一法; **Ekottarikā*; 346a7–352b26) is not a numerically arranged *Ekottarikā* but this Vinaya's counterpart to the *Nidāna* of the *Uttaragrantha* of the *Mūlasarvāstivādavinaya* (see below).

(b) The **Ekottarikā* proper is found somewhat later (352b27–354c8; 355c10–373c6; a section of the *Nidāna* is erroneously repeated from 354c10–355c7). The **Ekottarikā* enumerates the "ones" to "tens" twice; the second section (369b25–373c6) is labeled *zengyihou* (增一後; After [?] the **Ekottarikā*). The first of the two sections of "fives" (358a28–367a5; 370c20–372a12) is extremely long; in the *Mūlasarvāstivādavinaya*, the length of this section may have contributed to its development into a separate text, the **Pañcaka* (see below).

(c) The text after the **Ekottarikā* corresponds to the *Kathāvastu* of the Mūlasarvāstivādin *Uttaragrantha*, although here it seems to be labeled – most likely erroneously – *zengshiyi xiang chu* (增十一相初; Beginning [?] of the Incremental section on "elevens"; 373c7–378c6).

Recitation 9 (T. 1435 [XXIII] 379a1–409c19; fasc. 52–55): *Uttaragrantha* counterparts – (a) *Upālipariprcchā* and (b) **Māṇavikā*.

(a) The *Upālipariprcchā* section (379a3–405a20) consists of a clarification of points arising from the *bhikṣuvibhaṅga* (379a3–397a11) and the chapters from ordination (1) down to disputes (15) (397a15–405a20). The lack of an *Upālipariprcchā* section covering the chapter on leather (5) may not be coincidental in light of the following remark by Guṇaprabha (see below): *carmavastvādīnāṃ māṇavikā* ("the chapter on leather and so forth [are dealt with in] the *Māṇavikā*"; Vinayasūtra's Pravrajyāvastu Study Group, 2007, 45.17–46.1 [*sūtra* 98]).

(b) The last section of the *Upālipariprcchā* – if indeed part of the *Upālipariprcchā* – is labeled *wen zashi chu* (問雜事初; Beginning [?] of the Questions on the Chapter on Miscellanea; 405a21–409c18). Despite its title, it is the same core text as the Mūlasarvāstivādin **Māṇavikā* (see below).

Recitation 10 (T. 1435 [XXIII] 410a1–470b20; fasc. 56–61): *Uttaragrantha* and other counterparts – (a) *Mātṛkā*, (b) unidentified section, (c) *Vinītaka*, (d) unidentified section, (e) councils, and (f) *Muktaka*.

(a) Section 410a4–423b9 is a *Mātṛkā* with its standard, threefold division (410a4–414c9; 414c10–417c21; 417c22–423b9; see below).

(b) Section 423b10–424b15 is curious, with, seemingly, no known correspondence in any other canonical Vinaya text, although it does correspond in part to a section in the Merv (Bairam Ali) Sanskrit manuscript (Vorobyova-Desyatovskaya, 1999a; 1999b; 1999c; 2000a; 2000b), as noted by S. Karashima (2000b, 214). Curiously, the Merv manuscript also contains a number of indications of its close relationship to the Vinaya tradition of the Mūlasarvāstivāda (Clarke, 2001, 91–92).

(c) The *Vinītaka* (424b16–445a12) contains case law from the four *pārājikas* and the first five *saṅghāvaśeṣas*, with close parallels in all other Sthavira Vinayas. It is not another *Upālipariprcchā*, as is sometimes claimed (see below).

(d) The text here (445a12–c6) contains a number of hypothetical questions and clarifications of previous rulings. Parallels in other Vinayas have not been identified. The beginning of this section is not indicated. The end is marked with the statement that the "Five Divisions are complete"

(五段竟); to what this refers is unclear. In light of an interlinear annotation at 442c25, it may be possible to understand this section as a continuation of the *Vinītaka* and that the "Five Divisions" refer to the five types of offenses from *saṅghāvaśeṣa* down to *pratideśanīya*. This would mean that this *Vinītaka* ([c] and [d]) also includes select rules beyond the fifth *saṅghāvaśeṣa*.

(e) The next two sections are the chapters on the first (445c10–450a26) and second councils (450a27–456b8), respectively; these are not found in the *Uttaragrantha* of the *Mūlasarvāstivādavinaya* but in the *Kṣudrakavastu*.

(f) The final section (456b9–470b19) is the counterpart of the *Muktaka* of the *Uttaragrantha* (see below).

(Miscellaneous French translations are available in Chavannes, vol. II, 1910–1911, 231–269). (See also Hirakawa, vol. I, [1960] 1999–2000, 127–135; Yuyama, 1979, § 1.15–1.19; Prebish, 1994, 79–83.)

Binaiye

The title of this text, *Binaiye* (鼻奈耶; T. 1464 [XXIV]; ten fasc.), is a transcription of Indic Vinaya. Translated in 383 CE and attributed to Zhu Fonian (竺佛念; *fl.* late 4th cent.), this is one of the earliest Chinese Vinaya translations. According to a preface by the Chinese cataloguer Daoan (道安; 312–385 CE), it was recited by the Kashmiri monk Yaśas (Yeshe [耶舍]). The sectarian affiliation of the text is not mentioned, but it is generally thought to be Sarvāstivādin. This text is incomplete insofar as it contains only a *vibhaṅga*. It also contains some interesting transcriptions that may help to identify the language from which it was translated. (See also Hirakawa, vol. I, [1960] 1999–2000, 162–166, 179; Yuyama, 1979, § 1.15.C.1.)

Shisong biqiu boluotimucha jieben

The translation of this text, titled *Shisong biqiu boluotimucha jieben* (十誦比丘波羅提木叉戒本; Ten-Recitation [Vinaya] *Bhikṣuprātimokṣa* Precept Book; T. 1436 [XXIII]; one fasc.) is attributed to Kumārajīva. There are a number of minor differences between this text and the *Shisong-lü*. Hirakawa Akira attributes the variation to differences in the originals, suggesting that this text is a translation and not an extraction from the *vibhaṅga* of the *Shisong-lü*. The earliest dated manuscript found at Dunhuang (Stein 797, 406 CE) contains a Sarvāstivādin *bhikṣuprātimokṣa* on one side (and fasc. 27–28 of the *Shisong-lü* on the other). The texts appear not to agree with the received versions of either text and given the early colophon date may transmit earlier versions (Palumbo, 2013, 124–128; Hirakawa, vol. I, [1960] 1999–2000, 168–175, dates the translation of the Dunhuang *bhikṣuprātimokṣa* between 265 and 360 CE, making it the earliest extant Vinaya text preserved in Chinese translation; Sanskrit fragments of Sarvāstivādin *bhikṣuprātimokṣa* manuscripts from Central Asia have been edited, recovering a complete text, and translated into German by G. von Simson [1986; 2000]; for further listings of identified Sanskrit *prātimokṣa* fragments, see Hartmann & Wille, 2014b, 216; Wille, 2014a, 194; 2014b, 233; for a Tocharian fragment [*pāyantikā* 59–62], see Ogihara, 2012; French translation from Chinese by É. Huber is aligned with Sanskrit fragments in Finot, 1913, 473–543; W. Pachow translates this text into English [1955, 69–219] and compares the wording of other *prātimokṣa* traditions; note also the Mahīśāsaka *bhikṣuprātimokṣa*, listed above, which appears to be Sarvāstivādin [*Wufen jieben*; T. 1422 (XXII) 200b13–206b19]). (See also Hirakawa, vol. I, [1960] 1999–2000, 232–240; Yuyama, 1979, § 1.11; Prebish, 1994, 76–78.)

Shisong biqiuni boluotimucha jieben

The translation of this text, titled *Shisong biqiuni boluotimucha jieben* (十誦比丘尼波羅提木叉戒本; Ten-Recitation [Vinaya] *Bhikṣuṇīprātimokṣa* Precept Book; T. 1437 [XXIII]; one fasc.), is attributed to Faying (法穎; misprinted as Faxian [法顯] in the Taishō edition). It is an extraction from the *vibhaṅga* of the *Shisong-lü* (Sanskrit fragments in Finot, 1913, 548–549; see also Hartmann & Wille, 2014b, 214; Wille, 2014a, 193; note also the fragments edited in Waldschmidt, 1926, 17–45, with a systematic analysis and miscellaneous translations of nuns' rules from Pali, Chinese, and Tibetan [1926, 71–184]; English translation from Chinese in Kabilsingh, 1998, 126–166). (See also Hirakawa, vol. I, [1960] 1999–2000, 240–244; vol. II, [1960] 1999–2000, 77; Yuyama, 1979, § 1.12; Prebish, 1994, 76–78.)

Bhikṣuṇīprātimokṣa (Discovered in Dunhuang)

There is an incomplete and undated Chinese translation of a *bhikṣuṇīprātimokṣa* from Dunhuang, preserved in the collection at Otani University (Kyoto) and dated paleographically to the 6th century CE. The text is extant from only the eighth *naiḥsargika* onward, with a total of 326 rules preserved (yielding an estimated total of 358). It matches quite well with the *Shisong-lü*. Nishimoto Ryūzan (1929) suggests

---

that it may be a translation by
Hirakawa, vol. I, [1960] 1999
Yuyama, 1979, § 1.12.C.2.)

Mūlasarvāstivādins

The Vinaya texts of the Mūlasarvāstivādins are traditionally categorized into four main divisions: *Vinayavibhaṅga*, *Vinayavastu*, *Vinayakṣudraka*, and *Vinayottaragrantha* (Eimer, 1987). The largest collection of Vinaya material currently available in Sanskrit, representing approximately one quarter of this Vinaya but containing only *vastu*, *prātimokṣa*, and *karmavācanā* material, was discovered in a cache of manuscripts near Gilgit in modern-day Pakistan in 1931. A Sanskrit *vibhaṅga* fragment was also found (Lévi, 1932, 19–20; Hirakawa, vol. I, [1960] 1999–2000, 101), suggesting the probability that a complete *vibhaṅga* – if not a complete Vinaya – was preserved at Gilgit. Numerous *vibhaṅga* fragments, presumably from the same find, have been recently identified (Hartmann & Wille, 2014a, 148–149). Translations of this Vinaya into Tibetan and Chinese are extant in various degrees of completeness. There are also secondary translations into Mongolian and Manchu from Tibetan and into Xixia (西夏; Tangut) from Chinese.

In contrast to the other extant Vinayas, the *Mūlasarvāstivādavinaya* is enormous and particularly unwieldy on account of its propensity toward repetition rather than abbreviation and its inclusion of many *sūtras* and *avadānas* (see Panglung, 1981), including the so-called *Mahāsūtras* (see Hirakawa, vol. II, [1960] 1999–2000, 372–376; Skilling, 1997, 4, 6–17, 25–31). Due to its length, the Chinese translation is presented not in one text – as are all of the other Chinese Vinaya translations – but in a series of separate texts.

The Tibetan translation is thought to be complete. However, some of the Mūlasarvāstivādin Sanskrit material found in the Schøyen collection such as the fragmentary *Vinayoddānagāthā* is not included in the Tibetan translation of the Vinaya (*'Dul ba*). Two *Vinayoddānagāthās* are also known from Yijing's (義淨; 635–713 CE) translation corpus (T. 1456, 1457). The existence of Sanskrit fragments proves that these *Uddānagāthās* were not compiled by Yijing (Clarke, 2002, 59 [postscript]). The presence of fragments of Sanskrit texts from the *Mūlasarvāstivādavinaya* that are not preserved in the Tibetan translation is perhaps best explained by positing not the incompleteness of the Tibetan translation but the existence of multiple Mūlasarvāstivādin Vinayas.

The strongest evidence for the existence of multiple Mūlasarvāstivādin Vinayas is found in the corpus of texts for nuns. Although we have no Sanskrit manuscripts, *bhikṣuṇīvibhaṅgas* and *bhikṣuṇīprātimokṣas* are preserved in Tibetan and Chinese translations. Curiously, the order and wording of rules in the *bhikṣuṇīvibhaṅga* preserved in Tibetan do not match that of the Tibetan *bhikṣuṇīprātimokṣa*. In reference to this situation, the Tibetan polymath Bu ston (1290–1364) concluded that the *bhikṣuṇīvibhaṅga* preserved in Tibetan does not belong to the Mūlasarvāstivādins (Vogel, 1985, 110n61).

In contrast, Yijing's corpus of *bhikṣuṇī* texts is unproblematic. In spite of Bu ston's claim that the Tibetan *bhikṣuṇīvibhaṅga* is not Mūlasarvāstivādin, it matches closely enough with Yijing's Chinese translation to conclude that the former is in fact Mūlasarvāstivādin, although clearly not identical to the Mūlasarvāstivādin tradition known to Yijing. Further evidence supporting the Mūlasarvāstivādin affiliation of the Tibetan *bhikṣuṇīvibhaṅga* can be found in the *Āryasarvāstivādimūlabhikṣuṇīprātimokṣasūtravṛtti* (D 4112/P 5614), a commentary preserved in Tibetan to a text that, until recently, was thought to be lost; a few folios of what appears to be the root text have now been found in a manuscript from the Pelliot Dunhuang collection in Paris (Clarke, 2012a). This commentary identifies itself as *Sarvāstivādimūla (given in Tibetan in both transcription and translation), most likely synonymous with Mūlasarvāstivāda (see Enomoto, 2000, 245). Analysis of the text reveals that it is a commentary on a *prātimokṣa* that is close to the traditions preserved in the Tibetan *bhikṣuṇīvibhaṅga*, a fact that further supports the claim that the *bhikṣuṇīvibhaṅga* introduced into Tibet is in fact Mūlasarvāstivādin, in contrast to Bu ston's view.

A close examination of the *Vinayasūtra* (Sāṅkṛtyāyana, 1981) and its autocommentary, the *Vinayasūtravṛttyabhidhānasvavyākhyāna* (Bapat & Gokhale, 1982) – Vinaya handbooks by Guṇaprabha (c. 5th–7th cents.; see Schopen, [1994] 2004, 312–313), the foremost exegete on the Mūlasarvāstivādin Vinaya tradition transmitted to Tibet – establishes beyond any doubt that the *bhikṣuṇīprātimokṣa* preserved in Tibetan belongs to the same tradition as that known to Guṇaprabha. The only way to explain this situation, then, seems to be to posit the existence of two Mūlasarvāstivādin traditions: one known to Yijing in Nālandā and the other known to Guṇaprabha in Mathurā. Thus at least three Mūlasarvāstivādin *bhikṣuṇī* textual traditions were transmitted to Tibet: one represented by a fragmentary *prātimokṣa* found only in Dunhuang and the *Āryasarvāstivādimūlabhikṣuṇīprātimokṣasūtravṛtti,* another represented by the *bhikṣuṇīvibhaṅga*, and a third found in the canonical *bhikṣuṇīprātimokṣa* and the works of Guṇaprabha. Of course, it may be that these traditions represent only temporally or geographically different versions of the same tradition.

Mūlasarvāstivādavinaya: Bhikṣuvibhaṅga

The Chinese translation by Tripiṭaka master Yijing is simply titled *Genben shuo yiqie youbu pinaiye* (根本說一切有部毘奈耶; *Mūlasarvāstivāda* [**nikāya* (?)] *vinaya*; T. 1442; 50 fasc.). The text is not called a *vibhaṅga* but simply a Vinaya. There is no translation colophon for the *vibhaṅga* specifically, although detailed colophons to Yijing's Vinaya works may be found in at least four places (譯場列位; T. 1452 [XXIV] 418b19–419b25; T. 1456 [XXIV] 520a17–b21; T. 1457 [XXIV] 523c4–524a6; and appended to the first fascicle of the *bhikṣuṇīvibhaṅga* but not reproduced in the Taishō edition – see Ikeda, 1990, 276–279). The date and place of issue of Yijing's translations are recorded in the *Kaiyuan shijiao lu* (開元釋教錄) catalogue (730 CE), with the *bhikṣuvibhaṅga* being listed as issued on Nov 17, 703 CE at Ximing-si (西明寺; T. 2154 [LV] 567c27–568a20). The translation dates here and below are publication or issuance dates (see Chen, 2004, 8). The quality of Yijing's translations has sometimes been called into question, most prominently by É. Lamotte ([1958] 1988, 170). But such characterizations are based on two problematic assumptions: that the Sanskrit and/or Tibetan texts that have come down to us were similar or even identical to those used by Yijing and that there was only ever a single, stable Mūlasarvāstivādin Vinaya tradition (Clarke, 2014, 15; see also above).

The Tibetan translation (D 3/P 1032), titled *'Dul ba rnam par 'byed pa*, in 25,000 *ślokas*, 83 *bam pos* or fascicles, made under royal decree of Dpal lha btsan po by Jinamitra (*ācārya* [teacher] of the Kashmiri Vaibhāṣikas and *vinayadhara* [Vinaya expert] of the Ārya-Mūlasarvāstivādins) and Klu'i rgyal mtshan (*fl.* late 8th–early 9th cent.), is usually dated to the first decade of the 9th century (Skilling, 1997, 140–141).

For listings of identified Sanskrit fragments, see Hartmann & Wille, 2014a, 148–149; Wille, 2014a, 195; 2014b, 237; see also Lévi, 1932, 19–20. For Sanskrit parallels preserved in extracts from the *Divyāvadāna* (chs. 13, 21, 35–37), see *Ōtani daigaku toshokan-zō*, 1930–1932, 407–412. For Uighur fragments, see Elverskog, 1997, 31. Miscellaneous French translations are available in Chavannes, vol. II, 1910–1911, 425–449. (See also Hirakawa, vol. I, [1960] 1999–2000, 73–74, 154–155; Yuyama, 1979, § 1.25; Prebish, 1994, 96–97.)

Mūlasarvāstivādavinaya: Bhikṣuṇīvibhaṅga

The Chinese translation by Yijing, titled *Genben shuo yiqie youbu pichuni pinaiye* (根本說一切有部苾芻尼毘奈耶; *Mūlasarvāstivāda* [**nikāya* (?)] *Bhikṣuṇīvinaya*; T. 1443; 20 fasc.), was issued in 710 CE. A Tibetan translation (D 5/P 1034), titled *Dge slong ma'i 'dul ba rnam par 'byed pa*, in 28 *bam pos* was made by the Kashmiri *upādhyāya* (preceptor) Sarvajñādeva, the Kashmiri *upādhyāya* Dharmākara, the Indian *upādhyāya* Vidyākara, and Dpal gyi lhun po, and it was revised by the Indian *upādhyāya* Vidyākaraprabha and Dpal brtsegs. It is usually dated to the first decade of the 9th century (Skilling, 1997, 134–135, 140–141). As noted above, the Tibetan and Chinese translations do not correspond exactly; they are translations of different texts (or vastly different versions of the same text). The Tibetan translation was not made by the same team that translated the *bhikṣuvibhaṅga, bhikṣuprātimokṣa, bhikṣuṇīprātimokṣa,* and so on, and this may also account for what is clearly a very different text, or perhaps textual tradition, from the one translated by Jinamitra's team. (See also Hirakawa, vol. I, [1960] 1999–2000, 74, 154–155; Yuyama, 1979, § 1.26; Prebish, 1994, 96–97.)

Mūlasarvāstivādavinaya: Bhikṣuprātimokṣa

We possess a number of versions of *bhikṣuprātimokṣas* from the Mūlasarvāstivādin tradition. Thirty-eight folios in four incomplete Sanskrit manuscripts were preserved at Gilgit, with some overlap in text confirming through the discrepancies in word and rule order that, at the very least, the *bhikṣuprātimokṣa* was certainly not a stable document. We also have a complete Sanskrit text preserved in Tibet (Hu-von Hinüber, 2003).

A Chinese translation by Yijing in one fascicle, titled *Genben shuo yiqie youbu jiejing* (根本說一切有部戒經; *Mūlasarvāstivāda* [**nikāya* (?)] Precept *Sūtra*; T. 1454), was issued in 710 CE. The details of the Tibetan translation, *So sor thar pa'i mdo* (D 2/P 1031), in two *bam pos* (700 *ślokas*), are the same as those given above for the *bhikṣuvibhaṅga*.

bhikṣuprātimokṣas; and full-color plates, see Clarke, 2014. For further listings of identified Sanskrit fragments, see Hartmann & Wille, 2014a, 149; 2014b, 216; Wille, 2014a, 194; 2014b, 233. The English translation by C.S. Prebish (1975) from Sanskrit relied solely on A.C. Banerjee's problematic editions (1953; 1954; and later 1977). The Tibetan text was translated into English by S. Chandra Vidyabhusana (1915) and into Japanese by Masuda Shin'ya (1969). For a translation of the rules unique to monks, see Rockhill, 1884b, 194–201; the numbering of monks' rules among the shared rules is given in parentheses to the nuns' rules in Rockhill, 1884a; 1884b. (See also Hirakawa, vol. I, [1960] 1999–2000, 73, 154–155; Yuyama, 1979, § 1.21; Prebish, 1994, 86–88.)

Mūlasarvāstivādavinaya: Bhikṣuṇīprātimokṣa

The Chinese and Tibetan versions of these texts do not match (see above). The Chinese translation by Yijing in one fascicle, titled *Genben shuo yiqie youbu pichuni jiejing* (根本說一切有部苾芻尼戒經; *Mūlasarvāstivāda* [**nikāya* (?)] *Bhikṣuṇī* Precept *Sūtra*; T. 1455) was issued in 710 CE. The details of the Tibetan translation, *Dge slong ma'i so sor thar pa'i mdo* (D 4/P 1033), in two *bam pos*, are the same as those given above for the *bhikṣuvibhaṅga*.

There are a number of interesting *prātimokṣa* texts for nuns preserved in Tibetan Dunhuang manuscripts, a full survey of which is a desideratum given that they were catalogued (La Vallée Poussin, 1962, 1–21; Yamaguchi, vol. I, 1977–1988, 1–51; Lalou, vol. II, 1939–1961, 5–19; Wang, 1999, 115–122) at a time when in modern Western scholarship there was yet little recognition of the problems surrounding the *bhikṣuṇīprātimokṣa* or *bhikṣuṇīvibhaṅga* (see, however, *Ōtani daigaku toshokan-zō*, 1930–1932, 412n3; on some of these previously unidentified or misidentified texts from Dunhuang and the need for a new catalogue, see Clarke, 2012a; for an English translation from Chinese, see Kabilsingh, 1998, 210–248; for a French translation from Tibetan, see Rockhill, 1884a; 1884b; for an English translation from Tibetan, see Tsomo, 1996, 75–130). (See also Hirakawa, vol. I, [1960] 1999–2000, 74, 154–155; Yuyama, 1979, § 1.22; Prebish, 1994, 86–88.)

Mūlasarvāstivādavinaya: Vastus

The 17 *vastus* of the *Mūlasarvāstivādavinaya* are extant in a single, fragmentary manuscript from Gilgit, originally consisting of 523 folios, of which approximately four-fifths survive (Wille, 1990, 16). K. Wille (1990, 17) reconstructs the title from the colophon as *Vinayavastvāgama*. Each *vastu* extant in the Chinese translation by Yijing is transmitted as a separate text. Of the 17 *vastus* of the *Mūlasarvāstivādavinaya*, only seven are extant in Yijing's translations: *Pravrajyāvastu* (*chujia shi* [出家事]; Chapter on "Going Forth"; T. 1444; four fasc.), *Pravāraṇāvastu* (*suiyi shi* [隨意事]; Chapter on the *Pravāraṇā*; T. 1446; one fasc.), *Varṣāvastu* (*anju shi* [安居事]; Chapter on the Rains' Retreat; T. 1445; one fasc.), *Carmavastu* (*pige shi* [皮革事]; Chapter on Leather; T. 1447; two fasc.), *Bhaiṣajyavastu* (*yao shi* [藥事]; Chapter on Medicines; T. 1448; 18 fasc.), *Kaṭhinavastu* (*jiechinayi shi* [羯恥那衣事]; Chapter on *Kaṭhina*; T. 1449; one fasc.), and *Saṅghabhedavastu* (*poseng shi* [破僧事]; Chapter on Schisms; T. 1450; 20 fasc.). The *Kaiyuan shijiao lu* records that Yijing unexpectedly died before revising his translation of the *vastus* (Chn. *basudu* [跋窣堵]), stating that he translated 70–80 fascicles but that they remain unedited (T. 2154 [LV] 569a23–25). Only 50 fascicles (with three listed as missing) are recorded in the later *Zhenyuan xinding shijiao mulu* (貞元新定釋教目錄) catalogue compiled by Yuanzhao (圓照) in 800 CE (T. 2157 [LV] 868c20–869a7). Hirakawa Akira (vol. I, [1960] 1999–2000, 154–157; vol. II, [1960] 1999–2000, 212–213) suggests that Yijing may have completed a draft translation of the entire *vastu* section but that many fascicles were later lost (in English, see Matsumura, 1996, 172–173).

The voluminous Tibetan translation titled *'Dul ba gzhi* (D 1/P 1030), in 109 *bam pos*, made by Sarvajñādeva, Dharmākara, Vidyākaraprabha, and Dpal gyi lhun po, and revised by Vidyākaraprabha and Dpal brtsegs – the same team that translated the problematic *bhikṣuṇīvibhaṅga* (see above) – is usually dated to the first decade of the 9th century (Skilling, 1997, 134–135, 140–141).

For a detailed survey of the extant Sanskrit material from Gilgit, including listings of editions and select translations; references to Sanskrit parallels preserved in extracts from the *Divyāvadāna* (chs. 1–7, 9–10, 17, 23–24, 30–32; see also *Ōtani daigaku toshokan-zō*, 1930–1932, 399–407); a concordance covering most of the extant Sanskrit, Tibetan, and Chinese *vastus*; and full-color plates, see Clarke, 2014. For further listings of identified Sanskrit fragments, see Hartmann & Wille, 2014a, 149–151; 2014c, 250; Wille, 2014a, 193–195; Yao, forthcoming. For miscellaneous French translations from Chinese, see Chavannes, vol. II, 1910–1911, 372–419 (the *Saṅghabhedavastu*), 420–424 (the *Bhaiṣajyavastu*). (See also Hirakawa, vol. I, [1960] 1999–2000, 73, 100–103, 155–157; Yuyama, 1979, § 1.27; Prebish, 1994, 89–95.)

Mūlasarvāstivādavinaya: Kṣudrakavastu

The *Kṣudrakavastu* (Chapter on Miscellanea) is extant only in Chinese and Tibetan translations. Yijing's Chinese translation, *Genben shuo yiqie youbu pinaiye zashi* (根本說一切有部毘奈耶雜事; Chapter on Miscellanea of the Vinaya of the *Mūlasarvāstivāda* [**nikāya* (?)]; T. 1451; 40 fasc.), was issued in 710 CE. The text is arranged according to eight sets of ten *uddānas* (verses consisting of keywords) organized under eight *piṇḍoddānas* (verses summarizing the *uddāna* keywords), and all summarized under one meta-*uddāna* given at the beginning of the text; in various places, *antaroddānas* (additional keyword summaries) are also found. The organizational structure of the text is briefly mentioned by Yijing at the beginning of his translation, in which we read that there are a total of 89 *uddānas*. There is also a separate *Vinayoddānagāthā*, which preserves nothing but the *uddānas* of this text: *Genben shuo yiqie youbu zashi shesong* (根本說一切有部雜事攝頌; Summary Verses from the Chapter on Miscellanea of the [Vinaya of the] *Mūlasarvāstivāda* [**nikāya* (?)]; T. 1457; one fasc.), issued in 710 CE – there is no Tibetan version of this or any other *Vinayoddānagāthā* as a separate text. The Tibetan translation, *'Dul ba phran tshegs kyi gzhi* (D 6/P 1035), was made by Vidyākaraprabha, Dharmaśrīprabha, and Dpal 'byor in 59 (60 in Stog) *bam pos* (on the detailed colophon, see Harrison, 1994, 305–306).

The *Kṣudrakavastu* is particularly important for the study of *bhikṣuṇīs* in India; it contains a detailed section on rules exclusively for nuns. Material from this *vastu* is quoted eight times in Śamathadeva's *ṭīkā*, the *Abhidharmakośabhāṣyopāyikā*, five of which provide exact references to the *uddāna* system (Honjō, vol. I, 2014, 36). The Chinese and Tibetan translations do not match perfectly in terms of organization (for the correspondences between the Tibetan and Chinese translations, with reference to Sanskrit parallels preserved in extracts from the *Divyāvadāna* [chs. 12, 17], see *Ōtani daigaku toshokan-zō*, 1930–1932, 414–416; for a brief synopsis of the content with detailed summaries of the accounts of the first and second councils and the *Mahāparinirvāṇa* preserved in the *Kṣudrakavastu*, see Banerjee, 1957, 89–99; see also Hirakawa, vol. II, [1960] 1999–2000, 215; for miscellaneous French translations from Chinese, see Chavannes, vol. II, 1910–1911, 355–371). (See also Hirakawa, vol. I, [1960] 1999–2000, 74–75, 154–155; Yuyama, 1979, § 1.27; Prebish, 1994, 97–98.)

Mūlasarvāstivādavinaya: Uttaragrantha (Sanskrit)

This text, especially the sections known as the *Nidāna* and *Muktaka*, is extremely important for the textual warrants that it provides for several important practices including authorizations for the worship of stūpas (Schopen, [1998] 2004, 278n14) and the Bodhisattva image (Schopen, 2005, 131–132; Kishino, 2013, 59–60).

A complete and an incomplete *Uttaragrantha* – if this is the correct title – are extant in Tibetan translation (see below). Quotations are preserved in commentaries such as Guṇaprabha's *Vinayasūtravṛttyabhidhānasvavyākhyāna* and Śamathadeva's *Abhidharmakośabhāṣyopāyikā* (Honjō, vol. I, 2014, 37 [note that Honjō's "*mātṛkā*" is in fact the *Muktaka*]; for listings of identified Sanskrit fragments, see Hartmann & Wille, 2014a, 151; Wille, 2014a, 193, 195; 2014b, 232; Yao, forthcoming, n13).

Mūlasarvāstivādavinaya: Uttaragrantha (Chinese)

There is no complete *Uttaragrantha* translation in Yijing's corpus of Chinese translations. There are, however, two *Uttaragrantha* sections extant in Yijing's oeuvre: the *Nidāna* (*Nituona* [尼陀那]) and *Muktaka* (*Mudejia* [目得迦]), respectively. These two sections are preserved in a single, ten-fascicle translation titled *Genben shuo yiqie youbu nituona mudejia* (根本說一切有部尼陀那目得迦; *Mūlasarvāstivāda* [**nikāya* (?)] *Nidānamuktaka*; T. 1452), issued in 703 CE. This translation is often erroneously identified in scholarship as the *Nidānamātṛkā*. It is unclear why only these two sections of the *Uttaragrantha* were translated by Yijing. However, a hint as to the relative importance of the *Nidāna* and *Muktaka*, at least tó Yijing, can perhaps be gleaned from their comparatively early translation date. The translation of the *Nidāna* and *Muktaka* was issued in 703 CE; the *Kṣudrakavastu* was not issued until 710 CE.

Yijing also translated a text known as the *Genben shuo yiqie youbu nituona mudejia shesong* (根本說一切有部尼陀那目得迦攝頌; *Mūlasarvāstivāda* [**nikāya* (?)] *Nidānamuktakoddānagāthā*; T. 1456; one fasc.), issued in 710 CE. This text is merely a compilation of *uddānas* and *piṇḍoddānas* found throughout the *Nidāna* and *Muktaka*. Accordingly, it functions as a table of contents to the *Nidāna* and *Muktaka*. This text is not preserved in Tibetan but Sanskrit fragments have been identified in the Schøyen collection, a fact that, as discussed

tivādavinaya: Uttaragrantha

pecially the sections known as the
uktaka, is extremely important for the

---

above, turns out to have implications for our knowledge of the multiplicity of the Vinayas of the Mūlasarvāstivādins and the "completeness" of the Tibetan translation.

The Chinese translation of the *Nidāna* (T. 1452 [XXIV] 415a2–435b28; fasc. 1–5) consists of 46 divisions arranged under five *piṇḍoddānas*, with ten *uddānas* under the first four *piṇḍoddānas* and six under the fifth *piṇḍoddāna*. The entire text is summarized at the beginning in a single meta-*piṇḍoddāna* titled in Chinese *damen zongshesong* (大門總攝頌; Great-Gate *Piṇḍoddāna*) and in Tibetan *sgo rnams kyi mdo bsdus pa*. One fragment in the Schøyen collection (MS 2381/212) confirms that the Chinese term *damen* (大門; great gate) and Tibetan *sgo* (gate) translate the Sanskrit term *mukha* (on the *Nidāna*, see also below).

The Chinese translation of the *Muktaka* (T. 1452 [XXIV] 435c1–455c2; fasc. 6–10) consists of 40 divisions arranged under four *piṇḍoddānas*, with ten *uddānas* under each *piṇḍoddāna*. Like the *Nidāna*, the entire text is summarized at the beginning in a single meta-*piṇḍoddāna* titled in Chinese *damen zongshesong* (大門總攝頌; Great-Gate *Piṇḍoddāna* (on the *Muktaka*, see also below).

Both the *Nidāna* and the *Muktaka* deal primarily with issues of monastic discipline from, and generally following the structure of, the *vastus*. Almost identical questions, however, are also occasionally found in the *Upālipariprcchā*. Thus, the intended functions of the *Nidāna* and the *Muktaka* remain unclear. (See also Hirakawa, vol. I, [1960] 1999–2000, 154–155.)

Mūlasarvāstivādavinaya: Uttaragrantha (Tibetan)

As mentioned above, there are two Tibetan translations of the *Uttaragrantha*: one incomplete, the other complete. The incomplete translation is titled *'Dul ba gzhung bla ma*; the complete translation is titled *'Dul ba gzhung dam pa*, which may translate not *Uttaragrantha* but *Uttamagrantha* (Vogel, 1985, 110n60). The names of the translators are not recorded for either translation of the *Uttaragrantha*, although in the colophon to the incomplete text (for translations, see *Ōtani daigaku toshokan-zō*, 1930–1932, 417; Kishino, 2006, 203–205 [translation appendix]; on the colophon, see also Scherrer-Schaub, 2009, 165–167), it is recorded that both texts were translated in the time of the translator Klu'i rgyal mtshan, which places the translation in circa the first decade of the 9th century. The *'Dul ba gzhung bla ma* (D 7[a]/P 1036) in 11 *bam pos* contains only an *Upālipariprcchā* (Questions of Upāli), covering down to *pāyantikā* 20 of the *bhikṣuvibhaṅga* (for a translation of the *Upālipariprcchā* from the *'Dul ba gzhung bla ma*, see Kishino, 2006).

The colophon to the incomplete *Uttaragrantha* preserves, in the Derge and Peking editions, a lengthy quotation from the colophon of a commentary on this text, the *Vinayottarāgamaviśeṣāgamapraśnavṛtti*, in which details of the incomplete and inferior state of preservation of the *'Dul ba gzhung bla ma* are recounted. According to this colophon, following the Shunga ruler Puṣyamitra's (187–151 BCE) persecution of Buddhism (Lamotte, [1958] 1988, 386–392), it became difficult to find a complete text of the *Uttaragrantha* in Mathurā; the incomplete version is all that could be remembered by a monk from Kashmir. The *Upālipariprcchā* contains section colophons in which it is identified as the Kashmiri *Upālipariprcchā* (see the Stog Palace edition [*'Dul ba*, da 18a2–3; 36b7; 41a5–6; 92b6–7: *nye bar 'khor gyis zhus pa kha che ba*]).

As discussed by P. Harrison (1994, 306), there are two different colophons to the complete *Uttaragrantha* (for a translation of one version, see Samten & Russell, 1987). Of particular interest for our knowledge of the content of the *Uttaragrantha* is the series of verses found before this colophon in which each of the sections of the *Uttaragrantha* is briefly defined. The definitions look very similar to those found in Bu ston's *'Dul ba spyi'i rnam par gzhag pa* (General Exposition on Vinaya; Lokesh Chandra, 1971, zha 48a6–49a5), although his are in prose, not verse.

The *'Dul ba gzhung dam pa* (D 7[b]/P 1037) in 53 *bam pos* contains the following 12 sections:

Section 1: *Upalis zhus pa* (The Questions of Upāli; Skt. *Upālipariprcchā*; Sanskrit title attested as *Prcchā* in Guṇaprabha's autocommentary; *bam pos* 1–21). This section consists of a relatively terse and formulaic, question-and-answer-format dialogue between Upāli and the Buddha, in which Upāli asks for clarification of details related to various Vinaya offenses. Structurally, the text follows the order of the *bhikṣuvibhaṅga* and then the *vastus*.

Section 2: *'Dul bar byed pa* (The Adjudications; Skt. *Vinītaka*; Sanskrit title attested in Guṇaprabha's autocommentary; *bam pos* 22–25). This section contains what appears to be case law. It deals only with case law for the first nine *bhikṣuprātimokṣa* rules, that is, the four *pārājikas* and the first five *saṅghāvaśeṣas*. This and its parallels in other texts are perhaps the richest source available for

Indian Buddhist monastic attitudes toward sexuality and sexual transgressions (and any other matters discussed in these nine rules). The *Vinītaka* is cited approximately 45 times in Śākyaprabha's *Āryamūlasarvāstivādiśrāmaṇerakārikāvṛttiprabhāvatī*. Similar sections are found in all extant Sthavira Vinayas including the Theravāda Vinaya, wherein the individual case histories are to be found under the respective rules in sections known as the *vinītavatthu*s, and also the *Mahāsāṅghikavinaya*. (For a detailed study, see Clarke, 2012b.)

Section 3: *Gcig nas 'dzegs pa* ([Vinaya Topics Numerically Arranged in] Single Increments; Skt. **Ekottarikā*; Sanskrit title unattested in Mūlasarvāstivādin Vinaya works, but the variant title *Vinayotarikā* found in the Merv manuscript [Vorobyova-Desyatovskaya, 1999a, 28; 2000b, 14–15; Clarke, 2001, 90–91]; *bam pos* 26–27). The text is arranged under three *piṇḍoddāna*s, each with ten *uddāna*s, yielding a total of 30 *uddāna*s. This is a relatively long text, arranged according to the standard format for numerical discourse (all the "ones" are followed by the "twos," "threes," and so on, down to the "tens"). The coverage is somewhat uneven, with some numbers such as the "twos" receiving considerable authorial attention and some, such as the "nines," not, as can be seen by the *uddāna* distribution ("ones": *piṇḍoddāna* 1; "twos": *uddāna*s 1–10; "threes": *uddāna*s 11–15; "fours": *uddāna* 16; "fives": *uddāna*s 17–20; "sixes": *uddāna*s 21–22; "sevens": *uddāna* 23; "eights": *uddāna*s 24–26; "nines": *uddāna* 26; and "tens": *uddāna*s 27–30).

The **Ekottarikā* is much more, however, than simply a collection of lists of numerically arranged, random items. The section on the "twos," for instance, contains detailed lists concerning the qualities of the holder of the monastic office of the **vaiyāpṛtyakara* (Tib. *dge 'dun gyi zhal ta pa*), an administrative or managerial position held by certain monks (Silk, 2008, 39–73). The section on the "fives" contains at least 14 separate discussions concerning the qualities of a *vinayadhara*. The section on the "sixes" contains a detailed discussion of the six great teachings or *mahopadeśa*s (*bstan po chen po drug*). The section on the "eights" contains a dialogue between the Buddha and Mahāprajāpatī Gautamī, who requests a doctrinal explanation about the nature of the dharma. Conspicuous by their absence from the "eights" are the eight *gurudharma* rules for nuns, the imposition of which Mahāprajāpatī Gautamī is said to have accepted as a condition for the establishment of the *bhikṣuṇī* saṅgha but according to which *bhikṣuṇī*s remain in a subordinate position to *bhikṣu*s regardless of seniority.

Section 4: *Lnga pa* (The Fives; Skt. **Pañcaka*; Sanskrit title unattested in Mūlasarvāstivādin Vinaya works, but the variant title *Vinayapaṃcika* found in the Merv manuscript [Vorobyova-Desyatovskaya, 1999a, 28; 2000b, 14–15; Clarke, 2001, 90–91]; *bam pos* 28–29). This section consists primarily of lists of terms arranged into groups of five, with one *piṇḍoddāna* and ten *uddāna*s in total. In the format of an exchange between the Buddha and Upāli, it begins with a detailed discussion of protocols and procedures concerning how monks are supposed to accuse (*gleng ba*) other monks of offenses, all conveniently arranged into fives. Many lists are given, including, for instance, the five types of *ācārya*s (*slob dpon lnga*), five types of abuse (*spyo ba rnam pa lnga*), and the five types of protocols for receiving donations (*byin len rnam pa lnga*). Curiously, given its initial focus on protocols for accusing other monks of offenses, the **Pañcaka* contains seemingly only one mention of the *sthalastha* or arbitrator monk. (On this text, see Borgland, 2014, 47–49.)

Section 5: *Bcu drug* (The Sixteens; Skt. **Ṣoḍaśaka*; Sanskrit title unattested in Mūlasarvāstivādin Vinaya works, but the variant title *Vinayaṣoddaśika* found in the Merv manuscript [Vorobyova-Desyatovskaya, 1999a, 28; 2000b, 14–15; Clarke, 2001, 90–91]; *bam po* 30). This is an exceedingly short text arranged around a single *uddāna*. In format, the text is a dialogue between Upāli and the Buddha, with most of the dialogue consisting of a set of lists given by the Buddha to Upāli in response. The text consists of short sections, each of which begins with an initial list of 16 matters, followed usually by two further lists of five attributes, which make the monk in question from the initial list either unsuitable in the first list (sections 1–13) or suitable in the second list to perform a certain task (sections 1–16). The text deals primarily with the settlement of monastic disputes. As noted above, the sections on the "fives" in the **Ekottarikā* sections in both the Sarvāstivādin *Shi-song-lü* and the *Modeleqie* are conspicuously long. It appears almost as if the sections on the *vinayadhara* and his abilities and qualifications from the section of "fives" in the **Ekottarikā* have been collected and modified to discuss the *sthalastha* in the **Ṣoḍaśaka*. (On this text, see Borgland, 2014, 54–56.)

Section 6: *Gleng gzhi* ([The Collected] Incidents [on Vastu Legislation]; Skt. *Nidāna*; Sanskrit title attested in Guṇaprabha's autocommentary; *bam*

pos 31–37). (For a preliminary study, see Clarke, 2002; for a detailed study and an English translation, see Kishino, 2013; see also above.)

Section 7: *Rkyang pa* (The Separate [Collected Incidents on Vastu Legislation]; Skt. *Muktaka*; Sanskrit title attested in Guṇaprabha's autocommentary; *bam pos* 38–43). (For a preliminary study, see Clarke, 2001; see also above.)

Section 8: *Gtam gyi dngos po* (The Matters of Discussion [on Vinaya Topics]; Skt. *Kathāvastu*; Sanskrit title attested in Guṇaprabha's autocommentary; *bam pos* 44–45; for three broken Sanskrit folios from the Turfan collection [SHT (V) 1068] that correspond well with the *Kathāvastu*, see Clarke, 2011). A notable and distinctive characteristic of the *Kathāvastu* is that it seems to be one of only two Mūlasarvāstivādin Vinaya texts known not to include an *uddāna* system as part of their structural arrangement (the other being the *Mātṛkā*; see below). In terms of format, the text is a catechism between Upāli and the Buddha without narrative sections, although, curiously, neither the Buddha nor Upāli are introduced by name until well into the text. The text itself is not divided into any marked sections.

The text begins abruptly with a series of approximately 30 Abhidharma questions concerning the nature of Vinaya offenses. Although no formal transition is marked, after the application of Abhidharma categories to monastic offenses, the text moves to a number of what we might classify as legal puzzles. The first of these is whether there is any matter (*dngos po*; Skt. **vastu*) that can be both an offense and not an offense. The legal point to which attention is drawn is the exception already built into a number of *prātimokṣa* rules that allows monks to engage in certain activities in times of sickness and various other exceptional circumstances (*dus ma gtogs te*; Skt. *anyatra samayāt*). One such case is the 36th *pāyantikā* of the *Mūlasarvāstivādavinaya*, which allows monks to participate in a separate group meal (*'dus shing za ba*; Skt. *gaṇabhojana*) away from the rest of the saṅgha in times of illness or travel. Various other legal questions are broached.

Of further interest is the discussion and awareness of gender differences in monastic legislation exhibited by the Vinaya authors/redactors. In response to the question of whether there are any cases in which a *pārājika* offense is deemed to be a *saṅghāvaśeṣa* offense, the rule against touching the body of a member of the opposite sex is cited. If a nun touches the body of a male, she incurs a *pārājika*. The same action is only a *saṅghāvaśeṣa* offense for a monk who touches a female. Likewise, while it is a *pārājika* offense for a nun to conceal another's grave offense, it is only a *pāyantikā* if a monk does the same. For the act of following a suspended monk, a nun incurs a *pārājika*, but the same action results in only a *duṣkṛta* or wrongdoing for a monk. Not all monastic law, however, is more lenient toward monks. The intentional emission of sexual fluids (i.e. masturbation) is a *saṅghāvaśeṣa* offense for monks but a lesser offense, a *pāyantikā*, for nuns.

Section 9: *Ma na bi ka* (The Young, Female Brahman; Skt. **Māṇavikā*; Sanskrit title attested in Guṇaprabha's autocommentary; *bam pos* 46–47). The text is arranged under a series of *piṇḍoddānas* and *uddānas*: two *piṇḍoddānas*, the first containing 11 *uddānas*, the second 15. There is some confusion concerning this title, the significance of which is not clear. Although Sanskrit *māṇavikā* is only feminine, the title sometimes seems to be understood as the masculine *māṇavaka* (young, male Brahman). To whom the title refers is unclear; no Brahman boy or girl seems to be mentioned in the text.

The **Māṇavikā* is quoted in a range of Vinaya compendia, digests, and commentaries extant primarily only in Tibetan, including Śākyaprabha's *Āryamūlasarvāstivādiśrāmaṇerakārikāvṛttiprabhāvatī*, Guṇaprabha's *Ekottarakarmaśataka* and *Vinayasūtravṛttyabhidhānasvavyākhyāna*, Vimalamitra's *Prātimokṣasūtraṭīkāvinayasamuccaya*, Viśeṣamitra's *Vinayasaṃgraha*, and Dharmamitra's *Vinayasūtraṭīkā*. An indication of the importance of the **Māṇavikā* to Guṇaprabha may be gleaned from the fact that he cites it in his *Vinayasūtravṛttyabhidhānasvavyākhyāna* close to 30 times.

As noted in Guṇaprabha's *Vinayasūtravṛttyabhidhānasvavyākhyāna*, the **Māṇavikā* seems to deal with matters beginning with those from the *Carmavastu* and then other *vastus* (see above). The text opens with a question in which Upāli seeks clarification of the Buddha's previous pronouncement concerning ordination in the hinterlands with a quorum of five monks including a *vinayadhara*, a matter previously discussed in the *Carmavastu*. Upāli asks whether an ordination performed with only five monks, one being a *vinayadhara*, would be valid even if a regular quorum of ten monks were available. The text then moves on to a clarification of the rule by which a monk incurs a *naiḥsargika* if he has an extra robe for more than ten days. Here too the text elaborates on the rule in the *Carmavastu* that states that the ten-day period does not apply for robes during transit when sent from one monk to another. The rule is clarified here in relation to deaf and blind monks and how they know when they have received extra robes.

The discussion under the second to seventh *uddāna*s of the first *piṇḍoddāna* addresses issues arising from the *Bhaiṣajyavastu* (Chapter on Medicines) concerning the consumption or use of sugar beer (*ram chang*), human breast milk (*mi'i 'o ma*), human flesh (*mi'i sha*), meat that has been slaughtered specifically for a monk (*de'i phyir ched du bsad pa'i sha*), leeches (*srin bu pad ma*), woodpeckers (*bya shing rta mo*), frogs (*sbal pa*), and different mixtures of foods taken as medicine such as morning medicines mixed with afternoon medicines, or seven-day medicines with lifelong ones. The eighth and ninth *uddāna*s move on to questions arising from the *Cīvaravastu* such as whether one may accept a robe from an insane person. With the beginning of the tenth *uddāna*, the text moves on to a discussion as to whether a monk who nurses another monk is entitled to inherit his patient's property. The 11th and final *uddāna* of the first *piṇḍoddāna* starts with a discussion of how a monk may simultaneously spend the rains' retreat in four places without committing an offense. The second set of *uddāna*s, 15 in total, seems to deal with topics from the following *vastu*s: *Kaṭhinavastu* (*uddāna*s 1–4), *Kauśāmbakavastu* (*uddāna*s 5–9), *Karmavastu* (*uddāna*s 10–13), and *Pāṇḍulohitakavastu* (*uddāna*s 14–15).

Section 10: *Ma lta bu* (The Summary [of Vinaya Topics]; Skt. *Mātṛkā*; Sanskrit title attested in Guṇaprabha's autocommentary; *bam pos* 48–53). The *Mātṛkā* lacks any substantial narrative and an *uddāna* system. It is divided into three sections as follows: (1) section on ordination (*bsnyen par rdzogs pa'i phung po*; Skt. *upasaṃpadākhaṇḍaka*; 133 items); (2) section on [protocols] connected [with various monastic procedures and realia] (*rab tu ldan pa'i phung po*; Skt. *pratisaṃyuktakhaṇḍaka*; 98 items); and (3) section on obligatory behavior (*bya ba'i phung po*; Skt. *vṛttakhaṇḍaka*; 116 items). The *vṛttakhaṇḍaka* appears to have circulated as a separate text entitled *Kriyāskandha* (see Clarke, 2004b; for an initial study of Vinaya *Mātṛkā*s, see Clarke, 2004a; two of the three Vinaya fragments identified by Hoernle – 1916, 149×/20, and 149×/16 – belong to this text).

Section 11: *Upalis kun dris pa* (The Inquiry by Upāli; Sanskrit title unattested). It is unclear whether this should be considered a separate section. It is nothing more than a single, seven-part question concerning the body (*lus*) and fruit (*'bras bu*) of the Vinaya (for brief comments on this section, see Kishino, 2013, 22–23n72).

Section 12: colophon. (See also Hirakawa, vol. I, [1960] 1999–2000, 75; Yuyama, 1979, § 1.29; Prebish, 1994, 98–99.)

Sapoduobu pini modeleqie

The Chinese translation of this text, titled *Sapoduobu pini modeleqie* (薩婆多部毘尼摩得勒伽; *Sarvāstivāda* [**nikāya* (?)] *Vinaya*mātṛkā*; T. 1441 [XXIII]; ten fasc.), is ascribed to Saṅghavarman (Sengqiebamo [僧伽跋摩]; *fl.* early 5th cent.) in 435 CE. The text has long been misunderstood as a commentary on the Sarvāstivādin *Shisong-lü* (see above). It is, however, a canonical Vinaya text, one affiliated not with the *Shisong-lü* but more closely with the *Mūlasarvāstivādavinaya*. The term *modeleqie* (摩得勒伽) in the title is generally understood as a transcription of Sanskrit *mātṛkā*, but it might transcribe some other, phonetically similar, unattested or unrecognized Vinaya title. The Chinese title is usually reconstructed as Sanskrit *Sarvāstivādavinayamātṛkā*. If accepted as a Mūlasarvāstivādin Vinaya text, then the early translation date would make this perhaps our earliest datable textual evidence for the Mūlasarvāstivādins, albeit under the title Sarvāstivādins.

When compared to the *Uttaragrantha* of the *Mūlasarvāstivādavinaya*, preserved chiefly only in Tibetan, both the structure and the content of the text become clear. The so-called *Sarvāstivādavinayamātṛkā* is not a *Mātṛkā* but a collection of some seven sections including a *Mātṛkā*, all of which have counterparts in the *Shisong-lü* and the Mūlasarvāstivādin *Uttaragrantha*. The following section colophon from the *Mātṛkā* section is perhaps instructive with regard to the relationship between the *Sapoduobu pini modeleqie* and the *Uttaragrantha*/*Uttamagrantha*: "The Good Recitation [of the] **Mātṛkā* expounded by the Buddha is complete" (佛說摩得勒伽善誦竟 (T. 1441 [XXIII] 605a5). As discussed above, the term *shansong* (善誦; Good Recitation) may be a translation of Sanskrit *Uttamagrantha*, an attested variant – at least in Tibetan translation – of *Uttaragrantha*. Although the syntax remains problematic, it is not impossible that this colophon was intended to read: "The **Mātṛkā* [section] in the *Uttamagrantha* (Good Recitation) expounded by the Buddha is complete."

ounded by the Buddha is complete."

Indeed, this colophon marks exactly where the *Mātṛkā* section of the *Modeleqie* (*Uttamagrantha/Uttaragrantha* counterpart) ends.

There are a number of Sanskrit fragments in the Hoernle and Turfan collections that correspond well to the *Modeleqie* (see Chung, 2002). However, they do not preserve section titles. The seven constituent sections of the *Modeleqie* are as follows (Sanskrit titles are from the *Mūlasarvāstivādavinaya*; for more detailed discussion of these sections, see above on the Mūlasarvāstivādin *Uttaragrantha*).

Introductory verses may belong to the *Kathāvastu* (T. 1441 [XXIII] 564c24–565a13).

Section 1: *Kathāvastu* (*zhongfenshi* [衆分事]): T. 1441 (XXIII) 565a14–569b29;

Section 2a: *Upālipariprcchā* ([*bhikṣu*] *prātimokṣa-vibhaṅga* [優波離問分別波羅提木叉]): T. 1441 (XXIII) 569c1–579b25 (*pārājikas*: 569c1–571b4; *saṅghāvaśeṣas*: 571b8–572b15; *aniyatas*: 572b16–c8; *naiḥsargikas*: 572c9–574c1; *pāyantikās*: 574c2–579a19; *pratideśanīyas*: 579a20–b15; *adhikaraṇa-śamathas*: 579b16–25);

Section 2b: *Upālipariprcchā* (*vastus* [優波離問事]): T. 1441 (XXIII) 579b26–582b12 (*Pravrajyāvastu* [問受戒事]: 579b26–580a28; *Poṣadhavastu* [問布薩事]: 580a29–b23; *Pravāraṇāvastu* [問自恣事]: 580b24–c16; *Varṣāvastu* [問安居事; text amended from *fa* (法) to *shi* (事) for consistency]: 580c17–27; *Bhaiṣajyavastu* [問藥事]: 580c28–581a9; note that here too the *Carmavastu* is missing [see above]; *Cīvaravastu* [問衣事]: 581a10–17; *Kaṭhinavastu* [問迦絺那衣事]: 581a18–b11; *Kauśāmbakavastu* [問俱舍彌事]: 581b12–20; *Karmavastu* [問羯磨事]: 581b21–c5; *vastu* on concealment of *saṅghāvaśeṣa* offenses [問覆藏僧殘事]: 581c6–25; *Poṣadhasthāpanavastu* [問遮布薩事]: 581c26–582a7; *Śayanāsanavastu* [問臥具事]: 582a8–15; *Adhikaraṇavastu* [問滅諍事]: 582a16–24; *Saṅghabhedavastu* [問破僧事]: 582a25–29; *vastu* on overturning of the alms' bowl [問覆鉢事; a punishment for laypeople by not accepting their alms]: 582b1–12); it should be noted that the *vastu* names in this *Upālipariprcchā* match exactly neither those of the *Shisong-lü* nor those of the *Mūlasarvāstivādavinaya*;

Section 3: *Vinītaka*: T. 1441 (XXIII) 582b13–593b20 (title at the head of this section: Chapter on Miscellanea of the *Vinaya*mātṛkā* [毘尼摩得勒伽雜事]); the case law of the *Vinītaka* deals only with the four *pārājikas* and the first five *saṅghāvaśeṣas*;

Section 4: *Mātṛkā*: T. 1441 (XXIII) 593b21–605a5 (all Vinaya *Mātṛkās* follow a threefold division into ordination, connected protocols, and deportment, preceded sometimes by lists of terms that are thereafter defined in each of these three divisions; the lists are found, with no internal division markers, at 593b21–c15, 593c15–29, and 593c29–594a17; the three divisions are found directly after at 594a17–598b10 [受戒聚], 598b11–601a21 [相應聚], and 601a22–605a4 [威儀聚]);

Section 5: **Māṇavikā*: T. 1441 (XXIII) 605a9–607a25;

Section 6: **Ekottarikā*: T. 1441 (XXIII) 607a25–611b11 ([?]; neither the beginning, defined by the end of the **Māṇavikā*, nor the end [610c6(?)] of the **Ekottarikā* is clear; three different types of *karmans* [formal ecclesiastical acts of the saṅgha] are discussed [610c7–611b11]: 24 *jñaptikarmans* [白羯磨; acts consisting of a motion (*jñapti*) only]; 47 *jñaptidvitīyakarmans* [acts in which the motion is followed by a single proclamation and passed as the second (*dvitīya*) part of the procedure]; and 30 *jñapticaturthakarmans* [acts in which the motion is followed by three proclamations and passed as the fourth (*caturtha*) part of the procedure]; the number of formal acts in each category can be an indicator of sectarian affiliation [comp. e.g. the lists at T. 1441 (XXIII) 569a24–28, 610c9–611a29; T. 1458 (XXIV) 498c29–499c5; Peking, Bstan 'gyur, *'Dul ba'i 'grel pa* (vol. CXXIII) zu 293b4–298a3]; whether the discussion of *karmans* is properly part of the **Ekottarikā* is unclear); the section on the "fives" in the **Ekottarikā* is extremely long; in the *Mūlasarvāstivādavinaya* the length of this section may have contributed to its development into a separate text, the **Pañcaka*;

Section 7: *Upālipariprcchā* ([*bhikṣu*] *prātimokṣa-vibhaṅga*): T. 1441 (XXIII) 611b15–626b9 (*pārājikas*: 611b15–615b8; *saṅghāvaśeṣas*: 615b9–617b1; *aniyatas*: 617b5–617c10; *naiḥsargikas*: 617c11–620a7; *pāyantikās*: 620a8–626a22; *pratideśanīyas*: 626a23–b9); it is unclear why there are two almost complete *Upālipariprcchās* covering the *bhikṣuprātimokṣa-vibhaṅga* (comp. 2a above); and

Colophon: T. 1441 (XXIII) 626b10–12 (the colophon gives the length of the text as 7,000 verses [偈] of 32 syllables [字] or a total of 224,000 syllables in ten fascicles; for a discussion of the relationship of the Hoernle [1916] fragments to this text, see Hirakawa, vol. I, [1960] 1999–2000, 81–90). (See also Hirakawa, vol. I, [1960] 1999–2000, 268; Yuyama, 1979, § 1.15.C.2.k.1; Prebish, 1994, 83–84.)

Kāśyapīyas

Jietuo jiejing

Jietuo jiejing (解脱戒經; Liberation-Precept *Sūtra*; T. 1460 [XXIV]; one fasc.) is a *bhikṣuprātimokṣa* ascribed to the Kāśyapīya school and translated in 543 CE by Gautama Prajñāruci (Qutan boreliuzhi [瞿曇般若流支]; *fl.* 6th cent.). It is the only Vinaya text of the Kāśyapīyas that has come down to us. It contains by one count a total of 246 rules for monks (including the seven *adhikaraṇaśamathas*). Structurally, this *prātimokṣa* is unique in that it presents the verses that are usually found at the end of other *prātimokṣas* (but not found in the Theravāda *pātimokkha*) and said to be the *prātimokṣas* of previous buddhas not at the end but at the beginning of the text. It contains a short preface by Sengfang (僧昉; *fl.* 6th cent.). (See also Hirakawa, vol. I, [1960] 1999–2000, 250–251; Yuyama, 1979, § 1.71; Prebish, 1994, 76.)

Sāṃmitīyas

Lü ershier mingliao lun

Lü ershier mingliao lun (律二十二明了論; Treatise on the Elucidation of 22 [Verses] on Vinaya; T. 1461 [XXIV]; one fasc.) is a commentary by *Buddhatrāta (Fotuoduoluoduo [佛陀多羅多]), translated by the Indian Tripiṭaka master Paramārtha (Zhendi [眞諦;

499–569 CE) in 568 CE. *Buddhatrāta, the author, is described as a Sāṃmitīya monk. The commentary is organized around and elucidates 22 verses said to cover some 65 important matters of the Vinaya of the Sāṃmitīya school. It contains a postscript that gives the translation date. (See also Hirakawa, vol. I, [1960] 1999–2000, 269–270; Yuyama, 1979, § 1.81; Prebish, 1994, 76; Namikawa, 2011, 28; Thiên Châu, 1999, 27–31, 117–122; Shōno, 2012.)

Abhidharma

As most traditional biographies of the Buddha have it, Śākyamuni spent the last 45 years of his ultimate existence preaching the law (*dharma*) he had discovered in his awakening. Buddhist accounts of the Buddha's dispensation agree in regarding it as a therapeutic and pragmatic approach to salvation adapted to the language, the religious needs, the social and psychological profiles as well as the intellectual capacities of the audience. However, while such "skill in means" (*upāyakauśalya*) perfectly suited the needs of early Buddhism as a missionary religion, it made a consistent and unitary account of the Buddhist doctrine difficult to provide, due to the apparent contradictions and competing levels of truth involved by the rhetorical plasticity of the discourses (*sūtra*). In other words, the (as tradition would have it, only apparent) doctrinal diversity of the Buddhist *sūtras* made a situation-independent description of the Buddhist doctrine, not conditioned by any particular audience, a desideratum. The Abhidharma may have been developed in part in a quest to meet this need, well before the sectarian fragmentation of the Buddhist community. Since the Buddha's words were uttered in specific situations, but the truth is context-independent, "Abhidharma texts were considered to be explicit in meaning (*nītārtha*) and the interpretations presented in them were accepted as the authoritative standard by which the *sūtras*, which were only of implicit meaning (*neyārtha*), were to be interpreted" (Cox, 1995, 14).

Origins and Early Development of the Abhidharma

From an early date, the Abhidharma likely served as a vehicle for factional identity, and gradually developed into the privileged expression of Buddhist sectarian self-assertion and intersectarian polemics. Many among the extant Abhidharma works, both canonical and commentarial, reflect a clear sense of sectarian identity and contentiousness. However, there are reasons to believe that these texts, while born in a common project, underwent a complex development both before and after the emergence of sects (Cox, 1998, 145; Anālayo, 2014, 13). According to C. Cox (1998, 142), early Abhidharma likely consisted not in a set of individual texts such as those we now possess, "but rather [in] a type of exegesis that gradually developed in tandem with distinctive content, and eventually resulted in an independent branch of inquiry and a concomitant and separate genre of texts." Originally, teachings could have been

> presented orally in an abbreviated form appropriate for oral transmission, together with an attendant elaborating commentary. At the extreme, the texts could be contracted to a "skeleton" or outline format for purposes of preservation in memory and expanded in oral recitation through the insertion of stock descriptive phrases and formulaic patterns. (Cox, 1998, 141; Anālayo, 2014, 36–37)

This interpretation comes very close to the hypothesis proposed recently by Anālayo (2014, 55–89), according to whom the early Abhidharma works "seem to have grown out of a common nucleus, which appears to have been mainly discourse quotations on central themes ... combined with a commentarial exegesis."

According to most Western scholars, Abhidharma "evolved from the practice of formulating matrices, or categorizing lists (*mātṛkā*), of all topics of the teaching arranged according to both numeric and qualitative criteria" (Cox, 1995, 18–19n29; Anālayo, 2014, 22n26). As pointed out by Anālayo,

> the term *mātṛkā* derives from *mātṛ*, "mother," and conveys the sense of a succinct list or summary which can be expanded and serve as the skeleton for a detailed exposition. A textual *mātṛkā* is thus comparable to a "mother" in the sense that it can give birth to a full exposition of a particular topic. (Anālayo, 2014, 20–21)

This includes, on the one hand, "lists containing fundamental concepts under which it was attempted to subsume all the various elements," and on the other hand, "attribute-*mātṛkās*" reflecting a method "consisting of composing a list of attributes and discussing the nature of the relevant elements with the aid of this list" (Frauwallner, 1995, 4–5).

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

Examples of the first type of matrix include the five constituents or aggregates (*skandha*, i.e., corporeality [*rūpa*], feeling [*vedanā*], conception [*saṃjñā*], conditioning factors [*saṃskāra*], bare cognition [*vijñāna*]), whereas examples of the second type are supplied by dyads (but also triads, tetrads, etc.) such as corporeal/incorporeal (*rūpin/arūpin*), visible/invisible (*sanidarśana/anidarśana*), and conditioned/unconditioned (*saṃskṛta/asaṃskṛta*). An important taxonomic list or "meta-list" (Ronkin, 2005, 27) consists of the 37 "limbs of awakening" (*bodhipākṣikadharma*). As Anālayo points out,

> "[t]his basic list [covers] the mental qualities that tradition considers crucial for progress to awakening; and it is this *mātṛkā* which according to the *Mahāparinirvāṇa-sūtra* was taught by the Buddha just before his passing away, and the *mātṛkā* that the *Pāsādika-sutta* and the *Sāmagāma-sutta*... recommend for ensuring communal harmony. (Anālayo, 2014, 50)

The limbs of awakening include:

1. four applications of mindfulness (*smṛty-upasthāna*);
2. four right exertions (*samyak-prahāṇa/pradhāna*);
3. four bases of supernatural ability (*ṛddhipāda*);
4. five faculties (*indriya*);
5. five powers (*bala*);
6. seven members of awakening (*bodhyaṅga*); and
7. the eightfold noble path (*āryāṣṭāṅgamārga*).

These 37 items are variously described as a precondition for liberation from the fluxes (*āsrava*, negative pollutants of one's mental stream), as the cultivation of the path (*mārgabhāvanā*), as the jewels (*ratna*) of the dharma, and as the quintessence of the Buddha's teaching "about which no disagreement exists" (Gethin, 1992).

According to Anālayo, of decisive influence on the evolving Abhidharma must have been attempts made

> to be as comprehensive as possible, to supplement the directives given in the early discourses for progress on the path with a full picture of all aspects of the path in an attempt to provide a complete map of everything in some way related to the path... Equipped with a complete map of the doctrine, the disciples are fortified in their struggle for survival in competition with non-Buddhist teachers and in their attempts to maintain harmony within the Buddhist fold. (Anālayo, 2014, 168)

This drive towards giving a comprehensive inventory of all that there is may have been meant as a symbolic counterpart of the Buddha's omniscience (Anālayo, 2014, 94, 109).

This pre- or proto-Abhidharmic "taxonomic organization through lists or matrices" (Cox, 1995, 9) is visible in *sūtras* using lists to summarize the Buddha's teaching, such as the *Saṅgītisūtra* and the *Daśottarasūtra*, both of which arrange their items numerically (from ones/monads to tens/decads and ten-times-ten, respectively) and the *Arthavistarasūtra*, which organizes its elements thematically (Anālayo, 2014, 29–39; note that the three *sūtras* are ascribed to the Buddha's great disciple and "Abhidharma specialist" Śāriputra; Migot, 1954, 519–532). In addition, numerical and topical arrangement was not only meant to organize individual *sūtras*, but also to "dictate the structure of entire collections of *sūtras*" (Cox, 1995, 9), the most famous examples being the *Aṅguttaranikāya* or *Ekottarikāgama* grouping, in which the *sūtras* are classified according to the increasing number of the doctrinal items they deal with, and the *Saṃyuttanikāya* or *Saṃyuktāgama*, in which the *sūtras* are organized according to their respective topics. Recent scholarship on the origins of Abhidharma insists, however, that the use of lists, which may have characterized the Vinaya (monastic discipline) and especially the Prātimokṣa (disciplinary precepts) at least as much as the Abhidharma, cannot be considered specific to Abhidharma, and should rather be interpreted as a common feature of oral transmission (Cox, 1995, 8; Anālayo, 2014, 22–28, 83). In another reference to the wider cultural context, for E. Frauwallner (1995, 40), the Buddhist *mātṛkās* likely were an answer to the Brahmanical *sūtras*, concisely formulated rules such as those that can be found in the works of various philosophical schools or in grammatical works, and which, like the *mātṛkās*, require an explanation to be understood.

According to another hypothesis, the origin of Abhidharma is not simply to be found in this taxonomic approach, but "in dialogues concerning the doctrine (*abhidharmakathā*), or monastic discussion in catechetic style characterized by an exchange of questions and interpretative answers intended to clarify complex or obscure points of doctrine" (Cox, 1995, 8; Kimura, 1968, 27–43; Sakurabe, 1969, 13–29). This hypothesis of the origins of Abhidharma in a certain question and answer format is certainly not incompatible with the idea that it arose from matrices used to organize concepts, since

> [t]he tendency toward organization represented by *mātṛkā* and that toward discursive explanation represented by *abhidharmakathā* together constitute the exegetical method characteristic of mature Abhidharma analysis, and both tendencies are found in incipient form in Abhidharma treatises from the earliest period onward. (Cox, 1995, 9)

We must remember, however, that whatever we understand to be the origin of Abhidharma, these origins are not the Abhidharma per se:

> the two main approaches that have been considered as explaining the coming into being of the Abhidharma – the use of *mātṛkā*s and the question-and-answer format – are features that are not in themselves necessarily characteristic of Abhidharma thought, however much they may have contributed to its formulation. (Anālayo, 2014, 28)

Meaning and Function of the Abhidharma

The meaning of the word *abhidharma* and its two components, the prefix *abhi* and the substantive *dharma*, seems to have changed according to scholarly milieu, time and place. The northern Indian scholiasts understand *abhi* in the sense of "with regard to" and *dharma* in the sense of "teaching," the compound expression thus meaning "with regard to the teaching," that is, the study of the Buddha's teaching. This usage seems to be well documented in early Pali literature as well as in most early discourses' understanding of the expression *abhidharma* (Anālayo, 2014, 70–79 and 70n49). The later Pali commentators seem to favor an interpretation of *abhi* as "highest," "further," and of *dharma* as "teaching," that is already listed in the important commentary **Abhidharma Mahāvibhāṣā* (T. 1545 [XXVII] 4b13; Anālayo, 2014, 151n65). According to this second interpretation, *abhidharma* consists in the highest or supreme teaching, "that which goes beyond what is given in the Buddha's discourses, in a sense somewhat reminiscent of the term 'metaphysics'" (Ronkin, 2005, 26). Both interpretations are represented in the Chinese translations of the word: whereas early renderings such as *wubifa* (無比法) reflect an interpretation of *abhi* as "highest" or "beyond compare," translations such as *duifa* (對法) and *xiangfa* (向法) rely on an understanding of *abhi* in the sense of "directed toward" (Cox, 1995, 16n1, 16n7). The great commentator and Abhidharma master Vasubandhu (350–430 CE[?]) understands *abhi* in the sense of "directed toward," "facing" (*abhimukha*), but *dharma* in the sense of either nirvāṇa (the supreme *dharma*) or the numerous individual factors of existence making up the world of ordinary experience (*AKBh.* 2,10–11; *AKVy.* 9,18ff.). The *Vibhāṣā* compendia, a series of fundamental Abhidharma commentaries, list 24 interpretations of the word (Watanabe, 1983, 23–24). These fall under three major categories: (1) the Abhidharma "enables one to discriminate and analyze the factors according to their generic and particular inherent characteristics"; (2) it "enables one to suppress non-Buddhist or false Buddhist doctrines and establish the true teaching" (see Anālayo, 2014, 124–125); (3) it "enables one to remove defilements and progress along the path" (T. 1545 [XXVII] 4a12ff.; T. 1546 [XXVIII] 3c4ff.; T. 1547 [XXVIII] 418a1ff.; Cox, 1995, 4).

These exegetical, expository(/apologetic) and soteriological meanings of *abhidharma* are well in tune with the six functions ascribed to the Abhidharma by the early **Āryavasumitrabodhisattvasaṅgīti* (T. 1549 [XXVIII] 733a16ff.; Cox, 1995, 4). Considered in an exegetical perspective, the Abhidharma "enables one to discriminate the meaning or nature of *dharmas* as presented in the *sūtras*." In its expository function, the Abhidharma "enables one to cultivate the four noble truths," "enables one to realize the twelve members of dependent origination and dependently originated factors," and "expounds the meaning of the eightfold noble path." These three aspects have strong soteriological overtones and obviously impinge upon the properly gnostic and cathartic, hence salvational, dimensions of the Abhidharma. Considered in this perspective, the Abhidharma can be defined as "that which analyzes and describes the causes of the various factors instrumental in the complete cessation of defilements" and "that through the cultivation of which one attains nirvāṇa." The factor the cultivation of which brings about nirvāṇa is none other than insight or discernment (*prajñā*). This sixth function of the Abhidharma thus comes very close to a definition provided by the *Vibhāṣā* compendia and accepted by most later authorities, that is, Abhidharma as the controling faculty of pure (*anāsrava*) insight together with "that which furthers, is associated with, or contains this pure insight," hence the Abhidharma treatises themselves (T. 1545 [XXVII] 2c23; T. 1546 [XXVIII] 2c27ff.; T. 1547 [XXVIII] 417b3ff.; also *AKBh.* 2,3ff.; *AKVy.*

> through [the] exercise of completely describing the character of each factor in every instance of its occurrence, the factors of which experience is composed can be seen as they actually are, the misconceptions obscuring our perception of experience can be discarded, the factors obstructing and ensnaring us can be abandoned, and the factors contributing toward liberation can be isolated and cultivated. (Cox, 1995, 12)

The numerous functions of the Abhidharma are perhaps best described in a well-known passage from the canonical Sarvāstivāda *Vijñānakāya* (see below):

> Abhidharma is the light of the true doctrine; without Abhidharma treatises, one would not be able to destroy the darkness surrounding what is to be known by knowledge. Abhidharma functions as the pure eye within the mind, as the basis of all knowledge; it is the sun illuminating the forest of things to be known, the sword that destroys heretical texts; it constitutes the authority for those who open the eyes of sentient beings and is the womb of the Tathāgatas; it is the illumination in the three realms, the path of the eye of insight; it is the light of all factors and the ocean of the Buddha's words; it is able to issue forth highest insight and to remove all doubts. (T. 1539 [XXVI] 531a13–17; trans. Willemen, Dessein & Cox, 1998, v)

Authenticating the Abhidharma

We do not know whether all groups once possessed their own Abhidharma corpus, but once the exegetical inquiry that was typical of the earliest, pre-sectarian Abhidharma had crystallized into sect-specific textual corpora, the authentication of these scriptures became an important task for those Buddhist denominations that did possess them (Lamotte, 1976, 197–210; Davidson, 1990, 303–305). The most radical attitude in this regard is the Theravāda view, according to which the newly awakened and omniscient Buddha grasped (*adhigata*) and collated (*vicita*) the seven Abhidhamma books under the Bodhi tree and subsequently taught them to his mother Māyā in the Trāyastriṃśa (Pal. Tāvatiṃsa, "Thirty-three") heaven during a three-month rain retreat. Every evening, the Buddha descended to Lake Anavatapta (Pal. Anotattha) and repeated the day's lesson to his disciple Sāriputta who, having "laid down the numerical series in order to make it easy to learn, remember, study and teach the Law," taught it in turn to 500 disciples (As I.16; Buswell & Jaini, 1996, 80, 18–21). This Theravāda position was challenged by those who claimed that the *Kathāvatthu*, one of the seven treatises allegedly preached by the Buddha in the Trāyastriṃśa heaven, had been composed by the elder Moggaliputtatissa on the occasion of the Second Council at Pāṭaliputra (3rd cent. BCE). As an answer, the orthodox Theravādins claimed that while preaching to his mother, the Buddha had contented himself with expounding a *mātṛkā* of the *Kathāvatthu*, foreseeing that Moggaliputtatissa would develop the treatise in full in Pāṭaliputra (As I.3–6; Lamotte, 1976, 201).

While admitting that their seven Abhidharma treatises ultimately went back to the Buddha, the Sarvāstivādins and especially the Vaibhāṣikas recognized that the treatises in question had been collected and organized by great disciples of the Buddha, or, alternatively, that they had been ascertained by later scholiasts such as Kātyāyanīputra thanks to their *praṇidhijñāna*, "a transtemporal intuition resulting from the power of their vows … by which they [were] able to perceive past and future events" (Cox, 1995, 17n19). Yaśomitra (*AKVy.* 12,2–7) offers an analogy to the authenticity of the canonicity of the Abhidharma, referring to the Vaibhāṣika claim that the case is comparable to that of Dharmatrāta collecting the *udānas* (aphorisms) uttered by the blessed one to create the *Udānavarga*. Likewise,

> [persons] such as the elder Kātyāyanīputra gathered and fixed the Abhidharma that had been uttered here and there by the Blessed One in works such as the *Jñānaprasthāna* for the sake of the trainees, the Abhidharma which consists in an instruction on the characteristics of the factors.

These disciples of the Buddha contented themselves, in this scenario, with adding summarizing stanzas (*uddāna*), dividing the teaching into chapters (*skandhaka*), and so forth. This strategy of authentication likely was facilitated by the fact that the name of the scholiast Kātyāyanīputra (variously dated to the late 1st, to the 3rd, or to the 5th cent. after nirvāṇa by Buddhist authorities) was very similar to that of Kātyāyana, a prominent disciple of the Buddha considered to have played a significant role at the First Council at Rājagṛha (Kātyāyana was also famous for having picked out the quintessence of the dharma and submitted this work to the Buddha, who approved it and labelled it the "supreme law," *abhidharma*; Lamotte, 1976, 208; Przyluski, 1926, 201, 303). In this picture, the Sarvāstivādin "six-membered Abhidharma" (*ṣaṭpādābhidharma*, i.e., the *Jñānaprasthāna* – the body [*śarīra*] – and its six ancillary treatises) was conceived of as the (editorial) work of great disciples of the Buddha or later authors: Mahāmaudgalyāyana, Śāriputra, Mahākauṣṭhila, Vasumitra, Devaśarman and Kātyāyana/Kātyāyanīputra (see below).

Moving yet a step further, the Sautrāntikas are said to have denied the Abhidharma any independent authority and regarded the *sūtras* alone as authoritative, whence their name (*AKVy.* 11,29–30). According to them, the Abhidharma treatises were nothing but human compositions. The early 5th-century Vaibhāṣika scholiast Saṅghabhadra records at least three reasons why his Sautrāntika opponent Vasubandhu (350–430 CE?) rejected the Buddha's authority of the Abhidharma works (T. 1562 [XXIX] 329c6ff.; Honjō, 2010, 181–187): (1) these treatises are traditionally ascribed to disciples/authors such as Kātyāyana/Kātyāyanīputra, (2) the Buddha has advised Ānanda to rely (*pratisaraṇa*) on the *sūtras* and not on the *abhidharma* (T. 1562 [XXIX] 329c20–21), and (3) the Abhidharmas of the different Buddhist denominations exhibit contradictory positions on one and the same question (for Saṅghabhadra's refutation of the views of Vasubandhu, see Cox, 1995, 6–7). The *Dīpavaṃsa*'s (V.37) Mahāsaṅgītikas also regarded the Abhidharma as not the word of the Buddha.

Needless to say, one of the most decisive criteria for scriptural authorization was the recitation-cum-compilation of a given text or group of texts by a great disciple of the Buddha during the First Council, held in Rājagṛha immediately after the death of the master. According to the Vinayas of the Theravādins, the Mahīśāsakas, and the Mahāsāṅghikas (resp. Vin. ii.287; T. 1421 [XXII] 191ac; T. 1425 [XXII] 491c16), the monks assembled in Rājagṛha contented themselves with reciting, after Ānanda and Upāli, the dharma and the Vinaya, "the law and the discipline," no mention being made of the Abhidharma as an independent third "basket" (Kimura, 1968, 27–28). According to Anālayo (2014, 18), "the accounts of the first *saṅgīti* [communal recitation] in these Vinayas seem to have been finalized at a time when the Abhidharma had not yet become a collection in its own right." Other sources such as the Mūlasarvāstivāda Vinaya and the *Aśokāvadāna* ascribe the compilation of a *mātṛkā* to the convener of the first council, Mahākāśyapa (resp. T. 1451 [XXIV] 408b2–11; T. 2042 [L] 113c3–4; T. 2043 [L] 152a5). However, most sources agree that Ānanda himself recited an Abhidharmapiṭaka of various length (including *mātṛkās* alone) in Rājagṛha. This is true of, among many others, the Vinaya of the Dharmaguptakas (T. 1428 [XXII] 968b25–26), the *Vinayamātṛkā* of the Haimavatas (T. 1463 [XXIV] 818a28–29), and late Pali commentaries (Sv I.17; As I.3; Smp I.18). According to the Sarvāstivāda Vinaya (T. 1435 [XXIII] 449a19), upon being asked by Mahākāśyapa, Ānanda revealed that the Buddha had taught the Abhidharma in Śrāvastī, and that "[t]he teaching given at that time was that breaches of the five precepts are conducive to rebirth in hell, whereas keeping the five precepts leads to a heavenly rebirth" (Anālayo, 2014, 19).

Extant Abhidharma Texts

Only the Theravāda has preserved a complete Abhidhammapiṭaka in an Indian language (Pali), while the seven canonical *abhidharma* treatises of the Sarvāstivādins have come down to us almost completely in Chinese translation. A very small portion of them is available in Tibetan, while a few scattered Sanskrit fragments have been preserved (Dietz, 2004). Only minute fragments of canonical Abhidharma texts of sects other than Theravāda and Sarvāstivāda have been preserved: some materials presumably belonging to the Kāśyapīya tradition are attested (Cox, 2014), and fragments from the **Śāriputrābhidharma* have been identified in the Schøyen collection (see below).

Theravāda canonical Abhidhamma

In style and language, the Theravāda Abhidhamma texts markedly differ from the Vinayapiṭaka and Suttapiṭaka (von Hinüber, 1996, § 137). Short questions and answers as well as many formulas often similar to those found in the *Niddesa* characterize the Abhidhamma literature. The Abhidhammapiṭaka and its parts are mentioned under this name for the first time in the *Milindapañha* (12,21–13,7). As there is no corresponding paragraph in the Chinese *Nāgasenabhikṣusūtra*, the Chinese version of the *Milindapañha*, the reference to this text may have been inserted only in Ceylon (von Hinüber, 1996, § 179). The Theravāda Abhidhammapiṭaka consists of the seven texts listed and briefly described below.

Dhammasaṅgaṇi

The Theravāda Abhidhammapiṭaka begins with the *Dhammasaṅgaṇi* (alternative title *Dhammasaṅgaha*; Collection of Dhammas; the form *Abhidhammasaṅgaṇi* found in some early manuscripts is a misnomer). The structure of the text is discussed at length by E. Frauwallner (1995, 53–86). The absence of the traditional introduction (*nidāna*) "Thus have I heard…" in a text considered the "word of the Buddha" (*buddhavacana*) created a problem for Buddhist exegetes. The issue is discussed in the commentary, where various attempts to add a *nidāna* are mentioned (As 30,16–31,16). Usually, the Buddha is reported to have recited the Abhidhamma in heaven to his deceased mother and to the gods (see above), and later to have handed it down to Sāriputta (a list of the sequence of teachers and pupils from Sāriputta up to Mahinda is found in As 32,12–20). Certain manuscripts of the *Dhammasaṅgaṇi* even insert "At one time the Lord was residing among the Tāvatiṃsa gods…" in front of the *mātikā* with which the text begins. This *abhidhammamātikā* or "*abhidhamma* list," which also occurs in other Theravāda Abhidhamma texts, comprises the concepts *kusala* "salutary, (morally) good," *akusala* "(morally) bad," and *abyākata* "undetermined," immediately followed by the *suttantamātikā* or "*suttanta* (*sūtra*) list," which is largely based on concepts taken over from the *Saṅgītisuttanta* (i.e. *suttanta* no. 33 of the *Dīghanikāya*; Anālayo, 2014, 29–37). The text that follows (*Dhammasaṅgaṇi* §§ 1–1599) expands and explains the *mātikās*. It is divided into four sections (*kaṇḍa*): (1) *Cittuppādakaṇḍa* (§§ 1–582; Section on the Arising of Thoughts), (2) *Rūpakaṇḍa* (§§ 584–980, with another *mātikā*, §§ 584–594; Section on Matter), (3) *Nikkhepakaṇḍa* (§§ 981–1367; Summary Section), and (4) *Atthuddhārakaṇḍa* (§§ 1368–1599; Commentary Section). The titles of the sections are slightly different in the commentary (As 6,13–7,9). As the *mātikās* located at the beginning of the text are discussed in sections 3 and 4 only, it is clear that sections 1 and 2 are later additions. The *Dhammasaṅgaṇi* is considered the youngest of the texts assembled in the Abhidhammapiṭaka (Frauwallner, 1995, 53).

Vibhaṅga

Although the *Vibhaṅga* (Explanation; Frauwallner, 1995, 43–48; von Hinüber 1996, §§ 138–139) does not begin with a *mātikā*, it presupposes such a list, which can indeed be reconstructed from the text itself. Usually the starting point is old canonical lists such as the five *khandhas* (*rūpakhandha*, *vedanākhandha*, *saññākhandha*, *saṅkhārakhandha*, *viññāṇakhandha*, "the aggregates matter (body), feeling, perception, conditioning factors, consciousness") or the twelve *āyatanas* "spheres (of perception)," that is, eye/visible object, ear/sound, and so forth, up to mind/mental object and so forth. Thus the *Vibhaṅga* systematizes older material drawn from the Suttapiṭaka.

The text is divided into 18 chapters with chapters 1–6 and 7–15 forming two units expanding on two *mātikās*. The last three chapters were originally separate Abhidhamma treatises which were subsequently included into the *Vibhaṅga*. The arrangement of chapter 16 (*Ñāṇavibhaṅga*; Explanation of Knowledge) and chapter 17 (*Khuddakavatthuvibhaṅga*; Explanation on the Small Items) follows the same numerical principle as the *Aṅguttaranikāya* with groups of 1–10, 18, 36, 72, of which only the first refers to Abhidhamma matters. Chapter 18 (*Dhammahadayavibhaṅga*; Explanation of the Heart of the Teaching) also begins with a *mātikā* of its own comprising, again, the five *khandhas*, the twelve *āyatanas*, and so forth. This chapter could be identical with the *Mahādhammahadaya*, which, according to the *Atthasālinī*, was considered as a possible candidate to replace the allegedly noncanonical *Kathāvatthu* (see above).

The *Vibhaṅga* shows many similarities with the *Dharmaskandha*, thus connecting early Theravāda and Sarvāstivāda Abhidharma (Anālayo, 2014, 88; see also below). It is generally considered the oldest text in the Abhidhammapiṭaka.

Dhātukathā

The *Dhātukathā* (Discussion of the Elements; Frauwallner, 1995, 48f.; von Hinüber, 1996, § 140) is a brief text which starts from *mātikās* of concepts similar to those found in the *Vibhaṅga*. The *Dhātukathā* bears some similarities with the Sarvāstivāda *Dhātukāya* and both may ultimately go back to the same origin (see below). The treatise owes its title to the fact that it investigates the ways in which different concepts are related to the *dhātus* or "elements." These elements are systematically analyzed as to whether they are included or not (*saṃgahīta*/*asaṃgahīta*), associated or dissociated (*sampayutta*/*vipayutta*), in a fourfold way: "included with non-included," "non-included with included," "included with included," and "non-included with non-included." This in a way anticipates methods of analysis fully developed only in later Buddhist scholasticism.

Puggalapaññatti

The *Puggalapaññatti* (Concept of Person; Frauwallner, 1995, 49ff.; von Hinüber, 1996, § 141–143; Anālayo, 2014, 52ff.) begins with a *mātikā* partly based on the *abhidhammamātikā* (see above). Various types of *puggalas* or "individuals, persons" are listed in groups from 1 to 10. This makes the text formally close to the *Aṅguttaranikāya* and particularly to the *Dasuttarasuttanta* (DN no. 34). When the compiler of the *Puggalapaññatti* drew material from the Suttapiṭaka, particularly from the *Aṅguttaranikāya*, he effaced the original "remembered orality" (von Hinüber, 1996, § 55) by removing the address *bhikkhave*, "o monks," and so on, thus assimilating the text to the Abhidhamma style. Because he limited his effort to reassembling the materials, it is impossible to assign to the text a place in the history of Abhidhamma. In spite of a similarity in title, the *Puggalapaññatti*, which has no parallels outside Theravāda, is entirely different from the Sarvāstivāda *Prajñaptiśāstra* (see below).

Kathāvatthu

The *Kathāvatthu* (Text Dealing with Disputes; Frauwallner, 1995, 86ff.; von Hinüber, 1996, § 144–151; for a Japanese translation, see Satō, 1991) is the only part of the Abhidhammapiṭaka traditionally dated (to the time of Aśoka, 218 years after the nirvāṇa) and ascribed to an author, Moggaliputtatissa, who is reported to have explained and expanded a *mātikā* of the *Kathāvatthu* originally uttered by the Buddha in heaven (see above). This assumption was made to save the canonicity of the text, which was not beyond doubt (As 3,25–29; 6,1–12). In structure and content, the *Kathāvatthu*, which consists of strictly formalized questions and answers, is quite different from the other Abhidhamma texts, because about 200 (according to tradition 500) controversial points of the Buddha's teaching are discussed (McDermott, 1975; Ganeri, 2001). The different views are ascribed to specific Buddhist schools by the commentary, which may be separated from the oldest parts of the *Kathāvatthu* by more than half a millennium.

Although some parts of the *Kathāvatthu* seem very old, in particular the discussion on the *puggala* or "person," which exhibits ancient linguistic features (Norman, 1979) and is close in content to the Sarvāstivāda *Vijñānakāya* (Bronkhorst, 1993), the specific structure of the text easily allows for additions, which are difficult to discern, as remarked long ago by La Vallée Poussin (1922, 520).

Yamaka

The *Yamaka* (Pairs; Frauwallner, 1995, 51–53; von Hinüber, 1996, § 152ff.) is a huge text which would cover about 2500 pages if it were printed in full. According to tradition, it is 25 times longer than the *Majjhimanikāya*. As suggested by E. Frauwallner, the title was chosen because two things form a pair when the second thing originates from the first. The fairly complicated structure of the *Yamaka* is explained in detail at the beginning of the commentary. All pairs are discussed at great length with all imaginable combinations being enumerated, which inspired the following remark to Frauwallner (1995, 53): "This is a particularly glaring example of how an intrinsically interesting problem can be inflated to the point of inanity using the Abhidharma method." Still, a later Theravāda Abhidhamma text contends: "The text is succinct to the extreme" (*Mohavicchedanī* 279,14).

Paṭṭhāna

The *Paṭṭhāna* (Basis [of All Other Abhidhamma Texts]; Frauwallner, 1995, 50ff.; von Hinüber, 1996, § 154 ff.), also known as *Mahāpakaraṇa* (Large Treatise), is by far the longest text in the Tipiṭaka. While explaining the title, the commentary even states that the actual length of the text is incalculable. All editions therefore abbreviate, that of the Pali Text Society into two volumes; to gain a better picture, it is imperative to use the five-volume Burmese edition (still abbreviated considerably!). The *Paṭṭhāna* begins with the section on *Tika* or triads followed by the section on *Duka* or dyads (arranged in the wrong order in the Pali Text Society edition). The *Paṭṭhāna*, which tries to comprehensively explain causality and thus, in the traditional understanding, to facilitate the use of the *suttantas* for Abhidhamma specialists, does not provide any new insights but endlessly invents new possible combinations of concepts: "method has replaced genuine thought" (Frauwallner, 1995, 51).

One canonical Theravāda Abhidhamma text is found in the Tipiṭaka, but outside the Abhidhammapiṭaka: the *Paṭisambhidāmagga* (also called simply *Paṭisambhidā*; Path of Discrimination; Frauwallner, 1995, 87–89; von Hinüber, 1996, § 119–120). It is the only canonical Theravāda Abhidhamma text included in the *Khuddakanikāya* of the Suttapiṭaka, which seems to have been the only part of the Tipiṭaka still open for additions at the time when the *Paṭisambhidāmagga* was created. l Theravāda Abhidhamma text is
aka, but outside the Abhidhamma-
mbhidāmagga (also called simply
th of Discrimination; Frauwallner,
Hinüber, 1996, § 119–120). It is
cal Theravāda Abhidhamma text
huddakanikāya of the Suttapiṭaka,
have been the only part of the
for additions at the time when the
gga was created. The commentary

ascribes this work to Sāriputta. According to the *Dīpavaṃsa* (Chronicle of the Island [Ceylon]; V.37), the *Paṭisambhidāmagga* was rejected during the Second Council by the Mahāsāṅghikas, who would certainly never accept this typical Theravāda text; the *Dīpavaṃsa*'s assertion, moreover, is a glaring anachronism. The *Paṭisambhidāmagga* consists of various texts apparently put together more or less at random. Only the first part, the *Ñāṇakathā* (Discussion on Knowledge), which originally might have been a separate work, begins with a *mātikā*; the other parts quote and comment on canonical *suttantas*. This text, which may have been put together in the 2nd century CE, is perhaps the first attempt to create a systematic handbook of Abhidhamma and is as such a forerunner of Upatissa's *Vimuttimagga* (Path to Liberation) and Buddhaghosa's *Visuddhimagga* (Path to Purity; Frauwallner, 1995, 89–95; von Hinüber, 1996, § 245–250). While the *Visuddhimagga* became the basic handbook for Theravāda (Mahāvihāra) orthodoxy, the *Vimuttimagga* enjoyed a wide international recognition, being still in use in 12th-century Bengal (Skilling, 1987, 7, 15).

Sarvāstivāda Canonical Abhidharma

Only a tiny percentage of the canonical Abhidharma texts of the Sarvāstivāda survive in an Indic language. With one exception (the *Prajñapti*), all are extant in Xuanzang's (玄奘) Chinese translations; two (the *Prakaraṇapāda* and the *Jñānaprasthāna*) have been translated twice into Chinese. Three sections of the *Prajñapti* are available in Tibetan translation, and one section survives in an 11th-century Chinese translation by Dharmapāla (Fahu [法護]) and Wejing (惟淨). The titles of the seven Sarvāstivāda canonical treatises, together with their Tibetan and Chinese equivalents, are as follows:

1. *Saṅgītiparyāya*; *'Gro ba'i rnam grangs*; *Jiyimen zulun* (集異門足論; T. 1536; trans. Xuanzang);
2. *Dharmaskandha*; *Chos kyi phung po*; *Fayun zulun* (法蘊足論; T. 1537; trans. Xuanzang);
3. *Prajñaptiśāstra*; *Btags pa*; *Shishe zulun* (施設足論; T. 1538; trans. Dharmapāla);
4. *Vijñānakāya*; *Rnam par shes pa'i tshogs*; *Shishen zulun* (識身足論; T. 1539; trans. Xuanzang);
5. *Dhātukāya*; **Khams kyi tshogs*; *Jieshen zulun* (界身足論; T. 1540; trans. Xuanzang);
6. *Prakaraṇa(pāda)*; *Rab tu byed pa*; *Pinlei zulun* (品類足論; T. 1542; trans. Xuanzang)/*Zhong shifen apitan lun* (衆事分阿毘曇論; T. 1541; trans. Guṇaprabha and Bodhiyaśas); and
7. *Jñānaprasthāna*/**Aṣṭaskandhaka*; *Ye shes la 'jug pa*; *Fazhi lun* (發智論; T. 1544; trans. Xuanzang)/*Ba jiandu lun* (八犍度論; T. 1543; trans. Saṅghadeva, Zhu Fonian, and Dharmapriya)

Since the *Jñānaprasthāna* was recognized as the most important Abhidharma text, it came to be known as "the body-treatise (*kāyaśāstra*)," whereas the other canonical texts were referred to as its "six feet" (*ṣaṭpāda*), the seven canonical Sarvāstivāda treatises being referred to collectively as the "Abhidharma with six feet" (*ṣaṭpādābhidharma*). This usage, which is not attested in the *Vibhāṣā* compendia, finds its first known occurrence in a postscript to the Chinese translation of the **Aṣṭaskandhaśāstra* (T. 1543 [XXVI] 887a19–24) written in 379 or 390 CE, very close in time to Kumārajīva, whose translations of the *Mahāprajñāpāramitopadeśa* (T. 1509) and the **Tattvasiddhi* (T. 1646) mention the *ṣaṭpādābhidharma* without stating which individual texts are meant (Watanabe, 1954, 36ff.; Willemen, Dessein & Cox, 1998, 160–162). Sthiramati's commentary on the *Abhidharmakośa*, the *Tattvārthā*, however, does not regard the *Dhātukāya* as a canonical Abhidharma text, and thus enumerates a total of only six treatises (D 4421, *tho* 324a2/P 5875, *tho* 91a1). Pūrṇavardhana's *Lakṣaṇānusāriṇī* (D 4092, *cu* 324a2/P 5594, *ju* 380b4) does likewise. This may explain the absence of citations of the *Dhātukāya* in important texts such as the *Mahāvibhāṣā* (Cox, 1998, 160n60; see below) and the *Abhidharmakośa* (Hirakawa, 1973). When cited in the *Abhidharmakośa*, the six treatises are called *śāstras* (*benlun* [本論]). The chronology of the seven treatises is difficult to assess. According to Puguang (普光, T. 1821 [XLI] 8b24f.), the chronological sequence of the seven treatises is as follows: *Saṅgītiparyāya*, *Dharmaskandha* and *Prajñaptiśāstra* (written/edited by direct disciples of the Buddha), *Vijñānakāya* (1st cent. after nirvāṇa), *Prakaraṇapāda* and *Dhātukāya* (early 3rd cent. after nirvāṇa), and *Jñānaprasthāna* (late 3rd cent. after nirvāṇa; Cox, 1995, 47n55). E. Frauwallner (1995, 13–14) was inclined to accept this relative chronology.

*Saṅgītiparyāya or *Abhidharmasaṅgītiparyāyapādaśāstra*

The *Saṅgītiparyāya*, ascribed to Mahākauṣṭhila and Śāriputra in the Indian and Tibetan (Yaśomitra, Bu ston) and the Chinese traditions respectively (Cox, 1998, 177n114), is a commentary on the *Saṅgītisūtra*, a discourse that, in increasing numerical order (from one to ten), lists 205 major concepts, for example, the three kinds of training (*śikṣā*), the four noble truths (*āryasatya*), and the five aggregates (*skandha*; Cox, 1998, 179; for another, Gandhari commentary on the *Saṅgītisūtra*, see Cox, 2014, 36–39; on a Sanskrit folio of the *Saṅgītiparyāya* in the Schøyen collection, see Matsuda, 2002, 239n1). The frame story of the treatise

> relates how disputes and schisms arose in the Jaina community after the Jina's death due to differing interpretations of the doctrine, and how Śāriputra, in order to prevent similar disputes within the Buddhist community, recited a systematic collection of the Buddhist doctrinal concepts and how the Buddha approved of and endorsed Śāriputra's recital. (Waldschmidt, 1955, 299, 309–314)

This treatise is generally regarded as the earliest Sarvāstivāda Abhidharma text; its historical importance lies in the fact that it marks "the onset of a commentarial genre that was to form the Abhidharma" (Cox, 1998, 178). Although the *Saṅgītiparyāya* shows nonsectarian features common to ancient Buddhism, one can find the concept of "cessation through non-intelligence" (*apratisaṃkhyānirodha*). This notion (in Abhidharma technical vocabulary, this *dharma*) is characteristic of the Sarvāstivāda (a denomination that is mentioned at the end of each of the 20 chapters) in that it presupposes the theory that the past, the future, and the present exist. (Xuanzang's Chinese translation is translated into Japanese by Watanabe, 1929, and into German by Stache-Rosen, 1968 together with the text's extant Sanskrit fragments; newly found fragments of this text are included in Matsuda, 2006; English summaries of the work are available in Frauwallner, 1995, 14–15; Potter, 1996, 203–216; Willemen, Dessein & Cox, 1998, 67–68; Cox, 1998, 177–181.)

*Dharmaskandha or *Abhidharmadharmaskandhapādaśāstra*

The *Dharmaskandha*, which, together with the *Saṅgītiparyāya*, belongs to the earliest stage of the Sarvāstivāda Abhidharma treatises, is considered in the Indian tradition to have been compiled by the Buddha's direct disciple Śāriputra, while the Chinese tradition ascribes it to Maudgalyāyana (Cox, 1998, 181n126). The full text is extant only in Xuanzang's Chinese translation. The treatise is also known through 22 Sanskrit folios from a Mūlasarvāstivāda recension found in Gilgit (Dietz, 1985), which cover about 20 percent of the text. This Sanskrit recension, which seems to differ in structure from the Chinese version, has been edited by S. Dietz (1984) and supplemented by K. Matsuda (1986). The treatise consists of 21 chapters (Frauwallner, 1995, 16–17), at the beginning of each of which is quoted a *sūtra*, followed by explanations of the *sūtra*'s important concepts. E. Frauwallner (1995, 15–21) divides the treatise into three sections. The first section comprises 15 chapters providing detailed expositions on the "path to liberation" and various issues of religious praxis. The second section consists wholly of chapter 16, which deals with 78 defilements and is entitled *kṣudravastuka* ("miscellany"; *zashi* [雜事]). The third section includes the remaining five chapters dealing with basic doctrinal concepts such as the 22 faculties (*indriya*), 12 bases (*āyatana*), 5 aggregates (*skandha*), 62 elements (*dhātu*), and dependent origination (*pratītyasamutpāda*). Similarities between the *Dharmaskandha*, the Pali *Vibhaṅga*, and the **Śāriputrābhidharmaśāstra* (T. 1548) have been pointed out by various scholars (Fukuhara, 1965, 110–112, Frauwallner, 1995, 17–20). According to E. Frauwallner, the Sarvāstivāda *Dharmaskandha* and the Theravāda *Vibhaṅga*, "two versions of the same work," go back to a common ancestor predating Aśoka's missions; both of them "represent a step toward the composition of truly analytical and scholastic treatises independent of the sūtras" (Cox, 1998, 187). Let it be noted that the *Dharmaskandha* is to be credited with the all-important distinction between the path of vision (*darśanamārga*) and the path of cultivation (*bhāvanāmārga*), which would structure all subsequent Sarvāstivāda, Sautrāntika, and Mahāyānist accounts of the path to liberation. (We owe an annotated Japanese translation to Watanabe, 1930a; English summaries and discussions include Frauwallner, 1995, 15–21; Potter, 1996, 179–187; Willemen, Dessein & Cox, 1998, 68–70; Cox, 1998, 181–189.)

*Prajñaptiśāstra or *Abhidharmaprajñaptipādaśāstra*

The *Prajñaptiśāstra*, ascribed to Maudgalyāyana in India and to Mahākātyāyana in China (Cox, 1998, 189n143), is considered the latest of the three Sarvastivāda treatises belonging to this early stage of the overall development of Abhidharma literature (Sakurabe, 1969, 46). This treatise presents a *sūtra* quotation at the beginning of each of the chapters, followed by an account of various topics in question-and-answer form. ber of its quotations in the *Mahāvibhāṣā* (145), the *Prajñaptiśāstra* likely "served as a handy sourcebook of succinct identifications, definitions, and canonical references on a variety of topics" (Cox, 1998, 197). The *Prajñaptiśāstra* surviving in Tibetan translation possesses three sections: (1) *Lokaprajñapti* (Instruction on the World; *'Jig rten gdags/btags pa*; D 4086/P 5587) dealing with Buddhist cosmology, (2) *Kāraṇaprajñapti* (Instruction about Causes; *Rgyu gdags/btags pa*; D 4087/P 5588) containing an account of the Bodhisattva and the wheel-turning king (*cakravartin*), and (3) *Karmaprajñapti* (Instruction on Karman; *Las gdags/btags pa*; D 4088/P 5589).

More than 20 percent of the *Lokaprajñapti* has been preserved in its original (Cox, 1998, 191) through Sanskrit fragments of Mūlasarvāstivāda provenance (Dietz, 1989). A great majority of the text of the *Kāraṇaprajñapti* has its counterpart in a seven-fascicle Chinese version (*Shishe lun* [施設論]; T. 1538). Louis de La Vallée Poussin (1918, 295–350) has provided an analysis and selected translations of the Tibetan *Lokaprajñapti* and *Kāraṇaprajñapti*. In 1922 Taiken Kimura conjectured, on the basis of a close analysis of the citations of the treatise in the *Mahāvibhāṣā*, that the *Prajñaptiśāstra* may originally have had more subdivisions than the three extant sections. These chapters would have dealt with defilements (*anuśaya*), knowledge (*jñāna*), and meditation (*samāpatti/samādhi*). In the meantime, references to the titles **Anuśayaprajñapti* (*Phra rgyas btags*) and **Nāmarūpaprajñapti* (*Ming dang gzugs kyi btags*) in Śamathadeva's *Abhidharmakośopāyikā Ṭīkā* have come to light (Honjō, 1998). These references support Taiken Kimura's suggestion even though, as C. Cox rightly points out (1998, 192), the extent to which these eighth-century materials reflect the original structure of the treatise is difficult to assess. (In 1995 Takumi Fukuda discovered, in the library of Dōhō University, Nagoya, a draft of a full Japanese translation of the three *Prajñaptis*, completed in 1934 by Sei Katō, a graduate of Ōtani University, and began to publish it [Fukuda, 1998–2012]; Aohara has begun to publish a Japanese translation of the *Karmaprajñapti* [Aohara, 2012a, 2012b, 2013, 2014] in the light of Katō's materials; for a Japanese translation of the Chinese version, see Watanabe, 1930b; Willemen, Dessein & Cox, 1998, 70–71, and Cox, 1998, 189–197, provide useful summaries of the text.)

*Vijñānakāya or *Abhidharmavijñānakāyapādaśāstra*

The *Vijñānakāya* is extant only in Xuanzang's Chinese translation. Unlike the *Saṅgītiparyāya*, the *Dharmaskandha*, and the *Prajñaptiśāstra*, this treatise is not ascribed to a direct disciple of the Buddha, but to Devaśarman (reported to have lived 100 years after the *parinirvāṇa* and to have been active in Viśoka), and it is not a commentary on *sūtra* passages. These features suggest that it is much later than these three treatises. The *Vijñānakāya* is divided into 6 parts: (1) *Maudgalyāyana* (an opponent of unclear affiliation claiming that only the present exists), (2) person (*pudgala*), (3) causes and conditions (*hetupratyaya*), (4) condition as object-support (*ālambanapratyaya*), (5) miscellany (*saṃkīrṇa*), (6) accompaniment (*samanvāgama*) or possession (*prāpti*). The first two chapters are polemical, while the other four are systematic, a feature that, together with differences in topics, suggests "that the *Vijñānakāya* is a composite text, perhaps compiled, rather than composed, by Devaśarman" (Cox, 1998, 198). The first chapter contains a controversy on the existence of past, future, and present. The second chapter deals with the existence of the person (*pudgala*) and exhibits close similarities with *Kathāvatthu* I.1 (i.e. §§ 1–69). Chapters three through six deal with "the nature, arising, operation, and transformation of states of thought or consciousness (*vijñāna*)" (Cox, 1998, 201), a range of topics that accounts for the title of the work. The importance of this highly innovative treatise (Frauwallner, 1995, 30–31) is indicated by the fact that it is cited 39 times in the *Mahāvibhāṣā*. The *Vijñānakāya* indeed represents a major change, most conspicuously in the direction of a systematic theory of causality. (The first two chapters have been rendered into French by La Vallée Poussin, 1925; several parts of the second chapter have been translated into English by Fumimaro Watanabe [Watanabe, 1983, 154ff.]; here as elsewhere, we owe an annotated Japanese translation to Watanabe Baiyū, 1931; English summaries and discussions include Frauwallner, 1995, 28–31; Potter, 1998, 367–374; Willemen, Dessein & Cox, 1998, 72–73; Cox, 1998, 197–205.)

*Dhātukāya or *Abhidharmadhātukāyapādaśāstra*

The *Dhātukāya* is extant only in Xuanzang's Chinese translation. This treatise is ascribed to Pūrṇa in India and to Vasumitra in China (Cox, 1998, 206n193), an attribution that may be due to the close connection between the *Dhātukāya* and the *Prakaraṇapāda*, which was authored by Vasumitra perhaps in the 4th century after nirvāṇa. The *Dhātukāya*, a work "of the *mātṛkā*-type accompanied by an explanatory text" (Frauwallner, 1995, 21), discusses mind (*citta*) and mental factors (*caitta*) in question-and-answer form. This treatise is divided into two parts. In the first part (**mūlavastuvarga*, "fundamental groups"), 14 groups comprising 91 mental factors are enumerated and defined, thus creating, and for the first time, a "system of psychology" (Frauwallner, 1995, 22). The names of these groups with Cox's English equivalents are as follows (Cox, 1998, 208–209):

1. ten factors of great extension (*mahābhūmikadharma*);
2. en defiled factors of great extension (*kleśamahābhūmikadharma*);
3. ten factors whose extension is that of limited defilements (*parīttakleśabhūmikadharma*);
4. five defilements (*kleśa*);
5. five views (*dṛṣṭi*);
6. five factors (*dharma*);
7. five types of contact (*saṃsparśa*);
8. five controlling faculties (*indriya*);
9. six varieties of perceptual consciousness (*vijñānakāya*);
10. six varieties of contact (*sparśakāya*);
11. six varieties of feelings (*vedanākāya*);
12. six varieties of ideas (*saṃjñākāya*);
13. six varieties of volition (*saṃcetanākāya*); and
14. six varieties of craving (*tṛṣṇākāya*).

In the second part (**vibhajyavarga*, "analysis," in 16 sections), these mental factors are analyzed according to two kinds of relations, that is, simultaneous mental association (*saṃprayoga*) and includedness (*saṃgraha*). The *Dhātukāya* was largely incorporated into the *Prakaraṇapāda* (Frauwallner, 1995, 25–27). This may explain why this treatise was not cited in the *Mahāvibhāṣā* or *Abhidharmakośa* and was not considered canonical by some Indian masters (see above, and Cox, 1998, 207). Whatever the case may be, "[t]he importance of the *Dhātukāya* lies in its exclusive focus on mental operations and in its efforts to develop a more abstract classification of, at least, the soteriologically significant mental phenomena" (Cox, 1998, 211). (There is an annotated English translation by Ganguly, 1994, with an introduction and a reproduction of the Taishō edition; Watanabe, 1932a, has provided an annotated Japanese translation of the *Dhātukāya*; English summaries and discussions of the work are available in Frauwallner, 1995, 21–28; Potter, 1996, 344–358; Willemen, Dessein & Cox, 1998, 71–72; Cox, 1998, 206–212.)

*Prakaraṇapāda or *Abhidharmaprakaraṇapādaśāstra*

The *Prakaraṇapāda* has survived only in two Chinese translations: *Zhong shifen apitan lun* (衆事分阿毘曇論; T. 1541), translated by Guṇabhadra and Bodhiyaśas in 435–443 CE, and *Apidamo pinlei zu lun* (阿毘達磨品類足論; T. 1542), translated by Xuanzang in 660 CE. Sanskrit fragments from a commentary on the *Prakaraṇapāda* have been discovered in Turfan, which, besides testifying to the fact that the *Vibhāṣā*s were not the only available commentaries on "canonical" Abhidharma works, seem to reflect a divergent textual structure (Imanishi, 1975). The first chapter, entitled *Pañcavastuka*, may largely borrow from an independent text, the **Pañcavastuka*, translated into Chinese twice: the *Apitan wufaxing jing* (阿毘曇五法行經; T. 1557) by An Shigao (安世高), and the *Sapoduo zung wushi lun* (薩婆多宗五事論; T. 1556) by Facheng (法成). This indicates that some chapters of this treatise may at first have been composed separately (Cox, 1998, 218). The *Prakaraṇapāda* is attributed to Vasumitra in both India and China, but the *Mahāprajñāpāramitopadeśa* (T. 1509 [XXV] 70a16f.) attributes only four chapters to Vasumitra (chs. 4–7 according to Frauwallner's hypothesis), the other four being ascribed to *arhat*s from Kashmir (Cox, 1998, 212). It is considered to be the latest and in many ways the most significant of the "six feet" treatises (see above). The work is quoted no less than 106 times in the *Mahāvibhāṣā*, which at times and quite surprisingly rejects the interpretations of the *Jñānaprasthāna* and chooses those of the *Prakaraṇapāda* instead (Cox, 1998, 214). The wide reception of the *Prakaraṇapāda* may be due to its "function as a sourcebook or proto-compendium uniting significant textual materials in a single text" (Cox, 1998, 215).

The treatise consists of 8 largely independent chapters:

1. *Pañcavastuka* (Five Groups; very close to the *Pañcavastuka*);
2. *Jñāna* (Knowledge; very close to the *Vijñānakāya*);
3. *Āyatana* (Sense Spheres; very close to the *Pañcaskandhaka*);
4. *Saptavastuka* (Seven Groups; very close to the *Dhātukāya*);
5. *Anuśaya* (Contaminants);

6. *Saṃgrahādi* (Includedness Etc.);
7. *Sahasraparipṛcchā* (Thousand Question); and
8. *Nirvedha* (Penetration).

One of the most interesting features of the *Prakaraṇapāda* is its first chapter on the *pañcavastuka*, “the fivefold classification of factors that would form the foundation of later Sarvāstivāda classifications of factors” (Cox, 1998, 215). This “method of encompassing and organizing all possible phenomena” (Cox, 1998, 220) distributes all factors into corporeality (*rūpa*), mind (*citta*), mind concomitants (*caitta*), factors dissociated from the mind (*cittaviprayukta*), and unconditioned factors (*asaṃskṛta*). (There is an annotated Japanese translation of the *Prakaraṇapāda* by Watanabe, 1932b; English summaries include Frauwallner, 1995, 32–36; Potter, 1996, 375–379; Willemen, Dessein & Cox, 1998, 73; Cox, 1998, 212–221.)

*Jñānaprasthāna or *Abhidharmajñānaprasthānaśāstra*

As mentioned above, the *Jñānaprasthāna* is considered the most important of the seven canonical Sarvāstivāda Abhidharma treatises. This is reflected in the fact that a vast commentary on this treatise, the *Mahāvibhāṣā*, was compiled, comprising 200 fascicles in Xuanzang's Chinese translation (T. 1545) and generally regarded as “the definitive statement of Sarvāstivāda Abhidharma exegesis” (Cox, 1998, 229). The *Jñānaprasthāna* is ascribed to Kātyāyanīputra, whose dates are variously given as 100, 300 or even 500 after nirvāṇa (Cox, 1998, 221; see also above). Two Chinese translations are extant, one by Saṅghadeva, Zhu Fonian (竺佛念) and Dharmapriya in 30 fascicles (T. 1543; 383 CE), entitled **Aṣṭagrantha* or **Aṣṭaskandha*(*ka*), the other by Xuanzang in 20 fascicles (T. 1544; 657–660 CE), entitled *Jñānaprasthāna*. The two translations differ in both structure and doctrine and most likely represent distinct Sarvāstivāda lineages. Sanskrit fragments have been discovered in Bamiyan and Kučā (Lévi, 1932, Demiéville, 1961). The *Jñānaprasthāna* consists of 8 chapters (**skandhakas*) entitled:

1. **Saṃkīrṇa* (Miscellany);
2. **Saṃyojana* (Fetters);
3. *Jñāna* (Knowledge);
4. *Karman* (Action);
5. *Mahābhūta* (Fundamental Material Elements);
6. *Indriya* (Controlling Faculties);
7. *Samādhi* (Concentration); and
8. *Dṛṣṭi* (Views).

Explaining the structure of these eight chapters in terms of mutual dependence, the *Mahāvibhāṣā* (T. 1545 [XXVII] 7a25ff.) states that

> [t]he first chapter is explained as presenting the factor of enlightenment, which occurs through the abandonment of defilements (Chapter 2). The abandonment of defilements depends on knowledge (Chapter 3), and a person who has given up the effects of action (Chapter 4) gives rise to that knowledge that abandons defilements. These varieties of action are dependent upon the four fundamental material elements (Chapter 5), and most prominent among the varieties of derived elements are the controlling faculties (Chapter 6). The purification of the controlling faculties takes place through concentration (Chapter 7), and to practice concentration, one must have surmounted false views (Chapter 8). (trans. Cox, 1998, 227–228)

(The **Aṣṭaskandhaka* [T. 1543] has been translated into Japanese with annotations by Nishi Giyū and Sakamoto Yukio, 1934; Xuanzang's Chinese version of the *Jñānaprasthāna* [T. 1544] has been translated with copious notes and tables by Sakurabe Hajime and Kaji Yōichi, 1996–2000; parts of the work have been translated into French by La Vallée Poussin, 1930; 1936–1937); Hurvitz, 1977, has dedicated a study to the *Jñānaprasthāna* 's path to liberation; English summaries include Potter, 1996, 417–449; Willemen, Dessein & Cox, 1998, 73–79; Cox, 1998, 221–229; the first two chapters have been retranslated from the Chinese of T. 1544 into Sanskrit by Śānti Bhikṣu Śastri, 1955.)

Abhidharma Canonical Texts of Other Sects

The extent to which Buddhist denominations other than the Theravādins and the Sarvāstivādins possessed canonical Abhidharma works, and *a fortiori* what these Abhidharmapiṭakas looked like, is very difficut to assess. As A. Bareau (1947–1950) has pointed out, there is no compelling reason to believe that every denomination had developed an Abhidharmapiṭaka of its own. Whereas certain groups that branched off from a mother sect likely kept the latter's Abhidharmapiṭaka with slight adaptations and emendations where necessary, other groups lacking an independent third basket may have borrowed one from a geographically close sect. According to Paramārtha, the Sāṃmitīyas, the Dharmottarīyas, the Bhadrayānīyas and the Ṣaṇṇagarikas, the four subsects that seceded from the Vātsīputrīya sect, kept the latter's "*Śāriputrābhidharma*" (not to be confounded with the homonym Dharmaguptaka work described below; the Vātsīputrīya *Śāriputrābhidharma* was otherwise known as the *Dharmalakṣaṇābhidharma*, in nine sections), although they deemed it insufficient, and completed it here and there with their own interpretations of the *sūtras* (Demiéville, 1931–1932, 58). In a similar way, in Sri Lanka and a Theravāda context, the Abhayagirivāsins and the Jetavanīyas apparently kept the Abhidharmapiṭaka of the Mahāvihāravāsins (Bareau, 1947–1950, 3). When it alludes to *abhidharma*, the Vinaya of the Mahīśāsakas may well refer only to the discipline of dogmatic exegetics rather than to a separate basket (T. 1421 [XXII] 132b; T. 1422 [XXII] 204a). The Vinaya of the Mahāsāṅghikas, on the contrary, seems to point to the existence of a separate Abhidharmapiṭaka (T. 1425 [XXII] 295a, etc.; see Bareau, 1947–1950, 9n6), and the same applies to the Haimavatas, whose *Vinayamātṛkā* (T. 1463 [XXIV] 818a28f.) suggests that their Abhidharma was structurally very close, if not identical, to the Dharmaguptaka *Śāriputrābhidharma*, the only extant non-Theravādin and non-Sarvāstivādin Abhidharma treatise.

Śāriputrābhidharmaśāstra

The *Śāriputrābhidharmaśāstra* has come down to us in a Chinese translation by Dharmayaśas and Dharmagupta in 30 fascicles, the *Shelifu apitan lun* (舍利弗阿毘曇論; T. 1548; Frauwallner, 1955, 221n1). This treatise is generally attributed to the Dharmaguptaka school (Bareau, 1950; Mizuno, 1996–1997, 319–340) in spite of the fact that the Chinese tradition regards it a Sāṃmitīya text (see above for a homonym Vātsīputrīya/Sāṃmitīya Abhidharma treatise). Sanskrit fragments from the *Śāriputrābhidharma* or a very similar text have been recently identified in the Schøyen collection by K. Matsuda (2002). The treatise consists of 5 chapters whose titles, in A. Bareau's Sanskrit restoration, are as follows:

1. *Sapraśnaka* (With Questions);
2. *Apraśnaka* (Without Questions);
3. *Saṃgraha* (Includedness);
4. *Saṃprayoga* (Simultaneous Mental Association); and
5. *Prasthāna* (Base).

Resemblances with the Sarvāstivāda *Dharmaskandha* and the Pali *Vibhaṅga* and *Puggalapaññatti* have long been recognized (Kimura, 1922, 73–118). E. Frauwallner has analyzed the *Śāriputrābhidharma* in terms of structure and content and as to the way in which its *mātṛkās* developed from those of earlier texts. According to him, this treatise of interesting idiosyncratic character "helps us to avoid the one-sided judgements that exclusive observation of the Abhidharma of the other schools might otherwise lead us into making" (Frauwallner, 1995, 116). (An annotated Japanese translation was published by Watanabe, 1934; English summaries and discussions include Frauwallner 1995, 97–117; Potter, 1996, 317–325.)

Kanjur

The term "Kanjur" (*bka' 'gyur*, appearing in secondary literature also as Kah-gyur – e.g. in Csoma de Kőrös, 1836; 1839a; 1839b; Kangyur, Kangyour, Kanjour, or Kandjour) literally means "Words [of the Buddha] in Translation" in a very general sense. This broader meaning is, of course, always implied. Nowadays, however, it is understood by Western academic and Buddhist communities, as well as by the Tibetan tradition, primarily as a technical term denoting a particular body of literature, which, structured and edited in a specific way, contains – at least in theory and ideally – all the texts considered to be the word of the Buddha (*buddhavacana*), translated into Tibetan primarily from Sanskrit but also from Chinese and occasionally from Central Asian languages. According to the Mahāyāna concept of the Buddha, however, the term and concept *buddhavacana* does not imply that these words were necessarily spoken by the historical (doctrinally speaking, *nirmāṇakāya*) Buddha Śākyamuni; they could be – and in the case of tantric literature often were – also revealed by the Buddha (or a buddha) in his *sambhogakāya* and *dharmakāya* aspects.

Together with the Tanjur (*bstan 'gyur*), which is roughly the collection of commentarial exegetical literature composed by Indian masters and translated into Tibetan, the Kanjur constitutes the literary corpus generally known today as "the Tibetan Buddhist Canon." While this term may be problematic, for practical purposes, it will be retained here.

By its general nature, the Kanjur has always been an open collection of texts that are considered to represent the word of the Buddha and its commentarial literature; texts could and were added or omitted according to availability, the editors' preferences, or "certain religious or political ideologies" (Schaeffer & van der Kuijp, 2009, 33; in general, Eimer, 1992, 12; Skilling, 1997b). Accordingly, nothing such as *the* Tibetan Kanjur exists, but rather a number of Kanjurs that are considered equally authoritative. Here, the collective "the Kanjur" is used when referring to the literary genre or the concept of a more or less complete collection of all sayings of the Buddha and the plural "Kanjurs" or the singular "a Kanjur" when referring to the individual versions/editions. Some 30 individual Kanjurs are known, and more continue to be discovered. They share the basic stock of texts but vary with regard to the number of texts contained, the versions of the texts transmitted, and their arrangement. Various collections show mutual cross-dependences and interdependences of various kinds and to various degrees.

For Tibetan Buddhists, a Kanjur is a set of sacred texts, its value exceeding by far that of a mere literary corpus, regardless of how precious. It represents the Buddha in his aspect of speech, and as such it is – in particular for lay people – an object of veneration and a source of blessing rather than literature to be read; merely touching a volume of a Kanjur or turning its leaves is considered meritorious. Reciting its words or having them recited by monks adds to the blessing, but understanding their meaning is not required; mass ritual recitations of a Kanjur can take place with many monks simultaneously reciting different volumes aloud, the resulting incomprehensible din in no way reducing the resulting merit produced. In Tibetan historiographic literature, such veneration is reflected by the frequent use of the expression "Kanjur Rinpoche" (*bka' 'gyur rin po che*), using the same honorific title Rinpoche ("Very Precious One," "Jewel"), by which incarnated lamas are generally addressed. This ritual significance is a possible reason for the existence of a considerable number of different Kanjurs, whereas only very few distinct Tanjurs are known.

The texts collected in the various Kanjurs are in principle of non-Tibetan origin; the majority of them were composed in India, a few possibly in Central Asia, and some tantric texts claim to be revealed by the cosmic Buddha or some tantric deity in the land of O rgyan (i.e. Uḍḍīyāna), present-day Swat in Pakistan. Some of the latter may be Tibetan compositions, quoting O rgyan as the place of origin for the sake of authorization, as this country was famous in Tibet for its tantric masters and magicians. The corpus of the Kanjur as such, however, is genuinely Tibetan; except for structural influences, as a whole it is unrelated to any of the Buddhist canons known in various Indian schools, for example, the well-known Pali Tipiṭaka of the Theravāda school or the Chinese *Dazangjing*. Although never defined as such, the Kanjur is basically a collection

of Mahāyāna scriptures. Translations of only a few texts contained in the *nikāya/āgama* corpora are included, since such texts were never systematically translated into Tibetan. Apart from the nine titles of its *Mahāsūtra* section (Skilling, 1997a), the *Lhan kar ma* (see below), a 9th-century catalogue of Buddhist texts translated during the Tibetan Imperial Period, lists 37 "Hīnayāna" *sūtra*s among its 739 titles, and only little of this material was translated in later centuries.

Content and Structure of Kanjurs

The Kanjurs known today (see below) consist of some 750–1,100 individual texts (Eimer, 1992, 12) in 100–119 volumes, with an average of around 500 leaves per volume. (An exception, the Early Mustang Kanjur, of which only its catalogue [Eimer, 1999] is extant, comprised 141 volumes.) Of these texts, 707 can be considered to constitute the basic stock; 542 are extant in all Kanjurs, and another 265 are missing from not more than one of them (Lainé, forthcoming a). However, this reflects nothing but the present state of our fragmentary knowledge. Documentary evidence testifies to the one-time existence of a great many Kanjurs (Almogi, 2012), and ongoing research continues to unearth more Kanjurs and manuscript collections that represent a preliminary stage to the fully edited Kanjurs. These latter collections occasionally preserve texts or versions of texts that were previously unknown, and they provide an increasing insight into a far richer range of the earliest traditions of Tibetan religious literature than is represented by the better-known Kanjurs. Thus, all sorts of statistics in this respect must constantly be revised.

The considerable discrepancy in the number of texts contained in the various Kanjurs is to some extent caused by a varying number of duplications. These might occur either simply by mistake or by the fact that several texts are included in the *sūtra* (*mdo*) as well as in the *tantra* (*rgyud*) section. Some short Prajñāpāramitā texts, for example, such as the well-known *Prajñāpāramitāhṛdaya* (*Heart Sūtra*), are assigned to both categories (Silk, 1994, 27ff.). Occasionally even different versions of the same text may be included in the same collection. This might have happened by oversight, or because the editors could not decide which version to consider more authentic. Another reason for the varying number of texts – possibly even the main reason – is

the Kanjur's very nature as an open collection, editors being free to include or exclude certain texts when compiling or revising a Kanjur.

Individual Kanjur texts are arranged according to the basic literary/doctrinal genres, generally in "ascending" sequence, Vinaya (*'dul ba*), *sūtra* (*mdo sde*, in subclassifications, for which see below), and *tantra* (*rgyud sde*), but occasionally also in "descending" order, *tantra*, *sūtra*, and Vinaya, as in the editions of Peking and Cone. Already prior to their translation into Tibetan, Indian or Chinese scholars either considered certain *sūtras* to constitute a distinct genre or grouped them together and transmitted them as units. These groups were retained in Tibet and appear as additional sections of the Kanjur: Prajñāpāramitā (*sher phyin*), *Buddhāvataṃsaka* (*phal cher/chen*), and *Ratnakūṭa* (*dkon brtsegs*). Of these, the general division "Prajñāpāramitā" can be found only in the catalogues; in the actual Kanjurs, it is generally split into separate sections for each of its big *sūtras*, which comprise more than one volume, *Śatasāhasrikā* (*'bum* or *yum*), *Pañcaviṃśatisāhasrikā* (*nyi khri*), *Aṣṭadaśasāhasrikā* (*khri brgyad*), *Daśasāhasrikā* (*khri pa*), and *Aṣṭasāhasrikā* (*brgyad stong pa*) and a section "Various Prajñāpāramitā" (*sher/khri/sras sna tshogs*), normally consisting of only one volume, in which the shorter texts are collected. Within the sections, the volumes show a running numbering with the letters of the Tibetan alphabet (*ka, kha, ga*, etc.) used as numerical figures. An exception is the Peking edition, which has a continuous enumeration without regard for sections.

Variations of this general structure and additional subdivisions are found, of which the following may serve as examples: some Kanjurs (e.g. London, Stog, Shey, Ulaanbatar, Tokyo, Narthang, and Lhasa) count the *Mahāparinirvāṇasūtra* as a separate section (*myang 'das*), usually in three volumes. The editions of the Stog Palace and London do not keep the traditional order of the subdivisions in their *sūtra* sections. In Stog, *Buddhāvataṃsaka* and *Ratnakūṭa* are placed after *Śatasāhasrikā*, and the sections (Various) *Sūtra* and *Mahāparinirvāṇasūtra* follow the remaining Prajñāpāramitā sections. In London the whole *tantra* section is placed between *Aṣṭadaśasāhasrikā* and *Buddhāvataṃsaka*.

A special position is occupied by the genre of *dhāraṇī* (*gzungs*), meaning "(mystic) formula," some 250 short texts, consisting mainly of mantra, to which magical power is ascribed. Although they are obviously tantric in nature, they are sometimes included in the *sūtra* section and sometimes in the *tantra* section, and occasionally they constitute one or two distinct sections (*gzungs* or *gzungs 'dus* and *gzungs 'bum*) – for example, in the *Lhan dkar ma* catalogue, in the Kanjurs of Lithang, Derge (Sde dge), Urga, and in the Early Mustang Kanjur.

Some Kanjurs contain a few Nyingma *tantras*, tantric texts that are generally accepted as authentic only by the Nyingma (Rnying ma) school of Tibetan Buddhism and collected in great number in the Collection of Nyingma *tantras* (*Rnying ma rgyud 'bum*). Most of these Kanjurs include them in their general *tantra* sections, but the Kanjurs of Ulaanbataar, Lithang, Derge, and Urga, and, most probably, the 17th-century Kanjurs from Basgo and Hemis in Ladakh, dedicate a separate section (*rnying rgyud*) to them.

The Kanjur is per definition the collection of Buddha's words. Thus, the only objective criterion for including or excluding a text is its authenticity. In general, the introductory formula, "Thus I have heard" (*'di skad bdag gis thos pa*; Skt. *evaṃ mayā śrutam*), is considered evidence that a text is the direct witness of a sermon or any particular teaching of the Buddha (Eimer, 2002, 7). Apparently, this did not suffice in all cases to decide whether a particular text contained the words of the Buddha or of a human master. This dilemma was known already in Indian Buddhism, where scholars disagreed on whether some Abhidharma texts should be considered *buddhavacana*. In line with different answers to this question, some Kanjurs (Ulaanbataar, Tokyo, Stog, London, and Shey) contain Abhidharma texts such as the *Lokaprajñapti* and *Kāraṇaprajñapti*, or for other reasons the *Kuṇālāvadāna* or *Li'i yul lung bstan pa* (a religious history of Khotan), while elsewhere (Derge, Peking, and Narthang) such texts are included in the Tanjur. It is to be noted that when these texts are included in the Kanjur, there exists no corresponding Tanjur in which they might have been placed.

Genesis of the Kanjur

The literary corpus known as Kanjur is the result of a long-term process that went on for more than five centuries. It was essentially promoted by large-scale enterprises of collecting and translating Buddhist scriptures, which for the greater part always depended on royal support and sponsorship. Thus, the landmarks of this development can be connected with the respective rulers of the time.

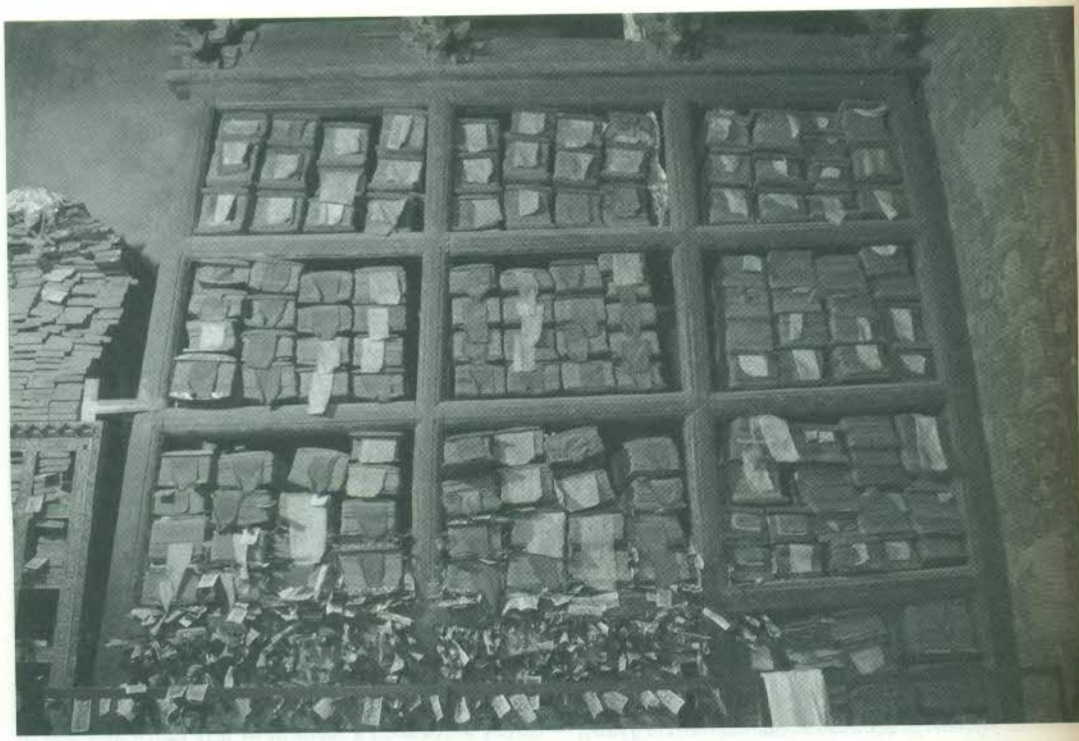

Fig. 2: Some volumes of the Prajñāpāramitā and *sūtra* sections at Kanam Monastery, Kinnaur, Himachal Pradesh, India (photo by Helmut Tauscher, 2012).

Collections of the Imperial Period

The translation of Indian sacred texts into Tibetan began already with the introduction of Buddhism to Tibet (which took place, in a more organized form, from the 7th cent. onward), although not in a systematic way. During the reigns of King Khri srong lde brtsan (756–796) and his successors, Mu ne btsan po (797–799), Khri lde srong brtsan *alias* Sad na legs (800–815), and Khri gtsug lde brtsan *alias* Ral pa chen (815–838), in the period known as the time of the "earlier diffusion" (*snga dar*) of Buddhism in Tibet, these activities were carried out systematically, on command and with support of the imperial court. In order to standardize the translations, the *Bye brag tu rtogs par byed pa chen po*/*Mahāvyutpatti* was compiled, a Sanskrit-Tibetan terminological glossary, as well as the *Sgra sbyor bam po gnyis pa*, a commentary on selected terms from the *Mahāvyutpatti*. A great number of texts were translated in a systematic cooperation between Tibetan translators and Indian or Chinese scholars, and these translations were then copied and recopied and collected at royal palaces and monastic centers. These growing collections had to be structured and catalogued. The oldest known catalogues of this kind are the *Lhan kar ma*/*Ldan dkar ma* (Herrmann-Pfandt, 2008; Lalou, 1953) and the *'Phangs thang ma* (Halkias, 2004; Kawagoe, 2005), both catalogues of collections kept at royal palaces in central Tibet. A third work, the *Mchims phu ma*, mentioned in later sources, is not known to be extant.

According to the introductory section of the *Lhan kar ma*, these catalogues contained "all translations of words [of the Buddha] and scholarly treatises" (*bka' dang bstan bcos 'gyur ro cog*), and thus they can be regarded as forerunners of the Tibetan canon (extensively discussed in Skilling, 1997b). They were structured according to various categories, some of which are also to be found in the Kanjur (other categories, such as texts translated from Chinese, works of King Khri srong lde btsan, or *Mahāsūtra*, are not found in any Kanjur, although the works listed therein are generally included under the categories mentioned already above). The general distinction between Kanjur and Tanjur, however, was not yet made.

Collections of the Time of the "Later Diffusion"

During the "later diffusion" (*phyi dar*) of Buddhism (from the early 11th cent. onward), a new wave of collecting and translating Buddhist scriptures started under the patronage of the lama-kings of Guge-Purang in western Tibet, Ye shes 'od (947–1024) and Byang chub 'od (984–1078; these dates are not undisputed; for the sake of convenience, I follow Vitali, 1996, 185, 296). Their capital, Tholing, became a center of learning and translating. Prominent proponents were Rin chen bzang po *alias* the "Great Translator" (Lo tsā ba chen po; 958–1055), Nag tsho Tshul khrims rgyal ba (c. 1011–1064), and Rngog Blo ldan shes rab (c. 1059–1109); even the royal prince Zhi ba 'od, brother of Byang chub 'od, is among the translators of canonical texts. During this period, the term "Kanjur" might have occurred for the first time. Ye shes 'od is reported to have prepared three sets of "the entire Kanjur of pure gold" and four sets of a white Kanjur. For central Tibet, among other reports, "silver and golden Kanjurs" are mentioned in the biography of Rwa rDo rje grags (11th cent.; Schaeffer & van der Kuijp, 2009, 12ff.). These events are presented in sources, however, that date from the 15th century and that might have simply adopted the usual terminology of their time. As none of these collections of translations has survived, it is by no means obvious to what the term refers in regard to contents, arrangement, or extent. It also has to be noted that in the biography of Rin chen bzang po, composed by his pupil Ye shes dpal, this term does not appear, and *sde snod gsum ka*, the Tibetan equivalent for Tripiṭaka, is used, without, however, clearly indicating what the term denotes (*Rin chen bzang po rnam thar*, 1996, 26).

Proto-Kanjurs

An intermediate stage between the collections of imperial times and the fully developed Kanjurs – of course not necessarily in all cases or in a straight development – can be seen in the group of proto-Kanjurs. These are, in an ideal case, complete collections of the Buddha's word but not yet systematically arranged into Kanjurs as described above. Similar or related texts are compiled into larger volumes, which, however, do not have any particular order among them. No complete collection of this kind is known so far; the only one with some degree of completeness is the proto-Kanjur of Gondhla in Lahul, northern India, compiled in the late 13th or early 14th century. (On this collection and the genre in general, see the introduction to Tauscher, 2008.) Nevertheless, fragments of proto-Kanjurs are to be found in various places in the Himalayan region; apparently this form of canonical collection was rather widespread before and around the time of the compilation of the first Kanjur in its fully developed form.

Collections of the Mongol Area

The time of Mongol and Yuan rule in Tibet (1240–1354) was particularly fruitful for the genesis and development of the Kanjur. Around 1272, activities of collecting canonical material started at Sakya (Sa skya), sponsored by the Mongol imperial family and culminating in 1285–1287, and already in 1275–1278, a Kanjur is reported to have been produced at the order of Lama 'Phags pa, the court chaplain of Khublai Khan. Between 1310 and 1328, the myriarchs of Tshal in central Tibet are reported to have financed a Kanjur in 250 volumes and one in 260 volumes (for a detailed account of these activities, see Schaeffer & van der Kuijp, 2009, 9ff.).

These collections have not survived, and their possible relation to the Old Narthang or the Tshal pa Kanjur (see below) is as unclear as is their exact nature. It can, however, be suspected that they followed a similar concept as the Kanjurs in the technical sense of the term.

The Old Narthang Kanjur

In a further development of these preliminary steps, the first Kanjur, the Old Narthang Manuscript Kanjur, which is not extant and known only from literary sources, was compiled in the first decades of the 14th century at Zhalu (Zhwa lu) Monastery at Narthang (Snar thang) in central Tibet. It is commonly connected with the name of Bu ston Rin chen grub (1290–1364), the 11th abbot of Zhalu, who compiled an extensive catalogue of religious and philosophical scriptures (Nishioka, 1980–1983). His role in the actual production of the Kanjur, however, is not directly attested (Eimer, 1992, 177; see also Schaeffer & van der Kuijp, 2009, 9). From that time onward, the terms "Kanjur" and "Tanjur" appear to be established for large collections of translated canonical texts.

Transmission Lines and Groups of Kanjurs and Their Most Important Representatives

When A. Csoma de Kőrös studied a copy of the Narthang xylograph Kanjur (dating from c. 1730) in the early decades of the 19th century and initiated scholarly Kanjur research, he thought himself to be analyzing a copy of the one and only Kanjur; he even speaks of "the Tibetan work, entitled Kah-gyur" (Csoma de Kőrös, 1836; 1839a; 1839b). Following generations of researchers, becoming increasingly aware of the variety of Kanjurs, took the Old Narthang Kanjur as the prototype, to which all others can directly or indirectly be traced back. At present, however, it is widely accepted that different lines of canonical transmission are only conceptually indebted to the Old Narthang Kanjur but independent in their actual execution (Skilling, 1997b, 100); no *one* archetype of the Kanjur ever existed. None of these lines is pure; they show various degrees of interrelation and conflation. According to the various lines of transmission, four groups of Kanjurs are generally distinguished: the two main groups of Tshal pa and Thems spangs ma, a "mixed" group, and the group of "local" or "independent" Kanjurs. Each group has its distinctive features in terms of structure, arrangement, and the texts or versions of texts contained. They are, moreover, not homogeneous units. In particular among the local Kanjurs, some sections might be more closely related to a particular tradition and others to another; that is, some collections may be traced back to diverse sources, as a result of which filiations are complex and not unilinear.

None of the archetypes from which the main traditions descend has survived; the oldest known Kanjurs, as physical entities, date from the 17th century. The individual Kanjurs mentioned below are designated in modern scholarship according either to their place of origin or to the place where they are presently located, both in monasteries or royal palaces and in Western or Japanese libraries.

The Tshal pa group descends from a manuscript Kanjur compiled at the Gung thang Monastery of Tshal in central Tibet at the order of the myriarch Kun dga' rdo rje as part of the funeral ceremonies for his father in 1348; it was consecrated by Bu ston in 1351. For its compilation, material from the Old Narthang Kanjur was used to a large extent, so that it is sometimes considered a major revision of this Kanjur.

The majority of the Kanjur editions known today belong to this group. It is represented mainly by a number of block-print editions from Imperial China, starting with the first Kanjur to appear in printed form, that of Yongle (1410; Silk, 1996), and followed by its reprint of Wanli (1606; Mejor *et al.*, 2010) and a series of revised editions (Peking, 1684–1765, like the former designated by the Chinese imperial reign period under which they appeared; Eimer, 2007). The edition of 1717–1720 is edited in a modern reprint by D.T. Suzuki (1955–1961) and catalogued by D.T. Suzuki (1962); a recent high-quality digital scan edition of the Peking Kanjur held in the National Library of Mongolia has also appeared. The Kanjur of Berlin (1680; Beckh, 1914) and a Kanjur kept at the National Palace Museum at Taipei (18th cent.; now publ. in facsimile as *Longzangjing*, 2011) are the only manuscript Kanjurs of this group. The xylographs of Lithang/'Jang sa tham (1609–1614; Imaeda, 1982; 1984), Cone (1721–1731), Derge (Sde dge, 1733; Ui, 1934; publ. by Barber, 1991), and Urga (1908–1910; Bethlenfalvy, 1980) belong to a subgroup.

The Them spangs ma group goes back to a manuscript Kanjur compiled at Gyantse (Rgyal rtse) in central Tibet shortly after 1430. None of the Them spangs ma Kanjurs has ever appeared in printed form, which might be one of the reasons for the more limited dissemination of this group.

Its main representatives are the manuscript Kanjurs of Ulaanbaatar (n.d.), considered to be a direct copy of Them spangs ma and published in 2010 as Tempangma Kanjur by the National Library of Mongolia and others (see Web sites below; catalogued by Samten *et al.*, 2012; also Bethlenfalvy, 1982), Stog, produced during the reign of the Ladakhi king Nyi ma rnam rgyal (1694–1729; Skorupski, 1985), and Tokyo (1858–1878; Saitō, 1977). A subgroup showing influences of a particular western Tibetan tradition (Tauscher & Lainé, 2008) is represented by the Kanjurs of London (Pagel & Gaffney, 1996), an 18th-century copy of a manuscript from Shel dkar in southern Tibet, and the Kanjur of Shey in Ladakh (17th cent.; Lainé, forthcoming b).

The mixed group, consisting of the closely related xylograph Kanjurs of Narthang and Lhasa (Eimer, 1998), are based on a copy from the Tshal pa line, but they include a great number of emendations based on some copy from the Them spangs ma group; thus it combines characteristic features of both traditions. The edition of Narthang was initiated by the sixth Dalai Lama (1683–1705), but the carving of the printing blocks was stopped with his death. The undertaking was restarted by Mi pham pho lha

estarted by Mi pham pho lha

Bsod nams stobs rgyal (1689–1747) and completed in 1732. Based on this Narthang edition, a new set of blocks was produced in Lhasa with some emendations according to the Derge Kanjur. This work was completed in 1934. This Lhasa Kanjur is the last traditionally produced Kanjur.

The local or independent group consists of manuscript Kanjurs that were produced not at large monastic centers but at rather remote places and compiled from locally available material. They usually show closer similarities with Them spangs ma than with Tshal pa. This does not indicate direct relation; rather it provides evidence for common or related sources from which their materials were drawn. In general, they are independent from either of the two main lines of transmission as well as from other local Kanjurs. Although similar to the mainstream Kanjurs in content and size, they differ from them with regard to the texts included and their arrangement. Just like the proto-Kanjurs, they contain texts absent from the mainstream traditions, texts in different recensions or translations, and even translations from a different version of the Sanskrit original. Occasionally they contain two or more versions of the same text, and their sources might predate the archetypes of the two main groups (Eimer, 2012, 21; Tauscher & Lainé, 2013).

Presently the Kanjurs of Phug brag (c. 1700; Samten, 1992), O rgyan gling (c. 1700; Samten, 1994) and Bathang (15th–16th cents.; Eimer, 2012), as well as the so-called Early Mustang Kanjur (1436–1447; Eimer, 1999), are generally regarded as local Kanjurs. Kanjurs discovered in recent years at Hemis and Basgo in Ladakh might also be counted among this group.

The Phug brag manuscript Kanjur is difficult to classify, as it appears to be the conflation of at least two Kanjurs or proto-Kanjurs stemming from different traditions. It shares many distinctive features with the roughly contemporary O rgyan gling Kanjur at Tawang in western Arunachal Pradesh, which, of course, is not necessarily evidence of a direct relationship, since this relationship might very well date back to earlier centuries. A number of conformities indicate a connection between Phug brag and Them spangs ma or its sources; others are seemingly unique.

The Early Mustang Kanjur was compiled at the order of King A ma dpal (c. 1380–1440), probably using material from Sa skya. It is not extant, only its catalogue (*dkar chag*) surviving. Two Kanjurs kept at Lo Manthang and at Tsarang (Mathes, 1997) are considered to be copies, but they have not yet been studied in detail.

In 2007, two fragmentary Kanjurs were discovered at Hemis Monastery. Both were written during the reign of King Seng ge rnam rgyal, shortly after 1630, and are contemporary with the canonical manuscript material kept at Basgo, where in the late 20th century, a Kanjur was compiled out of at least five fragmentary sets.

Close similarities between the collections of Hemis and Basgo and the Early Mustang Kanjur provoke the hypothetical postulation of a Mustang group of Kanjurs in addition to the four groups generally accepted. This hypothesis is discussed in H. Tauscher and B. Lainé (2013).

The Comparative Kanjur

A modern edition of the so-called Comparative Kanjur (*bka' 'gyur dpe bsdur ma*; Hackett, 2012) does not fit into any of the groups mentioned, as it is not a separate Kanjur. It was compiled in Beijing in 2006–2009 by comparing eight Kanjur editions (Yongle, Lithang, Kangxi, Cone, Derge, Narthang, Khure, and Lhasa Zhol). Thus it represents something between an attempted critical edition of the Kanjur and a tool for Kanjur research.

Kanjur Research

Although the Kanjur has been an object of Tibetological research ever since the pioneering works of A. Csoma de Kőrös, it was only in recent decades that Kanjur research has justifiably emerged as an important subdiscipline within the field of Tibetan studies. It seeks to understand the evolving canon both as a record of the development of a substantial part of the Tibetan literary and religious heritage and as a source for the history of Tibetan Buddhism, since these usually massive products are the result of significant economic investment and thus by their very existence testify to the cultural capital of the regions and dynasties under which they were produced.

While previously these studies were handicapped by the fact that they require a vast amount of textual material and this material was either not easily accessible or not accessible at all, things have been changing rapidly in recent years. Increasingly access has been enabled, on the one hand, by the production of finding aids, including catalogues and databases, historical studies, and other research and, on the other hand, by the reproduction, through microfilm or digital means, of editions. In addition to the sources already mentioned, special note should be made of some of the databases established by academic organizations, for instance, by the Tibetan Buddhist Resource Center and by the universities of Vienna, Virginia, Ōtani, and Columbia (for Web sites, see below). While these databases provide catalogues, search engines, and other research tools, needless to say individual scholars have long studied texts contained in the Kanjur collections, paying attention to the history of these collections, their interrelations, and other problems. They have also, since A. Csoma de Kőrös and the very earliest days of modern Buddhist studies, produced translations of Kanjur texts. Recently more systematic efforts are being attempted along these lines, one example of which is the 84000 project (www.84000.co), which aims at a translation of the complete (Derge) Kanjur into English.

HELMUT TAUSCHER

Mahāyāna Sūtra Literature

Buddhāvataṃsakasūtra

The *Buddhāvataṃsakasūtra* (Flower-Ornament Scripture; usually but incorrectly referred to as *Avataṃsakasūtra*), one of the most voluminous Mahāyāna *sūtras*, remains little studied in the West. However, in East Asia the *Buddhāvataṃsaka* plays an essential role, being regarded in some systems as the direct revelation of the highest truth that the Buddha realized under the Bodhi tree. The *sūtra* gave a fundamental impetus to the formation of the Huayan (華嚴) school, a distinct Chinese school that later spread throughout East Asia. This school elaborated the philosophy of interrelated existence of all phenomena.

The title *Buddhāvataṃsaka* refers in the first place to a scripture catalogued in China as an original or complete translation (*benbu* [本部]) of the *Buddhāvataṃsaka* (here "the larger *Buddhāvataṃsaka*"), extant in two Chinese (T. 278 [60 fasc.]; T. 279 [80 fasc.) and one Tibetan (D 44/P 761) translations. At the same time, *Buddhāvataṃsaka* also refers to a family or group of texts that the Buddhist tradition linked to the larger *Buddhāvataṃsaka*. Some of these texts are free-standing translations (*zhipin* [支品]) of scriptures corresponding to certain chapters in the larger *Buddhāvataṃsaka*, while others do not correspond to any of the chapters, but the Buddhist tradition suspected the genesis of these texts to be closely related to the larger *Buddhāvataṃsaka* and thus considered them to be Huayan-related works (*juanshujing* [眷屬經]; Hamar, 2007). As of the Sui period (581–618), the Chinese scripture catalogues (Fajing's [法經] *Zhongjing mulu* [眾經目錄; T. 2146 (LV) 119c11–120a1] and Yancong's [彥琮] similarly named work [T. 2147 (LV) 159a22–b6]) indicate the correspondences between the so-called partial translations and chapters from the larger works.

The textual history of the *Buddhāvataṃsaka* is very complex, and its study has just begun. However, it does seem clear that originally the larger *Buddhāvataṃsaka* was compiled on the basis of shorter *sūtras*, some of which continued to circulate independently. In order to discuss the history, structure, and teaching of the *sūtra*, an overview will be helpful.

An Overview of the Content

In the Sarvāstivāda literature (e.g. *Divyāvadāna* XI *Prātihāryasūtra*) and the Bhadraśrī chapter (ch. 8 in the 60-fasc. version, ch. 12 in the 80-fasc. version, and ch. 17 in the Tibetan version) of the larger *Buddhāvataṃsaka*, the term "*buddhāvataṃsaka*" means a special type of miracle of multiplication of one's own body that could be performed only by a buddha (Ōtake, 2007). Due to his magical power, the Buddha is able to manifest himself simultaneously at seven locations where the teaching was delivered during eight (in the 60-fasc. version) or nine (in the 80-fasc. and Tibetan versions) assemblies. The Buddha teaches in three human places (the place of enlightenment, the hall of universal light [Ōtake, 2007, 98–100], and the grove of Anāthapiṇḍada) and four heavenly realms (the heavenly realm of 33 gods on the peak of Sumeru, the palace of the god Suyāma, Tuṣita, and the palace of the Paranirmitavaśavartin gods). After Buddha appears at these locations, innumerable bodhisattvas arrive from the ten directions and surround him to listen to his teaching. Surprisingly, it is not the Buddha who delivers the teachings, but one of the bodhisattvas (most often Mañjuśrī or Samantabhadra) in the assembly takes this role. This is the narrative framework of the *sūtra* that arranges the otherwise loosely related chapters, or formerly independent works, into one scripture. The title indicates that one of the main features of this scripture is an abundance of visionary elements. These visions play an important role in underlining Mahāyāna doctrines, like emptiness, the fundamental sameness of all things, and so on. The image of all buddha fields contained in one atom, often repeated in the *sūtra*, led Chinese scholars to formulate a philosophy of the interrelated existence of all phenomena (McMahan, 2002).

The *Buddhāvataṃsaka* has two central topics: (1) the eulogy of the Buddha's abilities and his appearance in the world as a teacher and (2) the description of a bodhisattva's career. The two most famous chapters of the *sūtra*, the *Daśabhūmika* and the *Gaṇḍavyūha*, describe the bodhisattva's practice. The *Daśabhūmika* (Ten Stages), in accord

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

with its title, depicts the bodhisattva's path from the vow to liberate all living beings from suffering to enlightenment in ten stages:

1. joy (Skt. *pramuditā*);
2. freedom from defilements (Skt. *vimalā*);
3. splendor (Skt. *prabhākarī*);
4. radiance (Skt. *arciṣmatī*);
5. difficult to be overcome (Skt. *sudurjayā*);
6. presence (Skt. *abhimukhī*);
7. distant journey (Skt. *dūraṃgamā*);
8. immovability (Skt. *acalā*);
9. excellent wisdom (Skt. *sādhumatī*); and
10. dharma cloud (Skt. *dharmameghā*).

These ten stages became a part of the 52 stages of the bodhisattva path traditionally attributed to the larger *Buddhāvataṃsaka*. The ten stages of faith (*shixin* [十信]) are as follows:

1. the stage of faith (*xinxin* [信心]);
2. the stage of mindfulness (*nianxin* [念心]);
3. the stage of endeavor (*jingjin xin* [精進心]);
4. the stage of mental stability (*dingxin* [定心]);
5. the stage of the wisdom of understanding emptiness (*huixin* [慧心]);
6. the stage of pure self-restraint (*jiexin* [戒心]);
7. the stage of the returning of merit (*huixiang xin* [迴向心]);
8. the stage of maintaining the dharma within oneself (*hufa xin* [護法心]);
9. the stage of detachment (*shexin* [捨心]); and
10. the stage of aspiration (*yuanxin* [願心]).

Listed below are the ten abodes (*shizhu* [十住]):

1. initial determination for enlightenment (*chu faxin zhu* [初發心住]);
2. preparation of the ground (*zhidi zhu* [治地住]);
3. practice (*xiuxing zhu* [修行住]);
4. noble birth (meaning being "reborn" as a product of the teachings; *shenggui zhu* [生貴住]);
5. skill in means (*juzu fangbian zhu* [具足方便住]);
6. right mindfulness (*zhengxin zhu* [正心住]);
7. nonregression (*bu tui zhu* [不退住]);
8. youthful nature (innocence and purity; *tong zhen zhu* [童真住]);
9. prince of the teaching (*wangzi zhu* [王子住]); and
10. coronation (as a sovereign or master of the teaching; *guanding zhu* [灌頂住]; (Cleary, 1983, 186).

The ten practices (*shixing* [十行]) are as follows:

1. gladdening practice (*huanxi xing* [歡喜行]);
2. beneficial practice (*raoyi xing* [饒益行]);
3. practice of nonopposition (*wu weini xing* [無違逆行]);
4. practice of indefatigability (*wu qurao xing* [無屈橈行]);
5. practice of freedom from ignorance and confusion (*wu chi luan xing* [無癡亂行]);
6. practice of skillful revelation (*shan xian xing* [善現行]);
7. practice of nonattachment (*wu zhuo xing* [無著行]);
8. practice of that which is difficult to attain (*nande xing* [難得行]);
9. practice of goodness (*shanfa xing* [善法行]); and
10. practice of real truth (*zhenshi xing* [真實行]); (Clear, 1983, 189).

The following are the ten dedications of merit (*shihuixiang* [十迴向]):

1. dedication to saving living beings (*jiuhu yiqie zhongsheng li zhongsheng xiang huixiang* [救護一切眾生離眾生相迴向]);
2. indestructible dedication (*bu huai huixiang* [不壞迴向]);
3. dedication equal to all buddhas (*deng yiqie zhu fo huixiang* [等一切諸佛迴向]);
4. dedication reaching all places (*zhi yiqie chu huixiang* [至一切處迴向]);

and marvelous enlightenment (*miaojue* [妙覺]) are the last and highest stages of a bodhisattva's development. However, the ten stages of faith are not mentioned in the *sūtra*. These names originate from the *Renwang hu guo bore boluomiduo jing* (仁王護國般若波羅蜜多經; *Sūtra* of Benevolent King; T. 246) and the *Pusa yingluo benye jing* (菩薩瓔珞本業經; Bodhisattvas' Diadem Primary Activities; T. 1485), both native Chinese compositions. Only the Chinese exegetical tradition linked the ten stages of faith to the *Buddhāvataṃsakasūtra*. The notion that the bodhisattva path has 52 stages likewise appears to be a Chinese idea.

The *Gaṇḍavyūha* tells the story of a young boy named Sudhana, who visits 53 spiritual friends from all walks of life, including female teachers, to raise the question about the bodhisattva's practice. After listening about the practice of the spiritual friends, he is told to go on his quest until he finally arrives at the tower of Maitreya, the future buddha. When he enters the tower, he has an insight into the realm of reality. The *sūtra* stresses that buddhas and bodhisattvas are able to create magical bodies for the sake of living beings, and all these forms are interpenetrating (Gómez, 1977). Through Sudhana's encounters, we gain some hints about the social context of the *sūtra* that reveal the importance of royal women patrons in Indian Buddhism at the time (Osto, 2008).

In the Chinese exegetical tradition, the bodhisattva's practice represents the cause of enlightenment, while the result of this practice is the buddhahood that is also described extensively by the larger *Buddhāvataṃsaka*. It includes many depictions of the supreme body of the teaching, the *dharmakāya* (Guang Xing, 2005). The *Tathāgatotpattisaṃbhavasūtra*, which corresponds to chapters 32 in T. 278 (see the table), reveals that the reason why the Buddha appeared in the world was to benefit sentient beings, and in order to accomplish this aim, he had recourse to a variety of skillful methods (*upāya*). This *sūtra* shows ten aspects of the Tathāgata:

1. the characteristics of the manifestation of Tathāgata;
2. the body of Tathāgata;
3. the voice of Tathāgata;
4. the mind of Tathāgata;
5. the realm of Tathāgata;
6. the deeds of Tathāgata;
7. the perfect enlightenment of Tathāgata;
8. the turning of the dharma wheel by Tathāgata;
9. the *parinirvāṇa* of Tathāgata; and
10. the merits originating from seeing, hearing, and being associated with Tathāgata.

The *Tathāgatotpattisaṃbhavasūtra* is a precursor to the *tathāgatagarbha* theory, the idea of universal access to buddhahood, as it stresses that all living beings have the wisdom of the Buddha, but due to their defilements, they are not able to see it. The Buddha's mission is to reveal this fact to living beings (Takasaki, 1958).

Origin

According to a Buddhist legend, the *Buddhāvataṃsaka* was brought to the human world from the palace of serpents (*nāga*) by Nāgārjuna (T. 1870 [XLV] 586c23–26). He had found three versions of this scripture and chose the one consisting of 100,000 *ślokas* and 48 chapters, as the other two versions he thought to be too long for humans. Rather than the *sūtra* having originally been such a massive work, however, it appears more likely that it was compiled from originally independent sources. One reason to favor this scenario is that several chapters of the *Buddhāvataṃsaka* that circulated independently before being incorporated into the larger *Buddhāvataṃsaka* are cited in Indian *śāstra* literature, without being referred to as part of the larger *Buddhāvataṃsaka*. The *Sūtrasamuccaya*, attributed to Nāgārjuna but composed by an unknown author in the 5th century CE, not only cites the *Buddhāvataṃsaka* twice by name but also cites component texts under their own titles: *Gaṇḍavyūha* (ch. 34 of T. 278), *Daśabhūmika* (ch. 22 of T. 278), *Tathāgatotpattisaṃbhava* (ch. 37 of T. 278), *Tathāgataguṇajñānacintyaviṣayāvatāranirdeśa* (T. 302, 303, 304; Johnston, 1950, 8–9), *Śraddhābalādhānāvatāramudrā* (T. 305), and *Lokottaraparivarta* (ch. 33 of T. 278; Skilling & Saerji 2013, 203–205). The *Ratnagotravibhāga*, written by Sāramati in the 5th century CE, quotes from the *Rulai chuxian pin* chapter (如来出現品; Appearance of Tathāgata in the World; **Tathāgatotpattisaṃbhava*; ch. 32 of T. 278; Johnston, 1950, 22.10–24.8), while in his *Śikṣāsamuccaya*, Śāntideva (686–763 CE) quotes from the *Xianshou pin* chapter (賢首品; Leader of the Good) as *Ratnolkādhāraṇī* (ch. 8 of T. 278; Bendall, 1897–1902, 3.15–5.6; 153.11–15; 327.5–347.11), the *Shi huixiang pin* chapter (十廻向品; Ten Dedications) as *Vajradhvaja* (ch. 20 of T. 278; Bendall, 1897–1902, 22.5–33.10; 213.3–216.5; 278.14–283.2; 291.10), the *Li shijian pin* chapter (離世間品; Detachment from the World) as *Lokottaraparivarta* (ch. 33 of T. 278; Bendall, 1897–1902, 151.13–152.19), and the *Jingxing pin* chapter (淨行品; Pure Practice) as *Gocarapariśuddhi* (ch. 7 of T. 278; Bendall, 1897–1902, 350.21, but the identification is questionable). Additional Indian texts that cite portions of the *Buddhāvataṃsaka* as independent texts include Vasubandhu's *Vyākhyāyukti* and its commentary, the *Vyākhyāyuktiṭīkā* (*Lokottaraparivarta* and *Tathāgatotpattisaṃbhava*), Kamalaśīla's *Bhāvanākrama* (*Gocarapariśuddhi*, *Daśabhūmika*, *Lokottaraparivarta*, *Tathāgatotpattisaṃbhava*, *Gaṇḍavyūha*, *Bhadracaryāpraṇidhāna*, and *Śraddhābalādhāna*), the same author's *Madhyamakāloka* (*Daśabhūmika*, *Lokottaraparivarta*, and *Gaṇḍavyūha*), and Bhavya's *Madhyamakahṛdayatarkajvālā* (*Daśabhūmika* and *Lokottaraparivarta*; Skilling & Saerji, 2013).

However, this does not imply that the larger *Buddhāvataṃsaka* was not known in India. A colophon to the recently discovered Sanskrit manuscript of the *Anantabuddhakṣetraguṇodbhāvana*, one of the component texts of the larger *Buddhāvataṃsaka*, proves that something known as the *Buddhāvataṃsaka Vaipulyapiṭaka* existed as a collection already in the Indian subcontinent, and thus the *Buddhāvataṃsaka* is not an East Asian innovation. The colophon states the following:

> From the *Buddhāvataṃsaka*, a/the *Vaipulyapiṭaka*, the seventeenth Mahāyānasūtra, "The proclamation of virtues of the infinite Tathāgatas' buddha-fields (*Anantabuddhakṣetraguṇodbhāvana*)" by name, is complete. (Tseng, 2010, 585n2)

Moreover, the colophon of a manuscript of the text appended to the end of the *Gaṇḍavyūha*, the *Samantabhadracaryānirdeśaparivarta*, reads as follows: "The *Samantabhadracaryānirdeśaparivarta*, 30th [in numerals 31st] portion of the 100,000 [*śloka*] book of the *Buddhāvataṃsaka Mahāvaipulyasūtra*, is complete" (Hori, 2012, 21n25; Matsuda, 1988, 18–19; as Matsuda notes, the text in question corresponds to the ch. 31 in the 60-fasc. Chinese translation). It is thus plausible that some form of a larger *Buddhāvataṃsaka* did indeed already exist in India, although its extent need not overlap precisely with the Chinese or Tibetan sources.

The role of Central Asia is very important in the spread of the *sūtra* eastward. The appearance of the images of Vairocana, the cosmic buddha, especially his representation with the *dharmadhātu* (cosmic sphere; Sorensen, 2004) might indicate that the *Buddhāvataṃsaka* was popular in Central Asia. In addition, the Sanskrit manuscripts of both Chinese translations of the larger *Buddhāvataṃsaka* are said to have been brought to China from Khotan. In reconstructing the process of genesis of the larger *Buddhāvataṃsaka*, the *sūtra* entitled *Fo shuo pusa benye jing* (佛說菩薩本業經; The Fundamental Activity of a Bodhisattva as Related by the Buddha; T. 281), translated by Zhi Qian (支謙) between 222 and 228 CE, might play an important role (Sakamoto Yukio, 1956; Nattier, 2005). The antecedents of several chapters in the 60-fascicle larger *Buddhāvataṃsaka* can be discerned in the work, namely, the *Rulai*

minghao pin; (The Names of the Tathāgata; ch. 3 in T. 278), *Rulai guangmingjue pin* (Enlightenment through the Light; ch. 5 of T. 278), *Jingxing pin*; Pure Practice; ch. 7 of T. 278), *Fo sheng Xumiding pin*; (The Ascent of Buddha to the Peak of Mount Sumeru; ch. 9 of T. 278), *Pusa yunji miaosheng dianshang shuojie pin*; (The Bodhisattvas Gather as Clouds in the Palace of the Glorious Victory and Recite Poems; ch. 10 of T. 278), and *Pusa shizhu pin*; (The Ten Abodes of the Bodhisattvas; ch. 11 of T. 278). The later translators of the larger *Buddhāvataṃsaka* – Buddhabhadra and Śikṣānanda – seem to have consulted this scripture, adopting some translations of names of bodhisattvas, even if they may have been erroneous. Three other early translations, the *Fo shuo dousha jing* (佛說兜沙經; T. 280; said to have been translated by Lokakṣema between 178 and 189 CE), the *Zhupusa qiu fo benye jing* (諸菩薩求佛本業經; Bodhisattvas Ask about the Fundamental Activity of the Buddha; T. 282; attributed to Nie Daozhen, late 3rd-early 4th cents.), and the *Pusa shizhu xingdao pin* (菩薩十住行道品; Practices of the Ten Stages of the Bodhisattvas; T. 283; attributed to Dharmarakṣa [265–309 CE]), can be fitted together to make a text that corresponds to the *Fo shuo pusa benye jing*. On the basis of a comparative study of the style and vocabulary of the three partially corresponding texts (T. 280, 282, 283), it can be determined, however, that the translators of the *Fo shuo dousha jing* and *Zhupusa qiu fo benye jing* were mistakenly identified; the entire reconstructed text should be attributed to Lokakṣema (Nattier, 2005). This reconstructed text must be a second recension of the *Fo shuo pusa benye jing* translated by Zhi Qian, which had been broken into three parts during transmission. This scripture preserved in two recensions can be called a proto- *Buddhāvataṃsaka* or a smaller *Buddhāvataṃsaka* (Nattier, 2007).

Sanskrit Texts

No Sanskrit version of a complete *Buddhāvataṃsaka* has survived, but its former existence is attested by the second patriarch of the Huayan school, Zhiyan (智儼; 602–668 CE), who reported that he had seen the Sanskrit manuscript in the Dacien (大慈恩) Monastery, and who recorded its chapter titles in Chinese translation. This manuscript, which Zhiyan explicitly indicates was on paper (T. 1870 [XLV] 588a14–18), must have been written in Central Asia, since in this period, paper was unknown in the Indian subcontinent (Hori, 2012, 20n24). Several portions of the larger text are extant in Sanskrit, the most well-known of which are the *Daśabhūmika* and the *Gaṇḍavyūha*. The Sanskrit prose text of the *Daśabhūmika* was first edited by J. Rahder (1926) and the verse section together with S. Susa (Rahder & Susa, 1931–1932). A better edition is the one by Kondō (1936), although it too is far from perfect (Yuyama, 1996, 269). The *Gaṇḍavyūha* was published by D.T. Suzuki and H. Idzumi (1934), and a new edition of the beginning of the text, consulting a number of manuscripts and collating the Tibetan and three Chinese translations, was published by Tamura Chijun (2006). L.O. Gómez published a critical edition of some verses from the *Nidānaparivarta* and *Samantagambīraśrīvimalaprabhā* section of *Gaṇḍavyūha* based on four Sanskrit manuscripts, the two Sanskrit editions, and the Peking and Lhasa Kanjurs (Gómez, 1967). Additional fragmentary Sanskrit materials have been published, for instance by S. Hori (2002; 2012), belonging to chapter 2 of the 60-fascicle version and corresponding to chapters 2, 3, and 4 in the 80-fascicle and Tibetan versions. Extremely useful for the study of this text is the careful collation table of versions in Sanada Ariyoshi (1959).

Some *Gaṇḍavyūha* fragments' folio numbering indicates that they belonged to larger sets, but it cannot be certain that this implies the existence of a complete *Buddhāvataṃsaka* (Hori, 2012, 20). For instance, the aforementioned *Anantabuddhakṣetraguṇodbhāvana* is found as one of 20 texts in a fragmentary manuscript located in the Potala Palace, Lhasa (Tseng, 2010, 557–593); the other 19 texts are not related to the *Buddhāvataṃsaka*. This text is the chapter Life Span in the larger *Buddhāvataṃsaka* (ch. 26 of the 60-fasc. Chinese version, *Shouming pin* [壽命品]; ch. 31 of the 80-fasc. version, *Shouliang pin* [壽量品]; and ch. 37 of the Tibetan version, *Tshe'i tshad*). Two freestanding Chinese translations also exist, *Xian wubian fotu gongde jing* (顯無邊佛土功德經; T. 289) and *Fo shuo jiaoliang yiqie fosha gongde jing* (佛說較量一切佛刹功德經; T. 290), as do two freestanding Tibetan translations, *De bzhin gshegs pa rnams kyi sangs rgyas gi yon tan brjod pa'i rnam grangs* (D 104/P 772) and *Bsam gyis mi khyab pa'i rgyal po'i mdo* (D 268/P 934).

The Sanskrit *Daśabhūmika* is translated into English by M. Honda (1968) and into modern Japanese by N. Aramaki (1974), who used Kondō's edition but translated it in an extremely interpretive manner making cross-references to the source text often very challenging. Some verses of the *Gaṇḍavyūha* are translated into English by L.O. Gómez (1967), while the whole text is translated into modern Japanese by Y. Kajiyama *et al.* (1994). It is important to note that the impact of the *Gaṇḍavyūha* is not by any means limited to textual materials. Most strikingly, the narrative of the *sūtra* provides the basis for the reliefs that adorn the Javanese monument of Borobudur.

The Larger *Buddhāvataṃsaka*

The 60-Fascicle Version

Our information on the first complete Sanskrit manuscript is associated with Zhi Faling (支法領), who is said to have traveled to Khotan (Yutian [于闐]; present-day Hetian Xian [和田縣]) in order to obtain a manuscript of this *sūtra*. The Khotanese people must have credited this scripture with some kind of special power as they refused to give this work to foreigners. Finally, Zhi Faling was able to persuade the king of Khotan to grant him a copy of this scripture, and thus he took a Sanskrit version of the larger *Buddhāvataṃsaka*, which consisted of 36,000 *ślokas* (Chn. *jie* [偈]) to the Chinese capital Chang'an. He went to Jiankang (建康), where he met the Kashmirian monk Buddhabhadra and asked him to translate the *sūtra*. On Apr 30, 418 CE, he began the work and completed it on Jul 6, 420. High-ranking officials provided financial support for the work. This translation, titled *Da fangguang fo huayan jing* (大方廣佛華嚴經), originally consisted of 50 fascicles, but by the start of the Tang period (618–907 CE), it was called the 60-fascicle *Huayan jing* (T. 278). Divākara (known as Rizhao [日照]), an Indian who arrived in the Chinese capital in 680 CE, brought with him the Sanskrit manuscript of the last chapter of the *Buddhāvataṃsaka*, the *Gaṇḍavyūha*. Using his Sanskrit manuscripts and eight others, he compared the Sanskrit texts with the translation by Buddhabhadra. He found that Buddhabhadra's version is incomplete, and several sections are missing. The missing parts were translated, and the last chapter was spread independently during the Tang dynasty (*Dafangguang fo huayan jing rufajie pin*; 大方廣佛華嚴經入法界品; T. 295). These parts were incorporated into the 60-fascicle translation in the Song period (T. 278 [IX] 765a3–767b28, 783b28–c15; on this 60-fascicle version, see Park, 2014; for a German translation, see Doi, 1978–1983).

The 80-Fascicle Version

The Sanskrit manuscript on which the second Chinese translation (T. 279) was based was also taken from Khotan by order of Empress Wu Zetian (武則天; 623/625–705 CE), a fervent supporter of Buddhism and especially of the Huayan school. Śikṣānanda brought the scripture to China and later settled in the eastern capital, Luoyang, where he began translating it. This Sanskrit manuscript was longer than the 60-fascicle *Huayan jing* by 9,000 *ślokas* and consisted of a total of 45,000 *ślokas*. The work commenced on May 1, 695, and was completed on Sep 6, 699, with a foreword written by the empress herself. This version has been translated into English in its entirety by T. Cleary (1984–1987). The chapter *Rulai chuxian pin* (如來出現品; Manifestation of the Tathāgata) of the 80-fascicle version was translated separately (Chien, 1993); the same chapter was translated from the Tibetan version into Japanese (Takasaki, 1975). Traditionally, the Chinese 80-fascicle version was translated into Tangut, Uighur, and Manchu languages, while the Tibetan version was translated into Mongolian.

The 40-Fascicle Version

The king of the southern Indian state of Oḍḍiyāna sent a Sanskrit manuscript that became the basis for the 40-fascicle *Huayan jing* to Emperor Dezong (德宗; r. 779–805 CE), which Prajña (744–810[?] CE) translated into Chinese (*Dafangguang fohuayan jing* [大方廣佛華嚴經]; T. 293). Prajña began the translation on Jul 13, 796, and completed it on Mar 16, 798. He was assisted by the fourth patriarch of the Huayan school, Chengguan (澄觀; 738–839 CE). This version contains all the parts that are missing from the last chapter of the 60- and 80-fascicle recensions.

Of particular interest in this regard is the last fascicle, which includes the *Puxian guangdayuanwang qingjing jie* (普賢廣大願王清淨偈; The Vow of Samantabhadra; Skt. *Bhadracarīpraṇidhāna*). This text was first translated by Buddhabhadra as a separate work under the title *Wenshu shili fayuan jing* (文殊師利發願經; T. 296) and is shorter than later translations (44 verses in contrast to 62 of the other versions). The second translation was prepared by the famous tantric master Amoghavajra (705–774 CE) under the title *Puxian pusa xingyuan zan* (普賢菩薩行願贊; T. 297). The Sanskrit text has 62 verses and has attracted the attention of scholars from very early on (Watanabe Kaigyoku, 1912; Shiraishi, 1962). The text is also available in Khotanese (Asmussen, 1961) and was likewise translated into Uighur (Ishihama Juntarō, 1950). A recent discovery at the Kongōji (金剛寺) in Japan is of a phonetic transcription of the text in Sanskrit written in Chinese

Sanskrit written in Chinese

characters (14 verses), close to the text represented by Amoghavajra's translation. Although the title is *Puxian pusa xingyuan zan* (普賢菩薩行願贊), it bears no resemblance to the earlier known text of that title – most likely the text was originally produced in China (Hayashidera Shoshun, 2012). The motivation for this phonetic transcription was to enable those who did not read Sanskrit to nevertheless pronounce the text in that language through the medium of its transcription in Chinese characters.

The Tibetan Translation

The Tibetan translation, titled *Sangs rgyas phal po che zhes bya ba shin tu rgyas pa chen po'i mdo*, was prepared in the first quarter of the 9th century by two Indian masters, Jinamitra and Surendrabodhi, as well as the Tibetan master Ye shes sde. The colophon of the Derge edition mentions two lines of tradition of the *Buddhāvataṃsaka*: one is the Chinese, the other the Indian.

In the Chinese line of tradition, the teaching was transmitted from the Buddha to Mañjuśrī and then on to Nāgārjuna. Buddhabhadra (Paṇḍita Byang chub bzang po) and Śikṣānanda (Paṇḍita Dga' ba) subsequently translated it into Chinese. The text was later passed on by the Chinese Thu thu zhun hwa shang, and then Dbus pa blo gsal Sangs rgyas 'bum, a 13th-century scholar and polymath of the snar thang tradition of the Bka' gdams tradition, obtained the teaching from the Chinese Gying ju hwa shang.

The Indian line of tradition is as follows: from the Buddha to Nāgārjuna, then to Āryadeva, and later to 'Jam dpal grags pa (Mañjuśrīkīrti), who is said to have been the eighth king of Shambala and the second Panchen Lama. The teaching was received by a contemporary of Milarepa's (1040–1123), Bari lo tsaba (1040–1111), the second throne holder of the Sakya tradition, from Rdo rje gdan pa, and later by the great Sakya master Sa chen Kun dga' snying po (1092–1158) from Mchims brtson seng, who was Bari lo tsaba's disciple. According to the tradition, there must have been a Tibetan translation of the Chinese version, but if it actually existed, it has not survived.

The number of chapters of the three versions of the larger *Buddhāvataṃsaka* differs: the 60-fascicle Chinese version consists of 34 chapters, the 80-fascicle Chinese translation contains 39, and the Tibetan translation has 45. There are two reasons for this discrepancy. First, new chapters were added to the later versions. The *Ten Concentrations* chapter can only be found in the 80-fascicle (*shiding pin* [十定品]) and Tibetan texts (*ting nge 'dzin bcu*), while chapter 11 of the Tibetan translation, *The Garlands of Tathāgata* (*de bzhin gshegs pa phal po che*), and chapter 32, *The Speech by Samantabhadra* (*kun tu bzang pos bstan pa*), are found only in the Tibetan version. Second, the text is divided into chapters in different ways, and thus the chapter titles also differ. Chapter 2 of the 60-fascicle Chinese text, *Vairocana Buddha* (*lushena fo pin* [盧舍那佛品]), for instance, is divided into five separate chapters in the 80-fascicle version, whereas into nine in the Tibetan version.

Independently Circulated Scriptures of the *Buddhāvataṃsaka*

Before the compilation of the larger *Buddhāvataṃsaka*, some chapters were translated as independent *sūtras*, and these can shed some light on the formation of the larger version. As mentioned above, the two versions of the *sūtra* entitled *Fo shuo pusa benye jing* could be an intermediate stage of the formation of the larger *Buddhāvataṃsaka*. In terms of textual history, the *Fo shuo rulai xingxian jing* (佛說如來興顯經; The Appearance of Tathāgata as Related by the Buddha; **Tathāgatotapattisaṃbhavanirdeśa*), translated by Dharmarakṣa in 292 CE, reveals some features of the process. According to the title, it should correspond to the chapters *Baowangrulai xingqi pin* (寶王如來性起品; ch. 32) of the 60-fascicle version, *Rulai chuxian pin* (如來出現品; ch. 37) of the 80-fascicle version and *De bzhin gshegs pa skye ba 'byung ba bstan pa* (ch. 43) of the Tibetan version. However, the second half of Dharmarakṣa's translation corresponds to the chapter *Shiren pin* (十忍品; Ten Acceptances; ch. 24 of the 60-fasc. version; ch. 29 of the 80-fasc. version; ch. 35 of the Tibetan version), which precedes the chapter *Rulai chuxian pin* (如來出現品; Manifestation of Tathāgata), and several other chapters are inserted between them. This chapter must have been quite popular during the Tang dynasty, as the version of the the 60-fascicle *sūtra* was cirulated as an independent scripture under the title *Dafangguang rulai xingqi weimizang jing* (大方廣如來性起微密藏經; Kimura, 1999). The importance of the *Daśabhūmika* is demonstrated by the fact that, before and after the appearance of the larger *Buddhāvataṃsaka*, it was translated several times. Dharmarakṣa translated it under the title *Jianbei yiqie zhi de jing* (漸備一切智德經; Gradually Obtaining the Virtue of Omniscience; T. 285) in 297 CE, and Śīladharma translated it in 799

CE under the title *Foshuo shidi jing* (佛說十地經; The Ten Stages; T. 287). Kumārajīva and Buddhayaśas translated it under the title *Shizhu jing* (十住經; The Ten Abodes; T. 286).

Among the texts that were independently circulated, some scriptures do not correspond to any of the extant portions of the larger *Buddhāvataṃsaka* but are associated with its content, and the Chinese catalogues arranged them under the rubric of Huayan-related scripture. Fazang wrote that two *sūtra*s had originally been found in the Sanskrit version of the *Buddhāvataṃsaka*, but the Chinese translations did not include them as they lacked their own chapter titles. One of them, the *Tathāgataguṇajñānācintyaviṣayāvatāranirdeśa* has three Chinese translations, *Du zhufo jingjie zhiguangyan jing* (度諸佛境界智光嚴經; T. 302; trans. unknown), *Fo huayan ru rulai de zhi busiyi jingjie jing* (佛華嚴入如來德智不思議境界經; T. 303; translated by Jñānagupta between 581 and 601 CE), and *Dafangguang ru rulai zhi de busiyi jing* (大方廣入如來智德不思議經; T. 304; translated by Śikṣānanda between 652 and 710 CE), and one Tibetan translation, *De bzhin gshegs pa'i yon tan dang ye shes bsam gyis mi khyab pa'i yul la 'jug pa bstan pa zhes bya ba theg pa chen po'i mdo* (D 185/P 852) by Jñānagarbha and Ye shes sde. The other scripture, *Da fangguang fo huayan jing xiuci fen* (大方廣佛華嚴經修慈分; Section on the Cultivation of Loving Kindness of the *Buddhāvataṃsakamahāvaipulyasūtra*; T. 306), was translated by the Khotanese monk *Devendraprajña (提雲般若) in 691 CE. An earlier recension of this *sūtra*, *Maitrībhāvanāprakaraṇa*, was preserved as chapter 3 of the indigenous Khotanese Buddhist work the *Book of Zambasta*, dated to the mid-5th century CE (Duan, 2007; Martini, 2011). However, Fazang noted that the *Śraddhābalādhānāvatāramudrā*, translated into Chinese by Dharmaruci in 504 CE as *Xinli ruyin famen jing* (信力入印法門經; T. 305) and into Tibetan as *Dad pa'i stobs bskyed pa la 'jug pa'i phyag rgya zhes bya ba theg pa chen po'i mdo* (P 867) by Surendrabodhi and Ye shes sde, was not found in the Sanskrit version of the *Buddhāvataṃsaka*.

Commentaries

No Indian commentary to any version of the larger *Buddhāvataṃsaka* collection has survived, nor is it certain whether one ever existed. Two Indian commentaries relevant to the *Buddhāvataṃsaka* have been preserved, however, although both discuss only one chapter of the *sūtra*, the *Daśabhūmika*. The first is the **Daśabhūmivibhāṣā* (*Shizhu piposha lun*; 十住毗婆沙論; T. 1521), which, according to tradition, was written by Nāgārjuna and which comments on the first two of the ten stages. The second is the **Daśabhūmivyākhyāna* (*'Phags pa sa bcu'i rnam par bshad pa*; D 3993/ P 5494; *Shidi jing lun* [十地經論]; T. 1522), which is attributed to Vasubandhu (400–480 CE) and which expounds on the entire *sūtra*. A subcommentary on the latter is Sūryasiddhi's *Daśabhūmivyākhyānavyākhyāna* (D 3998/ P 5499). An additional short commentary preserved only in Tibetan is the *'Phags pa sa bcu'i mdo sde'i gleng gzhi'i bshad pa* (D 3999/P 5500). The text appended to the *Gaṇḍavyūha*, the *Samantabhadracaryāpraṇidhāna*, has been subject to a large number of commentaries (D 4011–4015/P 5512–5516).

The *Buddhāvataṃsakasūtra* was a very influential text in East Asian Buddhism. A Buddhist school was established that regarded this *sūtra* as the highest teaching of the Buddha. This school was called Huayan (華嚴) in China, Hwaŏm in Korea, and Kegon in Japan. The scholar-monks of this school wrote a great deal of exegetical works on this *sūtra* that explained the text sentence by sentence or summarized its central concepts in treatises. Here, only those seminal works that explain the text sentence by sentence are mentioned. The second patriarch of the Huayan school, Zhiyan (智儼; 602–668), who proposed several new tenets based on his understanding of the *Buddhāvataṃsakasūtra*, wrote his commentary on the 60-fascicle Chinese translation, the *Da fangguang fo huayan jing souxuan fenqi tongzhi fanggui* (大方廣佛華嚴經搜玄分齊通智方軌; The Mahāvaipulya Buddhāvataṃasaka-sūtra: A System for Plumbing Its Mysteries and a Model for Its Thorough Understanding T. 1732). The third patriarch, Fazang (法藏; 643–712), the de facto founder of the school who formulated the system of Huayan thought, authored a commentary on the 60-fascicle translation, the *Huayan jing tanxuan ji* (華嚴經探玄記; Exploring the Mysteries of the Avataṃsaka-sūtra; T. 1733). He also assisted the second translation of the larger *Buddhāvataṃsakasūtra* and started to write his commentary on the 80-fascicle but died before he could complete it. His disciple, Huiyuan (慧苑; 673–743), finished his work; it has been preserved only partly under the title *Xu huayan jing lüeshu kanding ji* (續華嚴經略疏刊定記; A Record of Editorial Decisions Made in Continuing [Fazang's] Short Commentary on the Avataṃsaka-sūtra; vol. III, no. 221). This commentary includes some references to the original Sanskrit words of the *sūtra*. The lay

hermit Li Tongxuan (李通玄; 635–730) wrote a commentary on the 80-fascicle version, the *Xin Huayan jing lun* (新華嚴經論; A Commentary on the New Avataṃsaka-sūtra; T. 1739), which contains many innovative concepts on the meaning of the *Buddhāvataṃsakasūtra*. The fifth patriarch, Chengguan (澄觀; 738–839), was called the commentator (*shuzhu* [疏主]), as his main works are his commentary on the 80-fascicle translation, the *Da fangguang fo huayan jing shu* (大方廣佛華嚴經疏 ; A Commentary on the Mahāvaipulya Buddhāvataṃsaka-sūtra; T. 1735), and the subcommentary, the *Da fangguang fo huayan jing suishu yanyi chao* (大方廣佛華嚴經隨疏演義鈔; A Record of the Explanation on the Meaning of the Commentary on the Mahāvaipulya Buddhāvataṃsaka-sūtra; T. 1736). These two works, which include references to more than three hundred Buddhist and non-Buddhist works, became the authoritative commentaries on the *Buddhāvataṃsakasūtra* in East Asia.

IMRE HAMAR

Dhāraṇī Sūtras

Dhāraṇī literature is one of the least-studied streams of Buddhist scriptural traditions. While the meaning of *dhāraṇī* is complex and context sensitive, those texts called *dhāraṇī* scriptures can be defined in most cases as works centered on a *dhāraṇī* spell. This diverse body of incantation literature has existed for some two millennia, and practices related to it have been popular and widespread up to the present time. Although several *dhāraṇī* scriptures and numerous individual *dhāraṇī* spells survive in Central, East, and Southeast Asia in Sanskrit, the present article deals mainly with *dhāraṇī* literature in its native South Asian contexts. Our sources have been preserved almost exclusively in Sanskrit manuscripts, and finds of *dhāraṇī* inscriptions have been rare on the subcontinent.

The Definitions of *Dhāraṇī*

Dhāraṇī is an exclusively Buddhist term, the primary literary meaning of which is not completely clear. In the extended sense, *dhāraṇī* has most often been interpreted as "spell." However, its semantic range is wider than the sphere of incantations, with a further principal interpretation as "memory" or "mnemonic device." Especially in earlier sources, *dhāraṇī* was a mnemonics-related term in most cases, a use that appears to have faded away with the course of time. At least synchronically speaking, *dhāraṇī* is decidedly polysemic and context sensitive (Davidson, 2009). In the present literary context, the "spell" interpretation of *dhāraṇī* as used here describes a reasonably distinct scriptural body. However, *dhāraṇī* is often appositional or interchangeable with two other closely related words – mantra and *vidyā*, which also refer to a spell.

The Definitions of *Dhāraṇī* Scripture

To determine the scope of *dhāraṇī* scripture, it is helpful to look for clarifications in the Chinese context. Here we find that within this category fall "those Buddhist texts that center on the presentation and means to actualize the incantations known as *dhāraṇī*s" (Copp, 2011, 176). This definition seems to be valid for South Asia as well and, recalling the fluidity of the usage of *dhāraṇī*, mantra, and *vidyā*, we find that *dhāraṇī* texts inevitably belong to a larger class of what may be labeled Buddhist spell or incantation literature. Simultaneously, there is no uniform name for pieces of *dhāraṇī* literature in South Asia: some are called *dhāraṇī*; others are called *sūtra* (exposition), *vidyā* (spell), *kalpa* (ritual manual), or *pratyaṅgirā* (countermagic). Often, more than one of the previously mentioned words are used in a particular title, and sometimes *rāja*/*rājñī* (king/queen) is appended to the whole heading to express higher rank and authority. Occasionally, a single text can be referred to by various titles – a phenomenon quite common in South Asia. Thus, *dhāraṇī* literature is a heterogeneous body with respect to titles, and we have to classify a wider range of scriptures of various designation under the umbrella of *dhāraṇī*. *Dhāraṇī* texts vary in length and degree of compositeness. Such scriptures stretch from a few dozen lines to several hundred, written in prose or prosimetric style and may contain elements such as a frame story, *dhāraṇī*(s)/mantra(s)/*vidyā*(s), narrative(s), list(s) of benefits or other components, and instruction(s) for use.

The Language of *Dhāraṇī*s

Dhāraṇī spells are regarded as uttered by the Buddha in the majority of cases. They have a special prose language sharing many features with mantras. A main difference between the two appears to be quantitative: *dhāraṇī*s are usually longer than mantras. These incantations are mostly divided into smaller sections (*pada*) that may contain salutations, invocations, or supplications; vocatives predominantly in the feminine; short sentences with imperatives; various mantras or mantric formulas; distinctive and intensifying alliterations; exhaustions and augmentations; and further miscellaneous sections, which sometimes convey onomatopoeia or musicality (Castro-Sanchez, 2011, 70–75). It is a key characteristic of these spells as found in our manuscript evidence that they are often personalized,

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

with the donor's or beneficiary's name inserted into them at particular points. The language of *dhāraṇīs* includes both meaningful and meaningless contents. Setting aside seed syllables (*bīja*), which are at least lexically plainly unintelligible (*āḥ*, *hrīḥ*, *phaṭ*, etc.), the occurrence of such, apparently meaningless, words (*mili mili*, *culu culu*, and the like) has raised the possibility that some may be connected to non-Sanskritic traditions, by the influence of which features of the Dravidian language family entered these otherwise linguistically Indo-European Buddhist incantations (Bernhard, 1967).

The Origins of *Dhāraṇī* Literature

The earliest material evidence for the presence of Buddhist spells in South Asia dates to the 1st century CE; Gandharan manuscript fragments of an incantation (*vidyā*) expounded by the *nāga* king Manasvin have been recently discovered (Strauch, 2014). There are a number of further, seemingly early sources that may help to cast more light on the beginnings of Buddhist spell practice and literature: references to the employment of mantras are present, for example, in various Vinayas, and *dhāraṇīs* are included in the *Lotus Sūtra* (*Saddharmapuṇḍarīka*) and the *Śārdūlakarṇāvadāna* (Davidson, 2009, 2014a). Probably the earliest *dhāraṇī* text in Chinese translation comes from the late 2nd century (Harrison & Coblin, 1999). While we can only speculate about the period before the 1st century CE, the rise of *dhāraṇī* literature cannot be separated from another closely related phenomenon within Buddhism, namely, providing both spiritual and worldly protection (Skt. *paritrā*; Pal. *paritta*; or Skt. *rakṣā*; Pal. *rakkhā*) by various means. Pali *paritta* collections have been in use up to the present time in Theravāda lands, and texts of other mainstream Buddhist schools related to magical practices are also likely to have once been grouped together, as there are references to a *Dhāraṇīpiṭaka* or *Mantrapiṭaka* of the Dharmaguptakas and Mahāsāṃghikas, and a *Vidyādharapiṭaka* of the Mahāsāṃghikas in some sources (Skilling, 1992, 114–115), although recent research suggests that these may have been imaginary containers (Davidson, 2014b). The ancient roots of *dhāraṇīs* are still obscure; their emergence may partly be connected to indigenous mantric lore that found its way first to the *Atharvaveda* and then to both early Brahmanic and Buddhist spell literatures.

The Affiliations of *Dhāraṇī* Literature

The establishment of a conclusive classification for this literature has posed problems since the beginning of modern Buddhist Studies in the 1840s, as it is not completely straightforward how *dhāraṇī* scriptures should be positioned in the history of South Asian Buddhism. A fundamental difficulty concerns the loose boundaries separating various types of apotropaic cultures, namely, the protective recitation of certain *suttas*/*sūtras*, including *paritta* (safeguard), *mahāsūtra* (great *sūtra*), *svastigāthā* (verse of welfare), and *rakṣā* (protection) (Skilling, 1992), and the employment of specific magical formulas, *vidyā*, mantra, and *dhāraṇī*. This situation is further complicated by the prevailing problem that, in the course of time, the position of such practices, especially that of *dhāraṇīs*, appears to have been fluid, as they were adopted by different streams of Buddhism. Such variations seem to be reflected in a number of *dhāraṇī* manuscript colophons, which sometimes do refer to Mahāyāna and in a few instances also have tantric allusions (Hidas, 2012, 77–87). It is noteworthy that except in colophons, Mahāyāna is rarely mentioned, and there is little that could be described as Mahāyāna in many of these scriptures. From a general point of view, it appears then that the use of texts and formulas for magical-ritualistic purposes has been present in a wide variety of Buddhist texts. With the exception of the Theravāda, which does not embrace explicit magical means at least at the canonical level, there is evidence for the use of incantations in some mainstream schools: Sarvāstivāda, Mūlasarvāstivāda, Dharmaguptaka, and Mahāsāṃghika (Skilling, 1992). Actual *dhāraṇīs*, however, appear to have risen to preeminence in a Mahāyāna context. *Dhāraṇīs* gained further palpable popularity within tantric Buddhism, and were later classified by theorists in the *kriyātantra* (ritual tantra) category (Dalton, 2005), although this assignment is to a certain extent artificial and automatic. It seems that *dhāraṇī* practices contributed to the rise of Tantrism and that they represent the earliest form of esoteric Buddhism. The classification of *dhāraṇī* scriptures as *sūtra* or *tantra* is much varied and sometimes controversial within Tibetan and Chinese textual systems, showing that the positioning of these scriptures was problematic in earlier times as well.

Dhāraṇī Manuscripts

Dhāraṇī scriptures survive in manuscript form in South Asia, though most remain unpublished. The birchbark, palm-leaf, and paper codices originate almost exclusively from the northern parts of the subcontinent, most being preserved in Nepal. On the basis of catalogues, their number can be estimated to be over 1,300. The most common single category, of more than 300, transmits the *Pañcarakṣā* (Five Protections) collection, and numerous codices contain the *Dhāraṇīsaṃgraha* (*Dhāraṇī* Collection) and *Saptavāra* (Seven Days) compendiums. Among individual texts the *Aparimitāyuḥsūtra, Grahamātṛkādhāraṇī, Sitātapatrā/Mahāpratyaṅgirā* and *Vasudhārādhāraṇī* prominently outnumber all others.

Dhāraṇī Scriptures

The calculation of the number of *dhāraṇī* scriptures in South Asia is not without difficulties, as the number of surviving individual *dhāraṇīs* is several times greater than those *dhāraṇīs* with a specific associated scripture. It is not known whether these spells have actually circulated without such scriptures, or whether these texts have been lost in the original language in the course of time. A thorough comparison of surviving manuscripts with Chinese and Tibetan translations would throw more light on this question. The *Mañjuśriyamūlakalpa* refers to a fabulous "many-hundred-thousand-ten-million" *dhāraṇīs*, but there is solid evidence for the existence of more than 350 incantations in the *Dhāraṇīsaṃgraha* collections. What may be called "actual" *dhāraṇī* scriptures amount to a much smaller number – about 30 survive in South Asia.

Before enumerating actual *dhāraṇī* scriptures, two further closely related groups should be mentioned. The first consists of texts that refer to *dhāraṇī* but do not include a *dhāraṇī* spell. These scriptures usually mention *dhāraṇī* in the context of mnemonics as part of the bodhisattva practice, and it is here that we have the highest degree of fluidity regarding the meaning of this word. Such texts include the *Daśabhūmika, Lalitavistara*, Prajñāpāramitā literature, *Rāṣṭrapālaparipṛcchā, Samādhirāja, Sukhāvatīvyūha*, and *Vimalakīrtinirdeśa*. In these scriptures, *dhāraṇī* does not seem to occur as an incantation but rather as a means of remembrance, understanding, and contemplation (Braarvig, 1985).

The second group consists of scriptures that do incorporate one or more *dhāraṇī* spells but are not centered on them. Such texts include the *Gaṇḍavyūha, Kāraṇḍavyūha, Karuṇāpuṇḍarīka, Laṅkāvatāra, Mañjuśriyamūlakalpa*, Prajñāpāramitā literature, *Śārdūlakarṇāvadāna, Saddharmapuṇḍarīka, Sarvadurgatipariśodhana, Sarvatathāgatatattvasaṃgraha*, and *Suvarṇabhāsottama*. In some cases, such as chapter 21 of the *Saddharmapuṇḍarīka* or chapter 9 of the *Laṅkāvatāra*, it is not clear whether the *dhāraṇī* sections have been part of these scriptures from the earliest times or are later additions.

Texts centered on a *dhāraṇī* spell may be considered actual *dhāraṇī* scriptures. These focus on a specific incantation, its origins, benefits, and ways of employment. However, since there is considerable fluidity regarding the use of the terms *vidyā*, mantra, and *dhāraṇī*, the name of this group could perhaps be extended to "spell scriptures." Such scriptures include the *Amoghapāśa, Aparimitāyus, Bodhigarbhālaṅkāralakṣa, Dhvajāgrakeyūra, Ekādaśamukha, Gaṇapati, Grahamātṛkā, Hayagrīva, Hiraṇyavatī, Mahāmaṇivipulavimāna, Mahāmantrānusāriṇī, Mahāmāyūrī, Mahāpratisarā, Mahāsāhasrapramardanī, Mahāśītavatī, Mārīcī, Megha, Mekhalā, Nārāyaṇaparipṛcchā/Mahāmāyāvijayavāhinī, Parṇaśavarī/Prajñāpāramitā, Ratnaketu, Ṣaṇmukhī, Sarvatathāgatādhiṣṭhāna, Sitātapatrā/Mahāpratyaṅgirā, Uṣṇīṣavijayā, Vajravidāraṇī*, and *Vasudhārā*. It should be noted that some of these actual *dhāraṇī* scriptures – namely the *Bodhigarbhālaṅkāralakṣa, Ekādaśamukha, Gaṇapati, Uṣṇīṣavijayā*, and *Vajravidāraṇī* – are available at the moment only in a concise form in South Asia, containing the essence (*hṛdaya*) of a longer text, said by tradition to have existed at some time in the (perhaps mythical) past.

There are also texts that bear most characteristics of an actual *dhāraṇī* scripture but do not contain spells. Such texts include the *Bhaiṣajyagurusūtra* and the *Śrīmahādevīvyākaraṇa*. Instead of an incantation, these scriptures incorporate various sorts of enumerations like vows or praises, which seem to have functions similar to those of the spells – namely it is claimed that their recitation, usually along with the whole scripture, brings about desired effects.

Some texts titled *dhāraṇī* do not bear the characteristics of an actual *dhāraṇī* scripture. These include the *Avikalpapraveśadhāraṇī/Nirvikalpapraveśadhāraṇī* and the unpublished *Bhīmasenadhāraṇī* (e.g. Cambridge Ms. Add. 1359).

Lastly, another group of texts consists of ancillary works connected to various *dhāraṇī* traditions.

These include texts called *vidhi* (manual), *stotra* (praise), and *sādhana* (worship). Many of these works are related to the phase in South Asian Buddhism in which these spells had already been deified (see below).

A Brief Description of *Dhāraṇī* Scriptures

The settings and key characters of *dhāraṇī* scriptures vary considerably from mundane to celestial and show the striking comprehensiveness of this genre. There are several pieces of *dhāraṇī* literature in which the place of teaching is a historical North Indian city and the protagonists are prominent followers of the Buddha. The *Gaṇapatihṛdaya* is taught by the Buddha to his closest disciple Ānanda in Rājagṛha. Beside the spell essence (*hṛdaya*), this text contains details of benefits and ritual instructions. The *Mahāmantrānusāriṇīsūtra* has come down to us in manuscripts preserving two different places of teaching: one in Vaiśālī and the other in Rājagṛha. The lord gives instructions to Ānanda to go to Vaiśālī hit by a devastating earthquake and storm and save the city from the resulting calamities by the recitation of various spells and verses. The *Mahāsāhasrapramardanasūtra* is taught by the lord in Rājagṛha. This scripture is another account of the alleviation of calamities in Vaiśālī. Besides the Buddha, the main characters are the guardian deities of the directions called the Four Great Kings who offer protection. This text consists of *dhāraṇīs*, verses, various lists of deities, *yakṣas* and mountains, enumerations of benefits, and a number of ritual instructions in its latter part. The *Mahāmāyūrīvidyārājñī* is expounded by the Buddha in Śrāvastī, where Ānanda requests him to provide help for a monk suffering from a snakebite. What follows is an extensive teaching including various spells, long lists of malevolent beings, *yakṣas*, *nāgas*, herbs, rivers, mountains, constellations, *ṛṣis*, poisons, trees, and ritual instructions at the end. The *Mekhalādhāraṇī* is taught by the lord to Ānanda in Kapilavastu after his son Rāhula informs him about being disturbed by malevolent *rākṣasīs*. This fragmentary scripture contains some spells, references to benefits, and brief ritual instructions. The *Bodhigarbhālaṅkāralakṣadhāraṇī* is likely to be an extract of a longer version in its surviving form. It appears to have been explicated by the Buddha to Ānanda and consists of a spell section followed by a list of benefits. The *dhāraṇī* is prescribed to be copied and deposited in a *caitya* and to be worshipped thereafter. The *Mahāśītavatī* is taught by the lord to Rāhula in Rājagṛha. It provides protection from *graha* demons and all sorts of further dangers. This scripture includes a *dhāraṇī*, lists of benefits, and instructions for use. The *Mārīcīdhāraṇī* is revealed by the Buddha to an assembly of monks in Śrāvastī. It expounds the *dhāraṇī* of the goddess Mārīcī, including an enumeration of dangers from which protection is provided. The *Ratnaketuparivarta* or *Mahāsaṃnipātaratnaketudhāraṇīsūtra* is taught by the lord in Rājagṛha. It is a long and complex scripture that consists of many chapters and includes various spells and astrological references. It is composed around a story of Māra's resistance against the Tathāgata. The *Vasudhārādhāraṇī* is expounded by the Buddha in Kauśāmbī. A layman called Sucandra requests a sermon from the lord so that beings may become prosperous. Then the Buddha teaches this *dhāraṇī* along with enumerations of benefits and ritual instructions for use. Having received this spell, Sucandra turns wealthy. This scripture concludes with a conversation between the lord and Ānanda. It is notable that manuscripts of this text were preserved in a Jaina library as well (Jaini, 1968).

In another set of *dhāraṇī* scriptures the place of teaching or the main characters and in many cases both of these belong to celestial spheres. The *Aparimitāyuḥsūtra* contains the spell of Aparimitāyus Buddha, and it is taught by the lord to the bodhisattva Mañjuśrī in Śrāvastī. Those who recite, copy, or worship this text are granted longevity and will be reborn in Aparimitāyus' buddha field. It is also stated that they will be reborn in Amitābha's blissful Sukhāvatī land. Further benefits include reverence by various buddhas and the attainment of the highest perfect awakening. The *Ekādaśamukhahṛdaya* is expounded by the bodhisattva Avalokiteśvara in the presence of the lord in Śrāvastī. This spell provides ten main benefits and various further ones. There are some mantras listed connected to a ritual to be performed. The *Mahāpratisarāmahāvidyārājñī* consists of two parts (*kalpa*), and it is taught by the Buddha to the great god Brahmā on Mount Vajrameru. In an earlier version of this scripture the place of teaching is likely to have been the Gṛdhrakūṭa near Rājagṛha. The first and main part includes separate *dhāraṇī* and *mantrapada* sections, nine narratives, enumerations of benefits, and ritual instructions for the preparation of an amulet. The second part includes lists of further benefits, another *dhāraṇī*, and ritual instructions for healing and protection. The

Amoghapāśahṛdayadhāraṇī contains the first part of the voluminous *Amoghapāśakalparāja*. The setting is Mount Potalaka, where the bodhisattva Avalokiteśvara requests permission from the Buddha to recite this spell. As it is stated in various references, including 28 blessings, this incantation provides general protection and all sorts of benefits. After the *dhāraṇī* essence (*hṛdaya*), a number of ritual instructions are given. In the *Sarvatathāgatādhiṣṭhānavyūhasūtra*, the place of teaching is again Mount Potalaka, where the lord dwells with an assembly of *bhikṣus*, bodhisattvas, and other beings. The bodhisattva Mañjuśrī asks Avalokiteśvara to request a sermon from the Buddha for the benefit of all beings. This scripture includes a number of *dhāraṇīs* and *mantrapadas* along with instructions for use and lists of benefits. The *Ṣaṇmukhīdhāraṇī* is taught by the lord to an assembly of bodhisattvas above the prominent celestial Śuddhāvāsa world realm. This scripture consists of a list of benefits, a *dhāraṇī*, and brief instructions for use. A central benefit of the employment of this spell is promised to be the attainment of the highest perfect awakening. The *Uṣṇīṣavijayādhāraṇī* has been published from a Nepalese manuscript that contains only the *dhāraṇī* section. On the basis of unpublished Sanskrit witnesses this teaching is given by Amitāyus to Avalokiteśvara in the land of Sukhāvatī.

There is a case when the *dhāraṇī* is revealed to mythical beings in their own dwelling place. The *Meghasūtra* is taught by the Buddha in the mansion of two *nāga* kings, Nanda and Upananda, to an assembly including hundreds of *nāgas*. After worship, a *nāga* king requests a sermon from the lord so that the troubles of these mythical serpent beings may subside and they may provide enough precipitation. Then the Buddha teaches them the practice of friendliness and gives two *dhāraṇīs* and a list of names of tathāgatas to be recited. Following these sections, ritual instructions for rainmaking are disclosed.

In a few instances *dhāraṇī* scriptures are infused with some *vajra* flavor. In the *Grahamātṛkādhāraṇī*, the lord stays in Aḍakavatī, the mythical capital of *yakṣas*, with a great assembly. When the powerful deity Vajrapāṇi requests a sermon from the Buddha so that beings can be protected from *graha* demons, the lord teaches a *maṇḍala* ritual to worship the *grahas*, and a *dhāraṇī* is given thereafter. The *Vajravidāraṇānāmadhāraṇīhṛdayopahṛdayamūlasūtra* is taught by Vajrapāṇi in the presence of the Buddha among the people called *vajras*. This scripture includes a description of benefits and a spell section. Sometimes *dhāraṇīs* are taught to the highest-ranking gods. The *Dhvajāgrakeyūradhāraṇī* is expounded by the Buddha in the abode of the Trāyastriṃśat gods. Their chief, Śakra requests a sermon from the lord after having been defeated by the *asuras*. Following the *dhāraṇī*, references to benefits and instructions for use are given. The *Nārāyaṇaparipṛcchā* or *Mahāmāyāvijayavāhinīdhāraṇī* is taught by the Buddha on Mount Svarṇaśṛṅga in the mansion of Vaiśravaṇa. The eminent deity Nārāyaṇa requests a sermon from the lord so that beings may become invincible in battle. Then the Buddha gives a *dhāraṇī* along with instructions for use, including the visualization of the personified "Queen of Spells" (*vidyārājñī*). The *Sarvatathāgatoṣṇīṣasitātapatrāparājitāpratyaṅgirāmahāvidyārājñī* is expounded by the lord in the abode of the Trāyastriṃśat gods. This scripture includes spell sections, enumerations of benefits, and instructions for use.

Finally, a couple of *dhāraṇīs* survive without a setting or with no context specified. The *Parṇaśavarīdhāraṇī* is identical to the *Prajñāpāramitādhāraṇī*. The *Hayagrīvavidyā* is given without a frame story. It contains a spell and instructions for use. Only the latter portion of the *Hiraṇyavatīdhāraṇī* remains. The preserved folio with the colophon contains ritual instructions for the recollection of this spell which results in the appeasement of malevolent beings and the establishment of safeguard by various bodhisattvas and deities. The *Mahāmaṇivipulavimānaviśvasupratiṣṭhitaguhyaparamarahasyakalparājadhāraṇī* survives only in fragmentary form. The preserved folios contain ritual instructions including the use of mantras and brief references to various benefits.

Dhāraṇī Collections

Some *dhāraṇī* scriptures and numerous *dhāraṇī* spells were incorporated into collections over the centuries. There are three influential compendiums in South Asia: *Pañcarakṣā*, *Saptavāra*, and *Dhāraṇīsaṃgraha*.

The *Pañcarakṣā* (Five Protections) consists of the *sMahāmantrānusāriṇī*, and *Mahāśītavatī*. The earliest evidence for texts grouped together as *gzungs chen po lnga la* (Five Great *Dhāraṇī*) comes from the Tibetan *Ldan dkar ma* and *'Phang thang ma* catalogues around 800 CE, but this compendium is somewhat different from the surviving Sanskrit collection, which is preserved in manuscripts dating back to the 11th century (Skilling, 1992).

The *Saptavāra* (Seven Days) incorporates the *Vasudhārā*, *Vajravidāraṇā*, *Gaṇapatihṛdaya*, *Uṣṇīṣavijayā*, *Parṇaśavarī/Prajñāpāramitā*, *Mārīcī*, and *Grahamātṛkā*. This collection associates each *dhāraṇī* with a specific day of the week, a tradition going back to at least the 16th century in Nepal (Bühnemann, 2014).

The number of magical texts included in the (*Bṛhad*)*dhāraṇīsaṃgraha*s ([Great] *Dhāraṇī* Collections) varies considerably, from a couple of pieces to more than 350. There seems to be a core of circa 150 texts present in all the longer compendia, however, their sequence is not completely fixed. The earliest witness of this tradition dates back to around the 13th century (Cambridge Ms. Add. 1680.8) and probably reflects a more ancient practice. Beside incantations from scriptures mentioned so far, titles in the *Dhāraṇīsaṃgraha*s include the *Abhayaṃkarī*, *Cintāmaṇi*, *Cundā*, *Ekajaṭā*, *Hemāṅgā*, *Jambhala*, *Jāṅgulī*, *Jātismarā*, *Karṇajāpā*, *Kurukullā*, *Mūlavidyā*, *Nīlakaṇṭha*, *Ṣaḍakṣarī*, *Śākyamuni*, *Sahasrāvartā*, *Sarvapāpadahanī*, *Sarvarogapraśamanī*, *Siddhinikā*, *Trailokyavijayā*, and *Vajracarcikā* spells. This collection has not yet been published, but a list of texts present in various manuscripts is printed in S. Matsunami (1965, 287–349) and the formation of this genre is discussed in R.M. Davidson (2014b).

The Deification of *Dhāraṇī* Scriptures

Several *dhāraṇī* scriptures became personified or deified over the centuries. This process appears to have happened usually after the emergence of a certain scripture, although there are cases when references to a divine being are already present in the root text in its surviving form (e.g. *Mārīcīdhāraṇī*). In the majority of cases, the deity associated with a *dhāraṇī* text is female, although it appears that some of them were male initially. The origins of such personifications may be linked to those feminine vocatives in the *dhāraṇī* spells that address various female entities with a wide range of epithets. After deification, an intricate system of iconography emerged depicting these deities, and the worship of many of them is described in collections such as the *Sādhanamālā* or *Niṣpannayogāvalī*. Simultaneously, it appears that in the course of time, various deities started to have *dhāraṇī*s related to them as recorded in various *dhāraṇī* collections. These include such important figures as Akṣobhya, Amitābha, Hevajra, Mahākāla, Maitreya, Mañjuśrī, Ratnasambhava, Tārā, Vajravārāhī, and Vajrayoginī.

Dhāraṇī Practice and Benefits

The ritual instruction parts of *dhāraṇī* scriptures outline the employment of spells in various ways. The main objective of the use of *dhāraṇī*s appears to be the establishment of protection, and this seems to be brought about primarily by recitation. Protection is promised from all sorts of conceivable threats: humans, nonhumans, *vetāla*s, *kākhorda* sorcery, demons, poison, weapons, sickness, fever, possession, epidemics, weakness, snakebite, spells, magical bonds, wizardry, fire, water, obstacles, great dangers, calamities, drought, floods, thunderbolt, dispute, bad dreams, bad rebirth, bad omens, bad constellations, physical defects, sorrow, the evil eye, royal power and punishment, thieves, robbers, armies, war, famine, earthquake, meteors, untimely death, insects, worms, wild animals, the loss of vital fluid, and so forth. Numerous *dhāraṇī*s promise purification from bad actions and sins committed in the past. At the same time, positively speaking one is also promised fertility, the birth of a son, rebirth as a male, recollection of former lives, prosperity, respect, happiness, beauty, fearlessness, longevity, full consciousness, good rebirth, the protection of the state, good crops, gain of supernatural powers, and so on. Diverse uses refer to the preparation of an amulet, the mounting of the *dhāraṇī* on a flagstaff, the preparation of an enchanted and knotted thread or five-colored twine, the copying of the text along with inserting the donor's name and then turning it into a book and keeping it as an apotropaic object, the use of a *caitya* image or an image of a deity, the performance of worship, the preparation of a *maṇḍala*, and the application of herbal ointments. *Dhāraṇī* practices primarily aim at worldly goals; occasionally, however, higher objectives including the understanding of all phenomena (dharma) or the attainment of awakening are also referred to. Certain *dhāraṇī* practices have some moral ambiguity: harming others (i.e. the enemy) by the use of spells are mentioned in several sources.

Dhāraṇīs Beyond South Asia

Both individual *dhāraṇīs* and complete *dhāraṇī* scriptures gained remarkable influence in Buddhist lands of Asia from the early centuries of the Common Era onwards. The incantations were usually adopted in the original Sanskrit, often transcribed phonetically into Chinese or Tibetan characters for example, and in East Asia many times the Indic Siddham script was used to represent the mantric syllables. The *sūtras* themselves were translated into local languages, sometimes rewritten and transformed. Starting perhaps with Central Asia, *dhāraṇīs* spread over almost all regions in the course of centuries and have remained in use up to the present in several places. The popularity of certain *dhāraṇī* texts beyond South Asia most likely reflects ancient Indian preferences as well – although this is at times difficult to determine because of the scarcity of evidence regarding native contexts. The use of incantations generally follows instructions present in the Sanskrit sources, with a main focus on recitation for various benefits, outlined earlier in this article. Some peculiar ritual uses, however, perhaps partly of local origins, include the employment of *dhāraṇīs* at funerary rites (Copp, 2014) and raising *dhāraṇī* pillars made of stone (Kuo, 2014).

Further Reading

Most of the primary sources referred to are available online in the Göttingen Register of Electronic Texts in Indian Languages (GRETIL) and the Digital Sanskrit Buddhist Canon (DSBC). Recent relevant studies, unmentioned above, include those by R.D. McBride (2005), U. Pagel (2007), P. Copp (2008), J. Silk (2008), K. Shinohara (2010; 2012; 2014a; 2014b), C.D. Orzech *et al.* (2011), G. Schopen (2012), G. Hidas (2013; 2014) and A. Griffiths (2014). The majority of these works cover areas outside South Asia. Numerous references to previous research are given by R.M. Davidson (2009) and P.M. Castro-Sanchez (2011), and a descriptive overview of publications dealing with this topic across Asia is provided online by P. Copp (2010). The iconography of several *dhāraṇī* deities has been discussed recently, for example, by M. Shaw (2006), G. Bühnemann (2006), G. Mevissen (2006; 2009), E. Allinger and G. Melzer (2010), and J. Kim (2013).

GERGELY HIDAS

Laṅkāvatārasūtra

The *Laṅkāvatārasūtra* is one of the most important scriptural sources for later Mahāyāna doctrine, presenting a combination of *śūnyatā* (emptiness), *tathāgatagarbha* (buddha embryo), and *ālayavijñāna* (storehouse consciousness) theories. It is generally considered to have been composed in a comparatively late phase of the compilation of the Mahāyāna *sūtras*, not earlier than the 3rd century CE, and in any event after the formation of the corpus of Prajñāpāramitā *sūtra*s. Its exact dating, however, is controversial, due to the evident relation between the composition of the scripture and the lives and ideas of some of the most important Mahāyāna thinkers. The title *Laṅkāvatāra* is supposed to be understood as "[The Buddha's] Descent into Laṅkā." Sri Lanka is popularly believed to be the legendary Laṅkā; however, this is debated (see Kibe, 2011).

Textual Transmission

Modern Editions

In 1923, Nanjio Bunyiu published what remains the only full modern scholarly edition of the Sanskrit text, based on a mere five Sanskrit manuscripts but consulting three Chinese and one Tibetan translation. Jikido Takasaki produced a revised edition of the *Kṣaṇika* chapter in 1981, based on a mere five manuscripts. Gishin Tokiwa (2003) revised Nanjio Bunyiu's text on the basis of Guṇabhadra's translation (see below).

Manuscripts and Recensions

Many Sanskrit manuscripts of the *Laṅkāvatārasūtra* are known, although this does not necessarily equate to a broad textual basis since most of them are probably related to one another. Photographs of at least 20 different Nepalese Sanskrit paper manuscripts, copied between the 17th and 19th centuries, are preserved by the Nepal-German Manuscripts Preservation Project collection, approximately 13 of which are complete or almost so. Five manuscripts, originally collected by Ekai Kawaguchi, a Japanese monk famed for his journeys to Nepal and Tibet in the early 20th century, are preserved in Tokyo University Library (mss. 327–333); number 333 is the only palm-leaf manuscript accessible at present. Although undated, on the basis of paleographic features it might have been produced in the 12th century. Other manuscripts are preserved in the library of the Royal Asiatic Society, London, in the Cambridge University Library, and elsewhere. In 1977, L. Chandra published a reproduction of a single Nepalese manuscript. While it is not easy to establish a plausible stemma of all the manuscripts, since they share a Nepalese origin, they are likely to be related in some fashion.

It is always worthwhile to study manuscripts not only for their contents but also in light of how they have been used. The rubrication on the *dhāraṇī* in the Cambridge University Library (Ms. Add. 915; fols. 117r–118v) could indicate that the manuscript was used for practice before it was sent to Europe in the 19th century. The marginal annotation, probably in Newari, in the Nepal National Archives (A112-10; fols. 13–19) seems to be notes taken during lectures. This is considered evidence that this manuscript was used for study.

In addition to manuscripts from Nepal, there are at least three Sanskrit manuscripts preserved in Tibet. They too, however, are originally Nepalese palm-leaf manuscripts, which were probably copied before the 12th century. Only one sample is available: a small extract published in V. Tseng (2010), in which the 24 verses of chapter 8 are incorporated.

The interpretation of the *Laṅkāvatārasūtra* in Sanskrit is difficult in part because of its linguistic peculiarities. These can be due to unique compounds. For instance, some compounds occur only in this text, although similar ideas may be found elsewhere, whereas others present unexpected word orders. The *Laṅkāvatārasūtra* tends to form set phrases that are grammatically uncommon, using them repeatedly in both verses and prose. Moreover, irregularities concerning verbs and pronouns are often found. And finally, the verses of the text sometimes present problems that are at least partly due to the greater grammatical and syntactical freedom that is permissible in verse composition.

Translations

According to the ancient catalogues, four Chinese translations of the *Laṅkāvatārasūtra* were made, of which only the latter three are extant:

1. a translation with an uncertain title by/ Dharmakṣema (曇無讖; Tan Wu Cheng; translated between 412 and 420 CE; already lost in the Tang Dynasty);
2. Guṇabhadra's *Lengqie abaduoluo baojing* (楞伽阿跋多羅寶經; translated in 443 CE; T. 670; in four fascicles);
3. Bodhiruci's *Ru lengqie jing* (入楞伽經; translated in 513 CE; T. 671; in ten fascicles); and
4. Śikṣānanda's *Dasheng ru lengqie jing* (大乘入楞伽經; translated between 700 and 704 CE; T. 672; in seven fascicles).

Guṇabhadra's *Lengqie abaduoluo baojing* has been the most popular version, though many Chinese Buddhist scholars complained about the difficulties of understanding it, due to its being literally translated according to the Sanskrit syntax and the poorly polished Chinese.

According to Fazang (法藏; 643–712 CE), one of the collaborators in the translation of Śikṣānanda's *Dasheng ru lengqie jing*, it is based on five Sanskrit manuscripts, and the two earlier Chinese editions were also examined during the translation process, inheriting their benefits and avoiding their defaults.

Bodhiruci's *Ru lengqie jing* was criticized by traditional scholars for its overinterpretation. We can see through a comparison with Nanjio Bunyiu's edition and the other two Chinese versions some indications that Bodhiruci's work contains interpretative elements especially in some doctrinally obscure passages in the prose portions of the first eight chapters. However, in the last chapter, it is sometimes even closer to the Sanskrit versions than Śikṣānanda's translation.

The earliest extant manuscript of the *Laṅkāvatārasūtra* is probably a copy of Guṇabhadra's translation from Dunhuang, made in 509 CE by the monk Jianhui (建暉; China National Library, 1276). There are around 90 Chinese manuscripts of the *Laṅkāvatārasūtra* from Dunhuang, of which two-thirds are Śikṣānanda's translation.

Two Tibetan translations are found in the Kanjur. The first, whose sources are still not entirely clear, bears the title *Lang kar gshegs pa theg pa chen po'i mdo* (D 107/P 775) and is said to have been made by the bilingual Dunhuang native Chos grub/Fa Cheng (法成; late 8th–early 9th cent.[?]) from a Chinese version. However, it is possible that both the Sanskrit and the Chinese versions were consulted, a possibility suggested by similarities to the extant Sanskrit versions (Suzuki, 1930, 12–13). The second translation, *Lang kar gshegs pa rin po che'i mdo las sangs rgyas thams cad kyi gsung gi snying po zhes bya ba'i le'u* (D 108/P 776), is accompanied by a Chinese commentary written by *Wenhui probably in the mid-9th century (for the correspondences between this commentary and Guṇabhadra's translation, see Suzuki, 1930, 14). The title of *Lang kar gshegs pa rin po che'i mdo las sangs rgyas thams cad kyi gsung gi snying po zhes bya ba'i le'u* corresponds to the subtitle of Guṇabhadra's translation, *Yiqie Foyuxin pin* (一切佛語心品; Chapter on the Essence of All Buddhas' Words).

The text is also preserved in Tibetan at Dunhuang (Pelliot tib. 608; Stein tib. 167; *Lhan dkar ma* 84, 252) with the title *Lang kar gshegs pa*. The former, almost complete, has 123 leaves, while of the latter only two leaves remain. The two manuscripts are probably of the same text. Both of them do not differ much from the version preserved in the *Lang kar gshegs pa theg pa chen po'i mdo*. According to the *Sgra sbyor bam po gnyis pa*, in ancient times already, King Khri Lde srong btsan (r. 800–815 CE) ordered that the Old Tibetan translation of the *Laṅkāvatārasūtra*, translated by a group of learned scholars assembled around his father Khri Srong lde btsan (r. 755–794[?] CE), be circulated as an example of an authoritative Tibetan translation of a Buddhist scripture.

A Dunhuang manuscript preserved in the British Library (Or. 8210/S. 5603) is a curiosity, written in both Chinese vertically and Tibetan horizontally from left to right between the Chinese lines.

Structure and Textual Genesis

Almost all the complete Sanskrit versions have ten chapters and share the same text structure – as in Nanjio Bunyiu's edition. Guṇabhadra's translation, which is generally regarded among modern scholars as translated around the time when the scripture was composed and thus rather close to the Ur-*Laṅkāvatārasūtra*, has four parts sharing the same name, *Yiqie Foyuxin pin* (see above), with numbers 1, 2, 3, and 4 added, something that could be interpreted as reflecting the fact that Guṇabhadra was actually translating a part of a larger composition. It lacks the counterparts of chapters 1, 9, and 10 in the Sanskrit version, and the equivalents in Bodhiruci's *Ru lengqie jing*, Śikṣānanda's *Dasheng ru lengqie jing*, and the *Lang kar gshegs pa theg pa chen po'i mdo*. The other two Chinese versions are not very different from each other in their contents, although Bodhiruci's translation has more chapter divisions and elaborations. Nanjio Bunyiu tabulated the chapter divisions, comparing the Sanskrit text and the three Chinese translations of the *Laṅkāvatārasūtra* in his edition.

The major part of the *Laṅkāvatārasūtra* – the dialogue between the Buddha and his disciple Mahāmati – is organized in a repeated structure: one or more prose paragraphs focusing on one topic, in which a few related subtopics are sometimes included, are followed by *śloka* verses as a summary. The last chapter is a summary of the whole scripture, consisting exclusively of 884 verses, out of which 215 have equivalents in chapters 2–6. Presumably the quoted verses and the previous corresponding prose passages can be regarded as the core of the original form of the *Laṅkāvatārasūtra* (Takasaki, 1980, 345).

The organization and chapter titles used in Nanjio's edition are meant to be based on the chapter colophons of the Sanskrit manuscripts. But, evidence overlooked by Nanjio suggests that the title of chapter 8 should be *Amāṃsabhakṣaṇaparivarto 'ṣṭamaḥ* (Chapter Eight on Not Eating Meat), agreeing with Bodhiruci's *Ru lengqie jing*, Śikṣānanda's *Dasheng ru lengqie jing*, and the *Lang kar gshegs pa theg pa chen po'i mdo*. For the chapter 10, it seems likely that the expression *sagāthaka*, which has generally been interpreted as the title of chapter 10, was actually extracted from the general colophon occurring after chapter 10's last verse. In other words, *sagāthaka* is to be construed as *mahāyānasūtraṃ sagāthakaṃ*: "*sūtra* of the Mahāyāna together with (its?) verses." According to Takasaki (1980, 345; though the opposite opinion was held by Tucci, 1928, 546), this verse section belonged to, but was not necessarily part of, the *Laṅkāvatārasūtra*. The idea that chapter 10 remained an independent text may be supported by the fact that one of the manuscripts preserved in Tibet consists merely of verses and is entitled *Laṅkāvatāra*.

Grammatical anomalies abound in verses, but these are found together with the corresponding classical forms, thus making it likely that these irregular forms were used deliberately for metrical reasons. Sometimes the prose and the following verses are not strongly connected, and sometimes the verses seem to introduce new ideas. The relationship among the verses from chapters 2, 3, 4, and 6, their related prose parts, and the *gāthās* in chapter 10 are extremely complicated.

It is probably reasonable to regard chapter 1 in the Sanskrit text as an accretion postdating Guṇabhadra's translation, which does not contain it, for no verse from this initial part is ever quoted in chapter 10. Moreover, chapter 1 has no connection whatsoever with the rest of the *sūtra*, Rāvaṇa even being omitted until he is requesting the Buddha. Compared with many other Mahāyāna *sūtras*, it has a rather austere opening part, even bereft of any depiction of Laṅkā and the Buddha's descent.

Chapter 8 is a watershed in the textual genesis and transmission of the text, with several peculiarities. In contrast to its precise and exhaustive rendering in other chapters, Guṇabhadra's translation is more concise than the Sanskrit and the other two Chinese translations in the prose portion. All the later versions but Śikṣānanda's translation misplaced the order of verses and prose of Mahāmati's question about meat eating. The original placement is preserved in Guṇabhadra's translation and Śikṣānanda's translation (probably because of the latter's consultation of Guṇabhadra's *Lengqie abaduoluo baojing* during the translation process). In verse 8.16, the Buddha prohibits meat eating, enumerating the scriptures in which he has voiced this prohibition, including the *Laṅkāvatārasūtra* itself. In this list, the *Nirvāṇasūtra* appears (except in Guṇabhadra's translation). This might indicate that the *Nirvāṇasūtra* was composed and its name added to the *Laṅkāvatārasūtra* between Guṇabhadra's translation (443 CE) and Bodhiruci's translation (513 CE). However, it is also possible that the respective translators, Guṇabhadra and Bodhiruci, coming from different parts of India, used different recensions of the *Laṅkāvatārasūtra*, providing variants, at least at certain points. Moreover, contrary to chapters 2–6, which are chiefly concerned with sophisticated philosophical discussions, chapter 8 deals with the practitioners' behavior. It is possible that chapter 8 was originally a separate text, inserted into the *Laṅkāvatārasūtra* (Schmithausen, 2010).

If chapters 1, 9, and 10 are all later accretion, then the question remains whether they were added at the same time, by the same group of people, and with the same motivation. It might be tempting to attribute a certain part of the *Laṅkāvatārasūtra* to a certain Buddhist school – for instance, chapter 1 to the Mādhyamika and chapter 10 to the Yogācāra – as S. Kim (2002, 56) has suggested. But this is hardly convincing in light of the fact that, for example, the *ālayavijñāna* is praised in chapter 1 (regarded as Mādhyamika), whereas Nāgārjuna is likely alluded to in chapter 10 (considered Yogācāra).

Contents and Doctrinal Analysis

The *Laṅkāvatārasūtra* repeatedly mentions topics such as the following:

- five dharmas (*pañcadharma*):

1. *nāma* (word);
2. *nimitta* (characteristic);
3. *vikalpa* (conceptualization);
4. *samyagjñāna* (right cognition); and
5. *tathatā* (suchness).

- three natures (*trisvabhāva*):

1. *parikalpitasvabhāva* (thoroughly imagined nature);
2. *paratantrasvabhāva* (dependent nature); and
3. *pariniṣpannasvabhāva* (absolute nature).

- eight consciousnesses (*aṣṭavijñāna*):

1. *ālayavijñāna* (storehouse consciousness);
2. *manas* ([deluded] consciousness);
3. *manovijñāna* (mind consciousness);

4.–8. the five *pravṛttivijñānas* (actual consciousnesses/functional consciousnesses: seeing, hearing, smelling, tasting, and feeling/touching).

- two selflessnesses (*dvinairātmya*):

1. *dharmanairātmya* (the selflessness of phenomena); and
2. *pudgalanairātmya* (the selflessness of person).

- mind only (*cittamātra*/*svacittadṛśyamātra*).

The essence of all teachings of the buddhas and the core of the *Laṅkāvatārasūtra* are the eight consciousnesses, the five dharmas, the three natures, and the two selflessnesses. The three natures, two selflessnesses, and eight consciousnesses are all included in the five dharmas. These teachings are directly realized by buddhas and advanced bodhisattvas, but not by the non-Buddhists and the *Śrāvakas*.

While the *Laṅkāvatārasūtra* certainly is an important source for the *tathāgatagarbha* theory, it is also often considered to be composed from a Vijñānavāda standpoint (Takasaki, 1980; Schmithausen, 1992). While discussions about the *Laṅkāvatārasūtra* usually focus on the *ālayavijñāna* and *tathāgatagarbha* and the relationship between them, we also not infrequently see a tendency to exaggerate and overemphasize one of the elements.

Various theoretical and practical topics are taught in the *Laṅkāvatārasūtra*, but they are scattered in different chapters and not well organized logically in sequence.

Without any claim to be even remotely comprehensive, the following might be noticed. The *Laṅkāvatārasūtra* refutes non-Buddhist ontological theory; since existence and nonexistence are mutually independent, the bodhisattvas should realize phenomena to be all seen in one's mind. There is no contradiction between the teaching that all phenomena are nonarisen and the teaching that they are like illusion.

There is both a mundane mind only (*laukikaṃ cittamātram*) and the mind only taught by the Buddha. Bodhisattvas should not make the statement that all phenomena do not arise, and neither should they say that everything is empty. Otherwise people will become afraid and distance themselves from the Mahāyāna. Rather they should say that everything is like a dream. In the chapter on not eating meat, it is stated that in saṃsāra, any sentient being can be one's family member. Cooked meat has the odor of burnt corpse, and gods keep away from meat eaters.

Commentaries, Quotations, and Influence

The *Laṅkāvatārasūtra* has had profound influence in all the regions where Mahāyāna Buddhism is found. However, no ancient Sanskrit commentaries are thus far accessible. Two short treatises by Āryadeva, now only preserved in Chinese and translated by Bodhiruci (*Tipopusapo lengqie jing zhongwaidao xiaosheng zonglun* [提婆菩薩破楞伽經中外道小乘宗論]; T. 1639; and *Tipopusashi lengqie jing zhongwaidao xiaosheng niepanlun* [提婆菩薩釋楞伽經中外道小乘涅槃論]; T. 1640) are the earliest commentaries available, but their authenticity is not beyond debate. In the Tibetan canon, there are two commentaries, **Āryalaṅkāvatārasūtravṛtti* (D 4018) and **Tathāgatahṛdayālaṅkāra* (D 4019), composed respectively by Jñānaśrībhadra, a probably 11th-century Kashmirian representative of the Yogācāra school and a logician, and by Jñānavajra, of whom there is little known. The former, not in a typical Sanskrit commentary style, seems to comprise lectures about the *Laṅkāvatārasūtra* given to the Tibetan audience and recorded by the author's Tibetan pupils (Hadano, 1975). The latter too may not be a translation of a Sanskrit text: the commentator consistently follows the internal foot order of *Lang kar gshegs pa theg pa chen po'i mdo* in the verses, and there is a short paragraph immediately following the commentary of 10.103, which justifies the reoccurrence of 10.72. However, 10.72 does not appear here in any available Sanskrit manuscript, but it does occur immediately after 10.103 in the *Lang kar gshegs pa theg pa chen po'i mdo*. Additionally, there are a few cases in which the commentator seems to comment on the basis of a misunderstanding of the *Lang kar gshegs pa theg pa chen po'i mdo*.

According to the *Lhan dkar ma* catalogue, there may be another commentary preserved in the Dunhuang collection (Stein 219), which could be a translation of a Sanskrit text by Paṇḍita Bin tar ta li la (perhaps a mistake for Rathalīla), with the title *Laṅkāvatāraṭīkā* (*Lhan dkar ma* 568–570). This commentary has been missing since Bu ston's time.

More than 14 commentaries written by Chinese Buddhist scholars from the Tang to the Qing dynasties are extant, among which 12 were composed mainly based on Guṇabhadra's translation. Only one was based on Śikṣānanda's translation, while the others compared all three versions.

The *Laṅkāvatārasūtra* has been quoted widely by both important early representatives of the Yogācāra school and Mādhyamikas. Vasubandhu cited verses of chapter 10 in the *Vyākhyāyukti* (Lindtner, 1992, 274–276), and Bhāviveka quoted the *Laṅkāvatārasūtra* at least ten times in his commentary on Nāgārjuna's *Mūlamadhyamakakārikā* entitled *Prajñāpradīpa*. Later, it was cited an authority in Buddhist treatises of various schools in both Mahāyāna and Vajrayāna traditions. The following are only some examples whose authenticity, authorship, and date are less questionable: *Prasannapadā* of Candrakīrti (7th cent.), *Śikṣāsamuccaya* of Śāntideva (8th cent.), *Madhyamakāloka* and *Bhāvanākrama* of Kamalaśīla (8th cent.), *Tattvasaṅgrahapañjikā* of Kamalaśīla (8th cent.), *Abhisamayālaṅkārālokā* of Haribhadra (late 8th cent.), *Sarvarahasyanibandha*, *Prajñāpāramitopadeśa*, and *Muktāvalī* of Ratnākaraśānti (early 11th cent.).

Legend has it that the putative (and perhaps mythical) founder of the Chan school, Bodhidharma, regarded the *Laṅkāvatārasūtra* as suitable at that time for Chinese Buddhists and handed Guṇabhadra's translation to his successor Huike (慧可; 487–593 CE) signalizing their heart-to-heart communication and the confirmation of attaining the scope of self-realization (*yinxin* [印心]). Later, the *Vajracchedikā Prajñāpāramitā* instead was used for such a purpose, but the *Laṅkāvatārasūtra* maintained its importance in the Chan tradition in China and Zen tradition in Japan, especially for its ideas about buddhahood, nirvāṇa, meditation, the relationship between dharma and speech, and so forth.

The *Laṅkāvatārasūtra* is considered one of the six fundamental scriptures of the Faxiang school (法相宗; often understood as the Chinese Yogācāra school). It was also widely studied and quoted in other influential Chinese Buddhist schools, such the Huayan (華嚴) and the Tiantai (天台). Frescoes based on the *Laṅkāvatārasūtra* are found in 12 caves in Dunhuang. There are likewise narrative and story texts in the Dunhuang collection drawing materials from the *Laṅkāvatārasūtra*.

Parallels, Presumed Date, and Background

The dating of the *Laṅkāvatārasūtra* is a very controversial issue, which is related to some other highly disputable problems like the dating of Vasubandhu and the chronological arrangement of his works, and the ascription of some works such as the *Sūtrasamuccaya* and *Bodhicittavivaraṇa* (see Buescher, 2008, 36–40). The main stream of modern scholars, though they differ in details, hold the opinion that the *Laṅkāvatārasūtra* belongs to the group of Mahāyāna *sūtras* composed at the late stage of Vasubandhu or even after Vasubandhu. Their main arguments can be summarized as follows:

1. From the doctrinal point of view, the *cittamātra/vijñaptimātra* and the *tathāgatagarbha* theories, and especially the connection between *tathāgatagarbha* and *ālayavijñāna*, are not discussed before Asaṅga and Vasubandhu.

2. The *Laṅkāvatārasūtra* is not quoted in earlier Yogācāra works, that is, those attributed to Maitreya, Asaṅga, and those often considered Vasubandhu's early compositions, excluding texts whose authorship is controversial. And legends from Tibetan and Chinese sources say that Nāgārjuna already knew the *Laṅkāvatārasūtra* and commented on it.

There are impressively close parallels between the *Laṅkāvatārasūtra* and Vasubandhu's *Triṃśikā(kārikā)* 20 and 28, which already exist in Guṇabhadra's translation (Schmithausen, 1992). This assumption is based on the following hypotheses: Mahāyāna *sūtras* appeared chronologically in accordance with the flourishing of different schools, namely:

1. the Prajñāpāramitā *sūtras* and the *Daśabhūmikasūtra*;
2. the typical Yogācāra scriptures such as the *Saṃdhinirmocanasūtra*, and;
3. the *Śrīmālādevīsiṃhanādasūtra* and the *Laṅkāvatārasūtra*, which aim at the synthesis of *ālayavijñāna* and *tathāgatagarbha*.

Laṅkāvatārasūtra. Vasubandhu is dated to circa 400–480 CE (recently questioned by Franco, 2010; see also Deleanu, 2006, 196, who suggests 350–430 CE), and the *Triṃśikā*(*kārikā*) is his latest work.

This theory has to confront the difficulty that some expositions that cite the *Laṅkāvatārasūtra* are generally considered to have been composed before Asaṅga and Vasubandhu. A considerable number of citations and parallels of the *Laṅkāvatārasūtra* are found in early Indian Madhyamaka *śāstras*, especially in some works attributed to Nāgārjuna (Lindtner, 1982; 1992), though many of these ascriptions may be challenged.

We should expect, of course, a gap between the formation of an idea and the composition of a scripture in which the doctrine is expressed, especially in an oral-tradition culture.

SHANSHAN JIA

Lotus Sūtra

The *Lotus Sūtra* (Skt. *Saddharmapuṇḍarīka*) may be the best known Mahāyāna Buddhist scripture; at least in East Asia, from a relatively early period it assumed a position of special, even unique, influence. While its impact in the Indian subcontinent itself appears to have been limited (Silk, 2001), it was highly honored in Central Asia in its Sanskrit form, to judge from manuscript evidence. Its major historical impact, however, no doubt took place through its Chinese translations, in which the text received nothing short of wholesale veneration. It may be ironic, therefore, given this imbalance in influence, that the modern scholarly appreciation of the *Lotus Sūtra*, and of Mahāyāna Buddhist scriptures in general, was shaped by the discovery of Sanskrit manuscripts of the *sūtra* in Nepal in the first half of the 19th century. The generously annotated translation of the text by the groundbreaking French scholar Eugène Burnouf in 1852, which remains a landmark of scholarship, transformed Western appreciations not only of the *sūtra*, but of Buddhism *tout court* (Yuyama, 2000). The *sūtra* was thus not only crucial for the formation of Mahāyāna Buddhism, especially in East Asia, but it stands at the fountainhead of modern studies of Buddhism as well. M. Deeg (2012) offers a survey of the Western translation and reception history of the *sūtra*.

Although it would be rash to speak of a single main idea of the *sūtra*, one dominant theme is the primacy of Śākyamuni Buddha. Facing the potential crisis of the spiritual vacuum caused by the absence of the Buddha from the world, the authors of the *Lotus Sūtra* responded with a radical revaluation of Śākyamuni's presence. Whereas other plausibly more or less contemporary Mahāyāna scriptures, while certainly not disparaging Śākyamuni, rather promote the sanctity of other buddhas, such as Amitābha/Amitāyus or Akṣobhya, or of the ineffable teaching itself, as one sees in the Prajñāpāramitā ("Perfection of Wisdom") tradition, the authors of the *Lotus Sūtra* focus virtually all their attention on Śākyamuni, and especially on the mystery of his continued presence in the world after his (for them, only apparent) nirvāṇa. The scripture promotes itself and its vision by proclaiming that while the Buddha – as universally accepted and shared Buddhist history maintains – taught several paths to spiritual advancement, it is in actual fact only the teaching of the *Lotus Sūtra* itself which is Śākyamuni's perfect teaching, his ultimate message of salvation and liberation. Thus the eternal buddha Śākyamuni is portrayed as employing skillful means (*upāya*) to cultivate all beings, according to their various capacities, one such means being the manifestation of a death in nirvāṇa, though in reality there is only a single approach (*ekayāna*, "unique vehicle"), and through that single approach all beings will attain buddhahood. While Śākyamuni is eternal, phenomenally his life came to an end in this world, and his successors, bodhisattvas, emerging from out of the earth itself, should preach this truth to others and energetically promote its salvific message. This message that all beings can attain buddhahood because they are bodhisattvas, future buddhas, is a groundbreaking revolution in Buddhist history, and among other things leads to a reorientation which values life and practice in this world, in contrast to the dichotomous saṃsāra-this world/nirvāṇa-other world distinction of the earlier tradition. The *Lotus Sūtra* is also especially important for its portrayal of the savior figure of the bodhisattva Avalokiteśvara (Chn. Guanyin [觀音]), doubtless the most prominent and influential bodhisattva in all Mahāyāna Buddhist lands, a prominence this figure attained in no small part precisely thanks to his portrayal in the *Lotus Sūtra* itself.

Sources

The *Lotus Sūtra* may originally have been composed in a form of Middle Indic (see below), at an unknown date but perhaps sometime just before or after the beginning of the 1st millennium CE. It is not possible to know where this may have taken place. While no direct traces of this stage of textual development are known to exist, we do have a large number of Sanskrit manuscripts of the *sūtra*, preserved in several regions of Asia (an outdated but still useful survey of sources is Yuyama, 1970. For more recent information see Yuyama, 1987, Tsukamoto, 1986, and Toda, 1997. Mochizuki, 1998, provides a catalogue

of articles. Regarding research on Central Asian manuscripts see Nakamura, 1980, 184–185n7, and, for more recent work, the material listed in Wille, 1998, 241n2). The manuscripts have been divided by scholars according to their textual filiations: (1) Nepalese manuscripts; (2) Gilgit manuscripts; (3) Central Asia manuscripts; and (4), Afghani manuscripts. (1) & (2) are relatively similar and together compose one group. The most numerous manuscripts are those preserved in Nepal. A number of these have been published in transcription (especially by Toda Hirofumi [戸田宏文] and through the Institute of Oriental Philosophy of the Sōka Gakkai), and in facsimile, for example by Tsukamoto *et al.*, 1977–1982, and also more recently in beautiful color reproductions, again by the Institute of Oriental Philosophy. We owe the existence of the manuscripts from Nepal primarily to the fact that as one of the "nine dharmas," the text had (as it continues to have) a ritual importance in Nepal, and was thus frequently copied in this context. These manuscripts, or modern copies thereof, are found in collections around the world. Older manuscripts, or fragments thereof, some dating back to the 5th century CE, have been preserved in the extreme Northwest of the South-Asian subcontinent, in Gilgit (Group [2] in the above classification, Watanabe, 1972–1975, von Hinüber, 1982; von Hinüber, 2012), and in several spots in Central Asia (Group [3], Kashgar: Baruch, 1938; Bechert, 1972; Lokesh Chandra, 1976; Khadalik: Wille, 2000; Turfan and other sites: Jiang, 1997). Research on the Kashgar versions (more precisely the Marburger fragments; Bechert, 1972) and especially on the oldest Chinese translation by Dharmarakṣa (see below and Karashima, 1992; 1998) suggest that there once existed a version of the *sūtra* in a northwestern Middle-Indic dialect, but no direct evidence for such a version has yet been found. Later manuscripts are either in Sanskrit or, like the Nepalese manuscripts on which the *editio princeps* of H. Kern and B. Nanjio (1908–1912; see below) is primarily based, are largely written in so-called Buddhist Hybrid Sanskrit. While most manuscripts were probably meant either for recitation or ritual use, some were clearly intended primarily as objects as such, that is, for devotional purposes. In East Asia a great number of Chinese manuscripts were produced with tremendous attention given to their visual appearance (see below).

The pioneering edition of the Sanskrit text was published in 1908–1912 by Hendrik Kern (1833–1917) and Bunyu Nanjio (Nanjō Bun'yū [南条文雄], 1849–1927). Being based on a collation of Nepalese manuscripts made by B. Nanjio, contrasted by H. Kern with a then newly-available Central Asian manuscript, the result has been criticized as a conflation of distinct recensions. However, this is probably too harsh a judgment, since H. Kern's aim was to seek the underlying unity and correct the Nepalese text in light of what he saw as the original shape of the text (for a reappraisal see Vetter, 1999; Silk, 2012). This edition continues to be the most widely used; although a great deal of research has now been published on the Sanskrit sources, no up-to-date critical edition of the text as a whole has yet appeared. A start on some portions has been made by Seishi Karashima (2003; 2004; 2005a; 2006a), taking into account all available evidence. The publications of Wogihara and Tsuchida (1934–1935; an index is Itō, 1993) and P.L. Vaidya (1960) have little to no independent value.

The text was translated into English from Sanskrit by H. Kern (1884), even before the publication of the first Sanskrit edition. This remains the only published English rendition of the Sanskrit. Along with the above-mentioned translation by E. Burnouf, the *sūtra* has been translated into Western languages repeatedly, virtually always based, however, not on Sanskrit sources but rather on the Chinese translation of Kumārajīva (representative examples are Hurvitz, 1976; Watson, 1993; Robert, 1997; Deeg, 2009; for a briefly annotated list of translations see Teiser and Stone, 2009a, 237–240, who list 15 separate items, though this is clearly incomplete; for instance Meazza, 2001, translates from Sanskrit into Italian). The *sūtra* has been repeatedly translated into modern Japanese (including a number from Sanskrit, and at least one from Tibetan), and into other Asian languages. While few of these are of scientific utility, they more importantly well illustrate the degree of continuing, and growing, popular interest in the *sūtra*.

Like most such scriptures, the *Lotus Sūtra* is known not only in its Indic language form but also in translations. A Tibetan rendering is preserved in the Kanjur, *Dam pa'i chos padma dkar po* (D 113/ P 781), made in the 9th century CE by Surendrabodhi and Sna nam Ye shes sde (a rudimentary edition is Nakamura 1976–1997; the pagination is conveniently made to match the Sanskrit edition of Kern and Nanjio). However, an older or unrevised translation also exists, and is of great philological significance (Simonsson, 1957; ed. Karashima, 2005b; 2006b; 2007; 2008). The text, however, like most *sūtras*, does not appear to have played any significant role in Tibetan Buddhist thought or practice.

The historically most influential versions are, without doubt, those in Chinese. Four are preserved, another three are recorded as having been completed, but were lost. The available versions are:

1. *Zhengfahua jing* (正法華經; T. 263) by Dharmarakṣa (*fl.* 265–313 CE), dated to 286 CE;
2. *Miaofa lianhua jing* (妙法蓮華經; Jpn. Myōhō renge kyō; T. 262) translated in 406 CE by Kumārajīva (350–409 CE);
3. *Tanpin miaofa lianhua jing* (添品妙法蓮華經; T. 264) by Jñānagupta and Dharmagupta, produced in 601 CE; and
4. *Satanfentuoli jing* (薩曇分陀利經; T. 265), may belong to the Western Jin (西晋; 265–316 CE; corresponding to ch. 11 only, see below).

Although the *Zhengfahua jing*, the oldest translation, had an impact on developing Chinese Buddhist traditions, it is rather the *Miaofa lianhua jing* that was to have the most lasting importance for all of East Asian Buddhism, down to the present day. The *Tanpin miaofa lianhua jing* is a sort of revision of the translation of Kumārajīva, with commentarial notes. Finally, the *Satanfentuoli jing* (the title is a phonetic transcription of *Saddharmapuṇḍarīka*) is a rendering of a single chapter, corresponding to chapter 11 (see below).

Karashima (1992, 253–260) argued that the *Zhengfahua jing* and *Miaofa lianhua jing* are more closely related to the Sanskrit recension found in the Central Asian manuscripts than to that represented by the Gilgit-Nepalese manuscripts, while in contrast the *Tianpin miao falianhua jing* corresponds more closely to the Gilgit-Nepalese recension. The *Zhengfahua jing* is particularly important for the light it sheds on stages of development of the *sūtra* even older than the oldest evidence provided by Sanskrit manuscripts.

Although the text circulated widely in China in manuscripts and later xylograph form, we can get some notion of its earlier popularity from the Dunhuang collections. S.F. Teiser calculates that there are something like 4,500 separate manuscript copies (complete or partial) of the Chinese *Lotus Sūtra* – mostly the *Miaofa lianhua jing* – in the main Dunhuang collections, but surely many more once existed. One manuscript (*Pelliot chinois* 3788) is a single surviving example of 3000 that were copied in the 680s CE "on behalf of the posthumous fate of the parents of Empress Wu" (Teiser, 2014, 67, 67n131). The text was, moreover, frequently engraved on stone at a number of sites in various areas of China between 600 and 840 CE (Teiser, 2014, 67–68).

Three additional Chinese translations are recorded in catalogues as having been produced, but they are not known to exist:

1. (*Zheng*) *Fahua sanmei jing* ([正]法華三昧經) translated by Zhi Jianglangsha (支彊良接) in 255 CE (T. 2154 [LV] 628c21–22);
2. *Sayunfentuoli jing* (薩芸芬陀利經), translated by Dharmarakṣa in 265 CE (T. 2154 [LV] 628c23–26). (Although this is the cited title, it is certainly an old error of 芸 [*yun*] for 曇 [*tan*], matching the title of the *Satanfentuoli*, above.); and
3. *Fangdeng fahua jing* (方等法華經) by Zhi Daogen (支道根) in 335 CE (T. 2034 [XLIX] 69a26–b2; T. 2154 [LV] 628c27–629a2).

The *sūtra* was also translated into Central Asian languages, including fragments in Uigur (Elverskog, 1997, 59ff.; Zieme, 2005; Yakup, 2011; a translation of a Chinese commentary is also known, Kudara, 1988), and the complete text in Tangut (from Kumārajīva's Chinese translation; Nishida, 2005). Although the text as such was apparently never translated into Khotanese, one quoted verse and a metrical summary are known (Bailey, 1971; 1972; Emmerick, 1992, 27ff.). As for East Asian vernaculars, although it is perhaps not correct to speak of a "translation" as such, there are records of Kumārajīva's translation of the *Lotus Sūtra* being read out in Japanese in a way that was apparently understandable as early as the 11th or 12th century (Apple, 2011). The date of the first translation of the Chinese into Japanese is unknown, but the oldest complete manuscript of the text in which the Chinese is presented in Japanese reading order – again, not a translation – appears to be that dated to 1330, the *Bannaji-bon Kana Hokekyō* (鑁阿寺本假名法華經; Kabutogi, 1955; Kawamura, 1979). The first Korean version dates to 1463, a work which combines a Korean rendering of Kumārajīva's Chinese text, *Myobŏb ryŏnhhwa'gyŏng* (conventionally *Bŏphwa'gyŏng ŏnhae*) with a commentary, the *Miaofalianhuajingyaojie* (妙法華經要解; ZZ 602), by the Chan monk Jiehuan (戒環; ?–1129?; Kim Kyongkon, 2014). However, the text was apparently never of great importance in Korea (Groner & Stone, 2014, 3).

In some East Asian traditions, Kumārajīva's text is joined together with the *Wuliangyi jing* (無量義經; Innumerable Meanings *Sūtra*; T. 276) and the *Puxian jing* (普賢經; *Sūtra* of [Meditation on] Samantabhadra; T. 277) to form the "Threefold Lotus *Sūtra*" (*Fahua sanbu jing* [法華三部経]; Jpn. *Hokke sambukyō*); the latter of the two additional texts, the *Puxian jing*, is important in Tiantai (天台) repentance rituals.

is important in Tiantai (天台)

The text is quoted, though infrequently, by Indian authors (Silk, 2001; Mochizuki, 2011). However, a commentary of probable Indian provenance, attributed to Vasubandhu, is preserved only in Chinese translation, the *Miaofa lianhuajing youbotishe* (妙法蓮華經憂波提舍; **Saddharmapuṇḍarīkopadeśa*; T. 1519; study and trans. in Abbott, 1985; T. 1520 may be closer to the original than T. 1519). Although not known in Tibet as such, there is an apparent reference to this commentary in Bu ston's 14th-century catalogue in his *Chos 'byung* (History of Buddhism), but nothing else is known of this translation (Nishioka, 1981, #667, *pad ma dkar po'i 'grel pa dbying gnyen gyis mdzad pa*; see also #664, *pad ma dkar po'i don bsdus pa 100 śloka*). These may, however, represent translations from Chinese, in which there are a large number of *Lotus* commentaries. One such commentary, the *Miaofa lianhuajing xuanzan* (妙法蓮華經玄賛; T. 1723) by [Kui]ji ([窺]基), was indeed known in Tibet, and partially translated as the *Dam pa'i chos puṇḍarīka'i 'grel pa* (D 4017/P 5518).

A series of indices (Sanskrit–Tibetan–Chinese; Chinese–Sanskrit; Tibetan–Sanskrit) was prepared based on the Kern-Nanjio edition (Asano *et al.*, 2003; Ejima *et al.*, 1985–1993; 1998). Very valuable glossaries of the two Chinese translations of Dharmarakṣa and Kumārajīva have also appeared (Karashima, 1998; 2001a).

Doctrines

The *Lotus Sūtra* is renowned not only for its doctrinal contents, which put forth a striking vision of a timeless Buddha and his salvific intent, but for its style. Some of this reputation is based on an appreciation of the beauty of the language of Kumārajīva's translation, but the structure of the *sūtra* is also esteemed. The presentation of Śākyamuni as transcending the bounds of time is central to the *Lotus*'s vision. The Buddhist communities which followed the generations after the death of the Buddha obviously faced a problem: how to maintain the charisma and power of the Buddha in a world from which he was now absent. One solution is that promoted by the *Lotus Sūtra*: drawing on ideas found elsewhere (on some of the background, see Tsukamoto, 2007; and from a different perspective, Hiraoka, 2012), such as the contingency of our ordinary ideas, the empty reality of selflessness and so on, the authors of the *Lotus* offer a Buddha who is now every bit as present in the world as he ever was. One way of understanding this solution is the *via negativa*, as in the Prajñāpāramitā tradition, but for the authors of the *Lotus*, and for its followers, the result is instead a world in which not just buddhahood as a potential but the Buddha himself is eternally present and accessible. This powerful vision has permeated the reception of the *Lotus Sūtra* down to today, and its theology has had a profound impact on virtually all of Mahāyāna Buddhism, directly or indirectly.

The text presents itself in a form rather more narrative and poetical than is common in Mahāyāna scriptures. The narratives, and especially parables, which populate the text convey the diverse themes and messages of the *sūtra* in a sometimes quite dramatic fashion, which is underscored by the huge audience of human and celestial beings, the frequent display of cosmic miracles of illumination, and the apparition of myriads of buddhas and bodhisattvas. These doctrinal and thematic emphases of the different parts of the *sūtra* – possibly related to its historical phases of composition – are reflected in certain key terms. One of the most important is *upāyakauśalya* (Chn. *fangbian*, Jpn. *hōben* [方便]), the "skillful means" used by the Buddha to explain the dharma in ways appropriate to his audience (Pye, 2004). Also central is the notion of the *ekayāna* (Chn. *yisheng* [一乘]), "one/single/unique vehicle." The authors of the text faced the challenge of explaining why, if the Buddha is omniscient, and moreover infinitely compassionate, he should nevertheless teach paths which are anything less than perfect. In other words, why, alongside the *buddhayāna*, or as it is sometimes called the *mahāyāna* or *bodhisattvayāna*, did he deign to teach the path of the auditors (*śrāvakayāna*) and of the lone buddhas (*pratyekabuddhayāna*), in all the *triyāna*, the "three vehicles"? The *sūtra* answers that the path of the auditor and of the lone buddha are none other than skillful means propounded in order to save beings in a fashion appropriate to their individual (limited) levels of spiritual maturity: the ultimate teaching is indeed nothing other than that of the *Lotus* itself. The *sūtra*, moreover, emphatically promotes itself as a *Vaipulyasūtra*, a term which may be synonymous with Mahāyāna, but which the text contrasts with other varieties of teaching (such as [mere] *sūtra*s, *gāthā*, etc.; Karashima, 2015, 124). All of these examples illustrate the intention of its authors to raise the *Lotus* above all other expressions of Buddhist scripture, placing it into a category beyond, an attempt which the history of the text demonstrates to have succeeded admirably.

The notion of the *ekayāna* and the existence of the eternal Buddha were reinforced by the vision of bodhisattvas emerging from the earth to keep, recite and copy the *sūtra*, and propagate its teaching in the future (ch. 14; Kumārajīva 15). These bodhisattvas hand down one and the same *ekayāna* teaching for the eternal Buddha generation after generation, and are portrayed as preachers of the teaching (*dharmabhāṇaka*). The most important example of such a figure is chapter 19's bodhisattva Sadāparibhūta, the Buddha in a previous life, who proclaims to everyone he meets: "I do not insult you worthy persons! I do not despise you. Why? You all follow the bodhisattva-path, and will become Tathāgatas, Arhats, Perfect Buddhas!" (Kern & Nanjio, 378,1–3; for the corresponding passage in Kumārajīva's translation, see Hurvitz, 1976, 280).

While resting entirely within the Mahāyāna project, the *Lotus Sūtra* sees itself, however, in line with this theme of self-promotion, as transcending a number of traditional modes of Mahāyāna bodhisattva practice, such as the gradual cultivation of virtues enumerated in the six perfections (*pāramitā*). Instead, it offers as a recurring theme a reflexive focus on the *sūtra* itself, and a central role for the preacher. The text repeatedly asks its audience to preserve, recite and copy or transcribe it, even if they may be slandered and persecuted (a feature some modern scholars have interpreted as indicating that the *sūtra*'s authors operated in an environment hostile to their innovative ideas [e.g. Karashima, 2001b]). This is meant to underscore the text's universal salvific power. Just as in other Mahāyāna *sūtra*s, the ultimate soteriological goal for an individual who has set out on the bodhisattva path is to achieve the "unsurpassable perfect awakening" (Skt. *anuttarasamyaksaṃbodhi*). However, here this awakening is universal in the sense that every living being striving on the path of bodhisattvahood can achieve it. The presentation of this idea is underlined by the cosmological range of the *sūtra*, which spans myriads of Buddha worlds and countless eons of time. Since it is difficult to reach the unsurpassable perfect awakening, the text seeks to assure its audience that the goal can indeed be accomplished by having the Buddha offer a prediction (Skt. *vyākaraṇa*) of the realization of this awakening to a huge number of bodhisattvas, who are present mostly in the latter half of the text. The *Lotus* itself promises awakening to each and every being. The preacher of the *sūtra* is to be esteemed just as the *sūtra* itself is esteemed; he is the living representative in every generation of the expounders of the text, that is, the living representative of the Buddha himself in the world. It additionally should be noted that, with the influential story of the *nāga* (dragon) girl who attains buddhahood, the *sūtra* seems to advocate a revolutionary idea that women may attain buddhahood directly (see below; this story is not found in all versions of the text, Nattier, 2009, 97).

In all, it may be that taken individually elements of the rhetoric and doctrine of the *Lotus* are indeed found elsewhere as well. However, the way these elements are innovatively woven together in the *Lotus Sūtra* proved to be the key to its success.

Chapter Outline

Although it cannot begin to capture the richness of the text overall, the following overview of the content of the *sūtra* is based on the Sanskrit version and Kumārajīva's (K) translation, with the basic differences between them noted. Note, however, that the Central Asian Kashgar manuscripts agree in some key respects with K, against the other Sanskrit lineages. (For a simple table comparing the chapter divisions in the Nepalese Sanskrit and three Chinese translations, see Tsukamoto, 2007, 430–431.)

The *sūtra* opens with a grandiose display of the Buddha in deep contemplation (*samādhi*), emitting light from the tuft of hair between his eyebrows (*ūrṇā*) and illuminating the whole universe in the midst of a huge audience (ch. 1: *Nidāna*; Introduction; *Xu pin* [序品]). In chapter two, *Upāyakauśalya* (Skillful Means; *Fangbian pin* [方便品]), the Buddha explains that through skillful means he teaches the three vehicles as actually one, a key idea developed throughout the text.

In chapter three, *Aupamya* (Parable; *Piyu pin* [譬喻品]), the theme of skillful means is further developed when the Buddha makes a prophecy of future buddhahood to his disciple Śāriputra, and recounts the parable (*upamā*) of the burning house. Often depicted visually in very dramatic fashion, this illustrates how and why he preaches the dharma differently. The image is presented of the children of a merchant trapped in a burning house; their father knows that the children, intent on their play, will not hear his pleas that they flee the danger they face, but he accomplishes his aim of saving them by luring the children out of the house through the promise to give each of them the toy cart he particularly desires. However, when the children are free of the conflagration, each is rewarded not differentially but with the very best of carts. The message is that while there may appear to be distinct vehicles, in

t of carts. The message is that
ear to be distinct vehicles, in

the end the father (Buddha) presents his beloved children only the very best one. In making explicit the metaphor, the *sūtra* itself has the Buddha reflect that all beings are his children, and the best of carts is explicitly homologized to nothing other than the buddha vehicle (*buddhayāna*), through which those beings are brought to nirvāṇa. In the chosen imagery there is an obvious link with the early Buddhist "Fire Sermon," (SN 35.28), in which the Buddha proclaims that the entire world is ablaze with desire, and so on. Here the *Lotus Sūtra* transforms this earlier Buddhist ascetic vision into one of universal salvation. It is notable that the Buddha is here clearly homologized to the father; the implications of this are profound for developing "theistic" elements in Mahāyāna Buddhism. Regarding the father's actions and the application of skillful means, the *sūtra* itself asks whether he lied to his children, to which it replies emphatically that he did not: skillful means appear dishonest only to those who do not understand the intention behind the salvific tactic.

In chapter four, *Adhimukti* (Conviction; *Xinjie pin* [信解品]), another of the Buddha's great disciples, Mahākāśyapa, presents the parable of the prodigal son in order to stress that the Buddha's message has been presented to all his disciples, but they were not able to realize its true intent. A run-away son, in search of employment, stumbles into his rich father's estate without realizing who the owner is, or their relationship. The father recognizes his son, but fails to convince him of his true identity. He then knows that revealing to the son his patrimony will be fruitless. Instead, he has his son work on the estate as a common laborer. Only years later, after the son has become a diligent and responsible man, does the father again reveal to him that he is heir to all his father's wealth. In the same way, the Buddha only seems to have disciples who did not inherit the true riches of his ultimate teaching. In the end, however, these disciples too will share in the Mahāyāna treasures, even though they may seem to be stuck in the poverty of the Hīnayāna, the "inferior vehicle." This term is of some importance for this *sūtra*, and plays a role in many later Mahāyāna Buddhist doctrinal developments, but neither in this *sūtra* nor elsewhere does it ever have any sociologically real referent; it points, instead in a generic way to those who might hold views considered wrong by Mahāyāna authors. The *Lotus Sūtra*, that is, disparages ideas it finds objectionable, not communities. On the contrary, the *sūtra*'s message is universalistic: even those on the wrong, limited path are, and have been all along, embraced by the Buddha's true teaching.

Chapter five, *Auṣadhi* (Herbs; *Yaocao yu pin* [藥草喻品]), presents another parable, in which a cloud rains on different plants, including medical herbs, without distinction between their different functions and qualities, and each herb is nourished according to its needs. This demonstrates that the Buddha offers only one vehicle to the different kinds of living beings without distinction, and his teachings are received in individually appropriate ways. In chapter six, *Vyākaraṇa* (Prediction; *Shouji pin* [授記品]), the Buddha predicts buddhahood for four of his followers.

Chapter seven, *Pūrvayoga*, (Former Striving; *Huacheng yu pin* [化城喻品]; Parable of the Magically Created Citadel), describes at length the career of a buddha of the past (as suggested by the Sanskrit title), Mahābhijñājñānābhibhū. Here the Buddha recounts the story of the past buddha who preaches to the 16 sons of a king. After the passage of huge periods of cosmic time, this buddha again preaches to these young men, this time the *Lotus Sūtra* itself, which they memorize. Practicing again for very long ages, the 16th of these princes, like his brothers, becomes a buddha himself, none other than Śākyamuni, who in this self-same *Lotus Sūtra* recounts this very story. In this fashion the *sūtra* effectively lifts its own revelation out of the limits of time, rendering it both timeless/eternal and authorless. All Buddhist truth is true without the contingencies of time; that is, buddhas realize the truth, they do not create it. But the *Lotus* differs here in explicitly declaring itself, as a specific articulation of that truth, to also transcend temporality. The chapter ends with the parable of the magic city (as suggested by the Chinese title), which describes the Buddha's skillful means in leading living beings to salvation: a caravan guide leads a party of men who are expecting to find a treasure at the other side of a desert. (Metaphors of trade are very common in much Indian Buddhist literature.) In order to inspire them, he conjures a city in which they can rest until they are able to resume their journey. Thus, nirvāṇa, as imagined by the earlier dispensation which the *Lotus* seeks to supersede, is presented as of only provisional meaning. The goal of the earlier teaching is thus reinterpreted as only a skillful means to encourage beings onward to the true goal of perfect awakening, buddhahood.

In chapters eight, *Pañcabhikṣuśatavyākaraṇa* (Prediction to Five Hundred Monks; *Wubai dizi shouji pin*

[五百弟子授記品]), and nine, *Ānandādivyākaraṇa* (Prediction to Ānanda and Others; *Shouxue wuxueren ji pin* [受學無學人記品]; Prediction to Those Who Have Completed and Those Still on the Path), the Buddha again predicts buddhahood for others of his disciples. In the former, the Buddha teaches the parable of a drunken man whose friend secretly sews into his garment a jewel of great price. The man proceeds to live in poverty for years, unaware that he is actually all along fantastically wealthy. After some time his friend meets him again, and is astonished that the man has continued to live in penury, unaware of what had been bestowed upon him – just as the disciples of the Buddha are unaware, in their doctrinal poverty, that the Buddha had actually given them the priceless gift of his Mahāyāna teaching all along.

Chapter ten, *Dharmabhāṇaka* (Preachers of the Dharma; *Fashi pin* [法師品]), praises the merits of those who preach and uphold the *sūtra* (*dharmabhāṇaka*). Chapter eleven, *Stūpasaṃdarśana* (Apparition of the Stūpa; *Jian baota pin* [見寶塔品]), presents the appearance from beneath the ground of the huge stūpa of the buddha Prabhūtaratna, who invites the Buddha Śākyamuni to share his seat within the stūpa. Long ago Prabhūtaratna had himself preached the *Lotus Sūtra*, and vowed to appear again whenever it was taught. Along with the story of Mahābhijñājñānābhibhū, this argues for the eternality and omnipresence of the *Lotus Sūtra* on a truly cosmic scale. Most Sanskrit versions continue with the prophecy of buddhahood to Śākyamuni's archenemy and cousin, Devadatta, which forms a separate 12th chapter in Kumārajīva's translation, *Tipodatuo pin* (提婆達多品; Devadatta), and in the Kashgar recension of the Sanskrit. This chapter was evidently not present in the original version translated by Kumārajīva, but was supplemented in the text, in Chinese, when it was revised by Faxian (法獻) and Fayi (法意) less than a century after its translation (Yuyama, 1996). The *sūtra* performs a rhetorically powerful move in casting Devadatta, the archetypical foe of the Buddha in earlier normative tradition, as a preacher of the *Lotus Sūtra* in a previous age. It was none other than Devadatta, in fact, who preached the *Lotus Sūtra* to the Buddha himself in one of his past lives. After recounting this tale, the Buddha predicts Devadatta to future buddhahood. This chapter also contains, in some versions (see above), the oft-quoted episode of the transformation of a young *nāga* girl into a male, who then immediately achieves buddhahood. The text here responds to orthodox Buddhist cosmology, which sees female rebirth as inferior to male status, and to the otherwise virtually unanimously tradition that holds that in order to achieve buddhahood, a woman must be reborn as a male. While the *nāga* girl does, albeit instantly, become a male, and only thereafter become a buddha (Nattier, 2009, 96–97), the East Asian exegetical tradition, in particular in Japan, used this episode as textual evidence to promote the possibility for women to attain buddhahood (Yoshida, 2002; Groner, 1989). In the Tendai interpretation, it also became the scriptural source for the notion that enlightenment can be attained instantly in one's own body (*sokushin jōbutsu* [即身成佛]), without undergoing multiple rebirths, and this by all sentient beings, since the *nāga* girl is also considered to belong to the realm of animals, rather than humans (Groner, 1989, 1992).

More prophecies are given in chapter twelve, *Utsāha* (Encouragment; K: 13, *Quanchi pin* [勸持品]). Chapter thirteen, *Sukhavihāra* (Blissful Condition; K: 14, *Anle xing pin* [安樂行品]), explains the proper conduct, the proper sphere of relationships and blissful ways (*sukhavihāra*) of a bodhisattva in order to preach the *sūtra* in the age of decay of the dharma. This chapter would acquire liturgical importance in East Asia as the textual basis for the repentance rituals known as *fahua chanfa* (Jpn. *hokke senbō* [法華懺法]), drawing on the *Fahua jing anle xing yi* (法華經安樂行義; T. 1926) by Huisi (慧思; 515–577 CE), the teacher of the de facto Tiantai patriarch Zhiyi (智顗; 538–597 CE). In the next chapter, 14, *Bodhisattvapṛthivīvivarasamudgama* (Emerging of Bodhisattvas from Gaps in the Earth; K: 15, *Congdi yongchu pin* [從地踴出品]), the Buddha causes multitudes of bodhisattvas of his own retinue to come forth from the earth to praise him. The future buddha, Maitreya, then asks him how, in his short period of life, he could have led so many bodhisattvas on the right path, the answer to which comes in the next chapter.

In the Tiantai interpretation, based on Kumārajīva's translation, which has been dominant in East Asian Buddhist philosophy, the text is divided between the trace teaching (*jimen* [迹門]) and the origin, or the essential teaching (*benmen* [本門]), with the latter beginning from this chapter, the halfway point in the text. According to this analysis, then, there is a fundamental transition in the *sūtra* at this point. A further subdivision sees the two halves correspondingly subdivided into three sections. For the "trace teaching," chapter 1 is the "preface" (*xufen* [序分]); chapters 2–9 are the "main preaching" (*zhengshuo* [正說]), on "skillful means,"

and chapters 10–14 (following here Kumārajīva's divisions, upon which the Tiantai doctrine is based) constituted the "circulation" (*liutong fen* [流通分]), demonstrating how the teaching of skillful means was legitimated. The same was applied to the "essential teaching": the former part of chapter 15 is the preface; the latter half of chapter 15, chapter 16, and the former part of chapter 17 constitute the main preaching, and the latter half of chapter 17 through chapter 28 teach how the Buddha's merits were witnessed and the *sūtra* spread. (For a useful chart, see Tsukamoto, 2007, 428–429).

In the next chapter, 15, *Tathāgatāyuṣpramāṇa* (Duration of the Lifespan of the Tathāgata; K: 16, *Rulai shouliang pin* [如來壽量品]), the Buddha begins to reply to Maitreya's question, explaining the limitless lifespan of a buddha, and illustrating the function of the seeming extinction (nirvāṇa) of such a buddha by means of the parable of a physician. This man causes his sons, reluctant to take the medicine he procured for them, to finally partake of it by spreading the rumor of his own death. Doctrinally speaking, the *sūtra* here addresses the question why, if the Buddha is so powerful, and indeed eternal, or ever-abiding, as this chapter proclaims him to be, he seemed to die. It answers by appealing again to the notion of "skillful means," suggesting that the Buddha only pretended to die in order to spur beings toward serious pursuit of awakening. The psychology is quite clear: something always freely available is valued much less (if at all) than something rare. Buddhist traditions speak of the possibility of obtaining rebirth in the time of a buddha as the rarest of rare chances, and thus encourage the exploitation of this chance to practice the Buddha's salvific path. The *Lotus Sūtra* contextualizes this rarity within its frame of the Buddha's eternality, both retaining the traditional emphasis on rarity, and protecting the omnipresence of the Buddha as well. Śākyamuni attained awakening in the remote past, and has since been preaching the *Lotus Sūtra* in the world (Dolce, 2002a). This chapter was also fundamental for the esoteric interpretations of the *Lotus Sūtra*, in which the "eternal" assembly of the Vulture Peak was called upon to substantiate the absolute dimension of Śākyamuni and his identity with the buddha Mahāvairocana (Dolce, 2002b; 2006; 2014).

One should note the internal contradiction implied here in the text: the *Lotus Sūtra* is preached by the Buddha, and so within the narrative frame of the text he is, of course, not yet dead. But the text was clearly composed centuries after his lifetime, and thus its authors had to explain how it was that the Buddha had seemed to die. This is difficult to understand, and may be the reason that the text next presents a series of chapters highlighting the tremendous benefits to be gained by accepting the *sūtra* itself, as inconceivable as its teachings may be: chapters 16–19, *Puṇyaparyāya* (Enumeration of Merits; K: 17, *Fenbie gongde pin* [分別功德品]); *Anumodanāpuṇyanirdeśa* (Instruction in the Merit of Sympathetic Joy; K: 18, *Suixi gongde pin* [隨喜功德品]); *Dharmabhāṇakānuśaṃsā* (The Blessings of the Dharma Preacher; K: 19, *Fashi gongde pin* [法師功德品]); *Sadāparibhūta* ([The Bodhisattva] Never Disparaging; K: 20, *Changbuqing pusa pin* [常不輕菩薩品]). These portions of the *sūtra* expound the merits to be gained by compassionate veneration and upholding of the *sūtra*, even against threats of violence and slander. Perhaps most notably, the Buddha relates how he himself had experienced persecution in a former existence as the bodhisattva Sadāparibhūta ("Never Disparaging"; Kanno, 2002). It is also important to remark that the *sūtra* itself, persisting in the world, comes to be seen as a relic of the Buddha and of his teaching, and thus as a sort of substitute for the Buddha. Chapter 20, *Tathāgatarddhyabhisaṃskāra* (Accomplishment of the Tathāgata's Magical Power; K: 21, *Rulai shenli pin* [如來神力品]), portrays the miracle of the buddhas Śākyamuni and Prabhūtaratna stretching out their tongues up to the heavenly Brahmā world, which serves as a conclusion to the central event, namely the depiction of the entrustment of the teaching to the Buddha's followers. Chapter 21, *Dhāraṇī* (K: 26, *Tuoluoni pin* [陀羅尼品]), contains spells (*dhāraṇī*) for the preachers of the *sūtra*. Chapter 22, *Bhaiṣajyarāja* (Medicine King; K: 23, *Yaowang pusa benshi pin* [藥王菩薩本事品]) is devoted to the deeds of the bodhisattva Bhaiṣajyarāja, and chapter 23, *Gadgadasvara* (K: 24, *Miaoyin pusa pin* [妙音菩薩品]; on the Sanskrit version of the name see Toda, 2002, 75–77) to the deeds of the bodhisattva Gadgadasvara. Bhaiṣajyarāja out of devotion offered his own body in firey worship, an act which, in various forms, was emulated by later devotees, who would burn parts of their body as offerings (Benn, 2009). Chapter 24, *Samantamukha* ([On the Bodhisattva] Facing Every Direction [i.e. Avalokiteśvara]; K: 25, *Guanshiyin pusa pumen pin* [觀世音菩薩普門品]; The Universal Gate of the Bodhisattva Who Regards the Sounds of the World) describes the benefits gained from venerating and invoking the bodhisattva Avalokiteśvara (Yü, 2001). This chapter gained wide circulation as an independent text, renowned especially for its promise of divine protection by the bodhisattva for any being who calls upon him in any circumstance of need; Avalokiteśvara promises to appear in a form appropriate to the needs of the being who entreats him. Thirty-three such forms are individually enumerated, the listing plainly meant to indicate the infinity of forms Avalokiteśvara might assume in order to aid beings in distress. (Note that Avalokiteśvara, or Guan[shi]yin, is depicted as a male bodhisattva in the *sūtra*, only later coming to be characterized as female.) The independence of a portion of this chapter as a separate text seems to have taken place in China.

Chapter 25, *Śubhavyūharājapūrvayoga* (Former Striving of King Śubhavyūha; K: 27, *Miaozhuangyan wang benshi pin* [妙莊嚴王本事品]), describes the deeds of several bodhisattvas and buddhas. In chapter 26, *Samantabhadrotsāhana* (Encouragement of Samantabhadra; K: 28, *Puxian pusa quanfa pin* [普賢菩薩勸發品]), the bodhisattva Samantabhadra vows to become the protector of those who venerate and uphold the *sūtra*. In chapter 27, *Anuparīndanā* (Entrustment [of the *Sūtra*]; K: 22, *Zhulei pin* [囑累品]), the Buddha exhorts the audience to preserve, preach, and transmit the *sūtra*.

Development

A comparison of the different versions of the Sanskrit and Chinese reflects a history of development in which certain chapters seem to have formed the nucleus of the *sūtra*, to which other chapters were later added. While the presentation in the different versions or translations is relatively uniform, there are differences in the number, length, and arrangement of the individual chapters, and the relation of prose and verse portions. For instance, as noted above in the sketch of chapter contents, the extant Sanskrit version in the Nepalese tradition comprises 27 chapters, while Kumārajīva's translation has 28 chapters; the 11th chapter of the Sanskrit version entitled *Stūpasaṃdarśana* (The Apparition of the Stūpa), is divided between chapter 11, *Jian baota pin* (見寶塔品; Seeing [or: Manifesting] the Stūpas), and chapter 12, *Tipodaduo pin* (提婆達多品; Chapter of Devadatta), in Kumārajīva's version, and later chapters are in a different order as well. Of Sanskrit sources, only the Kashgar manuscripts agree with the arrangement found in Kumārajīva, which represents a more developed form of the text. While there are, of course, also smaller scale differences in phrasing and the like, in terms of moderately sized variations, we should notice that the second half of chapter 5 (Herbs) is not found in Kumārajīva's translation, though it is found in the Kashgar manuscripts. The first portions of chapters 8 and 10 are found only in Dharmarakṣa's version. Sanskrit chapter 27, the final chapter, is chapter 22 in Kumārajīva. The verses in chapter 24 (K: 25), the famous chapter on Avalokiteśvara, are omitted by both Dharmarakṣa and Kumārajīva, though found in the Kashgar texts (Yuyama, 1996), later supplemented by Jñānagupta, while chapter 21 (K: 26) follows the Avalokiteśvara chapter, the latter sequential ordering of chapters here agreeing with Dharmarakṣa.

On the basis of doctrinal themes and textual form, it is assumed that chapters 2 through 9 belong to the earliest stage of the text's formation, concentrating on the concepts of the "one vehicle" and "skillful means." The second phase of development added the introductory and concluding chapters (1 and 27 [K: 22]), and probably also chapter 10, the first half of chapter 11 and chapters 13–21, which focus on the topics of the bodhisattva path, the veneration and the transmission of the *sūtra*, and the infinite life span of the Buddha. In the final phase of development, chapters 12 and 23–28, which are mostly dedicated to individual bodhisattvas, were included. The location of the preaching also changes from the Vulture Peak of the first portion to the "Assembly in Open Air" (虛空會) in the latter portion of chapter 11, with the apparition of Prabhūtaratna. This ends with what is the final chapter in Sanskrit, but chapter 22 in Kumārajīva's text. Although the proposed relative chronology is convincing, it is difficult, if not impossible, to connect these three phases of growth to an absolute chronology.

The *sūtra* is divided into chapters that consist of both prose and verse (*gāthā*). On the whole the verse recapitulates the sense of the prose, which it generally follows. There has been much scholarly discussion concerning the relative dates of composition of the prose and verse. It has been hypothesized that the core of the text was originally in verse, although increasingly this view is falling out of favor, and indeed now seems to be highly unlikely.

Impact

Perhaps the greatest historical importance of the *Lotus Sūtra* lies in the position that it gained in East Asia, particularly through the rise and establishment of the Tiantai school in China, whence it spread eastward. Most notable here is the work of Zhiyi, which includes direct commentaries on the

sūtra, as well as other exegetical works (Hurvitz, 1962). In Zhiyi's system of "classification and ranking" of Buddhist *sūtras* (*panjiao* [判教]), in which scriptures are hierarchically arranged according to temporal-biographical and doctrinal criteria, the *Lotus Sūtra*, together with the Mahāyāna *Mahāparinirvāṇamahāsūtra*, was assigned the ultimate position, not only representing one of the last teachings taught by the Buddha in his lifetime, but also the most complete and integral teaching of the dharma. Zhiyi's two major commentaries, actually compiled by his disciple, Guanding (灌頂, 561–632 CE), are the *Miaofa lianhua jing wenju* (妙法蓮華經文句; T. 1718), a commentary on specific words and sentences of the *sūtra*, and the *Miaofa lianhua jing xuanyi* (妙法蓮華經玄義; T. 1716), an interpretation of its meaning and purpose, focused on its title. The monumental treatise on meditation, *Mohe zhiguan* (摩訶止觀, T. 1911), is often considered a third *Lotus Sūtra* commentary.

Drawing on the *sūtra*, Zhiyi elaborated the important and very influential concepts of the threefold truth (*sandi* [三諦]) and the 3000 realms in a single thought-moment (*yinian sanqian* [一念三千]; Kanno, 1992). His scriptural source was Kumārajīva's Chinese rendering *zhufa shixiang* (諸法實相), the "true aspect of the dharmas," found in chapter 2, which is explained in the following passage as the "ten suchnesses" (*shirushi* [十如是]; Robert, 2011). Zhiyi read this passage in three different ways and understood the truth in three aspects, namely, emptiness (*kong* [空]), conventional existence (*jia* [假]) and the middle (*zhong* [中]; Swanson, 1989). The concept of the "3000 realms in a single thought moment" indicates that every element in the universe can be found in the single moment's vision of one's mind. Zhiyi formulated his meditative practice with this understanding (Teiser & Stone, 2009b, 36). In addition to Zhiyi, and before him, a number of other scholars offered very influential interpretations of the *sūtra* (Kanno, 2007), among whom at least Daosheng (道生, 355–434 CE; *Miaofa lianhua jing shu* [妙法蓮華經疏]; ZZ 577; Kim, 1990) should be mentioned.

With its narrative, doctrinal and cosmological themes, the *Lotus Sūtra* not only had a strong impact on literary production in East Asian Buddhism and beyond, for instance in poetry, but also informed the visual arts, probably more than did any other Buddhist source. The influence of the *sūtra* on visual arts is seen already in an inscribed Buddha image from North India (von Hinüber, 2012), and richly reflected in the art of Buddhist China (Davidson, 1954; Wang, 2005) and Japan (Tanabe, 1988, 1989). Among the most prominent examples are images found in the Dunhuang caves, in Yungang (雲崗, from the Northern Wei [北魏], 386–534 CE) and in the contemporaneous Longmen site (龍門). In Dunhuang are found unique paintings and images based on the *sūtra*'s 11th chapter, depicting Śākyamuni and Prabhūtaratna sitting side by side (for example in caves 23, 38, 133, 159, 303, 331). The dual clay images of the two buddhas in cave 259 are thought to date to the Northern Wei, making them among the oldest examples in Dunhuang. The two buddhas are worshipped together with an image of the future buddha Maitreya, in front of whom one could be reborn by keeping and reciting the *sūtra* in one's last moments. The devotion due to the text is evident in wall paintings representing subjects or themes from the *sūtra*, as well as in uncountable artistically embellished copies of the text. Copying of the text was especially popular in the Sui (589–618 CE) and Tang (618–907 CE) periods in China, and in the Heian period in Japan. This was done with calligraphic features, such as the use of gold or silver ink, or artistic ones, visible in the Japanese *Kinji hōtō mandara* (金字寶塔曼荼羅), in which text is written in gold in the shape of a pagoda, the *Ichiji butsu Hokekyō* (一字佛法華經), in which each character of the *Lotus Sūtra* is accompanied by a buddha, or the *Ichiji rendai Hokekyō* (一字蓮台法華經), in which each character perches on a lotus flower (O'Neal, 2012; Kuruta & Tamura, 1987). Activities of worship of the *sūtra* resulted from exhortations in the scripture itself about how it should be treated. In the Sanskrit text the description differs, but based on Kumārajīva's translation they are eventually formulated into five merit-making practices with regard to the text, namely, upholding, reading, reciting, explaining, and copying.

The *sūtra*'s stories and anecdotes also led to the production of popular narratives, demonstrating the miraculous salvific power of the text as well as of the Buddha and Guanyin, in particular (Dykstra, 1983; Stevenson, 1995; 2009). Scholastically speaking, it gave rise to broader doctrinal elaborations, not restricted to the Tiantai school but also produced in, or at least accepted by, other denominational groups. These include even, in Japan, Dōgen's (道元; 1200–1253) and Hakuin's (白隠; 1686–1768) Zen (Leighton, 2007). Although Dōgen is considered an archetypical Zen master, and it is true that he in some sense rejected the authority of *sūtras*, he did cite them as proof texts, and among such citations the *Lotus Sūtra* is found most often, this and other evidence testifying to the pride of place he gave the text (Kagamishima, 1985; on Hakuin, Horiuchi, 2001–2004).

In Japan, the *Lotus Sūtra* has been one of the most popular and influential scriptures not only in the religious world of temples but also in the daily lives of ordinary people. The earliest record of the text in Japan is, at least according to legend, the commentary *Hokke gisho* (法華義疏, T. 2187) attributed to Shōtoku Taishi (聖徳太子) in 615 CE. This is heavily based (estimates range at around 70% of shared materials) on the *Fahua yiji* (法華義記) of Fayun (法雲, 467–529 CE).

In the Nara period (710–794 CE), the *sūtra* was given an institutional function as one of the most powerful means of warding off and avoiding calamities. In 741 CE, due to disaster, famine, plague and social unrest, the emperor Shōmu (聖武) erected a series of temples through the country, two to each province, one monastery and one nunnery. It was in each of the latter, collectively the *kokubun niji* (国分尼寺; state nunneries), that ten copies of the *Lotus Sūtra* were enshrined. These nunneries were termed *hokke metsuzai no tera* (法華滅罪之寺), "temples for the eradication of sin through the *Lotus Sūtra*."

In the following Heian era (794–1185), Saichō (最澄; 767–822 CE) established the Japanese Tendai school and transmitted Tiantai hermeneutics and practices. Of the four types of Tiantai meditative practices (*sizhong sanmei* [四種三昧]) developed in China (Stevenson, 1986; 1987; 1999), the *Lotus samādhi* (Jpn. *hokke zanmai* [法華三昧]) took root in Japan as the most important *Lotus*-based ritual in the Tendai tradition. The repentance acts that were already integrated in the Chinese ritual were accentuated, following the introduction of new ritual manuals by Ennin (圓仁; 794–864 CE) and the *samādhi* was performed as a musical repentance liturgy (*hokke senbō* [法華懺法]; Ouchi, 2009; 2010a; 2010b).

New practices of the *Lotus* developed as well. A ritual, popular especially among aristocrats, was the *hokke hakkō* (法華八講), "eight lectures on the *Lotus Sūtra*," based on the eight fascicules into which Kumārajīva's translation was physically divided. Rather than focusing on edification per se, the main purpose of these rituals was the generation of merit (De Visser, 1935, 677–691; Tanabe, 1984). Yet another practice, documented from the mid-Heian period, and performed by monks and ascetics (*hijiri* [聖]) as well as lay persons, was that of reciting the title of the text (*daimoku* [題目]), chanted as *Namu myōhō renge kyō* [南無妙法蓮華經], "Hail to the Wonderful *Lotus Sūtra*!" (Ienaga, 1947, 66–109; Takagi, 1973, 430–489; Stone, 1998; Dolce, 2002, 294–315).

In the Kamakura period, the monk Nichiren (日蓮; 1222–1282) started to promote his own interpretation of the text. This was a time commonly understood to be the "last period of teaching" (*mofa*; Jpn. *mappō* [末法]), following a traditional schematization of the declining health of the Buddha's dispensation, an age when there was felt to be little hope for the future. Japan saw a variety of strategies for coping with this situation, such as a particular devotion to the salvation offered by the Buddha Amida (阿彌陀佛) in his Pure Land. Nichiren, for his part, ascribed to the *Lotus Sūtra* an exclusive salvific and soteriological function, particularly in this time period, and regarded the *daimoku* as a powerful means of religious achievement. He identified with the *Lotus Sūtra*'s Jōgyō Bosatsu (上行菩薩; Bodhisattva Viśiṣṭacāritra), one of the bodhisattvas who emerged out of the earth and to whom Śākyamuni entrusted the future propagation of the text. (On Nichiren see Habito & Stone, 1999 [and the whole issue of the journal in which it appears]; Stone, 1999; Dolce, 2002b.)

The denomination that originated from Nichiren and his disciples is historically called the Hokke-shū (法華宗; Lotus Sect). It flourished in the Muromachi period (室町; 1337–1573) and was a predominant force by the 15th century in Kyoto, where some Hokke temples were given the status of *chokugansho* (勅願所), temples for offering prayers for the imperial family. Adherence to the *Lotus Sūtra* continued to grow, and the followers of Nichiren continued to develop their institutions. The Nichiren lineage split into several sublineages, and with the Meiji Restoration (1868), these were officially recognized as the Nichiren-shū (日蓮宗), Nichiren-shōshū (日蓮正宗), and a host of further subsects. In addition to these traditional denominations, since the early 20th century, lay movements based on Nichiren-inspired devotion to the *Lotus Sūtra*, such as the Reiyūkai (霊友会), the Risshō kōsei kai (立正佼成会) and, as the largest and most recent group, the Sōka gakkai (創価学会), have been very active. The religious orientation of these groups focuses exclusively on the *Lotus Sūtra*, to the virtual exclusion of all other Buddhist scriptures, and they continue to gain an increasingly large following outside Japan as well. In 20th-century Japan the universalistic ideals of the *Lotus Sūtra*, filtered through Nichiren's interpretation, inspired both socialist oriented activitists and ultranationalists (Tamura & Miyazaki, 1972; Maruyama, 1
2001), eloquently testifying
of the *Lotus Sūtra*.

THE EDITORS

Mahāparinirvāṇamahāsūtra

The *Mahāparinirvāṇamahāsūtra* is one of the most influential Mahāyāna scriptures, in particular in East Asia but also of significant influence in some Indian and Tibetan traditions. It may be seen, from one point of view, as an exemplar of a genre of more than 40 extant texts that purport to report on events and teachings associated with the Buddha's *parinirvāṇa* in the village of Kuśinagarī. These scriptures thus claim authority as the last words of the Buddha and, as a group, can be referred to as *Nirvāṇa sūtras*.

These texts are of particular importance for their affirmation of either the legitimacy of the Buddhist teachings or the immutable nature of the Buddha. Both of these related themes gain special force from being set at the cessation of the Buddha's corporeal existence. Many of these *Nirvāṇa sūtras*, including one entitled *Mahāparinirvāṇasūtra* (extant in several versions in Pali, Sanskrit, Chinese, and Tibetan; ed. Waldschmidt, 1950–1951), belong to non-Mahāyāna traditions. In contrast, the *Mahāparinirvāṇamahāsūtra* and associated texts are predominantly Mahāyāna in orientation. Texts in this latter subgroup clearly refer to the prior literature whose name they borrow, and they take the same setting, but they differ significantly in doctrinal thrust. Among the *sūtras* dealing with the topic of the Buddha's demise, the *Mahāparinirvāṇamahāsūtra* is doctrinally the most complex.

The principal doctrines expounded in the *Mahāparinirvāṇamahāsūtra* are that the Buddha constantly exists in the world of transmigration, and that all sentient beings have inherent within them the essence of the Tathāgata or *tathāgatagarbha* and buddha nature (although unattested in the Sanskrit fragments of the *Mahāparinirvāṇamahāsūtra*, this is sometimes reconstructed as *buddhadhātu* on the basis of the *sūtra*'s Tibetan translation and the word's attestation in the *Ratnagotravibhāga*).

Extant Witnesses to the *Mahāparinirvāṇamahāsūtra*

There are four independent witnesses to the *Mahāparinirvāṇamahāsūtra*:

1. *Dabanniehuan jing* (大般泥洹經; T. 376), translated circa 416–418 CE by Buddhabhadra (佛陀跋陀羅; *fl.* c. 406–421 CE) and Faxian (法顯; 320–420 CE[?]);
2. *Dabanniepan jing* (大般涅槃經; T. 374), translated circa 421–432 CE by Dharmakṣema (曇無讖; 385–433 CE);
3. *Yongs su mya ngan las 'das pa chen po'i mdo* (D 120/P 788), translated in the 9th century by Jinamitra, Jñānagarbha, and Devacandra; and
4. 35 identified Central Asian Sanskrit fragments from 24 leaves most likely to have come from 3 different manuscripts from Khadalik (Habata, 2007).

The *Dabanniehuan jing* (6 fascicles), *Yongs su mya ngan las 'das pa chen po'i mdo* (13 *bam po*), and the first quarter of the *Dabanniepan jing* (10 fascicles out of 40) contain approximately the same body of material, which is also coextensive with the range of the Central Asian Sanskrit fragments. All of these versions can be regarded as derivations from more or less the same origin, henceforth referred to as *Mahāparinirvāṇamahāsūtra*-common.

The material found only in the *Dabanniepan jing* (T. 374) is three times as voluminous as *Mahāparinirvāṇamahāsūtra*-common, and is henceforth referred to as T. 374-unique. According to the Chinese Biographies of Eminent Monks (*Gaoseng zhuan* [高僧傳]; T. 2059 [L] 336a11–b4; see Fuse, 1942, 73–74) and the *Chu sanzang jiji* (出三藏記集; T. 2145 [LV] 60a10–20), Dharmakṣema obtained the manuscript of this material in Khotan or Dunhuang. It is therefore possible that this additional material was compiled there. This portion discusses interesting topics such as the salvation of the *icchantika* (*'dod chen po*, *yichanti* [一闡提], the being considered to be inherently incapable of awakening), which had been regarded as clearly denied in the *Mahāparinirvāṇamahāsūtra*-common by Chinese Buddhist scholar-monks (the only exception being Daosheng [道生; c. 360–434 CE; see Tokiwa, 1930, 175–182) until this portion of the *sūtra* was introduced into China. Another topic is the salvation of king Ajātaśatru, who was considered in earlier texts to be excluded from salvation

ed into China. Another topic is
ng Ajātaśatru, who was consid-
s to be excluded from salvation

due to his having committed one of the five heinous sins (see Radich, 2011). Even though there is no guarantee that this material is Indian in origin, these ideas and passages had considerable influence on Buddhist monks in East Asia, such as those of the Nirvāṇa school (涅槃宗) in China, Wŏnhyo (元曉; 617–686 CE) in Korea, and Shinran (親鸞; 1173–1263) in Japan.

In addition to the above mentioned translations, which were rendered directly from Indic versions of *Mahāparinirvāṇamahāsūtra*-common, there exists another Tibetan version, translated from T. 374, which includes T. 374-unique. This texts bears a title identical to that of the other Tibetan translation (*Yongs su mya ngan las 'das pa chen po'i mdo*; D 119/P 787). In terms of Tibetan hermeneutics, it is interesting that when Bu ston rin chen grub (1290–1364) wrote an influential thesis on *tathāgatagarbha* theory (*De bzhin gshegs pa'i snying po gsal zhing mdzes par byed pa'i rgyan*; Seyfort Ruegg, 1973), he deliberately relied on this translation from T. 374, and not on the translation of Indian origin (Shimoda, 1986).

Two other texts should be mentioned. A revision of T. 374, also titled *Dabanniepan jing* (大般涅槃經; T. 375; 36 fascicles), was compiled with reference to the *Dabanniehuan jing* under the Liu Song (劉宋) dynasty by Huiyan (慧嚴; 363–443 CE), Huiguan (慧觀; c. 5th cent. CE), and Xie Lingyun (謝靈運; 385–433 CE). In China this is traditionally called the "Southern version" (*nanben* [南本]), to differentiate it from the original *Dabanniepan jing*, which is known as the "Northern version" (*beiben* [北本]). In addition, there also exists in Chinese a sort of appendix in two fascicles (*Dabanniepanjing houfen* [大般涅槃經後分]; T. 377), attached to the last chapter of T. 374, apparently designed to close off the voluminous *Mahāparinirvāṇamahāsūtra* proper, which even in T. 374's version leaves key issues dangling. This text was also translated into Tibetan (*Yongs su mya ngan las 'das pa chen po'i mdo*; D 122/P 789). No Sanskrit equivalent is known.

The Central Asian Sanskrit fragments, although limited in quantity compared to the vast extent of the *sūtra* as a whole, provide invaluable information that would otherwise be inaccessible, such as the Sanskrit equivalents of doctrinally significant terms, and they manifest linguistic or grammatical characteristics and stylistic features which provide hints to their history (Habata, 2007).

It is worth noting the situation in which the manuscript of the *Mahāparinirvāṇamahāsūtra* was obtained in India, as reported in detail in the *Chu sanzang jiji*. The Chinese monk Faxian was presented with a manuscript of the text that had been installed in a stūpa in the house of a layman, not in a monastery (Shimoda, 1993, xxv–xxvi). This report agrees with the scenario of a sort of home-based book cult attested in early medieval India (Schopen, 2010).

Key resources for the scholarly study of the text are H. Habata's editions of the Sanskrit fragments (Habata, 2007; reviewed by Baums, 2015) and the Tibetan translation (Habata, 2013). H. Habata is currently preparing a second volume of Sanskrit fragments. The most detailed monographic treatments to date of aspects of the text are by Shimoda Masahiro (1997) and M. Radich (2015); the text is also treated in considerable detail by Takasaki Jikidō (see esp. 1974). Also worthy of note is Mochizuki Ryōkō (1988). The text was rendered into English by K. Yamamoto (1973–1975), but this version is hardly serviceable, being a very rough translation of a Japanese *kakikudashi* rendering (in which the Chinese text is rearranged in Japanese grammatical order supplied with the information of part of speech, case, tense, mood, etc. in a classical Japanese). A Japanese translation of the Northern version in this style, accompanied by a detailed compendium of this huge text, has been available since 1929 (Tokiwa, 1929; 1935). An attempt to revise this translation (on the basis of the Southern version) provided with richly informative notes has produced an invaluable result, now accessible in the series Shin Kokuyaku Daizōkyō (Tsukamoto & Isoda, 2008–2009). Recently M. Blum (2014) has published the first volume of a projected four-volume complete English translation of the Northern version. Shimoda Masahiro (1993) produced an annotated Japanese translation of one-third of the Tibetan text. A complete modern Japanese translation of the Northern version in a rather free manner is Tagami Taishū (1996–1997).

Structure and Setting

The body of T. 374 comprises 40 fascicles, including T. 374-unique (chapter 6 onward). In T. 374, this material is divided into the following 13 chapters:

1. **Āyus* (Lifespan; 壽命品);
2. **Vajrābhedakāya* (The Adamantine Body; 金剛身品);
3. **Sūtranāmadheya* (The Name of the *Sūtra*; 名字功德品);

4. **Tathāgatagarbha* (The Essence of the Tathāgata; 如來性品);
5. **Sarvapariṣatparipṛcchā* (Questions Posed by the Assembly; 一切大衆所問品);
6. The Manifestation of Illness (現病品);
7. Holy Practice (聖行品);
8. Pure Practice (梵行品);
9. The Virtues of the Fool (嬰兒功德品);
10. The Bodhisattva [Named] "King Noble Virtue of All-Illuminating Light" (光明遍照高貴德王菩薩品);
11. The Bodhisattva [Named] "Lion's Roar" (獅子吼菩薩品);
12. Kāśyapa Bodhisattva (迦葉菩薩品); and
13. Kauṇḍinya Bodhisattva (憍陳如品).

Correspondences between these chapter divisions in T. 374 and other complete and independent witnesses of the text are summarized in table 1. (This table covers *Mahāparinirvāṇamahāsūtra*-common only, since there are by definition no correspondences for T. 374-unique. Equivalence is in some cases inevitably approximate, due to detailed differences between versions too fine to enter into here. Sections marked § for the *Yongs su mya ngan las 'das pa chen po'i mdo* refer to the numbering of Habata, 2013.)

As can be seen from table 1, the first chapters in T. 374, which can be confirmed as Indic in origin, generally correspond to the Tibetan version, the only differences lying in the title of chapter 4 and the division and respective extent of chapters 4 and 5.

In the Tibetan version, chapter 4 is entitled *Byang chub sems dpa' sna grangs bzhi chos ston pa* (Bodhisattva Teaching in Four Categories of Dharmas). This title is appropriate to the first discourse given by the Buddha in this portion of the text, as is also

indicated by the parallel title in the *Dabanniehuan jing* – we will see below that this title in fact refers to the exposition of a set of categories for scriptural hermeneutics shared with Buddhaghosa. However, the title for the same chapter attested in T. 374, **Tathāgatagarbha*, reflects the central theme of *Mahāparinirvāṇamahāsūtra*-common as a whole, but does not properly fit the content of the first portion of this chapter in particular, in which this theme is not at stake, with, however, relevant terms sporadically mentioned.

Turning to the division of the text, as can also be seen from the table, T. 374 and the Tibetan also divide chapters 4 and 5 differently. In T. 374, the **Tathāgatagarbha* chapter covers almost all of the last two-thirds of the text. In the Tibetan, in contrast, this title is used only for material matching the "four-discourses" section in the *Dabanniehuan jing*. For the remainder of the text, the Tibetan uses the title "Questions Posed by the Assembly," which in T. 374 serves only for a relatively short portion at the very end of the text.

This difference in title and extent of chapter 4 in T. 374 and the Tibetan, each with its own plausible basis in the content of the text, is likely to have arisen during the development of the enormously voluminous discourses contained in the chapter (which amounts to two-thirds of *Mahāparinirvāṇamahāsūtra*-common as a whole, in T. 374's division). The chapter title given in T. 374 corresponds to a formulation found in the colophon of the *sūtra* summarizing the content of the text as a whole. This title thereby reflects a more advanced stage of textual development than does the Tibetan, which in contrast retains a title reflecting only the specific content of the chapter itself.

In contrast to these two versions, the *Dabanniehuan jing* divides *Mahāparinirvāṇamahāsūtra*-common far more minutely, into 18 chapters (and as can be seen from the line numbers given in the table, some of these chapters cover only a few lines). These peculiar divisions were probably later additions by the Chinese translators, aimed at promoting understanding of the content of the text.

It is of signal importance in understanding the content of the *Mahāparinirvāṇamahāsūtra* that the text was most likely composed in stages. The most detailed theory of the stratification of the text is still that presented by Shimoda Masahiro (1997). According to this theory, *Mahāparinirvāṇamahāsūtra*-common is comprised of three strata (designated below I, II, and III). This theory is summarized in table 2 (chapter numbering is as in table 1; the table is presented following the sequential order of the texts themselves, according to which the sequence of the hypothesized strata is slightly jumbled).

(Stratum I is also referred to as *Mahāparinirvāṇamahāsūtra*-dk; Strata II and III together are *Mahāparinirvāṇamahāsūtra*-b [for explanations of these terms, see below]).

As can be seen from table 2, Shimoda's first stratum (I) contains chapters 1, 2, and 3 of T. 374 and the Tibetan, with the exception of a portion roughly corresponding to chapter 5 (**Dīrghāyus*) in the *Dabanniehuan jing* (in fact incorporating a small part of the same translation's ch. 4 also), which Shimoda argues was most likely interpolated at the end of chapter 1 upon completion of the last part

Table 2

III *Mahāparinirvāṇamahāsūtra*-b	chapter 4 (remainder) chapter 5	chapter 5	chapters 9–18
	(T. 374 unique; i.e. chs. 6–13)	—	—

of *Mahāparinirvāṇamahāsūtra*-common (ch. 5 of T. 374 and the Tibetan). The second stratum (II) comprises the first part of chapter 4 of T. 374, chapter 8 of the *Dabanniehuan jing*, and chapter 4 of the Tibetan. The third stratum (III) comprises the latter half of chapters 4 and 5 of T. 374, chapters 9–18 of the *Dabanniehuan jing*, and chapter 5 of the Tibetan, and also includes the earlier interpolation approximately corresponding to the *Dabanniehuan jing*'s chapter 5.

Shimoda argues that among the three main translations, the *Dabanniehuan jing* represents features from the earliest phase in the history of the text. The first stratum of the *Dabanniehuan jing* (chs. 1–4 and 6–7) can thus be regarded as approximately representing the proto-*Mahāparinirvāṇamahāsūtra*.

In the analysis of the history of the text, it is also significant that some details earlier in the text can be interpreted as meticulously setting the scene of the discourse, and manipulating the casting, in ways that may accommodate a variety of discourses elaborated later in the text, including even part of T. 374-unique.

At the outset of the text, three significant figures, who are usually ubiquitous in the traditional *Nirvāṇa sūtras*, are missing from the assembly: Ānanda, Mahākāśyapa, and Ajātaśatru. This by no means signifies that the compilers of this *sūtra* were ignorant of the roles usually played by these characters in *Nirvāṇa sūtras*. Indeed, at the very end of *Mahāparinirvāṇamahāsūtra*-common, the Buddha reveals that the *Mahāparinirvāṇamahāsūtra* is in fact to be transmitted to Mahākāśyapa and Ānanda once they have eventually arrived in the assembly, and is only consigned to Mañjuśrī for the time being, as long as those rightful recipients and guardians of the text are absent (P. 154b4–6; T. 376 [XII] 899c20–22; T. 374 [XII] 428b8–10).

In excluding these key figures from the action in the meantime, the authors of the text betray a deliberate plotting technique. The authors aim to explain away the apparent anomaly arising from the fact that their new *sūtra* was unknown in earlier canonical collections by inventing a temporal interval in which neither Ānanda nor Mahākāśyapa, the two great disciples traditionally reported to have recited the Buddhist scriptures at Rājagṛha, was present, and specifically designate that time as the moment at which this *sūtra* was promulgated.

Further, in place of the usual figure of Mahākāśyapa, namely, as a non-Mahāyāna monastic follower of the Buddha, the *Mahāparinirvāṇamahāsūtra* introduces an eponymous Mahākāśyapa Bodhisattva. The appearance of this figure is made all the more remarkable by the fact that Mahākāśyapa never appears as a bodhisattva outside the *Mahāparinirvāṇamahāsūtra*. This move occurs in the portion of the text approximately corresponding to the **Dīrghāyus* (長壽; Lifespan) chapter of the *Dabanniehuan jing* (ch. 5) which, as we see in table 2, Shimoda holds to be a late interpolation into the earliest stratum of the text. According to Shimoda's theory, this interpolation functions as a necessary joint to link the first stratum of the text to the second and third strata.

The absence of Ajātaśatru is manipulated in a somewhat different manner. Ajātaśatru is mentioned at the outset of the non-Mahāyāna *Mahāparinirvāṇasūtra* as a belligerent king. Although he does not otherwise appear in the non-Mahāyāna *Mahāparinirvāṇasūtra*, he is explicitly mentioned in the *Mahāparinirvāṇamahāsūtra* as another of those notable by their absence. However, he is allowed to appear as an important character much later, in a part of T. 374-unique (T. 374 [XII] 474a27–485b11), so that he may serve as a joining device between T. 374 and other portions of the text.

Basic Characteristics of the Teaching of the *Mahāparinirvāṇamahāsūtra*

In apparent contrast to the basic Buddhist doctrine confirmed in the statement that "all things lack inherent identity," which is unanimously shared among Buddhist texts of both the non-Mahāyāna and the Mahāyāna, the *Mahāparinirvāṇamahāsūtra* expounds, as the ultimate truth manifest to the Buddha's perspective, not simply that the Buddha exists in the dimension of transmigration, but that the Buddha/buddhahood inheres in all sentient beings in the form of the buddha nature and the essence of Tathāgata (*tathāgatagarbha*).

These two claims are substantially identical, although the point of emphasis differs: in the former, the focus is laid on the aspect of the Buddha in which he transcends worldly beings, whereas the latter stresses the aspect of the Buddha in which he exists in association with worldly beings. In the presentation of this latter aspect, the new terms *tathāgatagarbha* and **buddhadhātu* are applied for the first time to the Buddha internalized within sentient beings. Both of these terms indicate the manner in which the Buddha abides in the dimension of transmigration, as was already more generally held with the first of the two claims. The compilers who

wo claims. The compilers who

formulated these ideas held that the Buddha within sentient beings is precisely the same as the Buddha in the sphere of transmigration.

The emergence of this doctrine may be regarded as an understandable development of the theory attested in a variety of *Nirvāṇa sūtras*, both in the Sūtrapiṭaka and Vinayapiṭaka, that affirms either the viability of Buddhist teachings even in the absence of the Buddha, or the indestructible nature of the Buddha transcending the cessation of his corporeal existence. The *Mahāparinirvāṇamahāsūtra* expresses this latter point by applying the terms **dharmakāya* (dharma body) and **vajrābhedakāya* (adamantine indivisible body) to the Buddha as he abides in the state of *parinirvāṇa*. This new theory of the ongoing existence of the Buddha in the sphere of transmigration after his *parinirvāṇa* is most appropriate to the basic characteristic of the Sūtrapiṭaka, in which, as the opening formula of each *sūtra* suggests, to communicate the living aspect of the words of the Buddha to the hearer was of great concern (Brough, 1950).

The *Mahāparinirvāṇamahāsūtra* also contains a doctrine, distinctive within Buddhist contexts, that the self (*ātman*) exists and is identical with the Buddha and the essence of Tathāgata (**tathāgatagarbha*). This doctrine has often been taken by modern scholars as directly conflicting with one of the most fundamental doctrines in Buddhism, that all beings lack "self." However, the *Mahāparinirvāṇamahāsūtra* formulates this doctrine by means of a highly elaborated hermeneutical logic which, we might argue, worked to protect the *sūtra* from any potential criticisms in traditional doctrinal contexts.

The *Mahāparinirvāṇamahāsūtra* had significant influence on the development of Mahāyāna *sūtras* promoting *tathāgatagarbha*/buddha-nature theory, giving rise to the creation of *sūtras* such as the *Aṅgulimālīya*, *Mahābherīhāraka*, *Mahāmegha*, and *Śrīmālādevī*. In Tibet, the *tathāgatagarbha*/buddha-nature theory was introduced fairly late. The *Mahāparinirvāṇamahāsūtra* is treated by Tibetan scholars as merely one among several *tathāgatagarbha sūtras* (with the notable exception of Bu ston, who formulated his theory primarily on the basis of the *Mahāparinirvāṇamahāsūtra*). In contrast, texts propounding this strain of Buddhist thought arrived in East Asia almost as soon as they had been composed, and the East Asian Buddhist world is pervaded by the influence of the particular version of *tathāgatagarbha*/buddha-nature theory that has its origins in the *Mahāparinirvāṇamahāsūtra*.

Historical Development of *Mahāparinirvāṇamahāsūtra* and Its Characteristic Doctrines

Mahāparinirvāṇamahāsūtra-common was apparently formulated by savants well versed in the genre of *Nirvāṇa sūtras*. These texts developed different nuances, depending upon whether they were treated as part of the Sūtrapiṭaka or the Vinayapiṭaka. Texts incorporated into the Vinayapiṭaka tended to stress the centrality of the teaching or of regulations as the key to the continuity and authority of Buddhism. Those in the Sūtrapiṭaka, by contrast, emphasized the continued presence of the Buddha, either in an invisible form such as the *dharmakāya*, or in an embodied form such as the Buddha's relics enshrined in a stūpa, or both. *Nirvāṇa sūtras* in the Sūtrapiṭaka usually hold that as the Buddha abides in *parinirvāṇa*, he is in a supreme stage of meditation (Shimoda, 1997, 71–72). The intimate knowledge of this literature on the part of the authors of *Mahāparinirvāṇamahāsūtra*-common may be seen in the fact that a variety of topics in the text are predicated upon meticulous analyses of elements of both genres of *Nirvāṇa sūtras*.

One feature that differentiates the internal strata of the *Mahāparinirvāṇamahāsūtra* is the terms in which proponents of the *sūtra* refer to themselves. Proponents of the first stratum (*Mahāparinirvāṇamahāsūtra*-dk) call themselves "preachers" (**dharmakathika*, or something similar). The main claim of *Mahāparinirvāṇamahāsūtra*-dk is that the Buddha is continually present. The Buddha, in this sense, is called "self" (*ātman*), meaning that the Buddha is indestructible and autonomous, and unaffected by any effects brought about within the confines of transmigration.

In contrast to the first impression conveyed by this startling application of the label *ātman* to the Buddha, the basic claim of the *Mahāparinirvāṇamahāsūtra* at this stage of its development (*Mahāparinirvāṇamahāsūtra*-dk) in fact does not go beyond the claims of those non-Mahāyāna *Nirvāṇa sūtras* contained in the Sūtrapiṭaka, which also confirm the continued existence of the Buddha in the sphere of *parinirvāṇa*, and the transition of his worldly presence into the relics enshrined in the stūpa. At this stage of its development, *Mahāparinirvāṇamahāsūtra*-dk also endeavors to stand on its head the traditional Buddhist doctrine of four types of inverted thought, namely the fundamental errors of mistakenly ascribing to things permanence (*nitya*), bliss (*sukha*), self (*ātman*), and purity (*śuddha*), when all things are not in fact permanent, blissful, possessed of a self, or pure. *Mahāparinirvāṇamahāsūtra*-dk achieves this second-order (counter) inversion of the standard "inversions" (*viparyāsa*) by redefining the Tathāgata as permanent, nirvāṇa as blissful, the dharma as pure, and the Buddha as self (T. 374 377b4–c12; P 32b4–34a2; T. 376 862a12–24).

Protagonists of the second and third strata of the *Mahāparinirvāṇamahāsūtra* (*Mahāparinirvāṇamahāsūtra*-b) are monks who refer to themselves as bodhisattvas, in contrast to the preachers mentioned above.

Building further upon the above mentioned understanding that the Buddha continues to exist, and so on, the second stratum develops a variety of revisions to the monastic rules concerning the ban of eating meat, introduces new interpretations of the activities of the Buddha by a sort of docetism gathered under the rubric of "conformity with the ways of the world" (*lokānuvartanā*), and uses a host of similes to reinterpret the traditional concept of liberation (*mokṣa*) as having innumerable virtues.

The third stratum of the *Mahāparinirvāṇamahāsūtra* (also included in the portion here called *Mahāparinirvāṇamahāsūtra*-b) further unpacks the doctrine of *Mahāparinirvāṇamahāsūtra*-dk, which holds that the Buddha continues to be present in the world. Where *Mahāparinirvāṇamahāsūtra*-dk (like other Sūtrapiṭaka *Mahāparinirvāṇasūtra* texts) takes the Buddha to be present in the world in the form of the relic enshrined in the stūpa, the third stratum of the *Mahāparinirvāṇamahāsūtra* internalizes the Buddha's continued presence, that is, locates it within every sentient being, under the terms "essence of Tathāgata" and "buddha nature." At this stage of its development, the text contends that one should place faith in the buddha nature inherent in one's own mind, instead of paying homage to an external stūpa (P. 111a1–7; T. 374 884c21-a7; T. 376 409c21–410a7). This "internalization" of the relic of the Buddha is likely to have been achieved with much less difficulty than one might expect from a surface inspection of these terms in various languages other than Sanskrit, since the new doctrinal term at play here, usually translated "nature of the Buddha" (*foxing* [佛性]), although unattested in Sanskrit, most likely corresponds to an Indic term **buddhadhātu* (Tib. *sangs rgyas gyi khams*), and that self-same term was also used to refer to the relic of the Buddha. In other words, in making this move, the authors of the *Mahāparinirvāṇamahāsūtra* were probably playing on the ambiguity of an old term for relics.

In this third stratum, further, the four inverted notions of permanence, bliss, self, and purity, which in the first stratum were assigned to the elements of the Tathāgata, nirvāṇa, the Buddha, and the dharma, respectively, are consolidated to denote either the Tathāgata or the essence of the Tathāgata (P 105a6–8; T. 374 407a20–26; T. 376 883b3–5).

A variety of additional teachings are developed in this stratum, including various similes that aim to explain the secret meanings of Buddha's teaching about the comprehension of *tathāgatagarbha*/buddha nature and the docetic *parinirvāṇa*. Among these is a series of passages propounding a hard line with regard to *icchantika*s (see Karashima, 2007), a class of beings who are claimed to be fundamentally incapable of attaining supreme enlightenment. This teaching, which apparently contradicts the principle doctrine of this *sūtra* that all sentient beings possess buddha nature within themselves, subsequently produced serious controversy in China.

As noted above, Shimoda (1997) argues that careful analysis of passages intervening between *Mahāparinirvāṇamahāsūtra*-dk and *Mahāparinirvāṇamahāsūtra*-b indicates that they were interpolated between materials that previously must have concluded chapter 1 in T. 374 and the Tibetan (Lifespan) and the following chapter on the "adamantine body" (once more, this interpolation approximately corresponds to the *Dabanniehuan jing*'s ch. 5). This interpolation was made during the very last moments of the compilation of the whole plan of *Mahāparinirvāṇamahāsūtra*-common since, as discussed above, details contained in the interpolation concerning the Bodhisattva Mahākāśyapa bear an intimate logical connection with material at the close of the third stratum.

The Transformation of the Social Setting from *Mahāparinirvāṇamahāsūtra*-dk to *Mahāparinirvāṇamahāsūtra*-b

We saw above that proponents of *Mahāparinirvāṇamahāsūtra*-dk are referred to as "dharma preachers" (**dharmakathika*). Evidence in the text has been interpreted to indicate that these preachers were peripatetic monks traveling in the wilderness (Shimoda, 1997, 324–330). The authors of the

324–330). The authors of the

---

text set out a disciplinary rule unique to this *sūtra* that allows lay followers to bear arms in order to protect the preacher as he travels on foot through dangerous areas. These passages attracted the attention of the influential Japanese monk Nichiren (日蓮; 1222–1282), influencing the formation of a belligerent attitude in his teaching (*Risshō ankokuron* [立正安国論]; T. 2688 [LXXXIV] 206c14–25; etc.).

The preachers of this layer are strict in morality, criticizing monks who possess "illegal" property such as cows, horses, servants, and so forth, which are labelled as belonging to the "eight types of impure goods." At the same time, they evince a flexible attitude toward the idea of associating harmoniously with communities that they visit, apparently with the intention of creating a close relationship with the original monastic and lay inhabitants of those communities without recourse to institutional authority as regulated by Vinaya texts.

As we also saw, in *Mahāparinirvāṇamahāsūtra*-b, the proponents of the text are renamed "bodhisattva." Close reading suggests that at this stage of the text's growth, proponents took up fixed residence in single monasteries. It appears that this move may have enhanced their awareness of the need to give their community its own organizational structure and coherence, within the context of established monasticism at large. In response, they practiced (or portrayed themselves as practicing) a more rigorous modus vivendi with both monks and laypeople than the proponents of *Mahāparinirvāṇamahāsūtra*-dk. This is exemplified by the introduction of new rules completely banning meat eating. This rule may have been unique to the *Mahāparinirvāṇamahāsūtra* at the time of its composition, and the *sūtra* has continued to be celebrated as the representative of this teaching.

The bodhisattvas of *Mahāparinirvāṇamahāsūtra*-b are also represented as trying to rectify the wrong practices of unrighteous monks, and the text goes so far as to permit practitioners to bring not only daily necessities but also *sūtras* from the monastery of unrighteous monks back to their own community (P. 89b5–90a2; T. 374 400b1–c8; T. 376 878c16–29). In contrast to the attitude of the preachers of *Mahāparinirvāṇamahāsūtra*-dk, the bodhisattvas of *Mahāparinirvāṇamahāsūtra*-b draw strict hierarchical distinctions between monks and the laity. They also pay more attention to the ethics of mainstream "Hindu" society, resulting in the criticism of *caṇḍāla* (outcaste) kings, an apparent adoption of social hierarchies otherwise at least rhetorically rejected in most Buddhist traditions (P 88b6–90a2; T. 374 400a5–c8; T. 376 878b11–c29). In this stratum of the text, a sort of sectarianism, which had been alien to *Mahāparinirvāṇamahāsūtra*-dk, is also evident in various respects.

One interesting feature of the social environment, not shared with other *sūtras*, deserves mention. Not only nuns but also female bodhisattvas are clearly mentioned at the outset of this *sūtra* as one portion of the assembled congregation. To date, no instance has been found in Buddhist scriptures of the feminine form of the term *bodhisattva* (Nattier, 2003, 99), but the *Mahāparinirvāṇamahāsūtra* does have this equivalent in all its renderings (P 3b1–3; T. 376 853b16–17; T. 374 366a26–28). This striking feature, associated with the fact that another representative *sūtra* propounding this theory, the *Śrīmālādevīsiṃhanāda*, makes the princess Śrīmālādevī the sole advocate of this teaching, has been taken by some to perhaps indicate that both this *sūtra* and *tathāgatagarbha* theory had their genesis in a female-friendly environment.

Another clue to the social milieu in which the compilers of the *Mahāparinirvāṇamahāsūtra* were active is provided by the Sanskrit fragments, which show us the peculiar prose style adopted by *Mahāparinirvāṇamahāsūtra*-b. This text supplies numerous similes in *kāvya* style, and features artful and ornate prose resembling that found in such works as the *Harṣacarita* or *Daśakumāracarita*. This feature is absent from *Mahāparinirvāṇamahāsūtra*-dk, which resembles the older style of non-Mahāyāna *sūtras*. The text also features a passage distinguishing the words of the Buddha from worldly **kāvyas* (T. 376 876a13: 離佛契經世間歌頌; P 81b6/D 80a1: *sangs rgyas kyis gsungs pa ma yin pa rang bzo'i tshig*; comp. T. 374 397a10–11: 外道典籍文書), an expression found in a number of Mahāyāna *sūtras*. These features suggest that the compilers of *Mahāparinirvāṇamahāsūtra*-b very likely were active in environments within easy reach of these sorts of literary knowledge. At the same time, it is important to note that the primary concern of the compilers of Mahāyāna *sūtras* lay in their involvement with "scripture," independent of the style they adopted. Significant in this respect is the observation of C. Smith (1993, 228) that this sort of protestation against the criticism of scriptures by outside skeptics in the manner of disparagingly assessing them as mere poetry is a very common phenomenon among religions that have their own scriptures, including Buddhism. Depending on the dating of the core of the *sūtra*, this transition in style from *Mahāparinirvāṇamahāsūtra*-dk to *Mahāparinirvāṇamahāsūtra*-b would be in complete agreement with a possible transition of the form of the *sūtra* from oral to written, or the emergence of the awareness of the significance of scripture, and the same conclusion may also be suggested by the fact that worship of *pustakas* (physical books) is alien to *Mahāparinirvāṇamahāsūtra*-dk, but essential to *Mahāparinirvāṇamahāsūtra*-b (Shimoda, 1997, 340–347).

Hermeneutical Methods in the *Mahāparinirvāṇamahāsūtra*

The *Mahāparinirvāṇamahāsūtra* is extremely valuable for the light it sheds on an interesting process in the development of Mahāyāna *sūtras*. The extension of the *Mahāparinirvāṇamahāsūtra* from *Mahāparinirvāṇamahāsūtra*-dk (the first stratum) to *Mahāparinirvāṇamahāsūtra*-b (the second and third strata) is carried out using a hermeneutical method shared with the attempt of Buddhaghosa to classify the *suttas* in the four *Nikāyas* (Sv 50,18 = Ps I 15,18 = Spk II 3,13 = Mp I 19).

Buddhaghosa classifies *suttas* in the four *Nikāyas* into four categories, explaining that there are four reasons for the Buddha's laying down (*nikkhepa*) of *suttas*, namely:

1. his own wish (*attajjhāsaya*);
2. the wish of another person (*parajjhāsaya*);
3. a question (*pucchāvāsika*); and
4. an occasion (*atthuppattika*).

In the first category, according to Buddhaghosa, the Buddha "lays down" the teaching in question solely "on the basis of his own wish," without being requested to teach by others. This category includes such *suttas* as the *Ākaṅkheyyasutta*. In the second category, teachings were elicited when the idea occurred to the Buddha that the time to deliver a specific teaching had ripened. Such *suttas* were taught by the Buddha after he had observed the recipient's wishes, ability, concept, intention, and situation for awakening. This category includes such *suttas* as the *Cūḷarāhulovādasutta*, which was occasioned by the realization that the teachings it contained could lead Rāhula to liberation. In the third category, a question was posed to the Buddha, and in response he "laid down" such *suttas* as the *Bojjhaṅgasaṃyutta* and the like "due to a question." In the fourth category, *suttas* were laid down when an occasion presented itself. This category includes *suttas* such as the *Puttamaṃsupama*, and the category is called "due to an occasion."

These terms correspond precisely to those appearing in the explanation of **dharmaparyāya* (preaching) in the *Mahāparinirvāṇamahāsūtra* (the teaching indicated by the title of ch. 4 in the Tibetan and ch. 8 in the *Dabanniehuan jing*, Four [Types of] Dharma). At the outset of *Mahāparinirvāṇamahāsūtra*-b, the *Mahāparinirvāṇamahāsūtra* states that bodhisattvas will give the teaching in accordance with the fourfold dharma gate of (1) **ātmādhyāśaya* ("[the Buddha's] own intention"; Tib.: *rang gyi lhags pa'i bsam pa*; T. 376: 自正; T. 374: 能自專正), (2) **parādhyāśaya* ("the intention of others"; Tib.: *gzhan gyi lhags pa'i bsam pa*; T. 376: 正他; T. 374: 能正他人), (3) **pṛcchāvāśika* ("due to questions"; Tib.: *'dri ba'i don*; T. 376, T. 374: 能隨問答), and (4) **arthotpattika* ("utilizing events as an opportunity [for teaching]"; Tib.: *don gyi dmigs byung ba*; T. 376: 善解因緣義; T. 374: 善解因緣).

In the *Mahāparinirvāṇamahāsūtra*, **ātmādhyāśaya* is defined as teaching given on the basis of the Buddha's own intention, whereas **parādhyāśaya* is delivered in accordance with the degree of maturation of disciples and their attendant capacity to understand. **Pṛcchāvāśika* refers to teachings elicited by questions posed by Kāśyapa Bodhisattva, and **arthotpattika* is a teaching presented by the Buddha on an occasion when a specific incident occurs.

From *Skandha* to *Parivarta* in Chapter Titles, and Bodhisattvas as Commentators

The *Mahāparinirvāṇamahāsūtra* shares with Buddhaghosa a fourfold set of hermeneutical categories for scriptural interpretation (called, by Buddhaghosa, *suttanikkhepa*). The fourth of these categories, **arthotpattika*, is applied in two different ways in the *Mahāparinirvāṇamahāsūtra*: in introducing new Vinaya rules, and as a rubric explaining episodes in the Buddha's life interpreted as "conformity with the ways of the world" (*lokānuvartanā*) and similes for *mokṣa* ("liberation"). This twofold application of the category of **arthotpattika* leads us in the direction of another special feature of *Mahāparinirvāṇamahāsūtra*-common, which in turn reveals a key characteristic of *Mahāparinirvāṇamahāsūtra*-b.

direction of another special
rinirvāṇamahāsūtra-common,
eals a key characteristic of
hāsūtra-b.

Mahāparinirvāṇamahāsūtra-common, taken as a whole, is bivalent in nature, since it bears relations to both the Vinayapiṭaka and the Sūtrapiṭaka. A related feature of the text is found in a transformation of the term denoting "chapter" in chapter titles. In the Tibetan and the Central Asian Sanskrit fragments, the first chapters (T. 374/Tib. chs. 1–2; T. 376 chs. 1–6) consistently use the term *skandha*, whereas from the "Names" chapter (*Nāmadheyaparivarta*; T. 374/Tib. ch. 3; T. 376 ch. 7) onward, we find the term *parivarta* (*le'u*). This shift in terminology maps roughly onto the stratification of the text between *Mahāparinirvāṇamahāsūtra*-dk and *Mahāparinirvāṇamahāsūtra*-b. The term *skandha* is very commonly used in Vinaya literature, whereas the term *parivarta* is common in Mahāyāna *sūtras*.

Nirvāṇa sūtras in general developed in relation to both the Vinayapiṭaka and the Sūtrapiṭaka. In fact, E. Frauwallner (1956) proposed that *Nirvāṇa sūtras* were originally attached to the Vinayapiṭaka, and only gradually thereafter became independent, a theory opposed by É. Lamotte (1958, 193–198). Although it is not possible to confirm Frauwallner's theory, it cannot be denied that *Nirvāṇa sūtras* were closely associated not only with didactic discourses but also with literature related to monastic discipline.

This shift in the term denoting chapter from *skandha* to *parivarta* (roughly corresponding to the shift from *Mahāparinirvāṇamahāsūtra*-dk to *Mahāparinirvāṇamahāsūtra*-b) suggests an alteration of the character of the *sūtra* from a *Nirvāṇa sūtra* of the Vinaya literature to that of the Mahāyāna *sūtra* literature. The "bodhisattva" proponents of *Mahāparinirvāṇamahāsūtra*-b, who develop new teachings on the basis of the teachings advocated earlier in *Mahāparinirvāṇamahāsūtra*-dk by preachers, can thus be regarded as acting as commentators (like Buddhaghosa). The second and third strata of the *Mahāparinirvāṇamahāsūtra* (i.e. *Mahāparinirvāṇamahāsūtra*-b) are thus in a sense commentaries on the preceding first part, and *Mahāparinirvāṇamahāsūtra*-common is to be considered as a complex whole comprised of both a *sūtra* and its commentary.

In this connection, a further peculiar feature of *Mahāparinirvāṇamahāsūtra*-b must be mentioned, namely, that *sūtras* other than the *Mahāparinirvāṇamahāsūtra* are frequently quoted, whether or not they are identified by name, in developing the discourse. This never happens in *Mahāparinirvāṇamahāsūtra*-dk. While it is true that other *sūtras* do sometimes cite *sūtras* (see e.g. von Hinüber, 1996, § 72, and index *s.v.* "quotations"), the citation of *sūtras* is in general more characteristic of commentary. This feature, also, therefore points to the commentarial nature of *Mahāparinirvāṇamahāsūtra*-b.

However, if *Mahāparinirvāṇamahāsūtra*-b and Buddhaghosa thus share the task of *sūtra* commentary, and even the fourfold categorization of motives for teaching, their hermeneutical projects also differ significantly. *Mahāparinirvāṇamahāsūtra*-b uses the category of fourfold teaching with the aim of evolving new teachings, whereas Buddhaghosa deploys it to classify teachings already given, that is, he uses this rubric only to indicate the origin of particular *suttas*. In addition, the authors of *Mahāparinirvāṇamahāsūtra*-b amalgamate the original text with the commentary, thereby expanding the *sūtra* into a newer and larger whole, whereas Buddhaghosa clearly distinguishes his own commentarial discourse from that of the *sūtra*. Perhaps this contrast between the two approaches betrays a more general difference in the basic understanding of the notion of *sūtra* between the Mahāyāna and the Theravāda.

Historical Records Suggesting the Existence of a Proto-*Mahāparinirvāṇamahāsūtra*

Several of the *Nirvāṇa sūtras* found in Chinese Buddhist catalogues indicate that there may have once existed two concise *sūtras* comprised of two fascicles almost identical in content and volume with the *Mahāparinirvāṇamahāsūtra*-dk: a "*Nirvāṇa sūtra*" translated by An Faxian (安法賢) and another translated by Zhi Qian (支謙). According to the *Lidai sanbao ji* (歷代三寶記), a catalogue of the Buddhist canon written by Fei Changfang (費長房), An Faxian's text (*Dabanniepan jing* [大般涅槃經]) is a succinct version of the *Mahāparinirvāṇamahāsūtra* translated in the Wu (吴) dynasty (222–280 CE), with the first few chapters "abridged" (略) into two fascicles (T. 2034 [XLIX] 56c26–57a2). As to Zhi Qian's version of the text (*Dabanniehuan jing* [大般泥洹經]), there is a discrepancy between the account in the *Chu sanzang ji ji* and that in the *Lidai sanbao ji*: the *Chu sanzang ji ji* identifies this *sūtra* with the **Vaitulyamahāparinirvāṇasūtra* (*Fangdeng niehuan jing* [方等泥洹經]) translated by Dharmarakṣa (竺法護; T. 2145 [LV] 14a8–9), whereas the *Lidai sanbao ji* identifies the *sūtra* with a concise *Mahāparinirvāṇamahāsūtra*, and describes the text in detail as follows:

> This is an abbreviated version of the extended *Mahāparinirvāṇa sūtra*, with the introduction and lamentation chapters [of the *Dabanniehuan jing*] summarized into two fascicles. [Although] the last three sheets are slightly different [from the extended version] this is the second translation [of the *Mahāparinirvāṇamahāsūtra*]. (T. 2034 [XLIX] 57a24–25; on the interpretation followed here, see Fuse, 1935, 32–33)

The attributions and dates given in the *Lidai sanbao ji* are often of problematic reliability, and we should not accept its testimony unquestioningly. However, Fei Changfang's description of the extent and content of these texts coincides with that of the proto-*Mahāparinirvāṇamahāsūtra* reconstructed using modern philological methods (Shimoda, 1997, 563–567). It is not really possible to imagine that Fei Changfang could have forged descriptions of texts that coincidently agree with the picture of the proto-*Mahāparinirvāṇamahāsūtra* so derived, and this testimony from the *Lidai sanbao ji* may consequently reasonably be regarded as an independent proof of the historical existence of the proto-*Mahāparinirvāṇamahāsūtra*.

Dating of the *Mahāparinirvāṇamahāsūtra*

In order to reliably date a *sūtra*, we first need to have two kinds of evidence, internal and external; we then require agreement between the two. Most Mahāyāna *sūtras*, however, are strongly colored with ahistorical characteristics and embedded in ahistorical settings, making it difficult to treat them as historical documents. The *Mahāparinirvāṇamahāsūtra* seems, however, to be something of an exception, and satisfies both criteria for dating very well.

The *Mahāparinirvāṇamahāsūtra* and a group of related *sūtras* (the *Mahābherīhāraka*, *Mahāmegha*, and Mahāyāna *Aṅgulimālīya*) share a prophesy that the teachings and transmission of the *sūtra* will decline and disappear, until a time comes 700 years after the Buddha's *parinirvāṇa* in which its "true teaching" will be destined to linger for less than 80 years. Some scholars take this account as reflecting historical reality, in distinction to other, more commonly encountered and stereotypical prophesies featuring in many Mahāyāna *sūtras* (Radich, 2015; Hodge, 2006). They conclude that these prophecies provide unusually strong reasons to believe that the text was closely associated with a particular point in time, falling around the era of the florescence of the Satavahana kings and Emperor Kaniṣka, denoting a period of composition somewhere in the 1st and 2nd centuries CE. This period seems to be in accord with the date suggested by records of earlier lost Chinese translations of the *Mahāparinirvāṇamahāsūtra*, as mentioned above. If some version of the *Mahāparinirvāṇamahāsūtra* was translated by Zhi Qian, the text should have already been transmitted to China by the 3rd century CE.

School Affiliation and Historical Background

In many respects, *Mahāparinirvāṇamahāsūtra*-common displays a close relationship with the Mahāsāṃghika:

1. an exceptional rule allowing laypersons to be armed in order to protect wandering monks (P 49a6–b5; T. 376 867a16–26; T. 374 384a22–b9);
2. the number of types of prohibited meat (P 55a4; T. 376 868c29; T. 374 386a18–19);
3. the kinds of food categorized as "foul-smelling substance" (**āmagandha*; P 55a7–8; T. 376 869a13–14; T. 374 386b7–9);
4. textual commonalities with the *Lokānuvartanāsūtra* (or a related text; for instance P 61b2–62b1; T. 376 870c23–871a16; T. 374 388b24–c21); and
5. a specific pattern of "gradual discourse" (**ānupūrvīkathā*; P 47b5–7; T. 376 866c7–10; T. 374 383b27–c1).

The unique rule permitting laypersons to be armed to protect preachers as they wander, which seemingly should be illegal in the context of the Vinaya, accords with an account appearing in the *Prātimokṣasūtra* of the Mahāsāṃghika. Only this school allows monks to give teachings to the laity armed for the purpose of protecting monks as they wander (T. 1425 [XXII] 410a8–18).

The *Mahāparinirvāṇamahāsūtra* mentions ten kinds of meat already prohibited in the existing Vinayapiṭaka, without naming them individually. The number ten agrees with that in the Mahāsāṃghika (T. 1425 [XXII] 486a24–487a13) and the Pali (Vin. i. 216,27–218,32) Vinayas. This

---

prohibition in the Mahāsāṃghika Vinaya is discussed contextually in close association with the prohibition from taking foul-smelling food that is mentioned immediately below, and should be considered as a whole.

When the *Mahāparinirvāṇamahāsūtra* mentions foul-smelling food (*āmagandha*), it classifies not only meat but also garlic and onions in this category. This classification is otherwise known only in the Vinaya of the Mahāsāṃghikas (T. 1425 [XXII] 487a25–28).

The *Lokānuvartanāsūtra* (or a closely related text) may be quoted in a slightly modified manner in the *Mahāparinirvāṇamahāsūtra*. This text, as P. Harrison (1982) has shown, is a characteristic element of the *Mahāvastu*, which belongs to the Mahāsāṃghika.

Among the types of gradual discourse (次第説法; **ānupūrvīkathā*), the *Dabanniehuan jing* version of the *Mahāparinirvāṇamahāsūtra* lists, in addition to the common threefold rubric of donation (*dāna*), keeping precepts (*śīla*), and being born in a heaven (*svarga*) as a result, two further elements: discourses on merit (**puṇyakathā*) and discourses on the ripening of merit (**puṇyavipākakathā*). Outside the *Mahāparinirvāṇamahāsūtra*, *puṇyakathā* and *puṇyavipākakathā* are attested only in the *Mahāvastu* (Mvu iii. 257.12–13; 408.15; 413.2) and in the *Nettippakaraṇa* (140,14–15). The latter, however, yields the authenticity of the relevant passage to another precedent *sūtra* unattested in extant materials.

On the other hand, we should also note that the *Mahāparinirvāṇamahāsūtra* and Mahāsāṃghika sources disagree on the number of *pātayantikā* (offences entailing atonement of a monk). The *Mahāparinirvāṇamahāsūtra*, without enumerating each item, counts them as 91 (P 57a2; T. 376 869c1; T. 374 386c27), while they are 92 consistently in the extant Mahāsāṃghika Vinaya (T. 1425 [XXII] 281c15, etc.). Despite this exception, it is reasonable, on the whole, to conclude that in such matters, the compilers of *Mahāparinirvāṇamahāsūtra*-common stay within the bounds of Mahāsāṃghika learning. More important, however, is the fact that in other respects, they were not satisfied with the environments constituted by the traditions of this school, and tried to transform them to fit the new settings they confronted.

Prajñāpāramitā Sūtras

The Sanskrit compound *prajñāpāramitā*, which may be rendered "perfection of insight" or "perfection of wisdom," refers to a fundamental teaching of Mahāyāna Buddhism and to a family of texts devoted to its exposition. The Prajñāpāramitā literature consists of a vast number of texts of varying size, mostly in dialogic form, presented as teachings imparted by the Buddha. They were composed, for the most part in prose, in different ages and in various Indic languages, and subsequently translated in several other idioms, especially Chinese and Tibetan.

The history of the Prajñāpāramitā literature spans many centuries and is particularly rich and complex. Perhaps no other variety of Mahāyāna texts can boast a similar historical trajectory: while they are among the earliest attested specimens of Great Vehicle scriptures, the Prajñāpāramitā texts, constantly transmitted, edited, expanded and reinterpreted, remained very much at the heart of the development of Mahāyāna Buddhism. While the influence they exerted on the Madhyamaka school is generally acknowledged (Robinson, 1967, 61–65; 177–180; Ruegg, 1981, 6–7), it also played an important role in the other great school of Mahāyāna thought, the Yogācāra, and a number of important commentaries devoted to Prajñāpāramitā texts belong to that tradition. The assimilation of Tantric elements which characterizes the late developments of the Prajñāpāramitā literature constitutes yet another proof of the vitality of this protean tradition.

Key Prajñāpāramitā ideas proved influential on other Great Vehicle strands and scriptures right from the earliest documented phase of Mahāyāna history. One example is the *Pratyutpannabuddhasaṃmukhāvasthitasamādhisūtra* (Harrison, 1978, 48–51): this text's idea that one should cultivate certain meditative practices while, at the same time, carefully avoiding hypostatization of and attachment to the experienced states is central to Prajñāpāramitā itself (see Deleanu, 2000, 69–70).

The influence of Prajñāpāramitā was by no means confined to the realm of Buddhist doctrine, but extended to religious ideas and practices as well. This is not a later development (let alone degeneration) incurred in an originally more "philosophical" tradition: as shown by G. Schopen's seminal study (2005, 25–62), the idea that scriptures such as those of the Prajñāpāramitā should be worshipped is attested since the formative phase of the Mahāyāna.

The idea that the Prajñāpāramitā (a feminine noun in Sanskrit) is to be regarded as the mother of the buddhas – in consequence of its role as the high road to awakening – is already attested in the *Perfection of Insight in 8000 Lines* (see e.g. *Aṣṭasāhasrikā Prajñāpāramitā*; ed. Mitra, 1887–1888, 253–255; Vaidya, 1960, 125–126; Conze, 1973a, 172–173). It appears in fact more prominently in this scripture than in *Larger Prajñāpāramitā* texts, a fact that may have influenced the centrality of the *Aṣṭasāhasrikā* in later cultic developments.

This conception proved productive both from a doctrinal (Radich, 2015, 150–151) and a religious point of view. The personification of the Perfection of insight as a female deity represents a further step in the establishment of a Prajñāpāramitā cult centred on the *Aṣṭasāhasrikā* which, developed during the Pala period, especially from the 11th–12th centuries (Schopen, 2005, 5–6; Kim, 2013, 29–32), is still alive in Nepal (Gellner, 1992, 117).

One of the most remarkable aspects of this cult is the role played by manuscripts as tangible embodiments of the deity (Kim, 2013, 23–41). This cultic centrality of the books is also reflected in the illuminated manuscripts (chiefly of the *Aṣṭasāhasrikā*) produced during the Pala period, with their complex iconography (Kim, 2013; Weissenborn, 2012). Ritual practices centred on the worship of Prajñāpāramitā manuscripts play an important role in the religious life of Newar Buddhism in Nepal (Gellner, 2001, 179–193; Emmrich, 2009).

Translations of *Prajñāpāramitā* texts into Chinese sparked a strong interest in this tradition. This resulted in a flourishing early exegetical production (only fragments of which survive) which peaked during the 4th–5th centuries and saw the formation of indigenous exegetical traditions devoted to the study and expositions of the Prajñāpāramitā (Zürcher, 2007, 100–102 and *passim*; Tsukamoto, 1985, 361–385). In Tibet, the study of the *Prajñāpāramitā* was largely filtered through a fundamental Indian commentary, the *Abhisamayālaṃkāra*, whose interpretation gave

rise to a significant indigenous commentarial literature (Conze, 1978, 24–27; Komine *et al.* 2015, 180–188; Brunnhölzl, 2010; 2012).

The Term *Prajñāpāramitā*

The form corresponding to Sanskrit *prajñāpāramitā* with the earliest manuscript attestation is the Gandhari *prañaparamida* (Falk & Karashima, 2012, 28 and *passim*), occurring in a manuscript which, as will be detailed below, is also the earliest text belonging to the Prajñāpāramitā genre discovered to date. The interpretation of the compound *prajñāpāramitā* has been the object of some debate. Its first member, *prajñā* (Gandh.i *prañа*; Pal. *paññā*), refers to a cognitive faculty, and may be translated "insight, wisdom, understanding". *Pāramitā* ("perfection") is an abstract noun from the adjective *parama*, "supreme, highest" (Dayal, 1932, 166; Hikata, 1958, xi; Watanabe, 2009, 105–121). There are various lists of perfections constituting specific ranges of practice for a bodhisattva (Dayal, 1932, 165–269; Nattier, 2003, 153–154); the most important in the literature of the Great Vehicle is the six-fold series, the perfections of: giving, good conduct, endurance, energy, meditation and insight, which includes *prajñāpāramitā* as its last item.

Not only is the use of the term *prajñāpāramitā* not confined to Prajñāpāramitā (or, for that matter, Mahāyāna) literature, it does not always even refer to the particular methods expounded by Prajñāpāramitā texts.

The compound *paññāpāramī*/*paññāpāramitā* is rare but attested in Pali canonical texts, but more common in the commentarial literature (for example in the *jātaka* commentary: see Fausbøll, 1877–1896, ii, 76, 173 and *passim*). A particularly interesting canonical occurrence is in the *Elders' Verses* (*Theragāthā*), in the section related to Sariputta (Oldenberg & Pischel, 1883, 91, no. 1015; Norman 2007, 103). Here we find the expression "having attained the perfection of wisdom" (*paññāpāramitaṃ patto*), which is glossed in the commentary as "having attained the perfection … of a disciple's knowledge" (Woodward, 1959, 105).

As this passage, probably one of the earliest occurrences of this compound (see Norman 2007, xxxiv), demonstrates, *paññāpāramitā* was probably used at first with a rather generic meaning, and in contexts unrelated to the bodhisattva path. This is in line with the use of *pāramī* (and *pāramiṃ patta*) in the Pali canon (especially in the *Majjhimanikāya*), where it refers to the attainment of a high degree of mastery in a certain practice or virtue (see for example MN ii.11–22; and especially MN iii.28–29, where *pāramippatto* is preceded by *vasippatto*, "having attained mastery").

Thus, the Pali canonical evidence suggests that this term evolved at first as a generic "empty category" open to different interpretations, which only later, and within certain groups, was used with reference to a specific method for attaining supreme awakening, expounded by a particular scriptural tradition (i.e. our Prajñāpāramitā literature). Indeed, not even in a Mahāyāna context is Prajñāpāramitā referentially univocal. An example of a detailed exposition of a "perfection of insight" system belonging to the Mahāyāna but outside the Prajñāpāramitā literature (and apparently not directly related its specific teaching) is constituted by chapter 11 of the *Bodhisattvapiṭakasūtra* (Pagel, 1995, 240–316, 332–413).

The standard Tibetan translation of the compound *prajñāpāramitā*, *shes rab kyi pha rol tu phyin pa*, is based on the interpretation of the second member as deriving from *pāram* + *ita* (*pha rol tu phyin pa*, lit. gone over/arrived to the other side). While philologically unlikely, this paretymology reflects a widely attested and hermeneutically productive interpretation of the compound, which partially underlies also some of its Chinese translations. One early example is *zhihui duwuji* (智慧度無極; "insight crossing over/limitless"), a rather creative rendition first attested in the *Fa jing jing* (法鏡經; *Ugrapariprcchā*) translated during the second half of the 2nd century (T. 322 [XII] 21b2; note also the variant *hui duwuji* [慧度無極] in T. 322 [XII] 18a23–24). *Duwuji* is probably a double translation of *pāramitā* attempting to cover both etymologies (Zürcher, 2007, 336n140). Variants are *zhi duwuji* (智度無極; T. 225 [VIII] 482b12) and the more common *zhidu* (智度; T. 225 [VIII] 482b13–14), "insight crossing over", both attested for the first time in the *Da mingdu jing* (大明度經; T. 225; on which see below).

However, the most common equivalent in Chinese is probably the phonetic transcription *banruoboluomi* (般若波羅蜜), first attested in the 2nd century *Dao xing jing* (道行經; T. 224, see below) translated by Lokakṣema, which is based on the Gandhari form (Karashima, 2010, 23; 2013, 176–177). The alternative pronunciation *boreboluomi*, recorded in Chinese lexicographical works since the Tang period (*Yiqiejing yinyi* [一切經音義]; T. 2128

[LIV] 313c8) and generally s
dictionaries, is probably inac

Lokakṣema's archaic transcription remained in use also in subsequent periods. Later, presumably starting from the Tang period, we find the variant *banruoboluomiduo* (般若波羅蜜多; for example *Da banruoboluomiduo jing* 大般若波羅蜜多經; T. 220 [V] 2b6–7 and *passim*).

Doctrinal Aspects of the *Prajñāpāramitā*

A complete treatment of a topic as vast and complex as Prajñāpāramitā thought transcends the scope of this article. In this section I will summarize some of the most important ideas expressed in this immense literature, mainly on the basis of the *Perfection of insight in 8000 lines*, which may be considered the foundational text of this tradition. Important general discussions of Prajñāpāramitā thought include E. Conze (1962, 198–237; 1967, 123–147), T. Vetter (1984; 2001), F. Deleanu (2000), P. Williams (2009, 45–62), A. Warder (2000, 345–354), Komine *et al.* (2015, 117–151).

Already in the earliest texts (Falk & Karashima, 2013, 162–165; Karashima, 2011, 41; see also Mitra, 1887–1888, 34; Vaidya, 1960, 17), *prajñāpāramitā* is described as a method that can be used by bodhisattvas as a shortcut for quickly attaining the supreme awakening characteristic of a Buddha (*anuttarasamyaksaṃbodhi*). This goal, shared by Mahāyāna literature at large, remains the main focus of the entire teaching, in ways that shaped in a very profound way both its form and content. Supreme awakening is not proposed as a universal goal by Prajñāpāramitā texts, and in fact the *Aṣṭasāhasrikā* is very explicit in depicting the bodhisattva path as a difficult career for a few exceptional individuals (for example Mitra, 1887–1888, 429–430; Vaidya, 1960, 212–213; Conze, 1973a, 251).

In general, in Buddhism insight (*prajñā*) is conceived as a faculty ultimately conducive to undermining attachment through profound analytic understanding of reality/experience and its fundamental constituent categories (*dharmas*). The perfection of insight brings this approach to its extreme consequences. So Prajñāpāramitā may be characterised, in general terms, as a particular way of practicing carried out with absolute detachment and aimed at attaining supreme awakening (i.e. buddhahood) or omniscience (*sarvajñatā*), another term often employed with reference to the bodhisattvas' goal (on the relationship between a buddha's omniscience and awakening, see Anālayo 2014, 117–127).

A programmatic passage at the beginning of the first chapter of the *Aṣṭasāhasrikā* may be taken as a good exemplification of the Prajñāpāramitā method (Mitra, 1887–1888, 4–5; Vaidya, 1960, 3; Conze, 1973a, 83–84; Falk & Karashima, 2012, 32–34; Karashima, 2011, 3–4). Here Subhūti, one of the main characters in Prajñāpāramitā literature as the perfect embodiment of its teaching, is asked by the Buddha to explain the perfection of insight to bodhisattvas. Subhūti replies first by negating, through a typical negative epistemological approach, all the categories brought into the discourse ("I do not observe that entity, namely 'bodhisattva', I do not observe that entity, namely 'Perfection of insight'"), and then goes on declaring that if a bodhisattva who is instructed in this way does not become discouraged, depressed and terrified, "then this is precisely a bodhisattva … to be instructed in the Perfection of insight; it is precisely this that should be known as the Perfection of insight".

It is important to pay attention – here and elsewhere, especially in the *Aṣṭasāhasrikā* – to the dialectical structure of this passage, which steers a middle course between absolute affirmation and absolute negation: a certain teaching is *asserted* and recommended to certain persons, while, at the same time the text negates the (ultimate) reality of all the agents, elements and attainments involved in the practice itself.

These formulations should not be taken as the reflection of a theoretical exercise. On the contrary, in the *Aṣṭasāhasrikā* the systematic rejection of any object (or "sign", *nimitta*) and notion is said to result in a particular state of meditative absorption (*samādhi*) called "the *samādhi* of the nonappropriation of all *dharmas*" (*sarvadharmānupādāna*), through which a bodhisattva can quickly attain supreme awakening (Mitra, 1887–1888, 12–13; Vaidya, 1960, 6–7; Conze, 1973a, 86–87; see also Vetter, 1984, 502–503; 2001, 80).

As there is literally nothing – no category, no practice, no attainment – which is not dissolved by this method of "perfect insight" (including the method itself), this sustained engagement in absolute detachment results in a powerfully dynamic vision of the practice and of reality at large. Any entity or category (even negative) on which one could "dwell", thus becoming the object of reification (and hence of attachment), should be abandoned.

Therefore, the idea that one should practice without fixation on any category or attainment is particularly important in this tradition. According to a programmatic definition found in a rhetorically conspicuous position in the initial portion of the *Larger Prajñāpāramitā*, all the six perfections should be "fulfilled... by a bodhisattva who has stood on the perfection of insight through nonstanding (*asthānayogena*)" (Kimura, 2007, 28). Similar statements on "nonstanding" ([*asthāna*] also found in the *Aṣṭasāhasrikā*; e.g. Mitra, 1887–1888, 8; Vaidya, 1960, 4) are not to be seen as mere paradoxical verbal flourishes. Rather, they are carefully worded representations of a crucial practical concern for the authors of Prajñāpāramitā texts: that of achieving a dynamic balance between engagement and detachment.

Perfection of insight is, first of all, a certain *way* of acting and practicing. As F. Deleanu (2000, 69) very aptly puts it, "[t]he most important point here is not what a *bodhisattva* practises, and usually he works with traditional methods and categories, but how he practises". Indeed, practices and notions to be cultivated in this way comprise much traditional stock material and for this reason Prajñāpāramitā texts (especially those of the *Larger Prajñāpāramitā* group) are inclusive of many categories and practices also attested in Āgama and Abhidharma literature, adopted and adapted in view of the different and higher goal of supreme awakening.

As these raw materials, so to speak, were originally designed for other purposes, the ability to keep buddhahood as the exclusive focus and goal of a bodhisattva's activities plays a strategic role in Prajñāpāramitā literature. This happens in various forms and at different levels, for example, at the level of karmic merit (*puṇya*), a very prominent theme in these scriptures. Merit provides the fundamental building blocks for the career of a bodhisattva, hence producing and correctly handling it was, not surprisingly, a central concern to the authors of these texts. According to the *Aṣṭasāhasrikā* (Mitra, 1887–1888, 172–173; Vaidya, 1960, 86–87; Conze, 1973a, 136), all the various spheres of a bodhisattva's activity – the sources of his merit – really become "perfections" (*pāramitā*) only when cultivated in the light of the Perfection of insight (i.e. without any form of attachment), and – from the point of view of their karmic fruits – if wholly aimed at the attainment of awakening.

An important development in this area was the idea (attested also in several other Mahāyāna scriptures: Harrison, 1990, 173–174; Nattier, 2003, 114–115) that merit acquired by a bodhisattva could be derailed from its expected karmic trajectory (i.e. the attainment of a specific retribution) and, guided by perfection of insight, redirected instead to assisting towards the attainment of supreme awakening (Kajiyama, 1989, 10–13; Seyfort Ruegg, 2004, 52–54). This is a distinctive application of the notion of "transfer" (*pariṇāmanā*) of merit, which, in itself, is also shared by other forms of Buddhism.

The idea of acting or practicing, while at the same time re-orienting the expected effects, also underlies the employment of the three old forms of meditative absorption (*samādhi*) known as "gateways to liberation" (*vimokṣamukha*) as a fundamental tool in the Prajñāpāramitā workshop.

These three *samādhi*s – of emptiness (*śūnyatā*), signlessness (*animitta* or *ānimitta*) and absence of aim (*apraṇihīta*) – were traditionally considered key methods for attaining *nirvāṇa* through progressive abandonment of specific mental states (Conze, 1962b, 59–69). Thus their adoption by Prajñāpāramitā texts represents a remarkable instance of appropriation and radical reinterpretation which exemplifies very well the fundamental attitude of this tradition. The locus classicus for this operation is chapter 20 of the *Aṣṭasāhasrikā*. Here we are told that these practices should indeed be cultivated, but – with a characteristic twist of focus – skilfully handled and employed as methods not for achieving *nirvāṇa* (which is in fact to be carefully avoided), but for practicing in view of awakening. In other words, the set of three *samādhi*s should be adopted for its side-effects (advanced forms of detachment), which are considered beneficial for the bodhisattva practice, but definitely not for its originally intended main purpose. In practical terms, the *Aṣṭasāhasrikā* carries out this functional shift by introducing a clear-cut distinction between *parijaya* ("intensive/thorough cultivation") of the three *samādhi*s – which is recommended – and *sākṣātkriyā* ("realization") of the *bhūtakoṭi* ("the true end", an elusive term used here as a coded reference to *nirvāṇa* [see Lancaster 1975, 38–39]), which is to be avoided (Mitra, 1887–1888, 370–371; Vaidya, 1960, 183; Conze, 1973a, 222).

An important concept introduced by the *Aṣṭasāhasrikā* in this context is that of *upāyakauśalya* ("skilfulness in the use of means"), which plays an important role in Mahāyāna Buddhism at large. Here (and, more generally, in the *Aṣṭasāhasrikā*) *upāyakauśalya* is not used in the sense, typical of other Mahāyāna strands, of ability in the use of salvific expedients, but rather refers to mastery in the use of practices and control over their outcomes, including karmic retribution (de Breet

f practices and control over their
g karmic retribution (de Breet

1992; Nattier 2003, 155). In this particular acceptation, *upāyakauśalya* is closely related to the perfection of insight (Mitra, 1887–1888, 312, Vaidya, 1960, 156; Conze, 1973a, 196).

The impression of a certain structural similarity between the treatment of the three *samādhis* in chapter 20 of the *Aṣṭasāhasrikā* and the notion of re-orientation of merit (*pariṇāmanā*) is strengthened by the fact that in both contexts the notion of *upāyakauśalya* is brought into the picture. In chapter 6 of the *Aṣṭasāhasrikā* "skilfulness in the use of means" refers to the correct cognitive approach, free from reification, which makes the re-orientation of merit possible (Mitra, 1887–1888, 150–151; Vaidya, 1960, 76; Conze, 1973a, 129; de Breet, 1992, 213–214).

Concern and compassion for other living beings (which are considered to be as ultimately unreal as anything else) constitutes a powerful balancing force which helps keep bodhisattvas on track, and to avoid undesired lesser attainments caused by unchecked detachment. Supreme awakening is intimately connected to compassion, which is the main motivation for a person's decision to become a bodhisattva and embark in the long journey towards buddhahood: becoming a buddha being the best way to assist other beings (but comp. Nattier, 2003, 132–135). Hence compassion, as a form of motivational drive, is a key factor also in Prajñāpāramitā discourse, but with a decidedly functional nuance. This aspect of compassion is very clear in the *Aṣṭasāhasrikā*: the vow taken by the bodhisattva to lead other beings to *nirvāṇa* is described in several passages as an armor (*saṃnāha*) protecting the bodhisattva (e.g. Mitra, 1887–1888, 20–21, 300–301; Vaidya, 1960, 10–11, 149–150; Conze, 1973a, 90, 190). Chapter 20 of the *Aṣṭasāhasrikā* links the theme of concern for existence as a powerful motivational drive preventing bodhisattvas from attaining lesser goals to the notion of *upāyakauśalya* (Mitra, 1887–1888, 372–379; Vaidya, 1960, 184–187; Conze, 1973a, 223–226).

The first two "gateways to liberation" mentioned above, emptiness and signlessness, are among the most important categories in the Prajñāpāramitā teaching, though perhaps less so the third of the triad, aimlessness, as absence of striving may have been deemed problematic in the context of progressing on the bodhisattva path (seeVetter 1984, 500). Emptiness has a particularly important status in Prajñāpāramitā texts (as in several other strands of the Mahāyāna), where it is singled out as a central practice. Its role, already prominent in the *Aṣṭasāhasrikā*, is further enhanced in *Larger Prajñāpāramitā* texts.

The use of emptiness in Prajñāpāramitā texts is complex and multifaceted. The form of cultivation free from attachment denoted by this category (especially as *śūnyatāsamādhi*, "meditative absorption of emptiness") is reflected by (and, at the same time, is a reflection of) the nature of the correctly interpreted reality. Hence emptiness, at the same time, refers also to the fundamentally true, non-dual character underlying and unifying reality as a whole (and in this sense is a synonym of "reality" [*tathatā*, lit. "thusness"]). The notion always encompasses both aspects, with occasional tension between them (see for example *Da zhidu lun* [大智度論]; T. 1509 [XXV] 328c16–22; = Zacchetti, 2005, 346n119; see Deleanu, 2000, 99n59).

From another angle, emptiness can be seen as the universalization of the traditional Buddhist idea of absence of self (*anātman*; Vetter, 1984, 501; Williams, 2009, 51–55), extended to all categories (*dharmas*). In this connection, an important aspect of Prajñāpāramitā discourse on emptiness is the adoption of the scholastic category of *svabhāva* ("intrinsic nature", particularly important in Abhidharma thought for defining the notion of *dharma*: Williams, 1981; Cox, 2004), already attested in the Gandhari manuscript (Falk & Karashima, 2012, 52). The resulting conceptualization of emptiness as lack of intrinsic nature probably implies a polemical stance towards the descriptive model of reality/experience advocated by the Abhidharma. At any rate, it proved a momentous move for the development of Buddhist thought, particularly influential on the Madhyamaka school. Its use is already fully fledged in the *Aṣṭasāhasrikā*, in which all *dharmas* (the fundamental descriptive categories of reality/experience in the Buddhist discourse) and forms of mental application are said to have been taught by the Buddha as being without intrinsic nature and empty (Mitra, 1887–1888, 405; Vaidya, 1960, 201; *svabhāva* seems already present in the earliest Chinese translation of this passage: see Karashima 2010, 390, 390n450).

Prajñāpāramitā texts are very keen on avoiding the hypostatization of emptiness and its adialectical interpretation as a form of nihilism. Neither this concern nor indeed the prominent role played by the notion of emptiness are exclusive to the Prajñāpāramitā. One of the most important discussions of emptiness is found in another fundamental early Mahāyāna scripture known as the *Kāśyapaparivarta*, which (Vorobyova-Desyatovskaya 2002, 26–27, §§ 64–68) lays out with great clarity a functional, nonreified conception of emptiness that proved extremely influential on the scholastic literature of the Great Vehicle.

From a certain point of view, Prajñāpāramitā texts can be regarded as performing a complex hermeneutical operation with respect to early teachings and practices, entailing both their inclusion and profound reinterpretation (Deleanu, 2000, 69). So in a sense, the Prajñāpāramitā might be interpreted also as the "translation" of significant parts of traditional Buddhist thought and practice into a new system of thought and language. From this point of view, form matters as much as (if not more than) content, and the adoption of particular linguistic formulations constitutes an important aspect of the Prajñāpāramitā project. The central motif of not dwelling or becoming stuck in a fixed position or definition (*asthāna*) is reflected, at the level of language, by the systematic adoption of dialectical formulations (negation followed by assertion) that can be seen as vivid linguistic representations of the dynamic principle of non-dwelling. This feature, already widespread in the *Aṣṭasāhasrikā*, becomes more systematic and formalized in the *Vajracchedikā Prajñāpāramitā* (the so-called *Diamond Sūtra*). A clear example of parallelism between the two texts at this level is provided by the discussion of merit in Chapter 18 of the *Aṣṭasāhasrikā* (Mitra, 1887–1888, 346; Vaidya, 1960, 172; Conze, 1973a, 211) and in the *Vajracchedikā* (chapter 8, Conze 1974b, 33; Harrison 2006, 145).

In Prajñāpāramitā texts, the key message is conveyed not only by means of specific notions (such as emptiness), but also, and perhaps mainly, through the very structure of the exposition. In interpreting Prajñāpāramitā thought, we must pay attention not just to its conceptual "lexicon" but also, so to speak, to its "grammar", one of the most fascinating and productive aspects of this tradition.

The Development of Prajñāpāramitā Literature: A Historical Overview

Approaching the Prajñāpāramitā literature as a whole, we are confronted by a substantial number of scriptures of very different sizes, ranging from the immense *Da banruoboluomiduo jing* (T. 220 [V–VII]) translated into Chinese by Xuanzang in the 7th century (in effect a summa of almost the entire literature edited as a single *sūtra*), to compressed versions such as the famous *Heart Sūtra*, whose Chinese version by the same Xuanzang consists of a little more than 300 characters, or – to mention the extreme embodiment of this principle – the *Perfection of Insight in One Syllable*. These universal natural movements of Buddhist texts (especially *sūtra*) in general, expansion and contraction (Salomon, 2011, 181–182), have deeply shaped the Prajñāpāramitā literature and informed its historical development.

Two factors have dominated the study of the Prajñāpāramitā family from traditional exegesis and bibliographical science to modern scholarship: the assumption of its overall unity at the level of doctrinal content on the one hand, and the variety (and variable size) of its textual instantiations on the other. As a result, much energy has been devoted, from an early time, to classifying the various Prajñāpāramitā texts and to working out their reciprocal relationship (see Hikata, 1958, xix–xxvii, particularly detailed on Chinese sources).

A common classification is that according to the size of the texts expressed (as was customary in India) in the number of units of 32 syllables (*śloka*, "line", a metrical unit here applied to prose). While the earliest available bibliographical records are characterized by a certain fluidity, from a certain point on the classification of Prajñāpāramitā texts tended to be based on fixed quantitative categories (Watanabe, 2009, 26–27): the main versions acknowledged in this way were those in 100,000 (*Śatasāhasrikā*), 25,000 (*Pañcaviṃśatisāhasrikā*), 18,000 (*Aṣṭādaśasāhasrikā*), and 8,000 (*Aṣṭasāhasrikā*) lines. In Sanskrit these figures (which are, to a certain extent, conventional: see Mitra, 1887–1888, xiv) take the form of feminine adjectives agreeing with the noun Prajñāpāramitā and forming the titles of the various scriptures. In this connection, it should be observed that the word *sūtra* is not used in the original titles of Prajñāpāramitā scriptures (Karashima, 2015, 116).

This eventually became the predominant taxonomical system applied to this literature. The earliest attestation of these standard categories, however, is relatively late. It is found in a list of Prajñāpāramitā scriptures at the beginning of the *Jin'gang xian lun* (金剛仙論; T. 1512 [XXV] 798a2–14; see Hikata 1958, xxiv-xxv), which is the record of a lecture by the early 6th century translator Bodhiruci (Funayama, 2009, 48–50).

The use of these categories in all likelihood represents an *ex post facto* attempt to impose some order on a far more fluid reality, which had been developing for centuries within blurred and flexible

typological boundaries. Thus, categories such as *Aṣṭasāhasrikā* are, to a certain extent, more functional bibliographical devices (or constructs) than rigidly defined referents of historical realities, something which is particularly true of the first centuries of the Prajñāpāramitā history.

The broad picture of the historical development of the Prajñāpāramitā literature outlined by the main previous scholarship on this subject (Hikata, 1958; Conze, 1978; Kajiyoshi, 1980) remains still largely valid, although recent studies and manuscript discoveries (above all the early manuscript in Gandharī) have no doubt modified it in several important details.

The origins of Prajñāpāramitā literature have been the object of some debate in the past (Lamotte, 1954, 385–391; Conze, 1978, 1–4), especially because the information provided by traditional doxographical and exegetical sources, and by Prajñāpāramitā texts themselves, is open to various interpretations. Some modern scholars have suggested a southern Indian origin of this scriptural tradition and of Mahāyāna in general (Bareau, 1955, 297–298), also in view of a possible connection with some schools affiliated to the Mahāsāṃghika group (such as the Pūrvaśaila and the Aparaśaila) and active in that area, which according to some sources possessed a Prajñāpāramitā in Prakrit (see below). However other evidence suggests a northern or northwestern origin (Lamotte, 1954, 389–394). The new information now available (particularly the Gandhari manuscript and linguistic data from early Chinese translations) suports the hypothesis that Gandhara was a crucial area for the early development of this tradition. This, of course, does not rule out the possibility that ideas embodied in Prajñāpāramitā scriptures may have originated in the south (Karashima, 2013a, 180–181).

Different theories concerning the development of this literature, and especially the relationship between the *Aṣṭasāhasrikā* and the longer versions, had already been proposed by traditional Buddhist exegetes, and this issue was addressed from the earliest phase of Prajñāpāramitā study by modern western scholars. In his seminal study of Indian Buddhism, E. Burnouf (1844, 464–465; 2010, 433) mentioned two alternative hypotheses: one regarding the *Aṣṭasāhasrikā* as an excerpt of the *Larger Prajñāpāramitā*, the other taking the latter as an expansion of the former, respectively advocated, according to E. Burnouf, by the Tibetan and Nepalese traditions. In fact the idea that texts belonging to the *Aṣṭasāhasrikā* group were the outcome of a process of excerpting from an originally longer scripture was predominant also in China (Zürcher, 2007, 339–340n182; Hikata, 1958, xix–xxi). The alternative view, considering the *Aṣṭasāhasrikā* the original scripture, that generally supported in modern scholarship, was probably influenced by the high status of the *Aṣṭasāhasrikā* in Nepalese Buddhist religious practice.

As is often the case in the study of Buddhist literature at large, Chinese translations, which are generally dated or datable with considerable accuracy, provide crucial information for establishing at least a hypothetical chronology of the Prajñāpāramitā literature. The fact that the earliest translations of this genre (T. 224 and T. 225, produced respectively during the 2nd and 3rd centuries; see below) correspond to the *Aṣṭasāhasrikā* and were produced quite some time before any version of the *Larger Prajñāpāramitā* constitutes an important clue in this respect.

In modern scholarship, the theory that the original Prajñāpāramitā text is to be found in the group (or subfamily) of texts related to the *Aṣṭasāhasrikā* was advocated with a very detailed analysis by Kajiyoshi (1980 [1st ed. 1943], 515–567), and his conclusions, at least in this respect, have been generally accepted. In particular, Kajiyoshi (1980, 568–633) identified part of the first chapter of the *Aṣṭasāhasrikā* (corresponding to T. 224 [VIII] 425c6–427a4 in the earliest Chinese translation; Kajiyoshi, 1980, 576–581) as the original, very short Prajñāpāramitā scripture (Hikata, 1958, xxxix–xxxxiv; Schmithausen, 1977; for a convenient overview of various theories on the original *Prajñāpāramitā*, see Orsborn, 2012, 87–102).

The historical primacy of the *Aṣṭasāhasrikā* subfamily received a spectacular confirmation in recent years with the discovery of an early manuscript in the north-western form of Middle Indic known as Gandhari. Possibly dating to the 1st century CE, it bears an unmistakable family likeness to other witnesses of the *Aṣṭasāhasrikā* group, even if it is certainly much shorter and more archaic than any of them (see below). This finding should be interpreted against the backdrop of the traditions concerning a Prajñāpāramitā in Prakrit noted above (Skilling, 2013, 199–201; Tournier, 2012, 253–280, and esp. 263–266; Harrison, 1982, 227–228; see also Vetter, 2001, who considered Prajñāpāramitā to be a strand originally distinct from the Great Vehicle).

At some point, probably between 2nd and 3rd century, the early Prajñāpāramitā text related to the *Aṣṭasāhasrikā* (which, as is typical of Mahāyāna *sūtra* literature in general, was transmitted in a variety of recensions already at an early stage: see Falk & Karashima 2013, 98–100; Karashima 2013, 181) was further expanded in ways that, as will be detailed below, resulted in an entirely different, and substantially longer text. In fact, we should say, more precisely, a set of texts or a textual subfamily, given that historically this expanded version is again represented by multiple witnesses which, while mutually related with very complex patterns of agreement and variation, are not reducible to a single ur-text. They form the other main subfamily of the Prajñāpāramitā literature: that of the *Larger Prajñāpāramitā* texts, so defined in contrast to the shorter *Aṣṭasāhasrikā*.

These two related subfamilies – that of the *Aṣṭasāhasrikā* and of the *Larger Prajñāpāramitā* – represent what could be called the main stream of Prajñāpāramitā literature. Some time after the formation of the *Larger Prajñāpāramitā*, a new phase began which saw the production of much shorter individual scriptures, with specific features of form and content. Here, too, it is impossible to propose a definite chronology of this development. On the basis of the available evidence (again, mainly provided by Chinese sources), we can provisionally date the beginning of this new phase to sometime during the 4th century CE: the first traces of the *Vajracchedikā Prajñāpāramitā*, which seems to be the earliest Prajñāpāramitā scripture outside the two main textual families on which we possess any evidence, date to the beginning of the 5th century (for a hypothetical earlier date, see Hikata, 1958, lxxxiii; see also Schopen, 2005, 29, 55n16–17), and other texts of comparable sizes and typologies were probably composed in the following centuries.

Another important parallel development which must have taken place during this phase (before the mid 7th cent.) is the gathering and assemblage of the various Prajñāpāramitā scriptures produced up to that time into one single textual container. However, rather than resulting in an *āgama*-like collection, this process led to the formation of a single, immense *sūtra* in which the various individual scriptures are presented as sections (*fen* [分]), or as "assemblies" or "gatherings" (*hui* [會]) at which the Buddha preached that particular scripture. Partly similar collections are found also in other classes of Mahāyāna texts (see Demiéville, 1953, 432–435), such as the *Buddhāvataṃsaka* (Ōtake, 2007) or the *Mahāratnakūṭa* (Pagel, 1995, 53–78), and may have reflected a general trend in the typological development of the literature of the Great Vehicle.

This huge *summa* of almost the entire Prajñāpāramitā literature is only attested by a single Chinese translation, the *Da banruoboluomiduo jing* (大般若波羅蜜多經; T. 220 [V–VII]) in 600 scrolls (for a detailed study, Watanabe, 1995), probably the largest Buddhist text ever produced in any language, and the only scripture in the Taishō edition of the Chinese canon extending over several volumes.

This translation (Watanabe, 1995, 31–35), completed in 663, represented the last work of the great Tang master Xuanzang (玄奘; c. 596–664). It consists of 16 sections representing as many historically independent texts (for an overview, Watanabe, 1995, 13–16). Sections 1–10 are in descending order of length, from the immense initial section, whose original is said to have consisted of 132,600 lines, to the short version in 300 lines, corresponding to the *Adhyardhaśatikā Prajñāpāramitā* (on this figure, see below).

The final six sections of the *Da banruoboluomiduo jing* (11–16) are not arranged according to size. Sections 11–15 are expositions of the first five perfections, and correspond to a single text preserved in Tibetan (**Pañcapāramitānirdeśa*), while the 16th (corresponding to the scripture known as *Suvikrāntavikrāmiparipṛcchā Prajñāpāramitā*, discussed below) can be taken to represent, at least in the context of the *Da banruoboluomiduo jing*, the section on the perfection of insight (which is indeed its title in T. 220: *Di shiliu banruoboluomiduo fen* [第十六般若波羅蜜多分]) complementing the preceding five (see Hikata, 1958, lxxvii).

The *Da banruoboluomiduo jing* does not seem to have been the outcome of a process of selection and editing by Xuanzang (see also Bongard-Levin & Watanabe, 1997, 98). The evidence we possess on this translation (which is essentially first-hand) clearly suggests a non-Chinese origin. According to Xuanzang's biography, the *Da Tang Da ci'en si sanzang fashi zhuan* (大唐大慈恩寺三藏法師傳), first drafted by his collaborator Huili (慧立) in 664 CE and completed by Yancong (彥悰) in 668, the original Sanskrit text consisted of 200,000 lines in total (T. 2053 [L] 275c24–25; Li, 1995, 327). The same source further specifies that Xuanzang had obtained "in the Western Regions" (*xiyu* [西域]) three copies of this scripture, which he collated in order to establish the text he then used for his translation (T. 2053 [L] 276a12–13; Li, 1995, 328).

found at the end (scroll 100) of the *Fayuan zhulin* (法苑珠林, T. 2122), a massive Buddhist encyclopaedia compiled by the Tang monk Daoshi (道世, c. 596–683?). The fourth part of this catalogue, called "Section on *Prajñā* [*pāramitā*]" (*Banruo bu* [般若部], T. 2122 [LIII] 1024b18–1025a16) is in fact just a table of contents of Xuanzang's translation, providing, for each of its sections, the size in lines of the corresponding original Sanskrit. This record is also found in some editions of Zhisheng's (智昇) fundamental catalogue of the Chinese canon, the *Kaiyuan shijiao lu* (開元釋教錄) compiled in 730 (T. 2154 [LV] 594a15–595a1).

All in all, Daoshi's description of the *Da banruoboluomiduo jing*'s original seems to reflect first-hand knowledge of the facts: the *Fayuan zhulin* was completed in 668, only a few years after Xuanzang had finished his translation, and Daoshi belonged to the Ximing Monastery (西明寺) in Chang'an, in which Xuanzang himself also resided for a period, after the monastery had been built (see T. 2053 [L] 275b22–23; Li, 1995, 325).

While the great *summa* may have been assembled somewhere in India, it did not become the predominant way of editing and transmitting the Prajñāpāramitā literature: on the contrary, the *Da banruoboluomiduo jing* remained an isolated experiment. It is true that, as observed by Watanabe (2009, 31), the arrangement of Prajñāpāramitā texts in the Tibetan canon parallels in part the structure of Xuanzang's translation. However, they do not formally constitute a single scripture, as is the case with the *Da banruoboluomiduo jing*. From a textual point of view, the scriptures constituting the *Da banruoboluomiduo jing* represent, in some cases, a fairly distinctive recension. This seems to be the case for the two sections (4–5) related to the *Aṣṭasāhasrikā*, for the *Larger Prajñāpāramitā* sections (Zacchetti 2005, 43, 47–49), and for its 9th section, corresponding to the *Vajracchedikā Prajñāpāramitā* (see below).

The last important development in the history of the Prajñāpāramitā was the gradual synthesis, particularly from the 7th century on, of this tradition with Buddhist Tantra, which was becoming one of the most important and dominant strands in Indian Buddhism and elsewhere (Conze, 1978 13–16; Komine *et al.*, 2015, 49–61). This process, which resulted in a number of short scriptures bearing the name *Prajñāpāramitā* in their titles, but incorporating to varying degrees elements which are essentially tantric in character, was probably favoured by – and indeed partly overlaps with – the creation of shorter Prajñāpāramitā texts mentioned above. And this not just for merely formal reasons: the condensation undergone by the Prajñāpāramitā seems also to reflect important ideas about texts and their efficacy, enhanced by the process of textual distillation and compression (Conze, 1978, 13).

Apart from Chinese and Tibetan translations, on which see below, Prajñāpāramitā scriptures were also translated, in the pre-modern period, into other Asian languages such as Khotanese (Emmerick 1992, 18–34; Maggi 2009, 370–375), Sogdian (Yoshida, 2009, 317) and Mongolian (Komine *et al.*, 2015, 190–194; Poppe, 1971).

Main surveys of the Prajñāpāramitā literature include Matsumoto (1932), Hikata (1958, ix–li), E. Conze (1978), Yinshun (1980, 591–712), M. Lehnert (1999, 35–92), and Komine *et al.* (2015). Useful, though outdated, bibliographical surveys of this subject are provided by Hanayama (1966) and P. Beautrix (1971). In this connection, mention should also be made of E.Conze's lexicographical work (1973c) specifically devoted to Prajñāpāramitā texts in Sanskrit, but systematically referencing also their Tibetan translations.

Main Prajñāpāramitā Texts and Textual Subfamilies

The following paragraphs discuss the most important scriptures (and scriptural subfamilies) belonging to the Prajñāpāramitā group, listing the most significant texts transmitted in the main Buddhist classical languages (Sanskrit, Chinese, and Tibetan), as well as the relevant modern editions, translations, and studies. Chinese and Tibetan translations are fundamental sources for studying Buddhist scriptures. In a number of cases, when no Sanskrit text survives, they constitute our only way of accessing a given scripture. But even when we do have Sanskrit parallels, translations retain their value. These early translations were often based on Indic originals which were more or less different from the Sanskrit texts we possess nowadays. To correctly understand this fact, one has to take into account the fluid nature of these scriptures, open to constant change and updating over long periods of their history. Hence, for the philological and historical study of this literature, translations are to be regarded as witnesses which are in principle on an equal standing with the Sanskrit versions (Karashima, 2011, xii, on the *Aṣṭasāhasrikā* subfamily; Zacchetti, 2005, 9). From this point of view, the value of Chinese translations is, generally speaking, particularly high: as a rule, in China earlier translations were neither discarded nor updated, but preserved as a constituent part of the canon. Thanks to this historical attitude, in many cases we possess multiple translations of the "same" scriptures which are often datable and generally predate the available Sanskrit and Tibetan parallels.

The *Prajnāpāramitā* literature will be discussed in the following sections:

1. The *Aṣṭasāhasrikā* subfamily: the Gandhari Prajñāpāramitā manuscript; the Sanskrit *Aṣṭasāhasrikā*; Chinese and Tibetan translations of the *Aṣṭasāhasrikā*; the *Prajñāpāramitāratnaguṇasaṃcayagāthā*; main commentaries on the *Aṣṭasāhasrikā*.
2. The *Larger Prajñāpāramitā* subfamily: the Gilgit manuscript of the *Larger Prajñāpāramitā* and other related texts (Sanskrit *Śatasāhasrikā*; Tibetan *Pañcaviṃśatisāhasrikā*); the Sanskrit *Pañcaviṃśatisāhasrikā Prajñāpāramitā* and related texts; other Chinese and Tibetan translations of *Larger Prajñāpāramitā* texts; the *Daśasāharikā Prajñāpāramitā*; main commentaries on *Larger Prajñāpāramitā* texts.
3. Shorter Prajñāpāramitā texts: the *Vajracchedikā Prajñāpāramitā*; the *Prajñāpāramitāhṛdaya*; the *Suvikrāntavikrāmiparipṛcchā Prajñāpāramitā*; the *Saptaśatikā Prajñāpāramitā*; the **Devarājapravaraprajñāpāramitā*; the **Nāgaśrīparipṛcchā Prajñāpāramitā*; the *Pañcapāramitānirdeśa*; the *Pañcaśatikā Prajñāpāramitā*; the *Prajñāpāramitā scripture for Humane Kings*.
4. The *Adhyardhaśatikā* and other tantric Prajñāpāramitā texts: the *Adhyardhaśatikā Prajñāpāramitā*; the *Svalpākṣarā Prajñāpāramitā*; the *Kauśikaprajñāpāramitā*; the *Perfection of insight in one syllable*.

The *Aṣṭasāhasrikā* Subfamily

The earliest Prajñāpāramitā texts belong to a subfamily which evolved for many centuries and is represented by several witnesses surviving in various languages. From a certain point on, witnesses of this group were classified as representing a *Perfection of Insight in 8000 Lines* (*Aṣṭasāhasrikā Prajñāpāramitā*). This comparatively late categorization, however, has to be taken with all the caveats outlined in the preceding section. So the definition of early texts such as the Gandhari manuscript or Lokakṣema's *Dao xing jing* as *Aṣṭasāhasrikā* is almost certainly not accurate from a historical point of view. Here the category "*Aṣṭasāhasrikā* subfamily" is used merely as a convenient shorthand definition.

The fortunes of the *Aṣṭasāhasrikā* had a curious trajectory. It seems to have temporarily lost importance after the formation of *Larger Prajñāpāramitā* texts (at least in Central Asia), as suggested by the very small number of early manuscript fragments belonging to this family which have surfaced so far—a scenario in stark contrast to that presented by the *Larger* Prajñāpāramitā. However, the *Aṣṭasāhasrikā* made a spectacular return to the forefront at a later stage, especially during the Pāla period (Schopen, 2005, 5–6; Seyfort Ruegg, 2004, 24n29), also thanks to the religious developments outlined above.

The *Aṣṭasāhasrikā* represents the most seminal Prajñāpāramitā scripture also from the point of view of content, and as such many of its main themes have been touched upon above. Here only the main features of this scripture are outlined; useful summaries include Hikata (1958, xxxix–xxxxii), E. Conze (1978, 48–50), and Komine *et al.* (2015, 66–68). For the sake of convenience, the following thematic outline is mainly based on the complete Sanskrit *Aṣṭasāhasrikā* in 32 chapters, which, however, reflects a relatively late and expanded text.

This scripture consists for the most part in a series of dialogues between the Buddha and various characters, in a fashion typical of the whole literature. The main role is played by Subhūti, a disciple of the Buddha renowned for being the "first of those who dwell without strife" (*araṇavihārin*; Vetter, 2001, 72–73) who figures as an important character in a large part of the Prajñāpāramitā literature. The narrative element is generally minimal, with the exception of chapters 30–31.

The first chapter, in the Sanskrit version entitled *Sarvākārajñatācaryā* (Practice of the Knowledge of All Aspects; i.e. the highest form of omniscience exclusive of a buddha), has been often considered one of the most important parts of the *Aṣṭasāhasrikā*, and the epitome of early Prajñāpāramitā thought. It provides definitions, in the dialectical form characteristic of the Prajñāpāramitā discourse, of several key categories, such as perfection of insight, bodhisattva, "great being" (*mahāsattva*), Great Vehicle, and so forth. For a detailed philological and thematic study of this chapter, see A. Verboom (1998).

topic of merit is discussed
t, but is the predominant focus

of chapters 3–6. Chapter 6, in particular, expounds a particular modality of merit-production by means of rejoicing (*anumodanā*) at others' positive deeds and then diverting (*pariṇāmanā* and related forms; see above) the resulting karmic retribution to the attainment of supreme awakening.

The *Aṣṭasāhasrikā* pays much attention to negative factors or attitudes which can hinder the bodhisattva's progresses towards awakening: these include panic and dejection caused by the disconcerting aspects of the teaching (Mitra, 1887–1888, 5; Vaidya, 1960, 3; Conze, 1973a, 84); pride in one's attainments (chapter 21, 24), practice of seclusion (*viveka*) as an exterior form of asceticism (Mitra, 1887–1888, 391–395; Vaidya, 1960, 194–195; Conze, 1973a, 233–235; see also Seyfort Ruegg, 2004, 55). These shortcomings are often depicted as the result of the influence of Māra, a traditional Buddhist personification of evil who plays a considerable role in the text, especially in trying to divert bodhisattvas from their final goal (see especially chapters 11, 17, 21, 24, 27). The counterpoint to these pitfalls is the attainment of the stage on which a bodhisattva is no longer liable to retrogression from the final goal (*avinivartanīya*). This notion figures prominently throughout the text (e.g. Mitra, 1887–1888, 6 and *passim*; Vaidya, 1960, 3–4 and *passim*) as a crucial juncture in the career of a bodhisattva as portrayed in the *Aṣṭasāhasrikā* (Nattier, 2003, 151–152, 151–152n32).

Another, closely related *leitmotiv* in this scripture is the importance of avoiding, while practicing, lesser attainments. This was obviously a major concern for the authors of the text. Chapter 20, another peak of the *Aṣṭasāhasrikā* and of Prajñāpāramitā literature at large, contains a technical discussion of this issue, providing detailed guidelines for cultivation in the spirit of Prajñāpāramitā, through "skillfulness in the use of means" (*upāyakauśalya*) which, *pace* Hikata (1958, xxxi), is clearly a key concept in the *Aṣṭasāhasrikā* (de Breet, 1992).

Chapter 16, "On reality" (*Tathatāparivarta*), occupying a central position in the scripture and carefully staged as a climatic episode, can be regarded as the thematic barycenter of the entire scripture (Conze, 1978, 48; Orsborn, 2012, 284–299). The key term in this chapter, *tathatā* ("reality"), is a denomination of the true aspect of things, undifferentiated, unaltered and non-dual (Mitra, 1887–1888, 307–308; Vaidya, 1960, 153–154; Conze, 1973a, 193–194), and as such can be considered a synonym of emptiness. Elsewhere in the *Aṣṭasāhasrikā* (chapter 18), *tathatā* is proposed as a definition of supreme awakening (Mitra, 1887–1888, 351; Vaidya, 1960, 175; Conze, 1973a, 212).

Chapters 30–31, forming the main bulk of the final portion of the text, are typologically and stylistically distinct from the rest. They are narrative in character, and describe the spiritual quest of the bodhisattva Sadāprarudita ("Always weeping") in his search for the Prajñāpāramitā. This narration ends at the beginning of the short last chapter (32), which is laid out as the formal conclusion of the entire scripture, with the entrusting (*parīndanā*) of the Prajñāpāramitā to Ānanda.

Modern scholarship has tended to regard the *Aṣṭasāhasrikā* as the outcome of a process of gradual growth and stratification (Conze, 1952; 1978, 8–9; Hikata, 1958, xxxix–xxxxv). A very different and promising approach has been prosed more recently by M. Orsborn (2012), who proposed an interpretation of the structure of the entire text as a meaningful whole, shaped by chiasmus as an underlying formative principle.

The Early Gandhari Manuscript of the *Perfection Of Insight*

The manuscript in Gandhari discovered in recent years (ed. Falk & Karashima, 2012; 2013), the earliest Prajñāpāramitā text available to date, is remarkably close to other texts of the *Aṣṭasāhasrikā* subfamily, and especially to the earliest Chinese translation. It is the remnant of what was probably an originally very long birchbark scroll, covering, in the recto and verso portions of the text corresponding, respectively, to parts of the first and fifth chapters in the Sanskrit *Aṣṭasāhasrikā*. Part of a collection of manuscripts presumably coming from the Pakistan-Afghanistan border area (Falk, 2011, 13), it has been carbon dated to between 47 and 147 CE; the script would not be incompatible with a 1st century date (Falk, 2011, 20). The scroll includes a colophon containing the words "in this first book of the *Perfection of insight*" (*paḍhamage postage prañaparamidae*), which suggest that originally there were other books (Falk, 2011, 23). This manuscript represents an earlier, shorter version of the text: it is even less developed than the second earliest representative of this subfamily, the Chinese translation entitled *Dao xing jing* (T. 224; second half of the 2nd cent. CE [see below]). Yet we have to stress that it cannot be taken as representing the "original" Prajñāpāramitā:

though no doubt earlier in terms of both form and content than any other previously known Prajñāpāramitā scripture, this text already bears signs of being the re-elaboration of an earlier version (Falk & Karashima, 2013a, 100).

Sanskrit Texts of the *Aṣṭasāhasrikā*

The complete Sanskrit text of the *Aṣṭasāhasrikā*, in 32 chapters, has been preserved in comparatively late manuscripts (11th and 12th century; see Sander, 2000, 1). The first modern edition was published at the end of the 19th century (Mitra, 1887–1888). Subsequent editions were produced by Wogihara (1932–1935) and P.L. Vaidya (1960). In Wogihara's work the base text is edited together with Haribhadra's commentary (the *Abhisamayālaṃkārālokā Prajñāpāramitāvyākhyā*), whereas in P.L. Vaidya the latter is edited separately. However, the accuracy of these editions (and particularly of Vaidya) and their direct reliance upon manuscripts are not beyond question. For example, a gap in Mitra's edition caused by the accidental omission of one manuscript folio was reproduced in both subsequent editions by Wogihara and P.L. Vaidya (for the missing folio see Conze 1952, 261–262; 1978, 46; see also Karashima, 2013b for a more recent and detailed discussion). A very useful index to both the *Aṣṭasāhasrikā* and Haribhadra's commentary was compiled by Keira and Ueda (1998).

The Sanskrit *Aṣṭasāhasrikā* represents the most developed text within this subfamily: when compared with earlier witnesses (especially the early Chinese translations), it gives signs of having undergone considerable modifications in terms of both form and content, in some cases reflecting developments in Mahāyāna thought (Lancaster, 1968; 1975).

Several important manuscript fragments of a much earlier Sanskrit manuscript of the *Aṣṭasāhasrikā*, probably coming from near Bamiyan, were discovered at the end of the 20th century and subsequently edited (Sander, 2000; 2002). They are estimated on paleographical grounds to date to the second half of the 3rd century CE, and are of considerable interest for the textual history of the *Aṣṭasāhasrikā* subfamily, as its earliest Sanskrit witnesses. Although from a linguistic point of view these fragments display some features typical of Buddhist Hybrid Sanskrit, they seem remarkably close from a textual point of view to the later complete Sanskrit version (Sander, 2002, 3–5).

There are two complete modern translations of the Sanskrit *Aṣṭasāhasrikā*: into English, by E. Conze (1973), and into Japanese, by Kajiyama and Tanji (1974–1975), while substantial excerpts were rendered into German by M. Walleser (1914, 32–139). An unpublished manuscript containing a French draft translation of the first 28 chapters by E. Burnouf, the great pioneer of modern Buddhist studies, is preserved in the Bibliothéque nationale de France of Paris (Feer, 1899, 63 no. 64; Conze, 1978, 29 and 48). A sizable excerpt from the first chapter (= Mitra, 1887–1888, 3–27; Vaidya, 1960, 2–14) was included by E. Burnouf in his *Introduction a l'histoire du buddhisme indien* (1844, 465–483; 2010, 434–447).

Chinese and Tibetan Translations Related to the *Aṣṭasāhasrikā*

There are seven Chinese translations (one of which is partial) of the *Aṣṭasāhasrikā* or related texts produced from the 2nd to the 10th centuries, spanning the entire history of Chinese Buddhist translations. For this reason they constitute an important source for studying the development of translation techniques, as alreay pointed out long ago by Liang Qichao in his pioneering work (1936, 170–176).

The earliest of these translations, the *Dao xing jing* (道行經), or *Dao xing banruo jing* (道行般若經; T. 224), is probably the most important witness from a historical point of view, and as such deserves special attention. Thanks to an early anonymous colophon it be can be dated to 179 CE (more precisely to November 24, 179; see Sengyou's [僧祐], 445–518; *Chu sanzang ji ji* [出三藏記集]; T. 2145 [LV] 47c4–9). It was accomplished by a team which included Lokakṣema, the first propagator of Mahāyāna literature in China (Harrison, 1993, 141–145; Nattier, 2008, 73–89). This translation was probably based on an original text in Gandhari (Karashima, 2013a). The *Dao xing jing*, unlike virtually any other such text, has been critically edited, with systematic references to all available parallels, by Seishi Karashima (2011), who earlier published a glossary (2010).

The second translation, the *Da mingdu jing* 大明度經 (T. 225), is included in the canon under the name of Zhi Qian (支謙), an important lay translator active in south-central China during the first half of the 3rd century. However, recent research has unveiled a more complex scenario: while chapters 2–30 are indeed to be ascribed to Zhi Qian, the first chapter (which includes an early Chinese

anonymous interlinear commentary, on which see Lai, 1983) is very different from the rest in terms of style and terminology and is to be regarded as the work of another translator (Nattier, 2010).

Subsequent translations were produced by Kumārajīva at the beginning of the 5th century (known as *Mohebanruoboluomi jing* [摩訶般若波羅蜜經] or *Xiaopin banruoboluomi jing* [小品般若波羅蜜經]; T. 227), by Xuanzang during the second half of the 7th century, and by the Indian monk Shihu (施護, *Dānapāla), active between the end of the 10th century and the beginning of the 11th (*Fo shuo fomu chusheng san fazang banruoboluomi jing* [佛說佛母出生三法藏般若波羅蜜多經]; T. 228).

Xuanzang's *Da banruoboluomiduo jing* includes two sections related to this subfamily. The first is the 4th (T. 220 [VII] 763b2–865a26), in 29 chapters, which is to be regarded as a real *Aṣṭasāhasrikā*, as its original consisted of 8,000 lines (T. 2122 [LIII] 1024c3). The other is the 5th (T. 220 [VII] 865c2–920b16), in 24 chapters, related to the preceding text in terms of content (Hikata, 1958, xxxxv; Karashima, 2011, xii), though approximately half its size and, indeed, said to have been based on a Sanskrit original in 4,000 lines (T. 2122 [LIII] 1024c7). It is noteworthy that both texts lack the final narration of Sadāprarudita's quest, and are thus quite different at least in this respect from all other witnesses of this subfamily.

The *Mohebanruo chaojing* (摩訶般若鈔經; T. 226), or *Excerpt from the Mahāprajñāpāramitā*, stands apart from all the other translations, being essentially a revision of part (13 chapters out of 30) of Lokakṣema's *Dao xing jing* (Karashima, 2010, ix). Its authorship has been debated by modern scholars. Kajiyoshi (1980, 68–76), on the basis of bibliographical catalogues, ascribed it to Dharmarakṣa, dating it to 265. In the canon it is ascribed to *Dharmapriya (曇摩蜱) and Zhu Fonian (竺佛念) who, according to the *Chu sanzang ji ji* (T. 2145 [LV] p. 10b1–4), translated this text in 382 CE. The problem is compounded by the fact that we also possess a preface by the great 4th century bibliographer and exegete Dao'an (道安) to a text with a very similar title, and said to have been translated by *Dharmapriya and others, but which is clearly described as a *Larger Prajñāpāramitā* (see Zacchetti, 2005, 38–39). The whole question needs reconsideration, especially in light of a systematic comparison of T. 226 with other translations ascribed to Zhu Fonian.

The Tibetan translation of the *Aṣṭasāhasrikā* (*'Phags pa shes rab kyi pha rol tu phyin pa brgyad stong pa* [D 12/P 734]) has been transmitted in three different recensions (Shōji, 2014).

A very useful table cross-referencing all these various sources is provided in Komine *et al.*, 2015, 200–203. For a synopsis of the various recensions of the *Aṣṭasāhasrikā* subfamily, see Karashima (2011, xii–xiii).

Main Commentaries on the *Aṣṭasāhasrikā*

The most important Indian commentary on the *Aṣṭasāhasrikā* is no doubt the *Abhisamayālaṃkārālokā Prajñāpāramitāvyākhyā* by Haribhadra (late 8th cent.; Seyfort Ruegg, 1981, 101–102), edited by G. Tucci (1932), Wogihara (1932–1935) and P.L. Vaidya (1960), and translated into English by G. Sparham (2006–2012). Haribhadra's commentary reflects the application to the text of the *Aṣṭasāhasrikā* of a hermeneutical scheme (expounded by the exegetical treatise known as the *Abhisamayālaṃkāra*) which was originally devised for describing the structure of the *Larger Prajñāpāramitā* (see below).

Another *Aṣṭasāhasrikā* commentary surviving, albeit partially, in Sanskrit is the *Sāratamā*, whose author, Ratnākaraśānti, was active in the first half of the 11th century (Jaini, 2001, 399); it was edited by P.S. Jaini (1979). Typologically very different from Haribhadra's earlier (and philosophically more sophisticated) work, it is a kind of exegetical text particularly devoted to the explanation of difficult words (*pañjikā*). For a comparative analysis of these two commentaries, see P.S. Jaini (2001, 397–415).

Mention should be also made of Dignāga's authoritative verse summary of the *Aṣṭasāhasrikā*, the *Prajñāpāramitāpiṇḍārtha*, whose Sanskrit text has been edited by G. Tucci (1947, with translation) and E. Frauwallner (1959, 140–144).

The *Prajnāpāramitāratnaguṇasaṃcayagāthā*

Another text that can be considered affiliated to this subfamily, at least from the point of view of its content, is the *Prajñāpāramitāratnaguṇasaṃcayagāthā* (*Stanzas summarizing the precious qualities of the perfection of insight*; see Yuyama, 1976, xiii § 4). This verse summary of the *Aṣṭasāhasrikā* holds a unique position among Prajñāpāramitā texts, not only because it is in verse whereas the other texts are predominantly in prose, but also for its language, as this is the only known Prajñāpāramitā in Buddhist

Hybrid Sanskrit. In this connection, mention should be also made of Ji Xianlin's important study on this scripture, with a particular focus on its language and history (Ji, 1995–1998, vol. 7 [1998], 216–269).

The Sanskrit text has been transmitted in two recensions: Recension A was edited by Yuyama (1976), who also compiled an important grammatical study (Yuyama, 1973); and Recension B, edited by E. Obermiller (1937; Sanskrit text edited synoptically with its Tibetan translation), by Vaidya (1961, 353–404) and, partially, by Yuyama (1977). Recension B has been translated into English by E. Conze (1973, 9–73). Note that Vaidya's edition of Recension B is incorrectly listed by E. Conze (1978, 53) as representing a third Recension C; see however Yuyama, 1976, xxix.

The *Prajñāpāramitāratnaguṇasaṃcayagāthā* were translated into Chinese in 991 CE (Yuyama, 1976, xlii) by the Kaśmīri monk Faxian (法賢, originally named Tianxizai [天息災]) as *Foshuo fomu baode zang banruoboluomi jing* (佛說佛母寶德藏般若波羅蜜經; T. 229), and into Tibetan. There are also two recensions – in fact, two different translations – of the Tibetan text (Yuyama, 1976, xxx–xxxviii): the first (A) preserved in several manuscripts from Dunhuang and critically edited by Yuyama (1976, 153–191), and the second (B), translated by Vidyākarasiṃha and Dpal brtsegs probably during the early 9th century (Yuyama, 1976, xxxii) and preserved in the Kanjur (*'Phags pa shes rab kyi pha rol tu phyin pa sdud pa tshigs su bcad pa* [D 13/P 735]).

A Ming woodblock print dated 1447 containing two previously unknown translations of the stanzas, in Tibetan and Chinese, dating to the 12th century, was discovered by Luo Zhao (1983; pp. 17–36 have an edition of the Chinese version).

The date of the *Prajñāpāramitāratnaguṇasaṃcayagāthā* is unclear. E. Conze, especially in view of its language, considered it to be a very early source, although he pointed out that the present text no longer directly reflects the original form, as it was "reviewed" at a later stage by the great Prajñāpāramitā commentator Haribhadra (1978, 54). He once expressed the view that the first two chapters represented the original Prajñāpāramitā and could be dated to 100 BC (Conze, 1960 = 1967, 124–130; see also 1973, x; 1978, 9–10; Skilling, 2013, 202–203). However, external evidence clearly points to a much later period for the composition of this text, as all its witnesses, including the Chinese translation, are comparatively late. Moreover, as remarked by Luo (1983, 14), not even Xuanzang's *Da banruoboluomiduo jing* includes its translation. From a typological point of view, it seems to better fit a later dating: as pointed out by Conze himself (1978, 12–13), versified summaries are characteristic of a mature stage of development of the Prajñāpāramitā literature. It is also questionable that the linguistic features of this or any text should be taken, alone, as strong evidence of an early date (Silk, 2013).

Apart from issues of absolute chronology, it also seems unlikely that the stanzas predate the *Aṣṭasāhasrikā* (see also Ji, 1995–1998 [vol. 7, 256–257]). If anything, the Gandhari manuscript suggests that the direct antecedent of the *Aṣṭasāhasrikā* was a shorter but closely related prose text, rather than a versified work.

The *Larger Prajñāpāramitā* Subfamily

The earliest reliable traces of the *Larger Prajñāpāramitā* date to the second half of the 3rd century: it was probably sometime after 260 CE (see Zürcher, 2007, 62,340n183) that the Chinese monk Zhu Shixing (朱士行), having heard of the existence of a version of the Prajñāpāramitā more complete than the *Dao xing jing* then available in China, set off for a long and dangerous journey to Central Asia in search of its manuscript (see below).

The *Larger Prajñāpāramitā* is based on the *Aṣṭasāhasrikā*. Expansion from the latter to the former happened through large scale inclusion of new materials into the framework of the earlier version (Hikata, 1958, xxxxvi–xxxxviii; Komine *et al.*, 2015, 32–33). This has been effectively compared by J. Nattier to a process of slicing and layering: the result – the *Larger Prajñāpāramitā* – "consists of the *Aṣṭa* 'sliced' like a loaf of bread and then layered with 'fillings' introduced from other sources. Very little of the text of the *Aṣṭa* has been altered in the process" (Nattier, 2003, 62n19). In the process, entire new parts were added, such as the long and elaborate introductory section (*nidāna*; see Kimura, 2007 [vol. I.1], 1–28; Conze, 1975, 37–44).

A significant portion of the expanded text is made up by stock lists of terms and seemingly endless repetitions. The adoption of lists as a key expository strategy is a prominent feature of the *Larger Prajñāpāramitā*. This form of exposition, which is found in the *Aṣṭasāhasrikā* only in an embryonic form (see for example Mitra, 1887–1888, 35–36; Vaidya, 1960, 18; Conze, 1973a, 97), is used systematically in *Larger Prajñāpāramitā* texts. Its main function at a doctrinal level is to actualize the universality of Prajñāpāramitā teaching: the inclusivistic

approach towards the *contents* of traditional Buddhist teaching which, as we have seen above, is a typical feature of Prajñāpāramitā as a whole, is particularly noticeable in the *Larger Prajñāpāramitā*, where the characteristic dialectical formulation are applied time and again to literally each and every category of the Buddhist teaching.

The differences between the *Aṣṭasāhasrikā* and *Larger Prajñāpāramitā* from a doctrinal point of view represent a complex topic, and only some of the most significant aspects can be mentioned (see also Hikata, 1958, xxxi–xxxv). In general, *Larger Prajñāpāramitā* texts lay greater emphasis than does the *Aṣṭasāhasrikā* on bodhisattvas' activities for assisting and instructing beings. References to the fact that the bodhisattvas bring beings to spiritual maturation (using the verb *paripācayati* and related forms) are widespread in the *Larger Prajñāpāramitā*, but relatively rare in the older version. In parallel with this development, the notion of "skilfulness in the use of means" appears to have broadened its semantic range: alongside the meanings already attested in the *Aṣṭasāhasrikā*, we start to see the term used in contexts which seem to imply the sense of "skillfulness in the use of teaching methods" (see for example Kimura, 2007 [vol. I.1], 52–53; Conze, 1975, 55).

The stages undergone by a bodhisattva during his progress towards awakening receive a detailed treatment in the *Larger Prajñāpāramitā*, where we find different ten-stage systems probably influenced by another textual tradition of the Great Vehicle, that of the *Buddhāvataṃsaka* (Hikata, 1958, xxxiii–xxxiv; Lamotte, 1980 [vol. V], 2373–2445). This contrasts with the much simpler system found in the *Aṣṭasāhasrikā*.

In comparison to the *Aṣṭasāhasrikā*, we find in *Larger Prajñāpāramitā* texts a more systematic and structured use of the notion of emptiness, especially through lists of its forms (Lamotte, 1976 [vol. IV], 2027–2151). In particular, the list of 18 types of emptiness is a constant refrain in the texts (see for example Kimura, 2007 [vol. I.1], 33, 63, 71 and *passim*; Zacchetti, 2005, 180–181, 296–299 [§ 1.135]).

We can assume that the process of textual expansion outlined above resulted in a basic *Larger Prajñāpāramitā*. This is a purely theoretical construct: here too we are confronted, on the ground, by a plurality of witnesses from as long back as we have evidence – exactly as in the case of the *Aṣṭasāhasrikā*, but with a scenario of possibly even greater complexity.

The tendency to textual variation, a universal feature of Mahāyāna *sūtra* literature, proved particularly strong in the case of this subfamily: as a result, several different *versions* (that is, textual instantiations of varying lengths) came to be produced. As we have seen above, from a certain period three *Larger Prajñāpāramitā* versions were recognized as strandard: those in 100,000 (*Śatasāhasrikā*), 25,000 (*Pañcaviṃśatisāhasrikā*), and 18,000 (*Aṣṭādaśasāhasrikā*), which are also found in Xuanzang's *Da banruoboluomiduo jing*.

However, early sources on the *Larger Prajñāpāramitā* (for the most part in Chinese) suggest a different scenario. On the basis of the available evidence, it seems that during the earliest phase (3rd–5th cents.) in the history of the *Larger Prajñāpāramitā*, texts belonging to this subfamily were of varying size, ranging from about 17,000 to 22,000 lines and simply called *Prajñāpāramitā* or *Mahāprajñāpāramitā* (Zacchetti, 2005, 38–40). In early Chinese historical, exegetical and bibliographical sources, texts belonging to this subfamily are usually defined as "Larger version [of the *Prajñāpāramitā*]" (*da pin* [大品]), as opposed to the "Smaller version" (*xiao pin* [小品]), i.e. the *Aṣṭasāhasrikā* (see for example Zürcher, 2007, 340), although in some cases the category *da pin* is used to refer specifically to the *Śatasāhasrikā*. This simpler classification seems to be a historically more accurate representation of this textual family during its early and most important formative phase (Zacchetti, 2005, 41), and it is essentially adopted in this section.

Disregarding this situation has effectively hindered a correct understanding of the historical development of this literature and of the relationship between the various texts. Modern scholarship is marked by a tendency to emphasize quantitative (size) over qualitative (recensional) affinities, often surreptitiously superimposing later standard categories such as *Pañcaviṃśatisāhasrikā* on the earlier texts. In this way it becomes easy to miss the dynamic nature of these texts, which are to be regarded as breathing living entities, hardly befitting rigid, ahistorical textual categories.

Such a fluidity was due to several factors, but primarily to the nature of the scriptures themselves: their "modular" structure (Zacchetti, 2005, 45–46) made it possible to infinitely vary the texts. Lists of terms, whose systematic use in *Larger Prajñāpāramitā* texts has been discussed above, played an important role also from this point of view. Lists – a traditional and ubiquous feature of Buddhist literature in general (Gethin, 1992) – are not static textual elements or inert repositories of content: on the contrary, they can be expanded and compressed at will, and then further combined with other interlocking lists. In other words, they are another factor allowing (and often inviting) constant variation: a certain basic text can be easily expanded or condensed simply by manipulating the lists found in this scripture.

Another aspect that ought to be taken into account for a correct understanding of the particular notion of text in this context is the performative nature of these scriptures, as written transmission does not, of course, rule out oral fruition. These are texts meant to be instantiated mainly through recitation, as is suggested by the occurrence in the manuscipts of formulas prescribing the expansion of abbreviated passages (such as the formula *yāvad vistareṇa kartavyam*, "and so on – [text] to be given in full", in manuscripts of the *Larger Prajñāpāramitā*: see Zacchetti, 2005, 373–374 and Suzuki & Nagashima, 2015, 595–596; see also Falk & Karashima, 2012, 22 for a similar feature in the Gandhari Prajñāpāramitā manuscript).

The *Śatasāhasrikā* (*Prajñāpāramitā in 100000 lines*), which represents the extreme expansion of the whole Prajñāpāramitā literature, can be regarded as the product of these techniques of textual expansion: it is essentially the result of the full "activation" of all lists, with all the passages to be repeated given in full in the manuscripts. This is also the main reason for including the category *Śatasāhasrikā* in this subfamily, rather than in an independent group: apart from these quantitative and easily identifiable expansions, in terms of content texts belonging to this class do not differ from other *Larger Prajñāpāramitā* texts. In a sense, *Śatasāhasrikā* (and other such categories) should be regarded more as a textual generative principle than a rigidly defined, closed text: it would be very easy to produce (or perform) a *Śatasāhasrikā* starting from any shorter text (Zacchetti, 2005, 47–49).

Apart from predominantly quantitative variations in size, as *Larger Prajñāpāramitā* texts were being transmitted (and, at the same time, interpreted and "lived") in different areas at different times, they were gradually differentiating also from a textual point of view, at the level of content or wording (see. Seyfort Ruegg, 2004, 20–24). In this way, over the course of the transmission, different lineages of related texts came into existence. These lineages can be defined as recensions: that is, groups of witnesses (be they Sanskrit manuscripts or Chinese and Tibetan translations) defined by *qualitative* textual affinities (i.e. significant agreement in the wording of specific passages, significant shared expansions etc.).

It is extremely important, when studying *Larger Prajñāpāramitā* texts, to remain aware of the distinction between these two typologies of classification: quantitative (versions) / qualitative (recensions). Historically, they reflect two different processes of textual variation which have been equally productive, albeit in different ways, in the development of the *Larger Prajñāpāramitā* literature. So, for example, two witnesses can be very close from the point of their text, at a recensional level, while belonging to two different quantitative categories. As will be shown below, this is exactly the case with the *Larger Prajñāpāramitā* manuscript from Gilgit and the Sanskrit *Śatasāhasrikā*.

Lack of clarity with respect to these categories has caused considerable confusion in the study of this subfamily. And it is fair to say that the quantitative aspect has largely dominated the discussion of these sources, to the detriment of recensions (see for example Hanayama, 1966, 38 [C]). So, for example, when E. Conze (1978, 10) describes the three main versions of the *Larger Prajñāpāramitā* (in 100,000, 25,000 and 18,000 lines) as being "really one and the same book", he is saying something which is correct only in part. He was, obviously, aware of the existence of multiple recensions in this subfamily (Conze, 1978, 35), but decided not to give them enough attention.

However, it seems clear that patterns of qualitative (i.e., recensional) rather than quantitative affiliation should be given priority in the historical and philological study of these texts. For this reason, the following paragraphs group the various *Larger Prajñāpāramitā* witnesses, as much as possible, according to their recensional affiliations. At this stage this remains just a provisional classification. Even the boundaries between these recensions are, at best, fluid: an example of a major structural discrepancy in the *Larger Prajñāpāramitā* shared by witnesses across recensional boundaries is the concluding portion (see Zacchetti, 2005, 46n184).

This highly fluid scenario was mainly characteristic of the early phase of the *Larger Prajñāpāramitā* history: the general tendency in the development of this subfamily was to move towards textual stabilization, which resulted, in the long run, in the

production and transmission of essentially defined and frozen texts. The Sanskrit *Pañcaviṃśatisāhasrikā* represents with great clarity this historical trend.

The great diffusion of texts belonging to this subfamily, especially during the first centuries of its existence, is witnessed by the huge number of existing manuscript fragments in Sanskrit from Central Asia. It is impossible to provide here a full list of all the *Larger Prajñāpāramitā* fragments found in manuscripts collections. One can consult, for further though still partial references, S. Zacchetti, 2005, 17–18 (n53–54), K. Wille, 2014a, 206; 2014b, 227; Hori, 2014, 261. Examples of editions of *Larger Prajñāpāramitā* manuscript fragments include S. Konow (1942), G. Bongard-Levin (1994), G. Bongard-Levin and Hori (1996), Karashima (2005). Mention should be also made of some Central Asian woodblock prints of Sanskrit *Larger Prajñāpāramitā* texts (*Śatasāhasrikā* and *Pañcaviṃśatisāhasrikā*; see Formigatti [forthcoming]).

The Gilgit Manuscript of the *Larger Prajñāpāramitā* and Other Related Texts (Skt. *Śatasāhasrikā*; Tib. *Pañcaviṃśatisāhasrikā*)

The most important Sanskrit witness of this subfamily is, without a doubt, the large birch bark manuscript of the *Larger Prajñāpāramitā* (von Hinüber, 2014, 102; Zacchetti, 2005, 19–26) discovered in 1931, together with many other texts, in the remnants of a building near Gilgit, in present-day Pakistan (von Hinüber, 2014, 79–80). This manuscript (Serial No. 24, 25, 28 in the Gilgit corpus), which originally consisted of 308 folios, can be dated on paleographical grounds to the 6th–7th centuries CE. While the Gilgit corpus contains also other folios belonging to *Larger Prajñāpāramitā* manuscripts (Serial No. 26, 27, 50; see von Hinüber, 2014, 102–103), attention here will be limited to the main manuscript.

The Gilgit manuscript had been classified by Conze (1974, xv; 1978, 34–35, 40) as representing two different versions: the *Pañcaviṃśatisāhasrikā* for the first part (folios 1–187v), and the *Aṣṭādaśasāhasrikā* for the remaining portion (187v–308r). However, recent research has shown that E. Conze's classification was based on a wrong interpretation of the manuscript, which is to be regarded as reflecting a single text (Zacchetti, 2005, 19–22). For the reasons discussed above, *Larger Prajñāpāramitā* seems the historically most accurate definition for this or any other text of this family for purposes of bibliographical classification, unless another more specific title is explicitly supported by the given manuscript. The title given in some chapter-colophons of this Gilgit manuscript is simply *Prajñāpāramitā* (e.g. folio 8r, 6 = Zacchetti, 2005, 375; or at the very end of the manuscript, on folio 308, 9 [Conze, 1974a, 136]).

The Gilgit *Larger Prajñāpāramitā* manuscript is currently accessible in two low-quality facsimile editions (Ragu Vira & Lokesh Chandra, 1966–1970, and 1995, which is generally more readable). A new edition of all the Prajñāpāramitā texts from Gilgit, with high-quality color photographs, is planned for the near future by the National Archives of India and the International Research Institute for Advanced Buddhology (Soka University), as part of a wider editorial project on the Gilgit corpus (see von Hinüber's General Introduction in Clarke, 2014, xiii). At present, only some portions of this manuscript have been critically edited (von Hinüber, 2014, 102): the initial part, folios 1–27 (Zacchetti, 2005, 366–400); folios 202–205 (Choong, 2006, 109–133); and the entire final portion, folios 218–308 (Conze, 1962a and 1974; including both edition and translation).

An incomplete but fairly large (69 nonconsecutive folios) *Larger Prajñāpāramitā* Sanskrit manuscript from Dunhuang, which is close to the Gilgit manuscript from a textual point of view, has been recently published by Suzuki and Nagashima (2015). This edition includes also some hitherto unedited parallel passages from the main Gilgit manuscript.

The Sanskrit *Śatasāhasrikā Prajñāpāramitā* (*Prajñāpāramitā in 100000 lines*) has been transmitted in comparatively late Nepalese manuscripts. The first twelve chapters of this huge scripture have been edited by Ghoṣa (1902–1914), and the remaining portion is being edited by Kimura (2009–2010). In spite of its late manuscript attestation, the *Śatasāhasrikā* is surprisingly close, from a textual point of view, to the much earlier Gilgit manuscript. If we leave aside the difference in size (which is in fact largely the result of merely mechanical repetitions and expansions of lists), and the many trivial errors which mar Ghoṣa's edition, the Sanskrit *Śatasāhasrikā* is often identical to the Gilgit text. Both belong to the same recension of the *Larger Prajñāpāramitā*.

To the same recension belongs also the Tibetan translation of the *Pañcaviṃśatisāhasrikā Prajñāpāramitā* (*Prajñāpāramitā in 25000 Lines*) included in the *Kanjur: Shes rab kyi pha rol tu phyin pa stong phrag nyi shu lnga pa* (D 9/P 731), which E. Conze (1978, 35) tentatively ascribes to the celebrated translator Ye shes sde (active between

8th and 9th century). On the relationship between these three texts see Zacchetti (2005, 42–43, 42–43n174.)

The Sanskrit *Pañcaviṃśatisāhasrikā Prajñāpāramitā* and Related Texts

When compared to the Gilgit manuscript and the *Śatasāhasrikā*, the Sanskrit *Pañcaviṃśatisāhasrikā Prajñāpāramitā* (*Prajñāpāramitā in 25000 Lines*) clearly represents a different recension, with many differences in matters of wording and sequence of passages; for a detailed collation of the initial portion of these Sanskrit texts, see the right-hand column of the synoptic edition in S. Zacchetti, 2005, 144–239, with the relevant apparatus. In view of the fact that this text has been preserved in (fairly late) Nepalese manuscripts, it is possible to call it the "Nepalese recension" of the *Pañcaviṃśatisāhasrikā*, but it should be remarked that this is just a convenient definition, which, moreover, is probably inaccurate from the viewpoint of the origins of this text.

The most obvious feature of this Sanskrit *Pañcaviṃśatisāhasrikā* is that its entire text has been cast into the framework of an exegetical text, the *Abhisamayālaṃkāra* (see below): the base text has been subdivided into eight main sections (called *abhisamaya*s, "stages of realization"), in turn subdivided into shorter sections whose end is marked by headings relevant to topics dealt with in the *Abhisamayālaṃkāra*. It is hard to say when this editorial arrangement was put in place: E. Conze (1978, 37) tentatively dates it to the 5th century; Hikata (1958, L), probably correctly, inclines towards a later dating (later than the 5th cent., maybe during the 8th cent.).

This recension has been often described, not without some ambiguity, as "the revised" or "recast" *Pañcaviṃśatisāhasrikā*, and the alterations supposedly introduced into the text by this revision have been discussed by several authors: see, for example, E. Conze (1978, 37–39), N. Lethcoe (1976), and Watanabe (1994). The main objection to the notion of a "revised" *Pañcaviṃśatisāhasrikā* opposed to a supposed earlier "unrevised" version is that it presupposes a far too homogenous and static picture of the early history of the subfamily (whereas, as we have seen, variety and coexistence of multiple recensions is the norm), as well as a clear-cut separation between transmission and exegesis which is clearly not supported by a close analysis of all these texts. In fact, each of the early witnesses of the *Larger Prajñāpāramitā* shows traces of expansion and inclusion of explanatory glosses which can only have happened in a context of constant and systematic osmosis between transmission and exegesis. While there is little doubt that the Sanskrit *Pañcaviṃśatisāhasrikā* was indeed "revised" or edited in some ways (even apart from the insertion of the *Abhisamayālaṃkāra* headings), it is less clear that this fact can really set it apart from other texts of the subfamily. The real problem here is the nature of its alleged correlate, the "unrevised" *Pañcaviṃśatisāhasrikā*, which is something of a red herring.

While the nature of the specific editorial process which produced the current Sanskrit *Pañcaviṃśatisāhasrikā* may remain open to question, its influence on the subsequent transmission seems fairly clear: once the text was caged into the structure of the *Abhisamayālaṃkāra*, it became frozen and was effectively prevented from further developing.

A complete critical edition of this *Pañcaviṃśatisāhasrikā* (with very useful concordances to the various Sanskrit manuscripts and to Chinese and Tibetan related translations) has been published by Kimura (1986–2007), while its first section (*Abhisamaya*) had already been edited by N. Dutt (1934). This particular recension was translated into Tibetan, but is included – no doubt due to its commentarial component – in the Tanjur (*Shes rab kyi pha rol tu phyin pa stong phrag nyi shu lnga pa* [D 3790/P 5188]). According to E. Conze (1978, 36) this translation is somewhat different from its Sanskrit counterpart.

A number of small fragments of *Larger Prajñāpāramitā* inscribed on copper plaques and identified as a *Pañcaviṃśatisāhasrikā* were discovered in the remains of a stūpa in Sri Lanka in 1923 and edited by S. Paranavitana, according to whom they can be dated to the 8th or 9th century on the basis of the script (Paranavitana, 1933, 200). In more recent years (1982), other fragments of greater size and significance were discovered at Anuradhapura, also in Sri Lanka. The find consists of seven gold leafs of considerable size inscribed with passages which have parallels in the first *Abhisamaya* of the *Pañcaviṃśatisāhasrikā*. The script has been dated by their editor to the 9th century (von Hinüber, 1983, 189). In addition to the edition (von Hinüber, 1983), see Yamaguchi's detailed study (1984) and, on the general religious and historical context underlying the presence of these texts in Sri Lanka, Mori's monograph (1999, esp. 57). ---

view, the Sri Lanka fragments, though lacking the *Abhisamayālaṃkāra* subdivisions, are comparatively close to the Sanskrit *Pañcaviṃśatisāhasrikā*, together with which they seem to form another clearly identifiable recension (von Hinüber, 1983, 191; Zacchetti, 2005, 43–44, 43–44n178; for a different view, see Yamaguchi, 1984, 69). This relationship is of considerable significance for the history of the *Larger Prajñāpāramitā*: it shows that, as late as the 9th century, there was in circulation a *Pañcaviṃśatisāhasrikā* significantly close from a textual viewpoint to what is now the "Nepalese" recension, and yet completely independent from the *Abhisamayālaṃkāra*.

E. Conze's *Large Sutra on Perfect Wisdom* (1975) – the only modern translation from Sanskrit covering the entire *Larger Prajñāpāramitā* – is mainly based on the Sanskrit *Pañcaviṃśatisāhasrikā*, although it also conflates other texts. In spite of some philological shortcomings (Schopen, 1977), Conze's work represents a considerable achievement and provides a convenient introduction to this immense literature. Mention should be made also of Soejima's Japanese translation (1980, 174–269) of the beginning of the Sanskrit *Pañcaviṃśatisāhasrikā* (i.e. Dutt, 1934, 4–59), which includes a Sanskrit-Chinese synoptic edition (with Kumārajīva and Xuanzang's translations).

Other Chinese and Tibetan Translations of *Larger Prajñāpāramitā* Texts

There are six Chinese translations of *Larger Prajñāpāramitā* texts, dating from the 3rd to the 7th centuries, which have a considerable importance for the philological study of this subfamily. This is particularly true of the first two translations, which constitute the earliest *Larger Prajñāpāramitā* texts available in any language. They were produced a few years apart at the end of the 3rd century, and both were based on originals from Khotan.

The first is the so-called *Guang zan jing* (光讚經; T. 222), translated in 286 CE by a team led by Zhu Fahu (竺法護, *Dharmarakṣa), the most important Buddhist translator active during the 3rd century (Zürcher, 2007, 6–70; on the translation and early history of the *Guang zan jing*, see Zacchetti, 2005, 51–60). The text is incomplete, with only 27 chapters remaining, presumably representing approximately one third of the original (Zacchetti, 2005, 61–62). We know from a preface by Dao'an that the original manuscript used by Dharmarakṣa for his translation had been brought to China from Khotan (T. 2145 [LV] 48a2–3; Zacchetti, 2005, 52). For a study of the *Guang zan jing*, including an edition and translation of the first three chapters, see S. Zacchetti (2005).

The second Chinese version of the *Larger Prajñāpāramitā* is the *Fang guang banruo jing* (放光般若經) or simply *Fang guang jing* (放光經; T. 221; Zürcher, 2007, 61–65; Zacchetti, 2005, 30–31). We are quite well informed on this translation and on its Indic original, thanks to a detailed early note on this scripture preserved in the *Chu sanzang ji ji* (T. 2145 [LV] 47c10–28; translation by Hurvitz in Tsukamoto, 1985, 555–556n4). The original Indic manuscript on which the translation was based had been found by Zhu Shixing in Khotan, as a result of his hazardous journey in search of the *Larger Prajñāpāramitā*. Written in *brāhmī* script (*fan shu* [梵書]; see Boucher, 2000, 16–17, 16–17n25), it was subdivided into ninety chapters (*zhang* [章]) and consisted of over 600,000 syllabic units (*yan* [言], **akṣara*, see Demiéville, 1950, 388, 388n1). This approximate figure suggests an original *Larger Prajñāpāramitā* consisting of between 18,000 and 20,000 lines (Zürcher, 2007, 63; Hikata, 1958, xxv).

The manuscript was sent to China in 282, and was eventually translated in 291 by a team led by the Khotanese *śramaṇa* Wuchaluo ([無叉羅] *Mokṣala?). This translation was then revised in the years 303–304. The *Fang guang jing* (a rather free and far more readable translation than Dharmarakṣa's *Guang zan jing*) remained, together with Lokakṣema's *Dao xing jing*, the most influential Prajñāpāramitā available in early medieval China.

While the *Guang zan jing* and the *Fang guang jing* were translated at approximately the same time on the basis of manuscripts coming from the same area (Khotan), they appear already differentiated from a textual point of view, even if we discount the influence of the very different translation techniques adopted in the two texts. This is yet another proof of the highly fluid state of the *Larger Prajñāpāramitā* text during the earliest documented phase of its history.

The predominant status of the *Fang guang jing* was successfully challenged by the next translation, the *Mohebanruoboluomi jing* (摩訶般若波羅蜜經; T. 223) rendered into Chinese by Kumārajīva at the beginning of the 5th century, in the years 403–404 (Zacchetti, 2005, 32). The base text was translated in close conjunction with that of its great commentary known as *Da zhidu lun* (大智度論; T. 1509), which was to exert a profound and lasting influence on the interpretation of the Prajñāpāramitā in East Asia (see below). Some information on the original Indic manuscript used by Kumārajīva is provided by an interesting passage which occurs at the end of the *Da zhidu lun* (T. 1509 [XXV] 756a27–b1) and describes various versions of the Prajñāpāramitā. Here the text translated by Kumārajīva (here referred to as "this medium version of the *Prajñāpāramitā*" [*ci zhong banruoboluomi pin* (此中般若波羅蜜品)]) is contrasted to the large version in 100,000 lines (i.e, the *Śatasāhasrikā*), and to an even larger mythical "archetypal" version found in the palaces of the Nāga and Asura kings (Zacchetti, 2005, 40; Hikata, 1958, xxi and lviii–lx).

These three early Chinese translations are relatively close from a textual point of view (Zacchetti 2005, 44).

The next and last Chinese translations of *Larger Prajñāpāramitā* texts are all part of Xuanzang's *Da banruoboluomiduo jing* T. 220, and make up the first three sections of this great collection. The initial section or "assembly" (*chu fen* [初分]/*chu hui* [初會]) is generally described as a *Śatasāhasrikā* (Hikata, 1958, xiv; Komine *et al.*, 2015, 69). While this is acceptable as a practical definition, it should be remembered that this part of the *Da banruoboluomiduo jing* was in fact based on an even larger original in 132,600 lines (T. 2122 [LIII] 1024b21–22). This text alone makes up the whole of volumes V-VI in the Taishō edition.

According to the *Fayuan zhulin* (T. 2122 [LIII] 1024b24–c1), the second (T. 220 [VII] 1b2–426a14) and the third (T. 220 [VII] 427b2–761b27) sections represent, respectively, the versions in 25,000 and 18,000 lines.

Although the sheer size of these texts makes a systematic comparison extremely difficult, the first two sections of Xuanzang's translation seem generally close from a recensional point of view. That is, this *Pañcaviṃśatisāhasrikā* and this *Śatasāhasrikā* often share particular readings and expansions that set them apart from other *Larger Prajñāpāramitā* texts as representing a distinct recension (Hikata, 1968, xxxxviii; Zacchetti, 2005, 43, 43n176, 47–49). The position of the third section of the *Da banruoboluomiduo jing* (*Aṣṭādaśasāhasrikā*) seems somewhat different: according to Hikata (1958, xxxxix–l), from the point of view of content it reflects a more elaborated and possibly later text.

Apart from the two versions of the *Pañcaviṃśatisāhasrikā* already mentioned in the preceding section, the Tibetan canon includes other two translations of *Larger Prajñāpāramitā* scriptures: the version in 100,000 lines (*'Phags pa shes rab kyi pha rol tu phyin pa stong phrag brgya pa* [D 8/P 730]), and that in 18,000 lines, the *Aṣṭādaśasāhasrikā* (*'Phags pa shes rab kyi pha rol tu phyin pa khri brgyad stong pa* [D 10/P 732]).

On this translation, see E. Conze (1978, 40–45), who also provides, in addition to other useful information, reconstructed Sanskrit forms of its chapter titles. Very useful concordances of some of the main *Larger Prajñāpāramitā* texts in Sanskrit, Chinese and Tibetan are provided in Komine *et al.* (2015, 204–211.)

The *Daśasāharikā Prajñāpāramitā*

In addition to the various *Larger Prajñāpāramitā* texts discussed in the preceding paragraphs, there is also a *Prajñāpāramitā in 10000 Lines* (*Daśasāharikā Prajñāpāramitā*) only attested by a single Tibetan translation (*'Phags pa shes rab kyi pha rol tu phyin pa khri ba* [D 11/P 733]). A detailed study of this scripture is offered by S. Konow; it includes a reconstruction of the Sanskrit text of the first two chapters (Konow, 1941, 93–113) which, with their list of 57 factors (*dharma*) or groups of factors to which the bodhisattva should not cling, constitute the distinctive feature of the *Daśasāharikā*.

The position of this scripture in the entire Prajñāpāramitā literature is rather isolated. While the *Daśasāharikā* is not directly related to any other text, it seems to be an elaboration ultimately based on the *Larger Prajñāpāramitā* (Conze, 1978, 45–46; Hikata, 1958, xxxxviii–xxxxix; Komine *et al.*, 2015, 71–72). It is thus provisionally assigned to the *Larger Prajñāpāramitā* group, although it is a very different text from all others listed in this section. According to E. Conze (1978, 46; perhaps following Dutt, as quoted by Konow, 1941, 5–6) the *Daśasāharikā* might have been composed in Tibet, but this opinion is not supported by a detailed discussion. According to Konow (1941, 6), the Tibetan text is clearly a translation from Sanskrit.

Main Commentaries on *Larger Prajñāpāramitā* Texts

One can observe a remarkable split between Indo-Tibetan and East Asian traditions with respect to commentarial literature on the *Larger Prajñāpāramitā*: whereas in China, and subsequently in Korea and Japan, the main commentary relevant to this subfamily is the *Da zhidu lun*, which is

in pa stong phrag brgya pa [D 8/

unknown to Indian and Tibetan Buddhism, in the latter traditions the interpretation of the *Larger Prajñāpāramitā* (but also of the *Aṣṭasāhasrikā*) is dominated by the *Abhisamayālaṃkāra* and related commentaries, which, in turn, did not play any role in East Asia.

The *Abhisamayālaṃkāra* (or *Abhisamayālaṃkāra nāma prajñāpāramitopadeśaśāstra*) is ascribed to a Maitreya (or Maitreyanātha), whose identity has been the object of some debate (see Conze, 1978, 101, who dates the composition of the treatise to the 4th cent.). Its first edition (Sanskrit text and Tibetan translation) was published by T. Stcherbatsky and E. Obermiller (1929); E. Obermiller produced a detailed analysis of the text (1933–1943), and E. Conze a translation with Sanskrit-Tibetan Glossary (1954).

The *Abhisamayālaṃkāra* is a short verse treatise summarizing the general structure of the *Larger Prajñāpāramitā*, conceived as a path consisting of successive stages of realization (*abhisamaya*). It serves "as a table of contents for the entire *Large Prajñāpāramitā Sūtra*, as a condensed summary of all the practices, paths and stages of realization to Buddhahood understood to be implicit in that sūtra" (Makransky, 1997, 110; see also Conze 1978, 102–107).

This terse summary, which shows traces of Yogācāra influence (Conze, 1978, 102–103; Makransky, 1997, 110–111), has been the basis of a considerable number of commentaries, for the most part surviving in Tibetan translation (Conze, 1978, 112–120). Some of them refer also, to varying degrees, to the *Prajñāpāramitā* text on which the *Abhisamayālaṃkāra* itself is based, and to that extent they perform also the role of commentaries to the *Larger Prajñāpāramitā*.

Of particular interest from this point of view is the *Abhisamayālaṃkāravṛtti* of Ārya Vimuktisena (6th cent.; Seyfort Ruegg, 1981, 101), which survives in Sanskrit, and makes constant reference to the text of the *Pañcaviṃśatisāhasrikā*, linking it to the *Abhisamayālaṃkāra*. The first section (*abhisamaya*) was edited on the basis of a single Nepalese manuscript by C. Pensa (1967), and the whole commentary has been translated by G. Sparham (2006–2012).

Although primarily a commentary on the *Larger Prajñāpāramitā*, the *Abhisamayālaṃkāra* reflects the structure rather than the specific content and wording of the base text. For this reason it has been adapted by Haribhadra to the *Prajñāpāramitā in 8000 Lines*.

The *Da zhidu lun* (大智度論; T. 1509; **Mahāprajñāpāramitopadeśa*, Demiéville, 1950, 375n1), traditionally ascribed in East Asian Buddhism to the great Mādhyamika master Nāgārjuna, is an extended commentary to the *Larger Prajñāpāramitā* only attested by Kumārajīva's Chinese translation, dating to the beginning of the 5th century. É. Lamotte (1970 [vol. III], viii–xliv), who rejected the traditional attribution to Nāgārjuna, provided a very detailed discussion of the geographical and doctrinal background of the author of the commentary; other important discussions of the authorship of the *Da zhidu lun* are those by Hikata (1958, lii–lxxv), and Yinshun (1990).

According to a first-hand source (T. 2145 [LV] 75a14–b1; Shih, 1980, 325–327; Lamotte, 1980 [vol. III], xlviii–xlix), the Sanskrit original of the *Da zhidu lun* consisted of 100,000 lines. However, only the commentary on the first chapter (*parivarta*) was translated into Chinese in its entirety (= scrolls 1–34 of the present text of the *Da zhidu lun*), while the remaining part (scrolls 35–100) was abridged by Kumārajīva. So, in a sense, the *Da zhidu lun* includes two typologically very different commentaries: the first part provides extremely detailed and extensive explanations on short passages or even single words of the base text, whereas the second deals with longer passages and, in general terms, focuses more on the structure of the text than on terminology.

The *Da zhidu lun* is a veritable mine of information on almost all aspects of Buddhist literature and thought and, due to its encyclopaedic nature, it has always played an important role in East Asian Buddhist thought and exegesis. The portion translated in full by Kumārajīva was in turn rendered into French (with copious, invaluable annotations) by Étienne Lamotte (1944–1980), thus becoming one of the most important sources for Buddhist studies in the West.

Shorter Prajñāpāramitā Texts

While the two main Prajñāpāramitā scriptural subfamilies continued to play an important role in the development of Buddhist thought, from a certain period we begin to see attempts to condense the main teachings of the Prajñāpāramitā, casting it into innovative and handier formats.

This important development happened in different ways. For example, the *Diamond Sūtra* and the *Heart Sūtra*, perhaps the two most famous specimens of shorter Prajñāpāramitā text, represent two very different typologies of "reduction": while the latter is, in its main portion, a fairly straightforward excerpt from the *Larger Prajñāpāramitā*, the production of the former entailed a more creative attempt of rewriting Prajñāpāramitā ideas in a very innovative and indeed unique form.

The *Vajracchedikā Prajñāpāramitā*

The *Vajracchedikā Prajñāpāramitā* (*Vajra-cutting Perfection of insight*; on the title, Watanabe, 2009, 163–165, 184–186), better known as *Diamond Sūtra*, has always been one of the most popular scriptures belonging to this tradition. The *Vajracchedikā* develops as a short dialogue between the Buddha and Subhūti, and is characterized by the systematic adoption of a distinctive formula, in which a certain category is first negated and then asserted (for a detailed discussion and innovative interpretation of this "signature formula", Harrison, 2006, 136–140).

An important leitmotif in the *Vajracchedikā* is the rejection of *saṃjñās* ("notion", "idea", but also "apperception" in other contexts). This may reflect an old scriptural tradition prescribing the abandonment of these mental constructs (Gómez, 1976, 144–145). In particular, four *saṃjñās* related to ideas of selfhood are singled out as key hindrances: the notions of self, of being, of soul and of person (*ātmasaṃjñā*, *sattvasaṃjñā*, *jīvasaṃjñā*, and *pudgalasaṃjñā*). It is noteworthy that Xuanzang's translation alone has, instead of this fourfold series, a longer list of nine terms (see T. 220 [VII] 980c18–21 and *passim*), which has parallels in other Buddhist texts and especially in the *Larger Prajñāpāramitā* (Zacchetti, 2005, 207, 327–329 [§ 3.2]).

A detailed critical overview of the editions of the *Vajracchedikā* in Sanskrit (either of partial or complete manuscripts) is provided by P. Harrison and Watanabe (2006, 89–92; see also 93–94 for a list of Central Asian fragments and Nepalese manuscripts of this scripture). Here only the main manuscripts and editions are mentioned.

The earliest available Sanskrit manuscript of the *Vajracchedikā* is the one (partial) discovered in 1900 by A. Stein in Dandān-Uiliq near Khotan, which was conjecturally dated by its first editor F.E. Pargiter (1916, 178; see also Harrison, 2015, 823, 823n3) to "about the end of the fifth or the beginning of the sixth century A.D." For a new edition and study of this manuscript see P. Harrison (2015).

The next two important Sanskrit texts are the manuscript from Gilgit (editions by Chakravarti, in Tucci [1956, 175–192], Dutt [1959, 141–170] and Schopen [1989], with translation) and that belonging to the Schøyen Collection (MS 2385) and probably coming from the Bamiyan area in Afghanistan (ed. Harrison & Watanabe, 2006). Both are written in the same script and are datable on paleographical grounds to the 6th–7th centuries. Moreover, although partial, they complement each other in terms of content, thus allowing us to read the *Vajracchedikā* "in the form in which it was circulating in the area of Greater Gandhāra in the 6th and 7th centuries A.D." (Harrison, 2006, 133; see also 142–159 for a translation of the combined text). Some early Central Asian fragments of the *Vajracchedikā* (small but interesting both from a textual and a linguistic point of view) from various manuscripts have been edited by P. Harrison (2009).

The first modern edition of the entire *Vajracchedikā*, by Max Müller (1880), published long before these early witnesses had become available, was based on much later manuscripts (Harrison & Watanabe, 2006, 90–91; Harrison, 2010a, 206–213).

Another extremely influential edition of the Sanskrit text of this scripture is that by E. Conze (1974b [first ed. 1957]; with translation and glossary), which, while essentially based on Max Müller's edition, takes also into account – albeit in an inconsistent and often confusing way – the readings of earlier witnesses (notably the manuscript edited by Pargiter and the Gilgit text). More problematic is the rather cavalier editorial approach adopted by E. Conze in his handling of the original sources. A clear example is his expunction of a passage defining the Tathāgata, among other things, as a synonym of "annihilation of *dharmas*" (*dharmoccheda*; Conze, 1974a, 48n[a]) on the grounds that it represents "a later addition which has crept into the text after 800 A.D.", which is also "doctrinally suspect" (1974, 6). In fact, this passage is already found in the early 7th century translation by Dharmagupta (T. 238 [VIII] 770a10; Watanabe, 2009, 305). In spite of its considerable shortcomings, E. Conze's work remains useful for accessing the Sanskrit text of the *Vajracchedikā* in its later form.

Apart from those by E. Conze, G. Schopen, and P. Harrison, other noteworthy modern translations of the Sanskrit text of the *Vajracchedikā* were published by C. de Harlez (1892; with references in the notes also to Kumārajīva's Chinese version, and to the Tibetan and Manchu translations), F. Müller (1894), M. Walleser (1914, 140–158), Ui (1963, 17–80, with copious annotations), Nagao (1973, including Asaṅga's commentary).

The earliest of the six successive Chinese translations of the *Vajracchedikā* (as well as the earliest witness of this scripture) is the *Jin'gang banruoboluomi jing* (金剛般若波羅蜜經; T. 235), authored by

e six successive Chinese transla-
edikā (as well as the earliest wit-
e) is the *Jin'gang banruoboluomi*
蜜經; T. 235), authored by

Kumārajīva's at the beginning of the 5th century. According to Jizang's (吉藏, 549–623) *Vajracchedikā* commentary (*Jin'gang banruo jing yishu* [金剛般若經義疏]; T. 1699 [XXXIII] 90b25–26), this translation dates to 402 CE (Ui, 1963, 7). This came to be regarded as the *Diamond Sūtra* par excellence in East Asia, and has been translated many times into other languages, both ancient (e.g. in Sogdian and Uigur, see Conze, 1978, 62; Watanabe, 2009, 10), and modern (for example Beal, 1865a; Muller, 2013). A fragment of a Sogdian translation of Kumārajīva's version (corresponding to T. 235 [VIII] 749a5–21) has been edited and translated by D. MacKenzie (1976, 3–5; see also Part II pp. 3–6 for a detailed commentary). The existence of a transcription of this version in Brahmi script (Emmerick & Pulleyblank, 1993) further attests to the popularity Kumārajīva's *Diamond Sūtra* enjoyed even in Central Asia.

In extra-canonical editions and commentaries of Kumārajīva's translation the text is often divided into 32 sections with titles, traditionally ascribed to crown prince Zhaoming (昭明, 501–531) of the Liang (梁) dynasty (e.g. see Yong You, 2010, 12–13; Lehnert, 1999, 48–49). This seems, however, an apocryphal tradition, as had already been observed by some pre-modern commentaries (see for example the late 14th cent. *Jin'gang banruoboluomi jing zhujie* [金剛般若波羅蜜經註解] by Zongle [宗泐] and Ruqi [如玘], T. 1703 [XXXIII] 228b2–4; tr. Lehnert, 1999, 196). An early source containing these sections is Dunhuang manuscript S. 1846 (printed in the Taishō edition, T. 2732). It contains the *Liang chao Fu Dashi song Jin'gang jing* (梁朝傅大士頌金剛經), a collection of stanzas on the *Jin'gang banruoboluomi jing* probably composed during the first half of the 9th century (Zhang, 1999, 282) and preserved in several manuscripts from Dunhuang. The title of the second section, "Subhūti asks [the Buddha] for instructions" (*Shanxian qiqing fen di'er* [善現起請分第二]; *Liang chao Fu Dashi song Jin'gang jing*; T. 2732 [LXXXV] 1c3), clearly suggests a Tang origin: this particular translation of Subhūti's name, Shanxian (善現), is in all likelihood Xuanzang's coinage (see for instance *Da banruoboluomiduo jing*; T. 220 [VII] 980a14 and *passim*). Be that as it may, this convenient traditional Chinese way of parsing Kumārajīva's translation eventually came to influence the Sanskrit text itself and its modern translations and studies: Max Müller, in a gesture of misplaced deference towards the Liang prince, introduced them (albeit with some hesitation) into his edition (see his remarks in Müller, 1881, 18), and his example was followed by E. Conze (1974).

The *Vajracchedikā* was rendered another five times into Chinese, by the following translators (dates after Harrison, 2006, 135, unless otherwise stated):

Bodhiruci (*Jin'gang banruoboluomi jing* [金剛般若波羅蜜經]; T. 236a) in 509; Paramārtha (*Jin'gang banruoboluomi jing* [金剛般若波羅蜜經]; T. 237) in 562; Dharmagupta (*Jin'gang nengduan banruoboluomi jing* [金剛能斷般若波羅蜜經]; T. 238) at the beginning of the 7th century (see Zacchetti, 1996, 144n29); Xuanzang, as the 9th section of the *Da banruoboluomiduo jing* (*Da banruo jing di jiu hui neng duan jin'gang fen* [大般若經第九會能斷金剛分]; T. 220 [VII] 979c2–985c24); Yijing (義淨) (*Neng duan jin'gang banruoboluomi jing* [能斷金剛般若波羅蜜多經]; T. 239) in 703.

Bodhiruci, Paramārtha and Yijing's versions are largely derivative from Kumārajīva's text (Harrison, 2010a, 243). As already remarked above, Xuanzang's text is particularly developed, being even more expanded than the later Sanskrit text edited by E. Conze. These expansions might reflect a recensional variation, as seems to be the case also for other parts of the *Da banruoboluomiduo jing* (see above), or could be due, as suggested by Harrison (2010, 244), to the translator himself. The *Vajracchedikā* was translated by Xuanzang, at the emperor's request, in 648 (T. 2154 [LV] 555c1–2; on the circumstances of the translation, T. 2053 [L] 259a13–29; Li, 1995, 215–216), several years earlier than the rest of the *Da banruoboluomiduo jing*, into which it was eventually inserted (see Hikata, 1958, xvi).

Dharmagupta's translation is, in many ways, a unique text. It is an incomplete draft consisting in an extremely literal and technically sophisticated version, reflecting an intermediate stage in the translation process (Zacchetti, 1996). As such, it constitutes a first-rate source for the study of translation techniques. For a detailed study of the *Jin'gang nengduan banruoboluomi jing*, including an analysis of its relationship with the lemmata embedded in Dharmagupta's two versions of Asaṅga's commentary to the *Vajracchedikā* (*Jin'gang banruo lun* [金剛般若論]; T. 1510a, and *Jin'gang banruoboluomi lun* [金剛般若波羅蜜經論]; T. 1510b), see Watanabe (2009, 235–326).

Perhaps in no other area did the *Vajracchedikā* – particularly through Kumārajīva's translation – achieve as important a status as in China and, subsequently, Korea and Japan. This was also due to its association with certain lineages of the Chan (禪) school (McRae, 2003, 62; Komine *et al.*, 2015, 258–269).

A clear attestation of the immense fortune of this scripture is the huge number of copies produced, since an early time, in various forms and mediums. Apart from numerous early manuscripts and prints found in Dunhuang (Yong You, 2010, 33–92), including the famous printed scroll dated 868 CE and kept at the British Library (Or.8210/P.2; Wood & Bernard, 2010), Kumārajīva's *Jin'gang banruoboluomi jing* is part of several corpora of scriptures engraved on stone (either on rocks or steles), following a practice well attested in medieval China (Yong You, 2010, 129–155). Notable examples are the ten copies of the *Diamond Sūtra* included in the famous corpus of steles of Fangshan (房山), near Beijing (Lancaster, 1989, 150), or the one found in Cave 46 at the Wofoyuan (臥佛院) in Sichuan province (Mayer, 2014). Perhaps the most stunning specimen of rock-cut *Diamond Sūtra* is that engraved, presumably during the 6th century, on a granite streambed on Mount Tai in Shandong province. The 1,069 characters of this majestic carving which survive nowadays are 50 centimetres high, and the text covers an area of over 2,000 square meters (Harrist, 2008, 174–175; Komine *et al.*, 2015, 425–428).

There is a rich literature of Chinese miracle tales related to this scripture (Ho, 2013; Yong You, 2010, 93- 127; Komine *et al.*, 2015, 244–258), which further attests to the popularity of the *Diamond Sūtra* in China.

The *Vajracchedikā* was translated into Tibetan around the beginning of the 9th century by Śīlendrabodhi and Ye shes sde (*'Phags pa shes rab kyi pha rol tu phyin pa rdo rje gcod pa* [D 16/P 739]). For a partial critical edition (corresponding to sections 1–6 of Kumārajīva's version), see Watanabe (2004); an overview of Tibetan manuscripts is provided by Watanabe (2009, 329–344).

Mention should be made also of the Khotanese translation, edited and translated by Konow (1916 [with vocabulary, pp. 330–356]); see M. Maggi (2009, 371–372); R. Emmerick (1992, 34–35). R. Emmerick (1977) contains an edition and translation of the concluding verses of the Khotanese translation (which are quite divergent from their Sanskrit counterpart) based on a manuscript different from the one used by Konow.

There are three Mongolian translations of the *Diamond Sūtra*, based on the Tibetan version and dating from the 16th and 17th centuries (Poppe, 1971, 4–7), which have been edited and translated by N. Poppe (1971).

The most important Indian commentaries on the *Vajracchedikā* belong to the Yogācāra school (Conze, 1978, 96–97). The Sanskrit text of Asaṅga's verse commentary, the *Triśatikāyāḥ Prajñāpāramitāyāḥ Kārikāsaptatiḥ*, was edited (with Chinese and Tibetan translations) and translated by G. Tucci (1956, 53–128; see also his detailed introduction [5–50]). Vasubandhu's commentary to Asaṅga's stanzas survives in two Chinese translations, by Bodhiruci (*Jin'gang banruoboluomi jing lun* [金剛般若波羅蜜經論]; T. 1511) and Yijing (*Neng duan jin'gang banruoboluomiduo jing lun* [能斷金剛般若波羅蜜多經論釋]; T. 1513).

Another commentary ascribed to Vasubandhu (see Tucci, 1956, 131–171), survives in Chinese and Tibetan (*Bcom ldan 'das ma shes rab kyi pha rol tu phyin pa rdo rje gcod pa'i don bdun gyi rgya cher 'grel pa* [D 3816]) translations. The Chinese canon contains two different recensions of Dharmagupta's Chinese translation, respectively in two and three scrolls (*Jin'gang banruo lun* [金剛般若論]; T. 1510a [XXV] 757a3–766 a28; *Jin'gang banruoboluomi jing lun* [金剛般若波羅蜜經論]; T. 1510b [XXV] 766b2–781 a23), whose relationship constitutes an intricate problem (see Tucci, 1956, 18–19, 41–50; Ui, 1963, 111–142; Watanabe, 2009, 254–264). Another Indian commentary to the *Vajracchedikā* that should be mentioned in this context is that by Kamalaśīla (8th cent. [Seyfort Ruegg, 1981, 93–99]), which survives in Tibetan translation (*Shes rab kyi pha rol tu phyin pa rdo rje gcod pa'i rgya cher 'grel pa* [D 3817/P 5216]); while largely based on Vasubandhu's work, it includes Madhyamaka elements (Tucci, 1956, 24–28).

There is a substantial exegetical literature on the *Diamond Sūtra* composed in China. For references to the main pre-modern commentaries – for the most part based on Kumārajīva's translation – see Komine *et al.* (2015, 167–168), M. Lehnert (1999, 162–164) and Watanabe (2009, 15–16).

The *Prajñāpāramitāhṛdaya*

The so-called *Heart Sūtra* (*Prajñāpāramitāhṛdaya-sūtra* in Sanskrit) is probably the only other Prajñāpāramitā text which can rival the *Diamond Sūtra* in terms of popularity.

The gist of this scripture, one of the shortest texts of the entire family, is based on passages found in *Larger Prajñāpāramitā* texts (e.g. Gilgit manuscript folio 21v1–11 [ed. Zacchetti, 2005, 393]; *Pañcaviṃśatisāhasrikā* ed. Kimura I.1 [2007, 64]), forming an elaboration of the notion of emptiness which is not found in the *Aṣṭasāhasrikā*. Emptiness

is equated with matter (*rūpa*) and then with the other four aggregates (*skandha*; Conze, 1967, 150 § III [hereafter, all references are to paragraphs and pages of Conze's editon, 1967, 149–153]). A series of characteristics are then predicated of all *dharmas* (said to be "characterised by emptiness" etc.; 151 § IV), followed by a list of *dharmas* not to be found in emptiness (151 § V). This list reflects a traditional Buddhist way of organizing key categories which, as we have seen, is a typical feature of the *Larger Prajñāpāramitā*. Then come two short paragraphs on the practical side of this vision for the bodhisattva's practice and on reliance on Prajñāpāramitā as the key factor in awakening (152 § V–VII). The Prajñāpāramitā is then described as a "great spell" (*mahāmantra*), which is then quoted (152–153 § VIII).

In comparison to other Prajñāpāramitā scriptures introduced thus far, the *Heart Sūtra* presents some notable differences: the main character, the Bodhisattva Avalokiteśvara, is essentially foreign to this literature; the presence of the final *mantra* is also an innovation with respect to the main Prajñāpāramitā texts, and testifies of an incipient phase of tantric influence. As will be detailed below, the *Heart Sūtra* is indeed also classified as *tantra* in Tibet. The notion of magical and apotropaic efficacy of this scripture, which is already clear in the earliest sources on this text (see Xuanzang's biography, *Da Tang Da ci'en si sanzang fashi zhuan*; T. 2053 [L] 224b7–13; Li, 1995, 26–27; see also Mair, 2002, 122–123; McRae, 1988, 89–90), has certainly been an important factor in shaping its fortunes down to the present time.

A fascinating and challenging theory on the origins of the *Heart Sūtra* has been proposed by J. Nattier (1992), who, on the basis of a detailed philological analysis of the relevant sources, has argued that this scripture originated in China: that is, the main passage which constitutes the *Heart Sūtra* was extracted from Kumārajīva's version of the *Larger Prajñāpāramitā* (T. 223), and then back-translated into Sanskrit.

The Sanskrit text exists in two versions, a shorter and a longer one. The main difference between the two is that the longer version includes the canonical initial and closing formulas which are typical of *sūtras*. A very clear discussion of the textual history of the *Heart Sūtra* and of its various available witnesses is provided by Watanabe (2009b, 44–80). On the basis of the information offered by the textual history of this scripture, and taking into account the innovative elements mentioned above (presence of Avalokiteśvara and the final *mantra*), Watanabe (2009b, 80) maintains that the *Heart Sūtra* took shape in the 5th–6th century and was then expanded into the long version in the 7th century.

The earliest Sanskrit witnesses of the shorter version are a group of manuscripts kept at the Hōryū-ji (法隆寺) in Nara, Japan, which where copied around the 8th century (Watanabe, 2009b, 46). Another early witness of this version is the phonetic transcription with Chinese characters preserved in some manuscripts of Dunhuang and in other sources (Watanabe, 2009b, 48, 59), and which is included in the Taishō canon (*Tang fan fan dui zi yin banruoboluomiduo xin jing* [唐梵翻對字音般若波羅蜜多心經]; T. 256). This transliteration is to be ascribed to Amoghavajra (Bukong [不空], 705–774), as was first suggested by L. Hurvitz (1977); for a detailed study see Wan Jinchuan (2004).

The longer version is attested in a number of Japanese, Chinese, and Nepalese manuscripts (Watanabe, 2009b, 48–50). The earliest modern edition of the Sanskrit *Heart Sūtra* (long version) was published by L. Feer (1866). It includes a synoptic edition of the Tibetan and Mongolian translations. Another notable early edition is that by C. Müller and Nanjio (1884). Apart from the editions and translations of both the shorter and the longer versions (1884, 48–59), this publication also includes the plates and transcriptions of a number of other early witnesses of the Sanskrit *Heart Sūtra* (Ib., 3–22,27–30; Watanabe, 2009b, 51–54).

Perhaps the most widely used edition is that by E. Conze (1948, republished with several changes in 1967, 148–167), although it conflates, somewhat confusingly, the long and the short versions into a single text. For a translation of both versions, see E. Conze, 1973b, 140–143.

There are seven extant Chinese translations of the *Heart Sūtra* (Watanabe, 2009b, 56–62, who lists eight translations, including also Amoghavajra's transliteration). Nominally the earliest is the one ascribed in the canon to Kumārajīva (early 5th cent.), the *Mohebanruoboluomi damingzhou jing* (摩訶般若波羅蜜大明咒經; T. 250), reflecting the short text. However, according to Watanabe (2009b, 71–80; McRae, 1988, 88–89), this attribution – which is not supported by early bibliographical catalogues – is to be rejected. This is probably a text composed in China on the basis of Kumārajīva's translation of the *Larger Prajñāpāramitā*, with materials taken from Xuanzang's translation of the *Heart Sūtra*.

Thus it is the latter, the *Banruoboluomiduo xin jing* (般若波羅蜜多心經; T. 251), translated in 649

(T. 2154 [LV] 555c3–4) that is the earliest witness (and not just translation) of the *Heart Sūtra* (short version). According to biographical sources, Xuanzang had a particular devotion for the *Heart Sūtra*, and this is reflected by the legendary lore which gradually took shape around the great translator and his travels to India (Mair, 2002). His translation, which is the only Prajñāpāramitā text translated by Xuanzang not included in the *Da banruoboluomiduo jing*, remained the most authoritative Chinese version of the *Heart Sūtra*, and as such it has been hugely influential in East Asia, and the object of many commentaries (McRae, 1988). It has also been translated many times (e.g. Beal, 1865b [with considerable – though historically understandable – errors], Buswell, 1992, 232–233).

A fascinating testimony of the lasting and widespread influence of Xuanzang's version of the *Heart Sūtra* (and, more generally, of popular cultic practices centred on this scripture) is provided by the so-called "pictorial *Heart Sūtra*" (*e Shingyō* [繪心經]), produced in some rural areas of North-eastern Japan (Nanbu region), which are of great cultural interest. These "pictorial Sūtras" (sometime also called "Tayama sutras" from the name of the village where the writing system was created) are phonetic transcriptions adopting a unique rebus-like writing system first devised in the late 17th century in order to allow even illiterate peasants to recite Buddhist scriptures. The system works "by substituting pictures of quotidian objects – farm implements, body parts, animals – in the place of the more acoustically opaque Chinese characters" (Eubanks, 2013, 17). While this and other similar systems were applied to several scriptures, their use to transcribe the *Heart Sūtra* is particularly prominent (Watanbe, 2012; Watanabe, 2009b, 224–329; Komine *et al.*, 2015, 328–340; Eubanks, 2013).

Apart from the two discussed above, and not counting Amoghavajra's phonetic transcription of the Sanskrit text, there are five other Chinese translations of the *Heart Sūtra*, all representing the long version (unless otherwise stated, the dates of these translations are quoted from Watanabe 2009b, 56–57):

Pubian zhizang banruoboluomiduo xin jing (普遍智藏般若波羅蜜多心經; T. 252), translated in the 26th year Kaiyuan (開元, January 738–February 739; T. 2156 [LV] 748c3–5) by Dharmacandra (Fayue 法月); this is the earliest translation of the long version of the *Heart Sūtra*; *Banruoboluomiduo xin jing* (般若波羅蜜多心經; T. 253), translated by Prajña (Boruo 般若) in 790; *Banruoboluomiduo xin jing* (般若波羅蜜多心經; T. 254), translated by Prajñācakra (Zhihuilun 智慧輪) in 861; *Banruoboluomiduo xin jing* (般若波羅蜜多心經; T. 255), translated by Facheng (法成, aka Chos grub), a monk active as a translator of Chinese texts into Tibetan, and vice-versa, in Dunhuang in the 9th century (van Schaik, 2013, 124). This version has been transmitted in several manuscripts from Dunhuang; according to Watanabe (who dates it to 856) it may have been translated from Tibetan (Watanabe, 2009b, 59); *Fo shuo sheng fo mu banruoboluomiduojing* (佛說聖佛母般若波羅蜜多經; T. 257), translated by *Dānapāla (10th–11th cent.).

The canonical Tibetan translation represents the long version of the *Heart Sūtra*. It is ascribed by a colophon (only found in one witness) to Vimalamitra and Dge slong Rin chen sde (for a detailed discussion of this document, Silk 1994, 47–56). The *Heart Sūtra* was classified by Tibetan bibliographers both as *sūtra* and as *tantra*, and as a result it is included, in certain editions, in two different sections of the canon (*Sher phyin*, *Prajñāpāramitā* [D 21] and *Rgyud*, *Tantra* [D 531 / P 160]). This twofold classification is also (at least in part) reflected at a textual level, as this translation exists in two recensions, bearing two slightly different titles: *Bcom ldan 'das ma shes rab kyi pha rol tu phyin pa'i snying po* (corresponding to the Sanskrit *Bhagavatīprajñāpāramitāhṛdaya* [= Recension A]) and *'Phags pa bcom ldan 'das ma shes rab kyi pha rol tu phyin pa'i snying po* (*Āryabhagavatīprajñāpāramitāhṛdaya* [= Recension B]; according to Watanabe [2009b, 63] *bhagavatī* is missing in certain editions). According to Silk (1994, 31), these two recensions basically overlap with the above mentioned classification, with Recension A representing the *Tantra* text, and Recension B its *Prajñāpāramitā* counterpart. These and other related issues are discussed in detail in Silk (1994), which contains also critical editions and English translations of both the recensions (see also Watanabe, 2009b, 61–65).

There are also several Dunhuang manuscripts of the *Heart Sūtra* in Tibetan. According to Watanabe (2009b, 65–66), most of them share the same title as the canonical Recension B, but reflect the short text of the Sanskrit *Heart Sūtra*. Some manuscripts, however, bear the title which characterizes Recension A and reflect the long text.

A manuscript discovered in Dunhuang (P 3510) contains part of a Khotanese translation of the *Heart Sūtra* (long text), published by P.O. Skjærvø (1988). An unrelated commentary in Khotanese on the *Heart Sūtra* (short text) entitled *Mahāprajñāpāramitāsūtra* is preserved in another

ated commentary in Kho-
rt Sūtra (short text) entitled
tāsūtra is preserved in another

Dunhuang manuscript (see Lancaster, 1977; Maggi, 2009, 373). There is also a Sogdian version (presumably based, according to its editor, on a Chinese original), equally found in a Dunhuang manuscript (Benveniste, 1940, 142–144). This is a bilingual manuscript, as the Sogdian is preceded by the short text of the *Heart Sūtra* in broken Sanskrit (perhaps, one is tempted to speculate, a maladroit back-translation based on a Chinese transliteration such as that by Amoghavajra).

Mention should be also made of some polyglot editions of the *Heart Sūtra* in which versions of the text in several languages (e.g. Sanskrit, Tibetan, Manchu, Mongolian and Chinese) are edited synoptically (see Fuchs, 1970; Silk, 1994, 155–156; Conze, 1978, 69).

There is an extremely rich exegetical literature on the *Heart Sūtra*. Several Indian and Tibetan commentaries have been studied and translated by D. Lopez (1988, 1996); on some Chinese commentaries see J. McRae (1988).

The *Suvikrāntavikrāmiparipṛcchā Prajñāpāramitā*

This middle-length scripture unfolds mainly as a dialogue between the Buddha and the Bodhisattva Suvikrāntavikrāmin, but includes also other regular characters of Prajñāpāramitā literature such as Śāriputra (here in the form Śāradvatīputra) and Subhūti, as well as Ānanda.

This scripture, which according to E. Conze (1978, 58) "is easily the most advanced Prajñāpāramitā text which we possess", represents a sustained and profound reflection, carried on from a variety of angles, on the very notion of "perfection of insight". Particularly significant are, from this point of view, the first chapter (*Nidānaparivarta*; Hikata, 1958, 3–21) – providing several "definitions", in the paradoxical style typical of Prajñāpāramitā texts, of key categories such as perfection of insight, awakening, bodhisattva etc. – and the fifth (*Subhūtiparivarta*; Hikata, 1958, 66–71), a short dialogue between Subhūti and Śāradvatīputra offering various perspectives on the fundamental unattainability and ineffability of the perfection of insight. Both these chapters are quite close – in spirit and occasionally also in letter – to the first chapter of the *Aṣṭasāhasrikā* (for example see Hikata, 1958, 66, and compare Mitra, 1887–1888, 4–5; Vaidya, 1960, 3).

The Sanskrit text survives in its entirety only in one single Nepalese manuscript datable to the 12th–13th century (Hikata, 1958, lxxvii–lxxviii), subdivided into seven chapters. The title contained in the colophon (Hikata, 1958, 128) gives the size of the text as "2500 [*ślokas*]" (*-sārdhadvisāhasrikā*). This agrees with the information provided by the *Fayuan zhulin* on the original of Xuanzang's translation (T. 2122 [LIII] 1024c9–10), a fact which further confirms the accuracy of this source's testimony. In addition to the main manuscript, there are Central Asian Sanskrit fragments (see Wille, 2014b, 227 for a list of those in the British Library), such as those edited in Karashima and K. Wille (2009, 105–106, 244, 249, 305), or by Ye (2010, 104–105).

The Sanskrit text has been critically edited by Matsumoto (1956), and then by Hikata (1958). As shown by de Jong's text-critical remarks (1977), neither of these editions can be considered definitive. P.L. Vaidya (1961, 1–74) is essentially a reproduction of Hikata's edition and has no independent value.

The only Chinese translation of this scripture is that included in Xuanzang's *Da banruoboluomiduo jing* as its 16th and last section (*Section on the Perfection of Insight*; T. 220 [VII] 1065c21–1110a21). Its position and title are due to the fact that within the framework of Xuanzang's *summa* this text is part of a set of sections devoted to the six perfections (see below the paragraph on the *Pañcapāramitānirdeśa*). Xuanzang's translation, in 8 scrolls, lacks a chapter subdivision corresponding to the Sanskrit.

The Tibetan translation, *'Phags pa shes rab kyi pha rol tu phyin pa rab kyi rtsal gyis rnam par gnon pas zhus pa shes rab kyi pha rol tu phyin pa bstan pa* (D 14 / P 736), by Śīlendrabodhi, Jinamitra and Ye shes sde, dates to the 9th century. In general, the Tibetan version is rather close to the Sanskrit, whereas Xuanzang's translation often reflects a different text (de Jong, 1977, 187–189; Hikata, 1958, lxxviii–lxxix). However, variants preserved in part of the textual tradition of the Tibetan text suggest conflation with an earlier version, which was closer to the Chinese translation (Hikata, 1958, lxxx). There are two modern translations of the Sanskrit text, into English by E. Conze (1973b, 1–78), and into Japanese by Tosaki (2001).

The *Saptaśatikā Prajñāpāramitā*

The *Prajñāpāramitā in 700 Lines* (but the title of first two Chinese versions is [*Mahā-*]*Prajñāpāramitā preached by Mañjuśrī*) lays great emphasis, especially in the first part, on desubstantializing attainments and other key categories: taking the figure of the Tathāgata as its starting point, the text moves on to apply *Prajñāpāramitā*-style language to the set of qualities which characterize a buddha (*buddhadharma*) defined, with a characteristic pun, as “supreme (*agra*) on account of their ungraspability” (*agrāhyatvād . . . agrā buddhadharmāḥ* [Masuda 1930, 204]). The fundamental Prajñāpāramitā principle of the absence of discrimination and dualism receives particular emphasis in this scripture, where it is pushed to its extreme consequences. An example is the provocative (though perfectly logical) equation of buddha and self (*ātman*) – always a sensitive notion in a Buddhist context – based on the ultimate unreality of both (Masuda, 1930, 222).

The first and hitherto only complete edition of the Sanskrit was published by G. Tucci (1923); it is based on a single manuscript and contains many errors. A second and better edition, based on more manuscripts and taking into account Chinese and Tibetan translations, was published some years later by Masuda (1930). This, however, only covers the first half of the text, up to p. 128 of G. Tucci's edition. Masuda's edition has been subsequently reproduced by P.L. Vaidya (1961, 340–351), who apparently took it for a complete text, as shown by the addition of the usual closing formula at the end (1961, 351, 20: *Saptaśatikā prajñāpāramitā samāptā* [!]). For a recently discovered manuscript containing, among other texts, also the *Saptaśatikā* (with the title *Āryabhagavatī Prajñāpāramitā Saptaśatikā*), see Tomabechi 2009, xxxi.

The Sanskrit text has been translated into English by E. Conze (1973b, 79–107), on the basis of the editions by Masuda (for the initial portion of the scripture) and G. Tucci.

There are three Chinese translations of this text. The first, *Wenshushili suo shuo mohebanruoboluomi jing* (文殊師利所說摩訶般若波羅蜜經; T. 232), is ascribed to Mantuoluo (曼陀羅) or Mantuoluo xian (曼陀羅仙, variously reconstructed as *Mandra/ *Mandrarṣi [Hikata, 1958, xv] or Mandrasena [Conze, 1978, 58]), active at the beginning of the 6th century, during the Liang (梁) dynasty (T. 2154 [LV] 537b2–4 and b10–15). This translation is also included in the *Da baoji jing* (大寶積經 [*Mahāratnakūṭa*]; T. 310 [46] [XI] 650b17–657a4 [scrolls 115–116]).

According to Zhisheng, Mantuoluo had only a limited knowledge of Chinese, and as a result his versions are particularly obscure (T. 2154 [LV] 537b14–15). This might explain why the same manuscript of this scripture (according to T. 2154 [LV] 537c18) was retranslated soon afterwards by Sengjiapuoluo (僧伽婆羅; *Saṃghabhara or Saṃghapāla?), who had collaborated with Mandra (T. 2154 [LV] 537b16–17): this second version is the *Weshushili suo shuo banruoboluomi jing* (文殊師利所說般若波羅蜜經; T. 233).

The third translation, that by Xuanzang, is included in the *Da banruoboluomiduo jing* as its 7th section (*Manshushili fen* [曼殊室利分; *Mañjuśrī Section*]; T. 220 [VII] 963c23–974b1), and has been edited synoptically with the Sanskrit by Masuda (1930). The *Fayuan zhulin* gives the size of the original Sanskrit text as 800 lines (T. 2122 [LIII] 1024c13–14).

According to E. Conze (1978, 59), the Tibetan translation, *'Phags pa shes rab kyi pha rol tu phyin bdun brgya pa* is the work of Surendrabodhi and Ye shes sde. As in the case of the earliest Chinese translation, it is included both in the *Prajñāpāramitā* (*Sher phyin* [D 24 / P 737]) and *Ratnakūṭa* (*Dkon brtsegs* [D 90 / P 760 (46)]) sections of the canon.

The *_Devarājapravaraprajñāpāramitā_

This medium-sized scripture is only attested by two Chinese translations. The earliest is the *Sheng tianwang banruoboluomi jing* (勝天王般若波羅蜜經; T. 231) in 16 chapters, translated by Upaśūnya (月婆首那) in 565 after considerable vicissitudes (T. 2154 [LV] 547a1–24; see *Xu gaoseng zhuan* [續高僧傳]; T. 2060 [L] 430c24–431a3 and especially the preface attached to the text in the Taishō edition; T. 231 [VIII] 725c22–726a22). The manuscript of the original had been brought to the Liang capital Jianye (建業, present-day Nanjing) in 548 by a Khotanese monk named Guṇabhadra (T. 2154 [LV] 547a4–6).

The second translation is by Xuanzang (6th section of the *Da banruoboluomiduo jing*; T. 220 [VII] 921a21–963c19, in 17 chapters), based on a Sanskrit original in 2,500 lines (T. 2122 [LIII] 1024c9–10).

While this text largely deals with usual Prajñāpāramitā themes, recent research by Ikuma (2012) has shown that it incorporated contents which are closely related to an earlier Mahāyāna scripture, the *Tathāgataguhyaka* (especially as witnessed by its second [11th cent.] Chinese translation, the *Fo shuo rulai bu siyi mimi dasheng jing* [佛說如來不思議祕密大乘經]; T. 312), such as the idea that the Buddha did not teach a single word (T. 231 [VIII] 711c24–25; T. 312 [XI] 736c20–21).

The **Nāgaśrīparipṛcchā Prajñāpāramitā*

This comparatively short scripture survivies only in two Chinese translations. The earliest, the *Rushou pusa wushang qingjing fenwei jing* (濡首菩薩無上清淨分衛經; T. 234), has the alternative title *Jueliao zhu fa ru huanhua sanmei jing* (決了諸法如幻化三昧經; see T 234 [VIII] 740a6). In the canon it is ascribed to a *śramaṇa* Xianggong (翔公) active during the Liu Song dynasty (劉宋, 420–479 CE); T. 2154 [LV] 532b4–9). This attribution seems to go back to Fei Zhangfang's (費長房) notoriously unreliable *Lidai sanbao ji* (歷代三寶紀; T. 2034 [XLIX] 93c25–94a1), compiled at the end of the 6th century. Sengyou listed this among anonymous translations (T. 2145 [LV] 21c19), and this is probably the reason why Hikata (1958, xvi) questioned the traditional attribution (see also Kajiyoshi, 1980, 138–139).

The second translation forms the 8th section in Xuanzang's *Da banruoboluomiduo jing* (T. 220 [VII] 974c2–979b23), bearing the title *Section of Nāgaśrī* (那伽室利分); the Sanskrit original is said to have been in 400 lines (T. 2122 [LIII] 1024c17–18).

It is not entirely clear to what an extent these two should be really considered two translations of the same text (Kajiyoshi, 1980, 139): apart from other considerations, the earlier version is almost twice as long as Xuanzang's text. Perhaps it is for this reason that Daoshi recorded this section of the *Da banruoboluomiduo jing* as a "single translation" (*danyi* [單譯]; T. 2122 [LIII] 1024c19; cf. T. 2154 [LV] 594b23–24).

In this scripture, chiefly as represented by the early translation, typical Prajñāpāramitā teachings on the illusory nature of all *dharma*s are set in a dialogical form which is more lively than it is customary in this literature, and occasionally reminds the reader of the *Vimalakīrtinirdeśa*. The main characters are Mañjuśrī (translated as Rushou [濡首] in T. 234), Nagāśrī, Subhūti, and Śāriputra.

Excerpts from the first translation centred on the main episode of Mañjuśrī's quest for alms-food (selectively covering T. 234 [VIII] 740c10–747c23) have been rendered into French by J. Rahder (1929–1930, 164–166; the article is anonymous, but Rahder is indicated as the author in the "Advertissement du deuxième fascicule"). An English version by L. Lancaster (see Conze, 1973b, v) of this selection is included in E. Conze's anthology of short Prajñāpāramitā texts (1973b, 160–164).

The *Pañcapāramitānirdeśa*

This scripture – or set of scriptures – devoted to the exposition of the first five "perfections" (*pāramitā*), from giving (*dānapāramitā*) to meditative practices (*dhyānapāramitā*) – is preserved in its entirety only in Chinese and Tibetan translations, but in two very different formats.

In Tibetan it is edited as a single scripture, entitled *'Phags pa pha rol tu phyin pa lnga bstan pa* (i.e., *Āryapañcapāramitānirdeśa* [D 181/P 848]) and included in the section of "Various *sūtras*" (*Mdo sde / Mdo sna tshogs*) and not in that of *Prajñāpāramitā*. The text was translated by Jinamitra and Ye shes sde (Conze, 1978, 77).

Corresponding to this Tibetan version, we find five different sections – i.e. ostensibly, originally independent scriptures, each with its own *nidāna* (introductory section) – of varying size in Xuanzang's *Da banruoboluomiduo jing* (nos. 11–15), each devoted to a specific *pāramitā* (the numbers of lines of the originals are after *Fayuan zhulin*; T. 2122 [LIII] 1024c27–1025a12):

Section 11 on the perfection of giving (*Di shiyi bushi boluomiduo fen* [第十一布施波羅蜜多分]; T 220. [VII] 991c16–1019a15; original Sanskrit text in 2,000 lines); *Section 12 on the perfection of pure discipline* (*Di shi'er jingjie boluomiduo fen* [第十二淨戒波羅蜜多]; T. 220 [VII] 1019b22–1044a8; 2000 lines); *Section 13 on the perfection of calm acceptance* (*Di shisan anren boluomiduo fen* [第十三安忍波羅蜜多分]; T. 220 [VII] 1044b17–1049c17; 400 lines); *Section 14 on the perfection of energy* (*Di shisi jingjin boluomiduo fen* 第十四精進波羅蜜多分; T. 220 [VII], p. 1050a25–1055a28); note that the figure of 800 lines given by the *Fayuan zhulin* for the original of this section must be a scribal error, as this is in fact only slightly shorter than the preceding section. The *Kaiyuan shijiao lu* gives instead the original's size as 400 lines, which should be the correct figure (T. 2154 [LV] 594c21); *Section 15 on the perfection of meditation* (*Di shiwu jinglü boluomiduo fen* 第十五靜慮波羅蜜多; T. 220 [VII] 1055c6–1065b12; 800 lines).

The 16th and final section of the *Da banruoboluomiduo jing* (corresponding to the *Suvikrāntavikrāmiparipṛcchā*) complements the preceding five so as to form a set of scriptures on all the six perfections. The presence of this set in Xuanzang's *summa* is probably the main reason for including the *Pañcapāramitānirdeśa* in a survey of Prajñāpāramitā literature.

Only some Central Asian fragments of the Sanskrit text seem to have survived. One is a single intact folio from the *śīlapāramitā* section, edited by G. Bongard-Levin & Watanabe (1997). An interesting feature of this fragment is the high folio number (957), which suggests the possibility that this text might have been part of a larger scripture, perhaps typologically similar to the *Da banruoboluomiduo jing* (Bongard-Levin & Watanabe 1997, 98). Karashima edited a fairly damaged folio from the *dānapāramitā* section (2004, 109–117) and a tiny fragment from the *śīlapāramitā* section (in Karashima & Wille 2009, 437–439).

The *Pañcaśatikā Prajñāpāramitā*

The *Perfection of Insight in 500 Lines* (*Pañcaśatikā Prajñāpāramitā*) is probably the most important Prajñāpāramitā text not included in Xuanzang's *summa*. The Sanskrit text, long thought to have been lost, has resurfaced in recent years. It is included in a remarkable Pāla manuscript discovered in Lhasa which contains an anthology of ten short Prajñāpāramitā texts arranged in ascending order of size (see the list in Tomabechi, 2009, xxx–xxxi). On this manuscript, probably dating to the second half of the 11th century, see Tomabechi's detailed discussion (2009, xxiv–xxxii). The *Pañcaśatikā* (with the title *Āryabhagavatī Prajñāpāramitā Svabhāvapraveśikā Pañcaśatikā*) is the last but one text found in this manuscript, being followed by the *Prajñāpāramitā in 700 Lines* (*Saptaśatikā*).

For a discussion of the *Pañcaśatikā*, and in particular of its Sanskrit text, see Fujita's study (2011). The most salient feature of this scripture highlighted by Fujita is the presence of doctrinal formulations which seem to have been influenced by the Yogācāra school. For example, according to the *Pañcaśatikā* all *dharmas* are to be cognized in terms of three categories – "inexistence" (*abhāva*), "non-inexistence" (*nābhāva*), and "real existence" (*sadbhāva*) – which according to Fujita (2011, 78–81) are related to the three natures (constructed, dependent, and perfected) which are a key Yogācāra doctrine.

On the Tibetan translation of the *Pañcaśatikā*, entitled *'Phags pa shes rab kyi pha rol tu phyin pa lnga brgya pa* (D 15/P 738), see Fujita (2011, 75–76). The translator is unknown, but the fact that this text is mentioned in the *Lhan/Ldan dkar ma* catalogue compiled in 824 provides a *terminus ante quem* for the translation. This version has been translated into English by E. Conze (1973b, 108–121).

The Chinese translation, *Fo shuo kaijue zixing banruoboluomiduo jing* (佛說開覺自性般若波羅蜜多經; T. 260), by Weijing (惟淨) and others, dates to the first half of the 11th century. According to Fujita (2011, 76), some parts of this translation as edited in the Taishō are out of order.

The *Prajñāpāramitā Scripture for Humane Kings*

The *Prajñāpāramitā scripture for humane kings who wish to protect their states* (title after Orzech, 1988, 1), only attested by two Chinese versions, is in many ways unique among Prajñāpāramitā texts. The unclear historical background of this scripture, as well as some distinctively Chinese features it contains, caused doubts to be raised about its authenticity as a genuine Indian text already as early as the 6th century. There is a consensus in modern scholarship that this is a Chinese apocryphal text, probably produced during the 5th century (Orzech, 1988, 79–97,289–291).

The earliest version of this text is the *Ren wang banruoboluomi jing* (仁王般若波羅蜜經; *Prajñāpāramitā scripture for humane kings*; T. 245), ascribed in the canon to Kumārjīva but recorded in the earliest available catalogue (T. 2145 [LV] 29c19) among anonymous translations, with the slightly different title (also attested in some early editions of the canon collated in T. 245) *Ren wang hu guo* (護國) *banruoboluomi jing* (*Prajñāpāramitā scripture for humane kings who protect* [*their*] *states*).

As with other scriptures of similarly dubious pedigree, this text received canonical status in the late 6th century catalogue *Lidai sanbao ji* (歷代三寶紀; T. 2034 [XLIX] 110c15; Orzech, 1988, 78). During the Tang period this decision was endorsed by Zhisheng's authoritative *Kaiyuan shijiao lu* (T. 2154 [LV] 680c16–17), and as a consequence this scripture came to be included in the various pre-modern editions of the canon.

The second version, the *Ren wang hu guo banruoboluomiduo jing* (仁王護國般若波羅蜜多經; T. 246), was produced by imperial commission during the Tang dynasty, in the years 765–766 CE, by the celebrated esoteric master Amoghavajra. Although ostensibly a retranslation, this is in fact a revision of the preceding version, with the inclusion of elements enhancing the esoteric character of the text (such as the long *dhāraṇī* inserted into chapter 7 [T. 246, VIII, 843c19–844a9]), and the elimination of certain disturbingly unorthodox features (for a

detailed analysis of the composition of the second version, see Orzech, 1988, 70, 160–167). In this case, the canonicity of the scripture was directly endorsed by emperor Daizong (代宗; 727–779 CE), who wrote a preface (T. 246 [VIII] 834a14–c1; Orzech, 1988, 77).

The scripture is shaped as a dialogue, mainly between the Buddha and Prasenajit, the king of Kośala. Subdivided into eight chapters, it alternates passages in prose and verses, in the so-called prosimetric form typical of Mahāyāna *sūtras* (though not of Prajñāpāramitā literature).

Influenced by apocalyptic ideas about the end of the Dharma, this scripture represents a uniquely creative synthesis of various Buddhist strands (Orzech, 1988, 121) and different objectives. According to Orzech (1988, 71), traditional analyses of this text underscored its "dual agenda [...], which pursues both the highest vision of transcendent emptiness and more 'mundane' political and personal protection. Averting disasters and achieving the vision of the 'edge of reality' (*bhūtakoṭi*) are linked through kings and the bodhisattva path".

The political concerns which are characteristic of this scripture are the particular focus of its fifth, short chapter, entitled *Chapter on the Protection of the State* (*Hu guo pin* [護國品]) in both versions (T. 245 [VIII] 829c28–830c11; T. 246 [VIII] 840a9–c15), whose initial portion contains detailed ritual prescriptions for state protection.

As it is often the case with apocryphal texts, the *Prajñāpāramitā scripture for Humane Kings* represents a first-rate source for the study the intellectual, religious and political preoccupations of Chinese Buddhism. It remained an influential scripture in East Asian Buddhism. In particular, it was important for the Tiantai (天台) school (Orzech, 1988, 128–133), especially for the distinctive theory (expunged from the Tang version) of the three truths expounded in Chapter 4 of the early version (Orzech, 1988, 82, 85–86).

The most detailed study of this scripture, including an annotated translation of the second version, is by C. Orzech (1988). A summary of the text with excerpts from is found in M. de Visser (1935, 125–158), on which E. Conze based his outline of this text (1973b, 165–183).

The *Adhyardhaśatikā* and Other Tantric Prajñāpāramitā Texts

The inclusion of elements that can be called tantric or esoteric (such as mantras and ritual prescriptions) represents an important trend in the development of Prajñāpāramitā literature. The synthesis between *Tantra* and *Perfection of insight* becomes fully apparent in a group of short scriptures classified by some scholars as tantric (or esoteric) Prajñāpāramitā texts (for full lists see Conze, 1978, 79–92; Komine *et al.*, 2015, 94–112).

The most representative among these scriptures is the *Adhyardhaśatikā Prajñāpāramitā* (*Prajñāpāramitā in 150 Lines*), also known as *Liqu jing* (理趣經 [Jpn. *Rishukyō*]) in East Asian Buddhist tradition (*liqu* [理趣] = *nāya*, "guide, guiding principle", see Astley-Kristensen, 1991, 8, 8n20; see also *tshul* in the title of the Tibetan translation). That this text was considered a Prajñāpāramitā in a proper sense is shown by the fact that it was quoted as an authoritative scripture of this tradition by important Mahāyāna masters such as Candrakīrti and Haribhadra (Conze, 1978, 80), and, above all, by its inclusion in the *Da banruoboluomiduo jing*. However, it can be considered an essentially Tantric text; according to Tomabechi (2009, xii), in comparison to other Prajñāpāramitā scriptures the *Adhyardhaśatikā* "took further steps towards full 'tantricization' by laying emphasis on the notion of Great Bliss (*mahāsukha*) and the purity (*viśuddhi* [...]) of sensual pleasure".

The Sanskrit text of the *Adhyardhaśatikā* was initially known only partially, through an incomplete (folios 6–20) bilingual manuscript for the most part belonging to the Saint Petersburg Collections, and containing some passages from the Sanskrit *Adhyardhaśatikā* interspersed with passages in Khotanese. The portions in the two languages form a single whole, though the rationale behind the alternation of the two languages is not entirely clear. According to I. Astley-Kristensen (1991, 10), the portions in Sanskrit contain the philosophical aspects of the text, while those in Khotanese, which praise the virtues of the scripture and of its practice, may have been meant to address a wider audience. A slightly different interpretation has been proposed by M. Maggi (2009, 374), according to whom the passages in Khotanese represent parts of the scripture deemed to be exoteric, while those in Sanskrit (particularly rich in esoteric terminology) were considered esoteric and hence left untranslated.

This manuscript was at first studied and edited by E. Leumann (1912, 84–99 [the Sanskrit passages from this edition are reproduced in Vaidya, 1961, 90–92]; 1930). A new edition, including a translation of the Khotanese portions, has been published by R. Emmerick and E. Vorob'ëva-Desjatovskaja (1995, 24–34). A fragment from an additional folio (no. 21) of this manuscript kept at the British Library has been edited by P.O. Skjærvø (2002, 359–360; folio 22 is mentioned by Tomabechi [2009, xxxii] as part of the same collection).

A nearly complete Sanskrit text of the *Adhyardhaśatikā* was discovered in recent years, included in the Pāla manuscript also containing the *Pañcaśatikā* as well as several other short Prajñāpāramitā texts (see above). A critical edition of the Sanskrit *Adhyardhaśatikā* based on this manuscript has been published by Tomabechi (2009, 3–28; see also xxiv–xxxii for a detailed description the manuscript, and liv–lx for a discussion of the Sanskrit text in terms of structure and content).

There are five Chinese translations of the *Adhyardhaśatikā* (Tomabechi, 2009, xliv–xlviii; Astley-Kristensen, 1991, 13–19), reflecting different stages in the textual development of this scripture, with signs of progressive tantricization. The earliest of these translations, and the earliest witness of this scripture, is that by Xuanzang, representing section 10 of his *Da banruoboluomiduo jing* (*Di shi Banruo liqu fen* [第十般若理趣分]; T. 220 [VII] 986a28–991b8). This, which according to Tomabechi (2009, xiv) "represents a pre-Tantric stage" in the development of the *Adhyardhaśatikā*, is by far the longest Chinese version. It is interesting to observe that according to the *Fayuan zhulin*, the original used by Xuanzang consisted of 300 *ślokas* (T. 2122 [LIII] 1024c25). The accuracy of Daoshi's record is essentially confirmed by a simple comparison of Xuanzang's translation with that of Amoghavajra, which according to Tomabechi (2009, xlvii) is close to the Sanskrit: indeed the former is more than twice the size of the latter.

The second translation, by Bodhiruci, dates to 693 (*Shixiang banruoboluomi jing* [實相般若波羅蜜經]; T. 240). The *Jin'gang ding yujia liqu banruo jing* (金剛頂瑜伽理趣般若經; T. 241), ascribed to Vajrabodhi (Jin'gangzhi [金剛智], active in the first half of the 8th century) is nominally the third Chinese version of the *Adhyardhaśatikā*. However its authenticity has been questioned; according to some scholars (Astley-Kristensen, 1991, 15; Tomabechi, 2009, xlvi), this text is likely to have been translated much later, on the basis of a Sanskrit manuscript brought to China during the Song (960–1127; 1127–1279) or Yuan (1277–1368) dynasties.

Amoghavajra's translation, called *Da le jin'gang bu kong zhenshi sanmaya jing* (大樂金剛不空真實三麼耶經; T. 243) and produced between 763 and 771 (Tomabechi, 2009, xivii) has been the most influential in East Asian Buddhism, and remains of paramount importance in Japan as one of the basic canonical scriptures of Shingon Buddhism (Astley-Kristensen, 1991, 1–2; 6–8). For a copiously commented translation of Amoghavajra's version, see Astley-Kristensen, (1991, 39–184). The last Chinese translation is the *Foshuo bianzhao banruoboluomi jing* (佛說遍照般若波羅蜜經; T. 242) by Dānapāla (active between 9th and 10th cents.).

The Tibetan translation, *'Phags pa shes rab kyi pha rol tu phyin pa'i tshul brgya lnga bcu pa* (ascribed by one source to Śīlendrabodhi, Jinamitra, and Ye shes sde [Tomabechi, 2009, xxxiv]) is included, in most editions of the Kanjur (but not in the Peking edition), both in the *Prajñāpāramitā* (D 17) and *Tantra* (D 489/ P 121) sections (on its three recensions see Tomabechi, 2009, xli–xliv). In addition to these canonical editions, there are also several Dunhuang manuscripts of the Tibetan text. For a detailed presentation of these sources, see Tomabechi's monograph (2009, xxxiv–xliv), which includes also a critical edition of the Tibetan translation.

A somewhat tentative translation, partly based on the Sanskrit passages contained in the Khotanese manuscript and partly on the Tibetan translation, was included by E. Conze in his anthology of short Prajñāpāramitā texts (1973b, 184–195). For detailed surveys of modern scholarship on the *Adhyardhaśatikā*, see Tomabechi (2009, xiii–xx) and I. Astley-Kristensen (1991, 5–8). The most detailed study centred on this scripture to date is Watanabe (1995).

Apart from the *Adhyardhaśatikā*, there are some other short Prajñāpāramitā texts also classified as Tantra in the Tibetan canon and by modern scholars, as well as several *dhāraṇī*s and esoteric ritual texts related to Prajñāpāramitā (Conze, 1978, 81–91; Komine *et al.*, 2015, 102–112). Judging from the available internal and external evidence, they seem to be all fairly late. Only some of the most significant can be mentioned here.

The *Svalpākṣarā Prajñāpāramitā*

The *Prajñāpāramitā in very few words* (*Svalpākṣarā Prajñāpāramitā*) is a short text which, as pointed out by E. Conze (1978, 81), presents certain similarities with the *Heart Sūtra*, but with more marked tantric features. Apart from their shared shortness, the bodhisattva Avalokiteśvara plays a role in both texts (though in the *Svalpākṣarā* only as an interlocutor of the Buddha). The text lays great emphasis on the

immediate benefits and attainments made possible by the mere hearing of this teaching, which is explicitly said to be addressing beings of lesser faculties (Yuyama, 1977b, 287–288 §VIb–VIIa).

The Sanskrit text was first edited by E. Conze (1956, 113–115 [reproduced in Vaidya, 1961, 93–94]), and then, on the basis of more manuscripts, by Yuyama (1977b, 286–292), who also produced a critical edition of the Tibetan translation (1977b 293–297). The latter, entitled *'Phags pa shes rab kyi pha rol tu phyin pa yi ge nyung du*, is generally included both in the *Prajñāpāramitā* (D 22) and *Tantra* (D 530 / P 159) sections of the Kanjur (Yuyama, 1977b 281–282). There is also a Chinese version, the *Fo shuo sheng mu xiao zi banruoboluomiduo jing* (佛說聖佛母小字般若波羅蜜多經, T. 258) translated by Tianxizai (天息災) probably in 982 (Yuyama, 1977b, 282–283). The Sanskrit text has been translated by E. Conze (1973b 144–147), and the Chinese version by Yuyama (1977b 298–301).

The *Kauśikaprajñāpāramitā*

Another scripture which belongs from a typological point of view to this group is the *Prajñāpāramitā for Kauśika* (*Kauśikaprajñāpāramitā*; given as *Kauśakaprajñāpāramitā* in Conze, 1956, 112, 115), a short dialogue between the Buddha and Indra, the lord of the gods (i.e. Kauśika). As shown by E. Conze (1978, 82–83), this is just a patchwork of short passages quoted from various sources – mainly Prajñāpāramitā texts but also Nāgārjuna's *Mūlamadhyamakakārikā* – together with several mantras, which make up the concluding portion of the text (Conze, 1956, 117–118; Vaidya, 1961, 96).

The Sanskrit text of the *Kauśikaprajñāpāramitā* has been published by E. Conze (1956, 115–118), whose edition is reproduced by Vaidya (1961, 95–96). The Tibetan translation (included in the *Prajñāpāramitā* [D 19] and *Tantra* [D 554 / P 173] sections of the canon with the title *'Phags pa shes rab kyi pha rol tu phyin pa kau shi ka zhes bya'o*), lacks the final *mantras* and is thus shorter than the Sanskrit and Chinese versions. The latter, the *Fo shuo di Shi banruoboluomiduo xin jing* (佛說帝釋般若波羅蜜多心經; T. 249), is by Dānapāla (10th–11th cent.). E. Conze's partial English translation (1973b, 157–159) is based on both the Sanskrit and the Tibetan versions.

The *Perfection of Insight in One Syllable*

The *Prajñāpāramitā in one syllable* (**Ekākṣarā Prajñāpāramitā*) survives only in Tibetan translation, the *Bcom ldan 'das ma shes rab kyi pha rol tu phyin pa de bzhin gshegs pa thams cad kyi yum yi ge gcig ma* (found only in the *Prajñāpāramitā* section of the Kanjur [D 23/P 741]), rendered into English by E. Conze (1973b, 201). Apart from the usual introductory and closing formulas typical of *sūtras*, this scripture consists in one single sentence, presenting the syllable "a" as representing the whole *Prajñāpāramitā*. Thus this scripture can be taken to represent the extreme form of textual condensation across the entire scriptural family. The fact that the syllable (*askṣara*) "a" was selected to summarize the entire Prajñāpāramitā reflects the particular status and the rich symbolic meaning it has in the Buddhist tradition: both as the fundamental syllable (representing the shwa, the sound requiring the least physical effort to produce and thus the primal utterance), and as a negative prefix (in Sanskrit as in English), and hence an appropriate symbol of emptiness (Demiéville 1929–1930, 1–5).

STEFANO ZACCHETTI

Pure Land Sūtras

Buddhism focused on Pure Land faith and practice can be defined as

> the set of all ideas and practices related to Buddhas who are presently living in world-systems other than our own…, [of] all Buddhist teachings that look forward to the possibility of rebirth in another world-system [*lokadhātu*] or Buddha-field [*buddhakṣetra*; *foguo* (佛國)], where a Buddha is presently teaching the Dharma. (Nattier, 2000, 74–75)

Let it be emphasized from the outset that a "pure land" is a paradise-like universe of its own and not, *stricto sensu*, a heaven (*svarga*), an expression that must be reserved for the blissful and increasingly ethereal abodes of the gods of a given world system within saṃsāra – ideas about which most certainly influenced the early representations of the pure lands (Nattier, 2000, 75, 75n9, 81, 99, 99n78).

In the strict sense just defined, Pure Land Buddhism originated in India around the turn of the 1st millenium. However, the expression "pure land" (*jingtu* [淨土]) used as a label lacks any clear Indic equivalent (but comp. Nattier, 2000, 73, 74n6; Fujita, 1996a, 20) and likely was first coined in China. In Kumārajīva's (344–413 CE) terminology, the expression refers to a purified/pure (Skt. *pariśuddha*) buddha field in contrast to an impure/defiled one (*huitu* [穢土]; on this distinction, see Lamotte, 1962, 397–399; Fujita, 1996a, 24–25). According to Fujita Kōtatsu (1996b, 36), *jingtu* (淨土) probably derives, by way of compression, from expressions such as *jing foguotu* (淨佛國土; purifying the/purified buddha field), rendering the Sanskrit *buddhakṣetra-pariśuddhi* ("purification of the/a buddha field"), *pariśuddhabuddhakṣetra* ("purified buddha field"), and so forth. In Chinese as well as in modern usage, both academic and nonacademic, the expression has come to refer predominantly to Amitābha's Sukhāvatī ("Land of Bliss"), the pure buddha field par excellence (Fujita, 1996b, 36), first transcribed as Xuhemati (須呵[訶]摩堤; Gan. Suhamadi[?]) and then translated as joy (*anyang* [安養]), peaceful bliss (*anle* [安樂]), and supreme/ultimate bliss (*jile* [極樂]; Fujita, 1996a, 20–21; 1996b, 33; Ducor, 2004, 373–374, 374n94).

In terms of Indic religious history, Pure Land Buddhism refers to beliefs and practices centered on the buddhas "of the ten directions," more specifically to Akṣobhya and Amitābha ("Limitless Light"; also known as Amitāyus ["Limitless Length of Life"]) and their world systems Abhirati ("Extremely Joyful") and Sukhāvatī, respectively located to the east and to the west of our own impure Sahā universe. In terms of literary history, Indic Pure Land Buddhism includes texts such as the *Akṣobhyavyūhasūtra*, the Bajaur Mahāyāna *sūtra*, the so-called *Pratyutpannasamādhisūtra*, and the two *Sukhāvatīvyūhasūtras*, along with somewhat later dogmatic treatises such as the (pseudo-) Nāgārjuna's *Daśabhūmikavibhāṣā* and (the pseudo-) Vasubandhu's **Sukhāvatīvyūhopadeśa*, which the present entry covers for the sake of completeness in spite of their non-*sūtra* (but widely authoritative) character. A few words are also devoted to the Central Asian/Chinese "Visualization Sūtra" as well as to the *Anantamukhanirhāradhāraṇī*(*sūtra*), although the latter is not Sukhāvatī related, in view of the importance of these texts in East Asian Pure Land traditions. It is important to stress at the outset that the conceptual grouping of such materials is a retrospective phenomenon, and thus to speak of "Indian Pure Land Buddhism" is a sort of anachronism, although a sometimes helpful one. It is really only in Japan that we find the overt conceptualization of a "Pure Land Buddhism," but even then, not all the texts treated here have been considered under this umbrella (a case in point being the historically unknown Bajaur Mahāyāna *sūtra*).

Pure Land Buddhism is believed, by some, to have originated in Kushana northwest India, around 100 CE (Fujita, 1996a, 10; Halkias, 2013, 20–24), a chronology that makes it roughly contemporary with the earliest extant epigraphic attestation of Amitābha in the Govindnagar inscribed-image pedestal (153 or 104 CE), with no connection to Sukhāvatī (Schopen, 1987; Fussman, 1999, 540–543; Salomon & Schopen, 2002). The once widespread belief in non-Indic, mainly Iranian influences on the formation of the cult and the representation of Amitābha has now been generally abandoned (Fujita, 1996a, 13–14, 23–24; 1996b, 39–44; 1985; Fussman, 1999, 552–563;

uences on the formation of the
entation of Amitābha has now
andoned (Fujita, 1996a, 13–14,
; 1985; Fussman, 1999, 552–563;

Ducor, 2004, 399; for a qualified acceptance of such influences, see Halkias, 2013, 20–24). Whatever the case may be, 2nd–3rd-century Chinese translations testify to the existence of Pure Land Buddhism in India *lato sensu* before the late 2nd century CE (Harrison, 1978; Nattier, 2000, 78–79; Ducor, 2004, 395; Satō, 2004). Akṣobhya's Abhirati world system is dealt with in some detail in the *Aṣṭasāhasrikā Prajñāpāramitā* (*Daoxing bore jing* [道行般若經]; T. 224; translated in 179 CE by Lokakṣema [Zhi Loujiachan (支婁迦讖); *fl.* 170–190]; Lamotte, 1962, 360–362, 362n9) and in the *Akṣobhyavyūhasūtra* (see below; maybe translated by Lokakṣema's disciples) as well as in Zhi Qian's (支謙; *fl.* 220–250) translation of the *Vimalakīrtinirdeśa* (*Weimojie jing* [維摩詰經]; T. 474; 223–228 CE; Lamotte, 1962, 360–370). As for Amitābha's Sukhāvatī, it is alluded to in Lokakṣema's translation of the *Pratyutpannabuddhasammukhāvasthitasamādhisūtra* (*Banzhou sanmei jing* [般舟三昧經]; T. 418; translated in 179 CE; Harrison, 1990) and in Zhi Qian's version of the larger *Sukhāvatīvyūhasūtra*. According to J. Nattier,

> these early translations demonstrate with certainty that the cult of Akṣobhya (to a significant degree) and the cult of Amitābha (perhaps to a lesser degree) were already well established in India by this time. In scriptures translated from the late third century onward, however, the relationship between Akṣobhya and Amitābha is reversed, for no new scripture devoted wholly to Akṣobhya is ever translated (though the *Akṣobhyavyūha* is retranslated once), while works extolling Amitābha (including several re-translations of the larger *Sukhāvatīvyūha*, two translations of the shorter *Sukhāvatīvyūha*, and one version of the apocryphal *Kuan Wu-liang-shou-fo ching* 觀無量壽佛經) appear with considerable frequency. (Nattier, 2000, 79–80; see also Fujita, 1996a, 9–10)

As was suggested by G. Schopen (1977, 194), by the 3rd century at the latest, rebirth in Sukhāvatī had "become dissociated from a specific cult of Amitābha and ha[d] become instead one of a number of generalized rewards or 'blessings' associated with such a wide variety of religious acts that it [wa]s virtually open to any member of the Mahāyāna community as a whole" (Schopen, 1977, 194/173; see Fussman, 1999, 578, for a reversal of the perspective). In parallel to the generalization of rebirth in this buddha field as a religious goal, "the idea of Sukhāvatī was generalized to the point that it became a standard literary simile for magnificence, loveliness, etc." (Schopen, 1977, 199/177). Such popularity of Amitābha and Sukhāvatī – but not necessarily of a related cult (Schopen, 1987; Fussman, 1999) – might be reflected in mid-3rd- to early 5th-century Gandharan art-historical materials. According to P. Harrison and C. Luczanits (2012), the Muhammad Nari sculptured panel (in Lahore Museum; G-155) and several related "complex steles" can be analysed as representations of Amitābha preaching in Sukhāvatī flanked by the bodhisattvas Avalokiteśvara and Mahāsthāmaprāpta (Huntington, 1980; Fussman, 1987, 73; Quagliotti, 1996). Archaeological records testify to a "significant concentration [of these steles] in the Peshawar Basin north of the Kabul River" and "a thriving artistic milieu with high levels of patronage" (Harrison & Luczanits, 2012, 107).

Akṣobhyavyūhasūtra and the Bajaur Mahāyāna *Sūtra*

Before turning to the *Akṣobhyavyūhasūtra*, a few words should be said of the *Vimalakīrtinirdeśa*, for a significant part of chapter 11 of the *Vimalakīrtinirdeśa* is devoted to Akṣobhya and Abhirati (Chapter on the Vision of the Tathāgata Akṣobhya Thanks to [Vimalakīrti's] Bringing the Abhirati World System [into Our Sahā World System]; for a translation of sections 2–9, see Lamotte, 1962; see also Harrison & Luczanits, 2012, 80–81). In this passage, Śākyamuni reveals to Śāriputra that the layman Vimalakīrti left the pure (*pariśuddha*) Abhirati world system in order to save the suffering living beings of the Sahā universe with its manifold defects. Learning of the assembly's wish to see Akṣobhya and Abhirati, Vimalakīrti shrinks the delightful universe so as to grasp it in his right hand and incorporate it into the Sahā world. Thereupon innumerable living beings vow to reach full awakening and to be born in Abhirati, which Śākyamuni "validates" in a prediction (*vyākaraṇa*), adding that "the bodhisattva who wishes to conquer such a *buddhakṣetra* [buddha field] must emulate all the bodhisattva practices of the *tathāgata* Akṣobhya" (section 7; trans. Lamotte, 1962, 366). Having thus brought these living beings to spiritual maturation (*vipacya*), Vimalakīrti brings the Abhirati world system back to its original location. Especially noteworthy is the *sūtra*'s description of Abhirati (section 4; Lamotte, 1962, 363–364). This paradise-like universe contains a moon, a sun, stars, dwelling places for various kinds of gods and supernatural beings, a central mountain Sumeru and mountain ranges, rivers, ponds, and seas; it has villages, towns, and kingdoms with men and women; bodhisattvas as well as *śrāvaka*s live there and listen to Akṣobhya; lotuses perform the task of buddhas in the ten directions. Three precious staircases (*sopāna*) connect Jambudvīpa to the Trāyastriṃśa heaven so as to allow these gods to descend to worship Akṣobhya and the humans to climb to heaven to visit the Trāyastriṃśa gods. Noteworthy is also this *sūtra*'s important remark to the effect that a *buddhakṣetra*'s purity is a function of the bodhisattva's mental purity (*VKN*. 1.15; T. 475 [XIV] 538c; Ducor & Loveday, 2011, 49; Nattier, 2007a, 380).

Much more important in connection to Akṣobhya and Abhirati is, however, the *Akṣobhyavyūhasūtra*. This *sūtra* has come down to us in two Chinese translations and one in Tibetan. The first Chinese version in five chapters (*Achu foguo jing* [阿閦佛國經]; T. 313) is traditionally ascribed to the Yuezhi translator Lokakṣema and may thus belong to the earliest translations of Mahāyāna texts into Chinese. This attribution has been challenged by J. Nattier (2008, 85–86) on stylistic and terminological grounds. In her view (2008, 85–86), this translation was at least subject to revisions. The second extant Chinese rendition of the *Akṣobhyavyūhasūtra* is a work of the Indian translator Bodhiruci in six chapters (*Budong rulai hui* [不動如來會]; T. 310[6]; translated between 706 and 713 CE; *sūtra* 6 in the *Mahāratnakūṭa* collection; for a French translation of the first three chapters with copious references to Lokakṣema's and the Tibetan translation, see Dantinne, 1983, 24–34; for the "cult of the book," see Dantinne, 1983, 44f.; for a partial translation, see Chang, 1983, 315–338; see also Satō, 2008). Mention should also be made of a lost Chinese translation by Zhi Daogen (支道根; *fl.* 326–342 CE; see Dantinne, 1983, 17–20).

The Tibetan translation, the *'Phags pa de bzhin gshegs pa mi 'khrugs pa'i bkod pa* (D 50/P 760[6]; ed. Satō, 2002a), was prepared by Ye shes sde, Jinamitra, and Surendrabodhi in the late 8th century or the early 9th century. According to J. Dantinne (1983, 34–35), the Tibetan version is very close to the *Achu foguo jing*, although it contains passages that lack any equivalent in either of the extant Chinese versions (a list of the sounds produced by the Bodhi tree, an account of painless childbirth, a formulation of Akṣobhya's initial vow concerning the ornamentation of his *buddhakṣetra*, and an allusion to the cult of stūpas and images). From a structural and a doctrinal point of view (e.g. the number of Akṣobhya's vows [see also Nattier, 2000, 97–98n74–75], considering individual developments, wording of formulas and clichés, and so forth), the *Achu foguo jing* and the Tibetan translation are likely to go back to the same Indic archetype, which must have been well spread in mid-1st-century northwestern India (Dantinne, 1983, 45), whereas the *Budong rulai hui* would derive from an independent Indic archetype (Dantinne, 1983, 4, 28–29).

The chapters of the *Akṣobhyavyūhasūtra* deal with the following:

1. the production of the thought of awakening (*cittotpāda*; or **vyākaraṇavyūha*, the splendor of the prediction, in Bodhiruci's translation);
2. the wondrous qualities (**guṇa*) or felicities (**sukha*) of Akṣobhya's *buddhakṣetra*;
3. the *śrāvaka*s;
4. the bodhisattvas;
5. the (qualities of the) nirvāṇa (of the Buddha); and
6. the causes and conditions of rebirth (**upapattihetupratyaya*; in Bodhiruci's translation only).

In this *sūtra*, Śākyamuni expounds to Śāriputra how he who was to become the buddha Akṣobhya made his initial vow. In a very remote past, the buddha *Viśālanetra/*Mahānetra (Damu [大目]; Guangmu [廣目]; Tib. Spyan chen po) was presiding over the Abhirati realm when a then unknown mendicant monk told him about his intention to undertake the training of the bodhisattva. *Viśālanetra replied that such vows were most difficult to carry out since the bodhisattvas must bear no malice toward any living beings. Despite this caution, the monk persevered and proved to be unshakable (*akṣobhya*) in the fulfillment of his vows; he accordingly became the buddha Akṣobhya, ruling and teaching in the Abhirati world-system. The *sūtra* advises practitioners to emulate the practice of the bodhisattva Akṣobhya, for whoever is born in Abhirati reaches the stage of nonretrogression (*avaivartya*; see "*Ashuku*," in *Hōbōgirin*, 39b–40a; Dantinne, 1983, 198–199; Nattier, 2000, 85–86).

Sharing certain doctrinal features with the *Akṣobhyavyūhasūtra* is a Gandhari *sūtra*, the so-called Bajaur Mahāyāna *sūtra*, that provides evidence for the existence of Mahāyāna scriptures within mainstream Buddhist institutions in Gandhara, thus belonging to one of the most sensational manuscript findings of the past decades. One of the 22 texts constituting the Bajaur Collection of Kharoshthi manuscripts (Strauch, 2007–2008; Falk & Strauch, 2014), it is an extensive *sūtra* fragment (about 200 cm in length and 600 lines, i.e.

about 45% of the entire collection; the beginning and the end are missing). According to I. Strauch (2010, 26), "judging from their scripts and language, all of the manuscripts can be tentatively dated to the first two centuries CE." The Bajaur Mahāyāna *sūtra*, consisting of mixed prose and summarizing verses, has several ideas in common with the *Akṣobhyavyūhasūtra*. Its prediction "uses the familiar concept of Akṣobhya and Abhirati to describe its own idea of a future Buddha-land. Abhirati is here clearly perceived as a model for a paradigmatic *buddhakṣetra*" (Strauch, 2010, 59). The text stages 84,000 *devaputras* (gods) directing their minds to the supreme and perfect awakening and asking the Buddha about the way to perform the training of a bodhisattva (*bodhisattvaśikṣā*). The *sūtra*'s description of Abhirati is "part of the prophecy which concludes the instruction of the 84,000 *devaputras* and predicts their future existence as buddhas named Vipulaprabha (or Mahāprabha) in a Buddha-land that is comparable to the Abhirati *buddhakṣetra* of Akṣobhya" (Strauch, 2010, 50–51).

Akṣobhya, Abhirati, and Early Mahāyāna

As pointed out by J. Nattier (2000, 101–102), "[t]he type of Pure Land Buddhism presented in the *Akṣobhyavyūha* [and now also in the Bajaur Mahāyāna *sūtra*] … constitutes a transitional stage between the earliest understanding of the bodhisattva path and the distinctive form of Pure Land Buddhism articulated in the larger *Sukhāvatīvyūha*." The last two centuries before the Common Era saw a gradual widening of the gap between ever more exalted descriptions of buddhahood and increasingly deprecating accounts of arhatship. As a result, it became possible to choose as one's religious goal the reenactment in every detail (likely with the *jātakas* as a practical guide) of the path that the future Buddha had gone through so as to become a "world-redeeming Buddha" (Nattier, 2003, 180). The emulation of a buddha's career was far more demanding not only in terms of (occasionally bloody) self-sacrifice but also in terms of sheer duration, for if arhatship could be achieved within a few lifetimes, buddhahood required billions of successive existences spent in accumulating the necessary provision of merit and knowledge (*puṇyajñānasambhāra*) and waiting for one's turn to come in the long succession of the future buddhas. Most agreed that the best way to acquire the necessary equipment for buddhahood was to serve and to attend the teachings of a living buddha. Around the beginning of the Common Era, bodhisattvas began to spread reports of visionary experiences of a universe of far greater dimension than had been hitherto imagined. These reports transmitted visions of innumerable world systems with teaching buddhas, thus opening up "the dramatic possibility of encountering a living buddha in the near future – indeed in one's next life, through being reborn in his realm" (Nattier, 2003, 184). As G. Halkias puts it,

> Buddha fields came to represent the goal and consummation of the Mahayana path, while the possibility of encountering buddhas and celestial bodhisattvas residing in heavens compensated for the spiritual vacuum left by the absence of Śākyamuni Buddha and provided an incentive for contemplative training. (Halkias, 2013, 4)

The *Akṣobhyavyūhasūtra* and the Bajaur Mahāyāna *sūtra* reflect this ideological stance while describing the career that makes an unnamed bodhisattva and myriad divinities (*devaputra*) become buddhas whose wonderful lands are described as the by-products of their bodhisattva practice. As P. Harrison and C. Luczanits have it,

> the domain of a Buddha is a natural consequence of the pursuit of the bodhisattva path, and the site of its culmination. Indeed, the bodhisattva path itself is often conceptualized as the 'purification' of a Buddha domain. (Harrison & Luczanits, 2012, 73)

No less importantly, the *Akṣobhyavyūhasūtra* and the Bajaur Mahāyāna *sūtra* still operate with a three-vehicle scenario according to which the great majority of the Buddhist practitioners opt for the path toward arhatship while only the spiritual elite embarks on the incomparably more demanding career leading to buddhahood. But being reborn in Abhirati and listening to the teaching of Akṣobhya makes it extremely easy for candidates of arhatship to attain nirvāṇa, and indeed innumerable listeners obtain arhatship at every sermon of Akṣobhya. As J. Nattier remarks (2000, 83), "[n]o one apparently will require rebirth elsewhere before attaining final liberation; thus birth in Akṣobhya's land is tantamount to the last birth of a non-returner." Contrary to the situation reflected in at least the later recension of the larger *Sukhāvatīvyūha* (see below), the documents related to Akṣobhya and the Abhirati world system thus do not involve a generalization of the bodhisattva ideal and remain true to both mainstream and early Mahāyāna conceptions according to which "[t]he 'job description' of a buddha is still – as it was in the time of Śākyamuni – to lead his followers to arhatship" (Nattier, 2003, 186). According to J. Nattier,

> [w]hat we see in the *Akṣobhyavyūha*... is the standard scenario of the "three vehicles," according to which some Buddhists – but not all – can and should undertake the difficult practices leading to Buddhahood so that they may in turn assist others in attaining Arhatship, just as Śākyamuni did. (Nattier, 2000, 94)

The Vows of Akṣobhya and the Merits of Abhirati

In contrast to the vows of the bodhisattva Dharmākara in the larger *Sukhāvatīvyūhasūtra* (see below all the vows of the future Akṣobhya describe the morality and the perfect behavior that he promises to observe during his career as a bodhisattva. This bodhisattva strengthens his vows with the formula "[If I should fail to fulfill these vows] I would be breaking faith with all the Buddhas, Blessed Ones, who are even now teaching the Dharma in incalculable, innumerable, inconceivable, immeasurable worlds" (Nattier, 2000, 96; for parallels in Mahāyāna literature, see Nattier, 2000, 95n71; for its Chinese and Sanskrit wordings, see Nattier, 2000, 96n72). In Bodhiruci's translation (see Dantinne, 1983; Satō, 2008, 99–111), the future Akṣobhya's vows are as follows:

1. not to have any thought (*citta*) of anger (*prakopa*) and/or malevolence (*vyāpāda*);
2. not to have any of the thoughts that are typical of the *śrāvaka*s and/or the *pratyekabuddha*s;
3. not to have any thought of desire (*rāga*), aversion (*dveṣa*), delusion (*moha*), and so forth;
4. not to have any thought of doubt (*vicikitsā*), murder (*prāṇātipāta*), theft (*adattādāna*), false views (*dṛṣṭi*), unchastity (*abrahmacarya*), and so forth;
5. not to contradict one's words with one's acts;
6. not to produce words that are unaccompanied by the commemoration of the buddhas (*buddhānusmṛti*);
7. not to fail to embrace the homeless life (*anāgārikā*);
8. not to fail to develop the qualities of the purified/ascetic man (*dhūtaguṇa*) concerning diet, dressing, beds, seats, dwelling places, and so forth;
9. not to preach the law without eloquence (*pratibhāna*);
10. not to fail to have good physical behavior (*īryāpatha*);
11. not to produce any thought associated with the victory of allodox positions (**parapravādavijaya*);
12. not to teach women without producing ideas of impermanence, and so forth;
13. not to fail to think of the Buddha;
14. not to honor the allodox teachers (*anyatīrthika*) and the Brahmans while neglecting buddhas, *śramaṇa*s, and disciples (*śiṣya*);
15. not to perform the gift of material/worldly things (*āmiṣadāna*) and the gift of the law/spiritual things (*dharmadāna*) with discrimination;
16. not to fail to save the criminals who are being punished by sacrificing oneself (*ātmaparityāga*);
17. not to speak of other peoples' sins (*āpatti*);
18. not to allow *śrāvaka*s to make faults in one's *buddhakṣetra*;
19. not to have emissions of semen (*śukramokṣaṇa*) even in a dream (*svapnāntargata*);
20. not to allow bodhisattvas to have emissions of semen;
21. not to allow women in one's own *buddhakṣetra* to have imperfections such as menstruation;
22. not to be untrue to the buddhas;
23. not to fail to obstruct Māra and his evil undertakings;
24. not to fail to cause all bodhisattvas to obtain the perfection (*sampad*) of good qualities.

These 24 vows are interspersed with prima facie unrelated questions, such as the name of Akṣobhya and his superiority over all the bodhisattvas of the *bhadrakalpa* (fortunate aeon), as well as events such as earthquakes; perfumes; the prediction of Akṣobhya; the homage of herbs, plants, gods, and demons; outbursts of universal joy; various miracles; the production of the thought of awakening by myriad beings; and the redemption of vices.

The wondrous qualities of Abhirati are a by-product of Akṣobhya's intense spiritual practice (Harrison & Luczanits, 2012, 78–81). In contrast to the Sahā world system (but partly in imitation of the Uttarakuru world; see Kwan, 1985, 62–82), Abhirati

---

contains no bad rebirth destinations (*durgati*/*apāya*; i.e. as hell being, hungry ghost, or animal), no illnesses, no excrement or other bodily impurities, no kings, no prisons and prisoners, no allodoxes and "heretics," no trade (i.e. selling and buying) and labor, no darkness, none of the five degenerations (*kaṣāyas*; i.e. false views, immorality of the living beings, corruption of the aeon, defilements, and shortening of life), and no distinction between master and slave; desire, aversion, and delusion are there only tenuous; men and women do not copulate; childbirth is painless and takes place after a seven-day pregnancy. Among the positive qualities of the universe of the dharma king Akṣobhya, mention can be made of its inhabitants' observance of the ten wholesome courses of action; of the evenness, softness, and golden color of the soil; and of the presence of wish-fulfilling trees (bearing jewelry and clothing), bejeweled palaces, parks, ponds, gardens, and scented breeze; in Abhirati, food is not planted, harvested, or cooked but needs just to be thought of to be obtained (Nattier, 2000, 81–83; Strauch, 2010, 51–59). Moreover,

> [t]he description of life in Abhirati closely resembles that of an idealized monastic community. Akṣobhya's disciples do not need to beg for food, nor do they have to cut and sew their own monastic robes; robes and bowls simply appear before them as needed, and at mealtime their bowls automatically fill up with food. Nor is there any need for the monks and nuns to wash their dishes, for at the end of the meal their bowls simply disappear. Since no one in Abhirati would even think of doing an evil deed, Akṣobhya does not confer the prohibitive precepts on his congregation, but preaches only about the positive aspects of the Dharma. (Nattier, 2000, 83)

The Larger *Sukhāvatīvyūhasūtra*

The larger *Sukhāvatīvyūhasūtra* can in many respects be considered the core Pure Land scripture. It has come down to us in five Chinese translations (Fujita, 1970, 23–96; 2007, 34–56; Mochizuki, 2001, 241–245; Ducor, 2004, 368–371; for a concordance, see Inagaki, 1978, viii–ix; for a synoptic edition, see Kagawa, 1984):

(1) ***Foshuo amituo sanyesanfo saloufotan guodu rendao jing*** (佛説阿彌陀三耶三佛薩樓佛檀過度人道經; T. 362). This is likely to be the earliest extant Chinese translation. According to P. Harrison (1998; 1999), there are good reasons to believe that in spite of the traditional attribution of the translation to Zhi Qian, it is the work of Lokakṣema, or a "slightly revised version of an original translation by Lokakṣema or a member of his school" (Nattier, 2008, 86; Harrison, 1998a, 556–557, 556–557n16–18).

(2) ***Foshuo wuliangqingjing pingdengjue jing*** (佛説無量清淨平等覺經; T. 361). Although this text has been ascribed to Lokakṣema (it has also been acredited to Dharmarakṣa [Zhu Fahu (竺法護); c. 308 CE; see Fujita, 1970, 37–41] and to Bo Yan [帛延 (白延); 220–265 CE] of the Wei dynasty [Fujita, 1970, 41–71]), it is most likely the work of Zhi Qian. It appears to be a revision of the *Foshuo amituo sanyesanfo saloufotan guodu rendao jing*, preserving much of the latter's vocabulary but introducing passages in verse (Fujita, 1970, 35–37, 55–61; Harrison, 1998a, 556–557; Nattier, 2008, 139; for a study and partial Japanese translation, see Karashima, 1999). The *Foshuo amituo sanyesanfo saloufotan guodu rendao jing* and the *Foshuo wuliangqingjing pingdengjue jing* can be considered "different versions of the same text... [or] to put it more carefully... the imperfect reflections of an archaic Chinese translation of the [larger *Sukhāvatīvyūha*] in its Early Recension" (Harrison *et al.*, 2002, 180–181).

(3) ***Foshuo wuliangshou jing*** (佛説無量壽經; T. 360). The traditional attribution of this text to the 3rd-century Sogdian translator Kang Sengkai (康僧鎧; Saṅghavarman) has not withstood scholarly scrutiny. Ritually and exegetically by far the most important of the five Chinese translations in East Asia, this version is now widely acknowledged to be the work of Buddhabhadra (359–429 CE) and his assistant Baoyun (寶雲; 376–449 CE), both of whom were active in the early 5th century (Fujita, 1970, 62–96; Gómez, 1996, 126; Ducor, 2004, 371n79; for translations, see e.g. Gómez, 1996, 153–222; Inagaki, 2000, 227–313; Eracle, 2008, 49–141).

(4) ***Wuliangshou rulai hui*** (無量壽如來會; T. 310[5]). It forms part of the *Mahāratnakūṭa* and is the work of the late 6th-century and early 7th-century Bodhiruci II (for an English translation, see Chang, 1983, 339–360). This translation was translated into Tibetan at Dunhuang under the title *'Od dpag med kyi bkod pa* (PT 557, 563, 562, 561, 556, 96, 564; see Akamatsu, 1984b; ed. Silk, forthcoming).

(5) ***Foshuo dasheng wuliangshou zhuangyan jing*** (佛説大乘無量壽莊嚴經; T. 363). This was

prepared in 991 CE by Faxian (法賢; Dharmabhadra; also known as Tianxizai [天息災]; *fl.* 980–1000).

Whereas the *Foshuo amituo sanyesanfo saloufotan guodu rendao jing* and the *Foshuo wuliangqingjing pingdengjue jing* bear witness to an early recension of the text, the *Wuliangshou rulai hui* and the *Foshuo dasheng wuliangshou zhuangyan jing* reflect its later recension; the *Foshuo wuliangshou jing* can be said to represent an intermediate stage in the transmission of the larger *Sukhāvatīvyūhasūtra*.

The only extant Tibetan translation of the larger *Sukhāvatīvyūhasūtra* is yet another witness to the later recension. Entitled *'Phags pa 'od dpag med kyi bkod pa* (**Āryāmitābhavyūha*; D 49/P 760[5]; ed. Kawaguchi, 1972, 213–339; see the *Zōyaku Muryōjukyō ihon kōgōhyō*, 1999; Fujita, 2007, 56–60), it was executed in the early 9th century by Jinamitra, Dānaśīla, and Ye shes sde (Halkias, 2013, 63–65).

The recension reflected in this Tibetan translation is very close to the Nepalese redaction of the Sanskrit text. This very late textual tradition is instantiated in 38 codices: two palm-leaf manuscripts dating to the mid-12th century (mss. R and N1) and 36 paper copies made between the 17th and the mid-20th centuries (for a synoptic edition, see Fujita, 1992–1996; see also Fussman, 1999, 531–532). All editions of the Sanskrit text of the larger *Sukhāvatīvyūhasūtra* are based on a varying number of manuscripts belonging to this Nepalese redaction (Müller & Nanjio, 1883 [*editio princeps*, 5 mss.]; Wogihara, 1972, 4–159; Ashikaga, 1965 [20 mss.]; Fujita, 1992–1996 [38 mss.]; 2011; 2007, 19–34; for translations of the Sanskrit redaction, see e.g. Müller, 1894a; Gómez, 1996, 61–111).

Another, much earlier redaction of the Sanskrit text of the larger *Sukhāvatīvyūhasūtra* has recently come to light among the Buddhist manuscripts of the Schøyen Collection (on this collection, see Braarvig, 2000). This redaction consists of 26 fragments belonging to three folios of a birch-bark Sanskrit manuscript, "which can be dated on paleographical grounds to around the 6th or 7th centuries" (Harrison *et al.*, 2002, 181) and which may possibly come from the Bamiyan area. According to P. Harrison *et al.* (2002, 181), these fragments "preserve a version of the [larger *Sukhāvatīvyūha*,] which differs markedly from the Sanskrit text as we know it" and which constitutes "a third recension of the [larger *Sukhāvatīvyūha*,] which agrees with no known version of the text." Organizing the evidence in terms of a gradual process of development, this Sanskrit manuscript from Gandhara "seems to fall somewhere between T. 360 and the text as we find it in T. 310[5], the Nepalese Redaction of the Sanskrit, and the Tibetan translation" (Harrison *et al.*, 2002, 183).

In addition, fragments preserved in several Central and East Asian languages testify to the wide diffusion and the popularity of the larger *Sukhāvatīvyūhasūtra* (Fujita, 1996a, 38n6; Harrison *et al.*, 2002, 180n8). Worth mentioning are (1) a fragment of an unknown Chinese rendition (Kudara, 1989; Fujita, 2007, 36–39); (2) seven fragments of a Uighur version (Zieme & Kudara, 1985b, 11–15, 71; Zieme, 1985a; Geng, 2004; Halkias, 2013, 14–15; seemingly a translation of T. 360); (3) a fragment of a Khotanese version (Emmerick, 1992, 31 [no. 18.21]; Bailey, 1963, 123 [no. 219 (Kha 0013c2)] that could be based on a Sanskrit original; Fujita, 1992, xv); and (4) a Xixia (西夏) fragment (Nishida, 1977, 23).

The larger *Sukhāvatīvyūhasūtra* can be tentatively dated to the 1st century CE (Ducor, 2004, 272–273; see also Fussman, 1999, 535, who hypothesizes a 1st-cent. nucleus in Buddhist Hybrid Sanskrit; note that according to Fussman, 1999, 574–577, the text is in fact a chapter [*parivarta*] of an unidentified work, a hypothesis that has been challenged by Ducor, 2004, 374–375).

The plot of the *sūtra* closely parallels that of the *Akṣobhyavyūhasūtra* (the following summarizes the "Nepalese" Sanskrit version; paragraphs according to Gómez, 1996; Gómez's tables 7a and 7b [1996, 266–277] provide a useful synopsis of the main topics and episodes in T. 360 and the Nepalese Sanskrit version; the most spectacular divergences consist in the absence, in all expressions of the later recension, of the eventual death of Amitābha [Nattier, 2007b, 203ff.; Harrison & Luczanits, 2012, 76–77] and of the rightly famous but clearly interpolated section on the "five evils" [Gómez, 1996, 205–215; Inagaki, 2000, 291–305; Eracle, 2008, 118–133; see also Gómez, 1996, 253n80; Harrison *et al.*, 2002, 181n9]; the main differences between the two recensions are summarized in Harrison & Luczanits, 2012, 75–78).

In the midst of myriad disciples and bodhisattvas, on the Gṛdhrakūṭa ("Vulture Peak") near Rājagṛha, Śākyamuni tells Ānanda the story of the encounter of the monk Dharmākara (a king according to T. 360) with the buddha of the past Lokeśvararāja, his vows, his career as a bodhisattva, and his creation of the paradise-like Sukhāvatī to the west, "a buddha-field that is one hundred thousand million trillion buddha-fields away from where we are" (section 40; trans. Gómez, 1996, 80). At some point during the teaching of Lokeśvararāja, Dharmākara vows to emulate the Buddha in saving all living beings:

> I will have a magnificent field,
> est, and in this most noble be
> awakening, will be found the
> of the state of nirvana. And I
> so that in it all living beings
> (section 19.8; trans. Gómez, 19

er as a bodhisattva, and his cre-
lise-like Sukhāvatī to the west, "a
is one hundred thousand million
lds away from where we are" (sec-
nez, 1996, 80). At some point dur-
f Lokeśvararāja, Dharmākara vows
ddha in saving all living beings:

> I will have a magnificent field, the best and highest, and in this most noble beautified high seat of awakening, will be found the incomparable bliss of the state of nirvana. And I will purify this field so that in it all living beings will reach nirvana. (section 19.8; trans. Gómez, 1996, 67)

Conforming to Dharmākara's wish, Lokeśvararāja expounds during one million years "how the perfect arrays of wondrous qualities and ornaments in the buddha-fields of eighty-one hundred thousands million trillion buddhas could be accomplished" (section 22; trans. Gómez, 1996, 68). Note that, in contrast to the situation described in the *Akṣobhyavyūhasūtra*, the buddha Lokeśvararāja never attempts to dissuade Dharmākara from engaging in the daunting career of a bodhisattva. In other words, "[f]or the author of the *Akṣobhyavyūha* . . . the bodhisattva path is a challenging . . . option for Buddhist practitioners; for the author of the *Sukhāvatīvyūha*, by contrast, such a choice seems to be a matter of course" (Nattier, 2003, 190). During five successive cosmic ages, Dharmākara gathers all these arrays before making his initial vows (section 28; see below) in the presence of Lokeśvararāja. The *sūtra* next expands on Dharmākara's subsequent training as a bodhisattva, insisting on his bodily, mental, behavioral, moral, and meditative qualities; his practice of the perfections; his provision of merit; and his worship of innumerable buddhas (sections 30–39). Śākyamuni now reveals to Ānanda that Dharmākara has become a fully awakened buddha named Amitābha/Amitāyus ten cosmic ages earlier and has ever since presided over the Sukhāvatī world system surrounded by innumerable disciples and bodhisattvas. After expounding the infinite light (sections 41–45) and life span (sections 50–51) to which Amitābha/Amitāyus owes his two most frequent names, the text proceeds to a detailed description of Sukhāvatī (sections 52–70 and 80–84) and its inhabitants (sections 71–85). Among the many wonderful features of Amitābha's world system, mention can be made of the absence of bad rebirth forms (hell beings, animals, hungry ghosts, and anti-gods); of this land's prosperity and peacefulness, its marvelous scent; flowers; fruits; jewel trees; sweet-voiced (magically created) birds; and melodious rivers emitting enchanting sounds such as "impermanent," "selfless," "buddha," and "emptiness," and its gigantic tree of awakening (see also sections 97–99) and lotuses issuing golden preaching buddhas; and the absence of oceans and of Sumeru and other mountains (Nattier, 2000, 81n23). Those born in Sukhāvatī share similar attributes in terms of complexion, belongings, and sensory and affective life; they eat according to their wish and obtain whatever they long for. In another description of the qualities of the bodhisattvas born in Sukhāvatī (sections 103–121), the text alludes to their possession of the 32 marks of a great being; their excellence in meditation and discernment; their constant vision of buddhas and audition of the dharma; their capacity to travel at will to worship thousands of buddhas; their ability to teach the dharma in full omniscience; their prodigious mindfulness, knowledge, and equanimity; and so forth. The bodhisattvas who are reborn in that field are tied to only one more birth (*ekajātipratibaddha*) before they reach full awakening, but with one notable exception: "those bodhisattvas who, by the power of their vows, have roared the roar of the Great Lion . . . and will remain devoted to leading all living beings to complete nirvana, so that they will not enter nirvana themselves" (section 100; trans. Gómez, 1996, 97).

Toward the end of the *sūtra* (sections 133–142), just after Amitābha's photic self-manifestation to Ānanda, Śākyamuni turns to the bodhisattva Ajita/Maitreya. Causing him to see Sukhāvatī, he shows him two types of rebirths by pointing out "those who dwell inside the closed calyxes of immense lotuses" and "those who sit cross-legged on the lotus flowers" (Gómez, 1996, 104). Whereas the first ones had initially entertained doubts about rebirth in Sukhāvatī but had planted the necessary roots of merit, that is, performed good deeds with an aspiration to such a rebirth, the second ones were free of doubt, planted roots of merit, and strongly aspired to be reborn in Amitābha's Sukhāvatī. The closed calyxes into which they are reborn function as prison-like purgatories in which they are doomed to spend five hundred years, thus wasting much of the most precious time that they could spend worshipping and listening to Amitābha. A little earlier (sections 91–94), the *sūtra* also distinguishes three types of believers (Harrison & Luczanits, 2012, 77–78). Some people constantly bring to mind the Tathāgata, plant limitless roots of merit, dedicate their thoughts to awakening, and vow to be reborn in Sukhāvatī. These will enjoy the visit of Amitābha and his retinue of monks at their death and be reborn in Sukhāvatī with thoughts of "serene trust." Those who are less zealous in bringing Amitābha to mind and planting roots of merit but who direct their minds toward rebirth in Sukhāvatī will see a magical creation of the Tathāgata standing before them at death;

> If such living beings pass away while in possession of this mental concentration, the focus of which is the serene trust caused by the vision of the Tathāgata, and if their mindfulness is not weakened at that point, they will be reborn in that same buddha-field. (Gómez, 1996, 93)

Finally, those who bring the Tathāgata to mind only ten or even one time(s) but are, nonetheless, longing for his buddha field without being hostile to or dejected by this dharma will see Amitābha in their dreams and be reborn in Sukhāvatī in the state of non-retrogression.

Dharmākara's Vows

The vows made by Dharmākara form the most decisive part of the larger *Sukhāvatīvyūhasūtra*. The number of these vows presents important variations according to the versions (T. 362: 18 vows; T. 361: 24; T. 360: 48 [see Ducor & Loveday, 2011, 389–397]; T. 310[5]: 48 [see Chang, 1983, 341–345]; the Nepalese Sanskrit redaction: 47; the Tibetan version: 49; T. 363: 36). According to J. Nattier (2003, 190), "the future Amitābha's vows focus on the creation of a 'pure land'," whereas the "beauty of the realm of Akṣobhya is presented as the by-product of the merit he has acquired by engaging in these activities, not as the result of a conscious plan" (see also Nattier, 2000, 95–98).

As J. Ducor rightly points out (2004, 378–379), Dharmākara's 47 (Nepal Sanskrit redaction)/48 (T. 360) vows are concerned less with the qualities and ornaments of Sukhāvatī as a "cosmic receptacle" (*bhājanaloka*) than with the specificities of the beings who inhabit it or come into contact with it. Thus it is that vows 30/31, 31/32, and 32 alone can be said to describe the ornaments of this world system: (1) it is self-luminous and of a mirrorlike character, with countless buddha fields reflecting themselves in it (vow 30/31); (2) it has innumerable, scented, and bejeweled vases whose perfume is "fit for the worship of buddhas and bodhisattvas" (vow 31/32); and (3) it is constantly showered by a rain of aromatic jewellike flowers and with music-making clouds (vow 32). Additionally, from vow 28 we can gather that Sukhāvatī has a 9,000-kilometer-high tree of awakening, and from vow 1 that it has neither hells nor animals, neither hungry ghosts nor anti-gods. Thus in spite of Dharmākara's preliminary statement ("Once I awake to ... full awakening, my buddha-field will be endowed with arrays of inconceivable qualities and ornaments, just as I have declared it to be in these vows" [trans. Gómez, 1996, 69]), more than 80% of his vows pertain to the inhabitants rather than their environment, whose wondrous qualities are abundantly described elsewhere in the *sūtra* (see above; see also Ducor, 2004, 378–379). In addition, at least three vows pertain to Amitābha himself (vows 13/12 and 15/13 reflect his wish to possess an immeasurable halo of light and an unlimited life span; vow 17 expresses his wish to be praised by countless buddhas).

About 30 vows refer to the living beings and/or the bodhisattvas born in Sukhāvatī. These beings will never be reborn in bad rebirth states (vow 2); all of them will have the color of gold (3); among them, the difference between humans and gods will be purely conventional (4); and they will possess the five superknowledges (*abhijñā*) – that is, (a) miraculous powers (*ṛddhi* [5/9]); (b) the memory of their previous existences (*jātismara* [6/5]); (c) a divine eye (*divyacakṣus*) to perceive all world systems (7/6); (d) a divine ear (*divyaśrotra*) to listen to every teaching of the good law (*saddharmaśravaṇa* [8/7]); and (e) the knowledge of other minds (*paracittajñāna* [9/8]). These beings will lack any idea of property (*parigrahasaṃjñā*) even regarding their own body (10); they will be certain of following the right path (11), will have an immeasurable life span (*āyuḥpramāṇa* [14/15]), and will not even know the word "unwholesome" (*akuśala* [16]). They will be only one more birth away from buddhahood (21/22), teach the dharma in full omniscience (24/25), and perfectly recognize Sukhāvatī's splendor (27). They will have no need to learn or to teach and will possess the four kinds of analytic understanding (*pratisaṃvid* [29]). Their happiness will equal that of a monk having entered the third stage of meditation (*dhyāna* [38/39]), and those who hear the name of Amitābha will be reborn in families of noble birth until they reach perfect awakening (42/43). The bodhisattvas born in Amitābha's buddha field will have the 32 marks of a great man (20/21), travel to innumerable other buddha fields, and wait on innumerable buddhas (22/23) who will accept the bodhisattvas' offered worship (*pūjā* [25/–]). In whichever way they imagine to plant roots of merit (*kuśalamūla*), these roots will appear and grow (23/24). These bodhisattvas with bodies as strong as diamonds (26) will see the gigantic tree of awakening (28) and will not have to wash, dry, sew, or dye their robes (37/38) – note that this clearly indicates the monastic state of these bodhisattvas; they will be able to perceive the marvelous qualities of innumerable buddha fields (39/40) and to hear

the dharma as and when they want it (45/46). Those who hear Amitābha's name will not be liable to retrogression from their progress toward awakening (46/47).

The various recensions of the larger *Sukhāvatīvyūhasūtra* mirror changing ideas regarding the issue of gender (Harrison, 1998a; Harrison & Luczanits, 2012, 75); the *Foshuo amituo sanyesanfo saloufotan guodu rendao jing* and the *Foshuo wuliangqingjing pingdengjue jing* unambiguously state that only males are born in Sukhāvatī (in contrast to the *Akṣobhyavyūhasūtra*), thus showing that "the early Mahāyāna assumption that one must be reborn as a male before becoming a buddha has been generalized to include all of the inhabitants of Sukhāvatī as well" (Nattier, 2003, 191). This doctrinal stance is reflected in the *Saddharmapuṇḍarīka*'s description of Sukhāvatī in chapter 24 (Kern & Nanjio, 1908–1912, 418–419):

> If…a woman, having heard this discourse on Dharma, will take it up, surely this will be her last existence as a woman. O Nakṣatra, whichever woman, having heard in the final five hundred years this chapter on the former life of Bhaiṣajyarāja, will obtain it…she certainly, having passed away from here, will be reborn in the world-sphere Sukhāvatī. (trans. Schopen, 1977, 159–160; see also Fujita, 1980, 121)

By contrast, such excluding statements do not appear in the *Foshuo wuliangshou jing* and the later recension, "a development which is congruent with, and quite likely was elicited by, the apparent universalization of the bodhisattva path" (Nattier, 2003, 192). Note that Dharmākara's vow 35 is not directly concerned with rebirth in Sukhāvatī but claims that women, upon hearing Amitābha's name, will "feel disgust at their female nature" and not be "reborn again as women when they leave their present birth" (Gómez, 1996, 74).

In addition to vow 35, 11 vows are related to the beings and bodhisattvas born in other buddha fields including our own. Beings filled with the light of Amitābha will enjoy inconceivable happiness (33); those who will hear his name will obtain a root of merit "which is joy and delight in the conduct of the bodhisattva" (43/44). As for the bodhisattvas who hear the name of Amitābha, they will obtain the power of remembrance and the power of *dhāraṇī*s until they reach buddhahood (34); they will receive the homage of the entire world when they salute Amitābha (36/37); they will not suffer from deficient spiritual faculties and powers (40/41); they will attain various states of deep mental concentration and absorption (41/42 and 44/45); and they will become receptive to the dharma and accept its ultimate truth (47/48).

As is to be expected from the entirely different nature of the two bodhisattvas' vows, the *Akṣobhyavyūhasūtra* and the *Sukhāvatīvyūhasūtra* testify to diverging views concerning the means of being reborn in Akṣobhya's and Amitābha's realms. Indeed,

> rebirth in Abhirati…is attained through one's own religious merit, and it does not require even an awareness of Akṣobhya himself. In the larger *Sukhāvatīvyūha*, by contrast, access to Amitābha's world is associated with knowledge of him and with personal reliance on his name. (Nattier, 2003, 191; see also Dantinne, 1983, 42)

This emphasis on bearing Amitābha in mind and recollecting his name (*nāmadheya*) is best exemplified in Dharmākara's two most famous vows (18 and 19), given here in full:

> Blessed One, may I not awaken to unsurpassable, perfect, full awakening if, after I attain awakening, those living beings in other world spheres who conceive the aspiration to attain unsurpassable, perfect, full awakening (*anuttarāyāḥ samyaksambodheś cittam utpādya*), hear my name (*nāmadheya*), and remember (*anu* √*smṛ*) me with serene trust (*prasannacitta*), will not be met by me at the moment of death (*maraṇakālasamaya*) – if I should not stand before them then, surrounded and honored by a retinue of monks (*bhikṣusaṅgha*), so that they can meet death without anxiety. Blessed One, may I not awaken to unsurpassable, perfect, full awakening if, after I attain awakening, living beings in unlimited, countless numbers of buddha-fields will hear my name, will set their minds on being reborn in my buddha-field (*buddhakṣetre cittaṃ preṣayeyuḥ*) and dedicate their roots of merit to rebirth in it (*upapattaye kuśalamūlāni pariṇāmayeyuḥ*), and yet not be reborn in my buddha-field. And this will be true even if they have made the resolution (*cittotpāda*) [to attain awakening] only ten times – except in the case of those who have committed the five offenses entailing immediate retribution (*ānantaryakārin*) and of those who are hindered by their own opposition to the Good Dharma (*saddharmapratikṣepāvaraṇāvṛta*). (trans. Gómez, 1996, 71)

The logic underlying this and other vows can be summarized as follows: Dharmākara will not become a buddha if, after he has become a buddha, those who hear his name, and wish to be reborn in his land, and dedicate their roots of merit cannot do so. But Amitābha is a buddha now, which makes sure that the condition was fulfilled.

Another conspicuous line of evolution between the *Akṣobhyavyūhasūtra* and the successive recensions of the larger *Sukhāvatīvyūha* is revealed by their respective treatment of *śrāvaka*s/arhats and *pratyekabuddha*s (Harrison & Luczanits, 2012, 75–76). In the *Akṣobhyavyūhasūtra* (as well as in T. 361 and T. 362), Sukhāvatī is regarded as "an optimal locale" (Nattier, 2003, 191) for the attainment of arhatship (Gómez, 1996, 243–244n3). In the later recension, however,

> references to arhats . . . have become far less common, while hyperbolic descriptions of the qualities of bodhisattvas in Amitābha's world occur in great profusion. Indeed, the authors of this recension of the larger *Sukhāvatīvyūha* seem to understand the bodhisattva path as something that is accessible to all. (Nattier, 2003, 192)

As Fujita Kōtatsu has it,

> [a]lthough the early recensions of the *Larger Sūtra* state that the person born in the Pure Land will gain the awakening of a śrāvaka (suggesting the need for further advancement and negating immediate buddhahood), the later recensions eliminate it and focus on the consummation of the bodhisattva path. (Fujita, 1996b, 26)

This is of course not to say that *śrāvaka*s are altogether absent from the later versions of Sukhāvatī, if only because, as was pointed out by J. Ducor (2004, 382–385), a vast retinue of disciples (see vow 12/14) belong to the specific properties of buddhas (see also Gómez, 1996, 243–244n3; Nattier, 2000, 93n66).

The Shorter *Sukhāvatīvyūhasūtra*

The relative chronology of the two *Sukhāvatīvyūhasūtra*s is difficult to establish. A small majority of specialists seem to be inclined to regard the larger *sūtra* as slightly earlier than the shorter; the two *sūtra*s likely were independent compositions and "may possibly stem from different circles of devotees" (Fussman, 1999, 535–537). The smaller *Sukhāvatīvyūhasūtra* has been preserved in two Chinese translations, two Tibetan versions, and a Sanskrit recension.

The *Foshuo amituo jing* (佛說阿彌陀經; T. 366; trans. Gómez, 1996, 145–151; see also Ducor, 1998, 53–95; Inagaki, 2000, 353–360; Eracle, 2008, 181–187), the by far better known and more widely used of the two Chinese translations, is the work of Kumārajīva. It was completed in 402 CE (under the original title *Wuliangshou jing* [無量壽經]; identical to T. 360; see Ducor, 1998, 118–119). This text was translated into Tibetan, under the title *Snang ba mtha' yas kyi mdo*, and discovered in a manuscript from Dunhuang (PT 758; Akamatsu, 1984a). Missing the beginning, the extant latter two-thirds of the text have been edited (see Li & Silk, forthcoming). The Chinese version is also found in several Dunhuang manuscripts transcribed in Tibetan characters for recitation by practitioners unable to read Chinese (Thomas & Clauson, 1927). Finally, it was rendered into Uighur, of which a fragment from Sangim near Turfan remains (Zieme & Kudara, 1985b, 13).

The *Chengzan jingtu fo sheshou jing* (稱讚淨土佛攝受經; T. 367; c. 650–655 CE; trans. Eracle, 1981, 57–94; see also Inagaki, 1993; Nishimura, 1995; Fujita, 1998) is the second extant Chinese translation. It is by Xuanzang (玄奘; 602–664 CE) or by his scribe Dasheng Xun (大乘詢; Fujita, 1998, 3–4, 22), but it never equaled Kumārajīva's work in fame and elegance.

An additional translation by Guṇaprabha (393–468 CE), most likely prepared between 446 and 453 CE (Ducor, 1998, 120), was already considered lost in 710 CE. (For the numerous manuscripts from Dunhuang, almost all of which contain Kumārajīva's translation, see Hirokawa, 1981; 1984; Inokuchi, 1964; Kaneko, 1978.)

The Tibetan translation in the Kanjur, the *'Phags pa bde ba can gyi bkod pa* (**Āryasukhāvatīvyūha*), was prepared from the Sanskrit by Dānaśīla and Ye shes sde around 800 CE (D 115/P 783; ed. Kawaguchi, 1972, 341–356; Ducor, 1998, 169–175; trans. Lopez, 2004, 60–68; see also Onoda, 2001; 2003; 2008; for its reception in Tibet, see Nōnin, 2013; see also Inaoka, 2002).

In contrast to the Sanskrit version of the larger *Sukhāvatīvyūhasūtra*, the shorter *sūtra* has no extant Nepalese redaction but has come down to us in Siddham script in 18th-century Japanese editions (for a detailed explanation and an overview of the manuscripts, forming the basis of Müller & Nanjio's *editio princeps* [1883, 92–100], see Ducor, 1998, 99–107; for reeditions and emendations, see Wogihara, 1972; Kimura, 1943; Ashikaga, 1955; Fujita, 1975; 2011; Ducor, 1998, 161–165; Kitabatake, 2006; Tsukinowa, 1955; for a few preserved fragments in Brahmi script, see Fujita, 2011, xxxix–xl; for translations, see e.g. Müller, 1894b, 98–103; Gómez, 1996, 15–22; Ducor, 1998, 141–149; Cicuzza, 2011).

Before numerous monks, bodhisattvas, gods, and other beings, Śākyamuni teaches Śāriputra the existence of the Sukhāvatī buddha field in which Amitāyus has been teaching for ten cosmic periods as a fully awakened buddha. Sukhāvatī owes its name to the fact that physical and mental pain (*kāyaduḥkha* and *cittaduḥkha*, respectively) are unknown to its inhabitants, who continuously "experience conditions of boundless happiness" (*apramāṇāni sukhakāraṇāni*; trans. Gómez, 1996, 16). The Buddha proceeds next to a detailed description of the "panoplies/display of the wondrous qualities of buddha fields" (*buddhakṣetraguṇavyūha*) of Sukhāvatī, mentioning its railings, its rows of palm trees, its nets of tinkling bells, and its lotus ponds with golden sand and refreshing water; its precious stairways, gem trees, and heavenly musical instruments; its (magically created) wild geese, curlews, and peacocks that sing Buddhist virtues inspiring faith to human beings. Sukhāvatī knows of no hells, animal realm, or world of the dead (*yamaloka*); its beings travel to other buddha fields "and then return to their own world . . . in time for the afternoon nap" (trans. Gómez, 1996, 17). After explaining why the buddha who presides over Sukhāvatī is named "Limitless Life" (Amitāyus) and "Limitless Light" (Amitābha) and how big his assembly of disciples is, the Buddha briefly mentions the immeasurable number of beings reborn there "as pure bodhisattvas who will not fall back (*avinivartanīya*) and will be separated from awakening by only one birth (*ekajātipratibaddha*)" (trans. Gómez, 1996, 18). But to be reborn in Sukhāvatī, living beings "should set their mind/vow (*praṇidhānaṃ kartavyam*) on rebirth in that buddha-field . . . for living beings are not reborn in that buddha-field of the Tathāgata Amitāyus as the result of an inferior root of merit" (trans. Gómez, 1996, 19). And indeed,

> those sons or daughters of good families who will hear the name (*nāmadheya*) of the blessed Amitāyus . . . and then will bring it to mind (*manasi* √ *kṛ*) without distraction for one night, or two, or three, four, five, six, or seven nights – they will be met by the Tathāgata at the moment of their death. When the moment of their death approaches . . . Amitāyus . . . surrounded by an assembly of disciples (*śrāvakasaṅgha*) and a host (*gaṇa*) of bodhisattvas, will stand before [them] (*purataḥ* √ *sthā*), and [they] will die with a mind that is free from distorted views (*aviparyasta-citta*). After they die, they will be reborn in the Land of Bliss, in the buddha-field of Amitāyus. (trans. Gómez, 1996, 19)

Interestingly, the *sūtra* ends with a statement by Śākyamuni to the effect that, just as he praises the buddhas of all six directions, these buddhas extol his qualities, saying the following:

> A most difficult task (*suduṣkara*) has been undertaken by . . . Śākyamuni . . . After he awakened to . . . full awakening in this Sahā world, he taught a Dharma that the whole world was reluctant to accept, at a time when the cosmic age was in a period of decay (*kalpakaṣāya*), when living beings were in a period of decay (*sattvakaṣāya*), when views and opinions corrupted living beings (*dṛṣṭikaṣāya*), when the length of human life had declined (*āyuṣkaṣāya*), when the afflictions vitiated human beings (*kleśakaṣāya*). (trans. Gómez, 1996, 21)

The Visualization *Sūtra*

A third scripture connected to Amitābha is the *Guan wuliangshoufo jing* (觀無量壽佛經; T. 365; also known as *Guan jing*). Although often cited in scholarship under the imaginary titles **Amitāyurdhyānasūtra* or **Amitāyurbuddhānusmṛtisūtra*, and traditionally credited as translated by Kālayaśas between 424 and 442 CE, this work has been demonstrated to be a Central Asian or Chinese "apocryphon" (Fujita, 1970, 116–136; 1990; Tanaka, 1990, 38–42; according to Fujita, 1996a, 6, 8, 31, the *sūtra* could have been produced in the Turfan area, an opinion possibly reinforced by Yamabe, 1999; Silk, 1997; Ducor & Loveday, 2011, 16–60; for translations, see Takakusu, 1894; Yamada *et al.*, 1984; Inagaki, 2000, 317–350; Eracle, 2008, 145–177; for the at least 150 manuscripts of the text known from Dunhuang, see Hirokawa, 1984, 101).

The *sūtra* can be divided, as it is, for example, in the commentary of Shandao (善導; 613–681):

1. (序分; Prologue; the story of Ajātaśatru and Vaidehī);
2. (定善; Meditative Good; contemplations 1–13: how to contemplate Sukhāvatī and perceive the Buddha);
3. (散善; Non-meditative Good; contemplations 14–16: how to attain birth in the nine grades); and
4. (流通分; Epilogue; transmission).

The vocabulary of the *Guan jing* seems to owe much to the Wei (魏; 220–265) dynasty translation of the larger *Sukhāvatīvyūha* (T. 360) and to that of the *Guanfo sanmei hai jing* (觀佛三昧海經; *Sūtra* on the Ocean of Contemplative Trance of Visualizing the Buddha; T. 643; Fujita, 1990, 160). Perhaps even more convincing evidence of the composite nature of the text is the differential use of terms for the same individuals. Yamada Meiji (1976) has showed that the Chinese names used to refer to the buddha Amitāyus are not mixed randomly in the text but follow a definite pattern. The name appears in the text 34 times, in translation as Wuliangshou fo (無量壽佛) 19 times, while the transcription Amituo fo (阿彌陀佛) appears 15 times. What is of importance, however, is the distribution of these names, which appear in the following order:

1. Prologue: Amituo fo, 3 times;
2. Meditative Good: Wuliangshou fo, 15 times, and Amituo fo, once in the 13th section;
3. Non-meditative Good: Amituo fo, 11 times, and both names once each in the 16th section; and
4. Epilogue: Wuliangshou fo, 3 times.

In addition, with regard to the prologue section and its story of Ajātaśatru and Bimbisāra, Yamada Meiji (1976, 78) observed that even in this very brief section, the name Devadatta appears twice, once as Diaoda (調達) and once as Tipodaduo (提婆達多). The most plausible explanation for these discrepancies is that the scripture was built out of originally diverse elements already in the Chinese language. J. Silk (1997) has showed that the frame story is found widely in Indian texts, including those belonging to the Jaina tradition, in a fashion that further suggests that the *sūtra* was assembled in a Chinese environment.

The story begins in Rājagṛha, where prince Ajātaśatru, son of King Bimbisāra, incited by the evil Devadatta, imprisons his father, intending to starve him to death. However, Queen Vaidehī covers her body with flour mixed with ghee and honey and fills her ornaments with grape juice, secretly giving these to the king, helping him to survive. The king then prays to the Buddha asking help from Mahāmaudgalyāyana. Maudgalyāyana flies to the king and day after day preaches to him about the eight precepts of the lay follower. The Buddha also sends his disciple Pūrṇa. After Ajātaśatru discovers what the queen has done, he attempts to kill her violently but is dissuaded by a minister. Hereafter Bimbisāra disappears from the story, as Ajātaśatru imprisons Vaidehī; she likewise prays to the Buddha, who sends both Maudgalyāyana and Ānanda to her. She laments her evil fate to have such a son and requests a teaching about a place free of suffering, away from Jambudvīpa, a general word for India in Buddhist texts.

The Buddha shows Vaidehī a vision of countless buddha fields, which he illuminates with light from between his eyebrows. Vaidehī proclaims that among these lands, she wishes to be reborn in Sukhāvatī (termed here *jiyue shijie* [極樂世界], the world of ultimate bliss). The Buddha then offers instructions on this world of Amitābha and on what those who aspire to be reborn there should do, namely three sets of meritorious acts. Vaidehī states that thanks to the Buddha, she has been able to see the land but asks how those who come later, when the Buddha is gone, can similarly do so. In response, the Buddha offers 16 contemplations, the description of which takes up the bulk of the text. The process begins with a contemplation of the setting sun, located of course in the west, the location of Sukhāvatī. There follow contemplations of water, earth, and so on, namely the features of the western land itself, with its trees, lakes filled with flowers, pavilions, and so on.

Amitāyus appears in the sky, along with Avalokiteśvara and Mahāsthāmaprāpta, and Vaidehī, in awe, again asks how future beings will likewise be able to have such a vision. The Buddha responds with instructions for various complex visualizations. Important here are the visualizations of Amitāyus himself with all the special marks that characterize the body of a buddha. Then follows instruction on the contemplation of Avalokiteśvara and Mahāsthāmaprāpta. One should imagine oneself being born in the land of utmost bliss, inside a lotus. There follow instructions about the contemplation of a large-size buddha image, which has led some scholars to speculate, probably unnecessarily, about connections with monumental imagery especially in Central Asia.

The text explains that beings fall into nine categories according to their qualification for rebirth, this being determined by their conduct in the world, ranked from the highest of the high to the lowest of the low. Each will be treated differently, those down to the middle grade of lowest rank obtaining birth in the land of utmost bliss. The final group, consisting of those who commit evil acts such as the five sins of immediate retribution (*ānantarya* sins – killing one's parents, killing a saint, drawing the blood of the Buddha, and causing a schism in the monastic community) or other severely evil acts, is fated to hell for aeons, but even they eventually obtain birth in Sukhāvatī as well. The contemplation of this fate is the 16th and final contemplation (for a list of the contemplations, see Yamada *et al.*, 1984, 117).

The earliest commentary on the *Guan jing* is the *Guan Wuliangshoujing yishu* (觀無量壽經義疏; T.1749) of Jingying Huiyuan (淨影慧遠; 523–592 CE), while in retrospect the most influential, at least in the Japanese Pure Land traditions, has been the *Guan Wuliang shoufojing shu* (觀無量壽佛經疏; T.1753; Tanaka, 1990, xviii, xix, 58) of Shandao.

The *Guan jing* appears to have furnished the main source for Pure Land iconography in East Asia. An interesting suggestion of Yamabe Nobuyoshi (2002) is that the scripture itself, and the Central Asian wall paintings at Toyok, arose out of the same milieu, and that the *sūtra* may have tried to put into words images also depicted by the painters of the cave murals, rather than, as we usually imagine, the murals having been based on preexisting scriptures (for a detailed treatment of the visual culture of the *Guan jing*, see Ducor & Loveday, 2011, 241–386).

The *Pratyutpannasamādhisūtra*

Before concluding this overview of Indian Pure Land *sūtra* literature, mention should be made of the *Pratyutpanna*(*buddhasammukhāvasthita*)*samādhisūtra* (*Sūtra* on the *Samādhi* of [the Bodhisattva Who Stands Face-to-Face with the Buddhas of] the Present). This *sūtra*, "an early Mahāyāna work which expounds a developed form of *buddhānusmṛti* ("calling a/the buddha to mind") primarily in terms of the doctrine of Śūnyatā" (Harrison, 1978, ix), entertains an original relationship with devotion to Amitābha/Amitāyus, which it both presupposes and reinterprets. The *Pratyutpannasamādhisūtra* has come down to us in four Chinese translations:

1. *Banzhou sanmei jing* (般舟三昧經; Skt. **Pratyutpannasamādhisūtra*; T. 418), a slightly revised (by Zhi Qian[?]) version of Lokakṣema's original translation (trans. Harrison, 1998b; see also Harrison, 1990, 207–272; Nattier, 2008, 81–83);
2. *Bapi pusa jing* (拔陂菩薩經; Skt. **Bhadrapālabodhisattvasūtra*; T. 419), an anonymous translation of the first six chapters of the *sūtra*;
3. *Banzhou sanmei jing* (般舟三昧經; T. 417), attributed to Lokakṣema but rather an anonymous abridgement of the *Banzhou sanmei jing* with a long interpolated versified passage; and
4. *Da fangdeng daji jing xianhu fen* (大方等大集經賢護分; T. 416), the work of Jñānagupta and others, completed in 594–595 CE.

The Tibetan translation, *'Phags pa da ltar gyi sangs rgyas mngon sum du bzhugs pa'i ting nge 'dzin* (D 133/P 801; ed. Harrison, 1978; trans. Harrison, 1990) is Śākyaprabha and Ratnarakṣita's early 9th-century revision of an (their own[?]) earlier translation (Harrison, 1978, ix–xii).

A few Sanskrit fragments from Central Asia (Khadalik near Khotan[?]; Thomas, 1916; Harrison, 1990, 273–302; Karashima, 2009, 348–351; Wille, 2014, 227) and a Gandhari fragment (Harrison & Hartmann, 2014a, xvin19) have been identified so far.

As P. Harrison remarks,

> [a]lthough [the *sūtra*] makes mention of the Buddha Amitābha as one of many possible objects of visualisation and meditation, it is not strictly a Pure Land text; in fact, it has closer affinities with the Prajñāpāramitā literature, and seems to have been written with a view to resolving certain tensions between those two developments of the Mahāyāna. (Harrison, 1978, ix)

The *sūtra* actually alludes only once to rebirth in Amitāyus' Sukhāvatī. Having heard of Amitāyus' name, appearance, and qualities, the bodhisattvas call this buddha to mind and finally see him as a result of repeated concentration. They ask him, "Lord, what dharmas must bodhisattvas and mahāsattvas possess to be reborn in this world-system [of yours]?" (section 3E; trans. Harrison, 1990, 36). Here is the buddha's reply: "Sons of good family, if the calling to mind of the Buddha ... is practised, cultivated, developed and rehearsed, then one is reborn in this world-system" (section 3F; trans. Harrison, 1990, 36). Amitāyus then defines this *buddhānusmṛti* as a repeated and undistracted concentration (*manasikāra*) on the tathāgata (here Amitāyus himself, but virtually all buddhas of the ten directions) teaching an assembly of *śrāvaka*s with his 32 marks, a golden body, and wonderful ornaments (sections 3F, 8A). Most descriptions insist that the bodhisattva should perform this *samādhi* "in accordance with what he has learnt" (*yathāśrutam*), which "clearly refers to oral or written traditions concerning the [b]uddha or [b]uddhas chosen as objects of the *samādhi*, and the use of this material as the basis for the visualisation" (Harrison, 1978, 44). This material is largely similar to, for example, the larger *Sukhāvatīvyūhasūtra* or the later (and non-Indic) *Guan wuliangshou jing*.

But, first, the *sūtra* immediately stresses that

> those bodhisattvas do not see the Tathāgata through obtaining divine vision, do not hear the True Dharma through obtaining the divine faculty of hearing, and do not travel instantaneously to that world-system through obtaining magic power, but while remaining in this very

> world-system. (section 3C; trans. Harrison, 1990, 32–33)

Similarly, while leaving the *samādhi*, the bodhisattvas, having thought,

> "Did these *Tathāgatas* come from anywhere? Did I go anywhere?"... understand that the *Tathāgatas* did not come from anywhere. Having understood that their own bodies did not go anywhere either, they think: "Whatever belongs to this Triple World is nothing but thought... It is because however I imagine things, that is how they appear." (section 3L; trans. Harrison, 1990, 42)

Second, immediately after defining the required *buddhānusmṛti*, Amitāyus gives the following warning:

> And one does not misconceive, does not objectify... does not falsely imagine, does not falsely discriminate, and does not review the Tathāgata: he who obtains the *samādhi* of Emptiness by thus concentrating on the Tathāgata without apprehending him, he is known as one who calls to mind the Buddha. (section 3H; trans. Harrison, 1990, 37–38; 1978, 45; this aspect of the *sūtra* may not be entirely unrelated to section 10 of the *Anantamukhanirhāradhāraṇīsūtra* [see below]; Inagaki, 1999, 69–70)

The *sūtra* makes use of telling images to state how this *samādhi* should be understood: as the dream of food and drink of a hungry and thirsty man lost in the wilderness (section 3H), as the dream of a man who has traveled to another country and recollects his native land (section 3I), as the vision of a monk performing the meditation on the repulsive (*aśubhabhāvanā*; section 3J), and as the vision in a mirror of "certain women and men with a natural bent for washing their hair and putting on jewellery" (section 3K; trans. Harrison, 1990, 41). Be it in dream, in the meditation on the repulsive or in a mirror, these images have no real counterpart outside of the meditating mind itself. In other words, here again, "[b]y thought alone is the Buddha produced; [a]nd by thought alone is he seen" (section 3O[1]; trans. Harrison, 1990, 43). For all this, however, one should be wary of considering the *buddhānusmṛti* described in our *sūtra* as a fruitless exercise in meditation, for one performs this *samādhi* in order to worship the envisioned buddhas and to hear their dispensation, that is, to increase one's provision of merits and knowledge.

> The Buddhas... also show their faces and proclaim their names to that bodhisattva even in his dreams, and cause that bodhisattva to hear the Dharmas of the Buddhas. Further... undeclared, unobtained words of the Dharma come within the range of hearing of that bodhisattva, and he acquires them; by the power of that *samādhi* that bodhisattva hears those Dharmas. (trans. Harrison, 1978, 54; from the Sanskrit fragment corresponding to section 14H)

According to P. Harrison (1978, 51; see also Ducor, 2004, 395–398; Ducor & Loveday, 2011, 60), the author of the *sūtra* – "both a proponent of Śūnyatā and at the same time a devotee of Amitābha" – took to task

> those of his fellow Mahāyānists who were, in his opinion, falling short of the ultimate truth in their veneration of Amitābha. The target of his criticism, errors of attitude (the apprehension of a basis, a materialist view of the *buddhānusmṛti* experience and a refusal to apply the doctrine of Śūnyatā to it) and errors of intent (desire for material gain and fortunate rebirth), are so clearly mirrored in the *Sukhāvatīvyūha* that we would be hard put to it to deny some sort of connection between that work and the *Pratyutpanna-sūtra*.

The *Anantamukhanirhāradhāraṇīsūtra*

Another text sometimes classified as belonging to the genre of Pure Land literature is the *Anantamukhanirhāradhāraṇī(sūtra)* ([*Sūtra* on] the *Dhāraṇī* that Accomplishes by Boundless Gate). However, though certainly of Indic origin, this text cannot indeed be considered a Pure Land *sūtra* insofar as neither the hope to be born in a pure buddha field nor Sukhāvatī finds any mention in it. The only connection of this Mahāyāna *sūtra* with Amitābha is the genealogy of the realization and the dispensation of the *dhāraṇī* (revealed in section 9; Inagaki, 1999, 65–66). In chapter 15, Śākyamuni reveals that the bodhisattva Acintyaguṇaratnaśrī, who had heard the *dhāraṇī* from the buddha Ratnaśrītejorājakalpa, and who realized and taught it 160,000 years later, was none other than Amitāyus (Inagaki, 1999, 149–151). This *dhāraṇī sūtra* has come down to us in eight Chinese translations (among which are the *Wuliang men weimichi jing* [無量門微密持經]; T. 1011; an authentic work by Zhi Qian; see Nattier, 2008, 141–142; Inagaki, 1999, 4), a Tibetan version (*'Phags pa sgo mtha' yas pas bsgrub pa zhes bya ba'i gzungs*;

The *sūtra* has also been commented on by the 7th-century scholar Jñānagarbha (**Anantamukhanirhāradhāraṇīṭīkā*; D 2695–2696/P 3519–3520; trans. Inagaki, 1999, 27–202).

Works Ascribed to Nāgārjuna and Vasubandhu

Turning briefly to non-*sūtra* works ascribed to known Indian scholars, mention should be made first of the *Shizhu piposha lun* (十住毘婆沙論; T. 1521; trans. Kumārajīva), a commentary (*vibhāṣā*) on the *Daśabhūmikasūtra* attributed to Nāgārjuna, who is regarded by the Japanese Jōdo Shinshū (淨土眞宗) school as its first patriarch (on this text, see Lindtner, 1982, 14n26; Fujita, 1996a, 32–33; Ducor, 2008, 394n201; partial trans. Eracle, 1981; Inagaki, 1998a). This commentary owes much of its fame to its chapter *Yixing pin* (易行品; Chapter on Easy Practice; T. 1521 [XXVI] 40c–45a), according to which two paths are conducive to birth in Amitābha's Pure Land:

> One is the way of difficult practice which likens the bodhisattva path to walking on land to reach one's destination; and the other is the way of easy practice which compares the path of faith to the ease of riding on a vessel on a watercourse to reach the same destination. The latter path teaches the "mindfulness of the Buddha" (*nianfo* [念佛]) and recitation of the Buddha's name as leading to the stage of non-retrogression. (Fujita, 1996a, 32)

This distinction between "difficult way" (*nanxingdao* [難行道]) and "easy way" (*yixingdao* [易行道]) parallels the one between "method of the saints" (*shengdaomen* [聖道門]) and "method of [rebirth in] the Pure Land" (*jingtumen* [淨土門]). It had an enormous impact on East Asian Buddhism, especially in the apocalyptic framework of *mofa* ("demise-of-the-dharma") ideology (末法; Jpn. *mappō*; Ducor, 2005, 43–58). According to K. Fujita (1996a, 33), the Indian origin of this work "cannot be doubted," even though it may not be the work of the celebrated Mādhyamika philosopher (and probably not the same either as the author of the *Mahāprajñāpāramitopadeśa* [*Mohe bore boluomi jing shilun* (摩訶般若波羅蜜經釋論; T. 1509; also known as the *Dazhidulun* (大智度論); trans. Kumārajīva).

A last work that deserves to be mentioned here is the *Wuliangshou jing youbotishe yuanshengjie* (無量壽經優波提舍願生偈; Skt. **Sukhāvatīvyūhopadeśa*; The Treatise on the *Sūtra* of [the Buddha of] Immeasurable Life and the Verses on the Vow for Rebirth; T. 1524; trans. Bodhiruci in 529–531 CE). This text is ascribed to Vasubandhu, the second patriarch of the Jōdo Shinshū school. Together with its commentary, the *Wang shenglun chu* (往生論註; T. 1819; see Corless, 1973; Inagaki, 1998b), by Tanluan (曇鸞; 476–542 CE), who is reported to have received the treatise from the hands of Bodhiruci himself in Luoyang (Eracle, 2008, 21), this short treatise in mixed verses and prose commentary had a huge impact on Genshin (源信, 942–1017), Hōnen (法然, 1133–1212), and Shinran (親鸞, 1173–1263) and has been widely considered a "basic manual for Pure Land practice in general" (Moriyama, 2005, 236). It has been translated several times into Western languages (e.g. Kiyota, 1991; Eracle, 2008, 189–210; Payne, 1996, 258n2; on this treatise, see e.g. Fujita, 1996a, 34–35; Payne, 1996; Inagaki, 2000, 66–78). In Vasubandhu's own words, an *upadeśa* consists of a dogmatic matrix (*mātṛkā*, *abhidharma*) meant as "the basis for exposing the meaning of other *sūtras*" (*vyākhyāyukti*; Lee, 2001, 160, 8–9; *de las gzhan pa'i mdo sde'i don bshad pa'i rten*; Moriyama, 2005, 236–237). The relationship of (the pseudo-)Vasubandhu's **Upadeśa* to the larger *Sukhāvatīvyūhasūtra* has been debated (esp. Payne, 1996, 234–242), and, indeed, the **Upadeśa*'s description of Amitābha's Sukhāvatī may have more in common with Asaṅga's *Mahāyānasaṃgraha* (10.30; Lamotte, 1973, 317–322) than with either of the two Pure Land *sūtras* (Payne, 1996, 237–240). In their colophon (and also v. 2), the 24 verses are claimed to be a poetic exposition of the **Amitāyuḥsūtra*, which corresponds to the Chinese title of the larger *Sukhāvatīvyūhasūtra* but apparently not to its Indic title. According to R.K. Payne (1996, 242), the verses could be a summary of the scriptural corpus associated with A(pari)mitāyus rather than of a single *sūtra*.

The *Wuliangshou jing youbotishe yuanshengjie*'s 24 verses deal with the 17 merits of Sukhāvatī (vv. 3–14; note that merits 13 and 16 insist that only bodhisattvas and no *śrāvaka*s and *pratyekabuddhas* are reborn there as such, a feature shared by the *Mahāyānasaṃgraha* [Lamotte, 1973, 319], which the *Wang shenglun chu* discusses at length [Kiyota, 1991, 282; Eracle, 2008, 200–201]), the eight merits of Amitābha (vv. 15cd–19), and the four merits of the bodhisattvas (vv. 20–23; Kiyota, 1991, 275–277; Payne, 1996, 235–238). The *Wang shenglun chu* systematizes the Pure Land practices and begins with "an account of the primary purposes of Pure Land aspirants, namely, to cognise the Buddha Amitābha, to visualize his Land and to wish to be born there" (Moriyama, 2005, 241). The main purpose of the treatise is to expound the "five contemplative gates" (*wunianmen* [五念門]) that enable one to attain these primary objectives:

1. the gate of worship (*libaimen* [禮拜門]), which consists in the bodily action of those who aspire to be reborn in Sukhāvatī;
2. the gate of praise (*zantanmen* [讃歎門]), that is, verbal recitation or chanting of the name of Amitābha, a practice aimed at being performed in the great assembly of this buddha;
3. the gate of aspiration (*zuoyuanmen* [作願門]), in which mental one-pointedness (*cittaikāgratā*) is resorted to in order to achieve calm (*śamatha*) and, as a result, to enter Amitābha's "lotus world";
4. the gate of visualization (*guanchamen* [觀察門]), the most important of the five gates, which resorts to insight (*prajñā*) in order to achieve discernment (*vipaśyanā*) and bears on the 29 abovementioned merits; and
5. the gate of the transfer of merit (*huixiangmen* [迴向門]; Skt. *pariṇāma*), in which, without abandoning any of the suffering living beings, one makes vows to achieve great compassion, acting and being reborn freely for the salvation of all living beings.

Whereas the first four gates are entrance gates leading to the realization of buddhahood (and hence are *svārtha, for the bodhisattva's own sake), the fifth gate is an exit gate used by the bodhisattvas to alleviate the sufferings of human beings by returning to saṃsāra and transferring merits (and hence is *parārtha, for other beings' sake). According to R.K. Payne (1996, 242), the five gates "constitute a single, ritualized visualisation practice, a *sādhana*." The *Wang shenglun chu* systematically expands on the 29 merits, which it presents in an Abhidharma-like manner as the accomplishment of Amitābha's inconceivable power.

Samādhirājasūtra

The *Samādhirājasūtra* (Discourse on the King of *Samādhis*) is a mid-length Mahāyāna scripture showing some affinities with the Prajñāpāramitā corpus through its emphasis on *śūnyatā* (emptiness) and *samatā* (sameness). It was in existence in the 2nd century CE and shows some concerns, such as the forest vocation and the permitted asceticisms, in common with other early Mahāyāna texts. It was quoted readily by Buddhist commentators. Despite its title it does not expound a specific meditation technique, and the nature of the *samādhi* to which it refers is disputable. The text is constructed from a variety of textual units from genres to be found in other Mahāyāna scriptures, including the didactic, narrative, *jātaka*, (self-)laudatory, and listing materials in prose and verse.

Sources

The *Samādhirājasūtra* is known from a variety of manuscripts, the greatest number of which come from Nepal, where its status as one of the *navadharma* ("nine *dharmas*") texts has ensured its scribal reproduction for ritual purposes. While the earliest of these is probably from the 12th century, the bulk of Nepalese witnesses (38 in total known to date) are paper manuscripts made between the late 17th and early 20th centuries, most of which carry a complete text. In addition to these, there are two probably 11th–12th-century Indian or Nepalese palm-leaf manuscripts preserved in Tibet, an almost complete 6th-century birchbark manuscript from Gilgit, and a variety of manuscript fragments ranging in putative dates from the 5th to the 9th century: from Afghanistan (5th–6th cents., mainly now in the Schøyen collection; Skilton, 2002a) and Central Asia (5th–9th cents., in collections in Saint Petersburg, Paris, and London; Skilton, 1999b; Karashima & Wille, 2006; 2009). In addition to these sources in Sanskrit, the language of the text's original composition (there being no evidence of any earlier Prakrit precursor), there exist canonical translations, one into Tibetan, *Ting nge 'dzin gyi rgyal po zhes bya ba theg pa chen po'i mdo* (Mahāyāna Discourse Known as the King of *Samādhis*), made by Śīlendrabodhi and Dharmatāśīla in the early 9th century (P 31, 32), and several into Chinese. A late 7th(?)-century catalogue, the *Da zhou kan ding zhong jing mu lu* (大周刊定眾經目錄; T. 2153), compiled by Ming Quan (明佺), lists a now lost one-volume *juan* [scroll]) translation by An Shigao (安世高), which may correspond to the single-volume translation mentioned in Seng You's (僧佑) early 6th-century catalogue *Chu san zang ji ji* (出三藏記集; T. 2145). Otherwise the Chinese canon preserves three extant translations of the *Samādhirājasūtra*: a complete translation made by Narendrayaśas (Na lian ti ye she [那連提耶舍]) entitled **Candrapradīpasamādhisūtra* (*Yuedeng sanmei jing* [月燈三昧經]; T. 639), finished in 557 CE, two sections of a translation with the same name by Xian Gong (先公; T. 640, 641), made between 420 and 479 CE, and a translation of chapter 34 treated as an independent *sūtra*, **Candraprabhabodhisattvasūtra* (*Yueming pusa jing* [月明菩薩經]; T. 169), made by Zhi Qian (支謙) between 223 and 253 CE (for the latter, see Nattier, 2008, 142).

The *editio princeps* of the complete Sanskrit text of the Gilgit manuscript was published by N. Dutt and V.S.N. Sharma (1941; 1953; 1954) and republished with editorial changes by P.L. Vaidya (1961). This was based on a reading of the Gilgit manuscript, supplemented freely, especially for the many lacunae in that manuscript, by material from two Nepalese manuscripts and the Tibetan translation. A facsimile edition of the Gilgit manuscript was published by R. Vira and L. Chandra (1974). This functions as an invaluable corrective to the *editio princeps*, which fails to fully differentiate recensions, which are conflated at will, and omits structural features of the Gilgit text. This criticism applies even more to P.L. Vaidya's reedition (Skilton, 2000b, 13–15). Reliable critical editions of individual chapters have been made by various authors: C. Regamey (1938, chs. 8, 19, and 22; this was completed prior to the discovery of the Gilgit manuscript), S. Matsunami (1975, chs. 1–7), C. Cüppers (1990, ch. 9), and A. Skilton (1997, ch. 17).

Titles, Recensions, and Date

The *Samādhirājasūtra* was widely known under at least two titles, and the textual evidence analyzed to date suggests that there was a total of four distinct recensions in circulation (Skilton, 1999b). Hereafter *Samādhirājasūtra* is used as a portmanteau term for the text ignoring its specific recensions. Two closely related recensions (*Samādhirājasūtra* I and *Samādhirājasūtra* II) are transmitted in the Nepalese manuscripts, which call their text *Samādhirājasūtra*. This is also the title of the Tibetan translation. The text of these recensions is cited under variants of the name (*Ārya*)*samādhirāja* by Indian Buddhist scholars. These recensions are primarily characterized by the presence of an additional 15% or so of material not found in the others. This consists of prose and verse material that supplements the existing chapters. This often appears as part of the prose introduction to a chapter and is distributed fairly evenly across the *Samādhirājasūtra* as a whole, although a significant number of chapters, as many as 14, have none of these additions, while others, for example chapters 10 and 35, have several. *Samādhirājasūtra* II appears to be a linguistically improved recension of *Samādhirājasūtra* I but with other significant differences. The material that forms chapter 38 in *Samādhirājasūtra* I is divided into three separate named and numbered chapters in *Samādhirājasūtra* II, giving a total of 42 chapters for this recension, whereas *Samādhirājasūtra* I has 40.

The two remaining recensions are shorter than those recorded by the Nepalese and Tibetan witnesses. They have the same general coverage, but individual chapters lack the sometimes substantial prose and verse insertions present in *Samādhirājasūtra* I and II. They also both include material that is not found in the *Samādhirājasūtra* I and II recensions. The first of these recensions is witnessed by the Chinese translation of Narendrayaśas and several Central Asian manuscripts. While these manuscript fragments are too small to indicate the title of their text, the Chinese title is translated from the Sanskrit **Candrapradīpasamādhisūtra*. This name is known in its variant form *Candrapradīpa*(*sūtra*) to Indian scholars and is also mentioned in the *Mañjuśrīmūlakalpa* (Gaṇapati Śāstrī, 1920, 38, 109). The fourth recension was at one time that of the Gilgit manuscript alone, until analysis of manuscript fragments from Afghanistan revealed a second witness (Skilton, 2002b). While the Gilgit manuscript has lost its final leaves and therefore lacks a colophon to indicate the title, the discovery of a fragment of the colophon of the manuscript found in Afghanistan (see above) suggests that this recension may also have gone under the title (**Candrapradīpa*)*samādhir Mahāyāna*(*sūtra*). In the final chapter of the *Samādhirājasūtra*, and also significantly in chapter 3 (see below), the Buddha entrusts the discourse to a disciple and explicitly instructs him that the *sūtra* should be known as *Mahākaruṇāvatāra* (The Embodiment/Introduction to Great Compassion). This title is only recognized in citations made by Śāntarakṣita and Kamalaśīla (Gomez & Silk, 1989, 35–36).

Any attempt to date the scripture must necessarily take account of its distinct recensions (Skilton, 1999a). Extant physical evidence gives an earliest date of 11th century for manuscripts of recensions *Samādhirājasūtra* I and II, although Candrakīrti's 7th-century quotation of this recension, the redacting of material from its chapter 1 in the *Praśāntaviniścayaprātihāryasamādhisūtra* (*Jizhaoshenbian sanmodi jing* [寂照神變三摩地經]; T. 648), translated in the 6th century, and reference by the 4th–5th-century scholar Asaṅga to a text of this name in his *Mahāyānasaṃgraha* possibly takes it back to the 4th century (Skilton, 1999a). The Gilgit recension is dated by its manuscript witnesses to the 6th century at the earliest. The earliest known date for the title *Candrapradīpasamādhisūtra* is established by Xian Gong's 5th-century translation. (This ignores citations under the same name in the *Sūtrasamuccaya*, an anthology problematically attributed to Nāgārjuna.) An early 3rd-century date for some version of the text is confirmed through the translation by Zhi Qian made between 223 and 253 CE. While Zhi Qian treats this as a complete *sūtra*, internal evidence suggests that it is extracted from a larger text, presumably one or another recension of the *Samādhirājasūtra*/*Candrapradīpasamādhisūtra*. Beyond Zhi Qian, the single-volume translation attributed to An Shigao offers the possibility that a much abbreviated or partial translation of one recension of this text was made between 148 and 170 CE.

Following this discussion, we should make two important observations: all four recensions were in circulation in the broader Buddhist world simultaneously; and we should not assume a linear relationship among recensions. The diversity of the recensions that we now know as literary texts may have emerged independently in a mixed oral-literary environment, such that none has precedence over

Structure and Chapters

The shorter recension of the *Samādhirājasūtra* from Gilgit is, to use the traditional measure, almost exactly 8,500 *ślokas* in length. Like other mid-length Mahāyāna scriptures, it is subdivided into chapters, although these divisions are not consistent across recensions and are in themselves evidence of the recensional divergence in the history of this text. The divisions of the Gilgit recension cannot be determined with finality due to loss of some folios and significant damage to others. Despite this loss of material, the manuscript indicates some 42 internal divisions, only 27 of which correspond with those in other recensions. There are no chapter colophons and therefore no chapter titles. The complete Chinese translation (T. 639) has no chapter divisions and is divided into ten volumes. The longer recensions (transmitting at least another 1,300 *śloka* of material distributed unequally across most chapters) are divided into named chapters (*parivarta*), but they diverge in places (although the *editio princeps* conflates all recensions). The distribution of the variations only partly corresponds to the recensions *Samādhirājasūtra* I and II discussed above, since a subset of *Samādhirājasūtra* I manuscripts have the same chapter titles as *Samādhirājasūtra* II, this doubtless reflecting the complex transmissional history of the two recensions in India and Nepal. The chapter titles of *Samādhirājasūtra* I are listed below.

Table 1: Chapters of the *Samādhirājasūtra* in recension *Samādhirājasūtra* I (material in brackets added for clarification).

Most chapters consist of a prose introduction, of varying length, followed by verse. The length of individual chapters varies widely. Chapter 32, the second longest, is the equivalent of over 650 *śloka*s in length – consisting of a short prose introduction followed by over 280 verses in a variety of meters. In contrast, chapter 27 is the shortest, the equivalent of only 25 *śloka*s, with five lines of prose and six verses. Neither chapter varies significantly between recensions. The longest chapter is 35, the equivalent of 700 *śloka*s of mixed prose and verse in the short recensions, although this is supplemented by substantial additions in the *Samādhirājasūtra* I and *Samādhirājasūtra* II recensions.

While the division into chapters and the choice of titles reflect an explicit redactional intent, we can also look for unwitting redactional evidence to illuminate a different structural principle in operation. As with most Mahāyāna *sūtra*s, the *Samādhirājasūtra* ends with a *parīndanā*, that is, an explicit act of transmission of the text by the Buddha to Ānanda. However, there are two earlier points of transmission, to Candraprabha, the Buddha's main interlocutor, which appear to demarcate the conclusion of earlier stages of the evolution of the text and suggest a cumulative process of composition (Skilton, 1997, 105–109). These earlier conclusions are contained in chapters 3 and 18 and imply that at points the *Samādhirājasūtra* grew from a core consisting of the material in chapters 1–3, to 1–18, and finally to 1–40. If this interpretation is correct, this growth took place prior to the derivation of the divergent recensions that we know.

Language/Poetry

The *Samādhirājasūtra* is composed in a Buddhist Hybrid Sanskrit that conforms to F. Edgerton's classification and in this sense is linguistically unremarkable (Edgerton, 1953, xxv). Prose passages are in a grammatically simple Sanskrit that is "Buddhist" by virtue of its vocabulary, while verse passages are usually characterized by a similar vocabulary plus a hybridized morphology and phonology showing frequent Middle Indic forms. This is noted by Candrakīrti, who interprets them as legitimate exigencies required by meter (Lang, 1993). The recension *Samādhirājasūtra* II seems to have undergone a systematic revision of its language. Since this also includes the resolution of occasional problematic passages, modern editors of the Sanskrit text have tended to give preference to readings from manuscripts carrying recension *Samādhirājasūtra* II, resulting in the conflation of recensions and the insertion of later Classical Sanskrit readings into a supposedly earlier text that the editor is reconstructing.

Of greater note is the variety of metrical forms that occur through the text. The standard *śloka* is widely employed, as also *triṣṭubh*, but a number of chapters also include verses composed in complex and sophisticated verse, for example *śārdūlavikrīḍita*, *pramitākṣarā*, *aupacchandasika*, *ānandajāta*, and a variant of the *upasthitapracupita*, which reveals a *kāvya* or literary agenda on the part of the composers (Skilton, 2002a). This is consistent with the rich narrative content of the *Samādhirājasūtra*, although *kāvya* meters are not restricted to this type of content. We should bear in mind that this material stands chronologically very close to the earliest *kāvya* poetry from India and appears to confirm the

role of Buddhist composers in the development of this art.

There are two modern translations of the *Samādhirājasūtra* into Japanese (one almost complete [Tamura & Ichigō, 1975] and one partial [Mitsuhara, 1974a; 1974b; 1975; 1977]), but no complete published translation of any recension into a Western language exists (Gomez & Silk, 1989, 44–46). Translations into English of individual chapters and sections can be found in the works of C. Regamey (1990), L. Gomez and J.A. Silk (1989), C. Cüppers (1990), and A. Skilton (1997; 2002a). A relatively detailed summary of all chapters prefaces the volumes of N. Dutt and V.S.N. Sharma (1941; 1953; 1954).

Summary of Contents

The *Samādhirājasūtra* is explicitly concerned to transmit and expound the virtues of a *samādhi* that is frequently described in the text itself as *sarvadharmasvabhāvasamatāvipañcita*, "the *samādhi* that is elaborated as the sameness in essence of all phenomena." While we might reasonably expect that this refers to a meditative state, the text itself explicitly and repeatedly identifies this *samādhi* as a specific list of some 330 doctrinal terms. The importance of this list is borne out by its repetition at crucial points in the structure of the *sūtra*: in chapter 1, shortly followed by the transmission of the text in chapter 3; in chapter 17, immediately preceding the second transmission of the *sūtra* in chapter 18; and finally in chapters 38 and 39, immediately prior to the final transmission of the text in chapter 40. This interpretation is reinforced by the absence of any significant material dealing with meditation. There is no meditation practice taught in the *Samādhirājasūtra*, nor does the Buddha enter a *samādhi* for the purpose of teaching, as he does at the start of the *Heart Sūtra* and *Lotus Sūtra*. We should probably regard this usage of *samādhi* as similar to that of the term *mātṛkā*, in the sense of collection – that is, as denoting a significant list of doctrinal terms (Skilton, 2002b). The name of the *samādhi* is also integrated into the *sūtra* title of *Samādhirājasūtra* II, which describes itself in its own colophon as *sarvadharmasvabhāvasamatāvipañcitāt samādher nāma mahāyānasūtram* "a Mahāyāna *sūtra* called the *Samādhirāja* as obtained from the *samādhi* that is elaborated as the sameness in essence of all phenomena" (Dutt, 1954, 648, ll. 3–4).

The *Samādhirājasūtra* treats this *samādhi* list itself in three different ways, although each is embedded in a relatively standardized context: in chapter 1, the list is simply recited item by item, and praised. It is then followed by a *pūrvayoga* (former-life) story illustrating the commitment of the Buddha to the *samādhi* in former times and finally by a prediction of the degeneration of the saṅgha and an appeal for the text to be preserved – an appeal that is met by Candraprabha in chapter 3. In chapter 17, the entire list is once again repeated, but this time in verse, in the context of a former-life story demonstrating the Buddha's former commitment to this list. This is followed by chapter 18, in which degenerate times are predicted and the second transmission of the *samādhi* to Candraprabha is accomplished. The third cycle of recitation of the *samādhi* is spread across chapters 38 and 39. Preceding these is a chapter relating an extensive former-life story that demonstrates the Buddha's commitment to and the power of the *samādhi* and that emphasizes the degeneration of the saṅgha. In chapter 38, the first three terms of the *samādhi* – restraint of body, speech, and mind (*kāyasaṃvara*, *vāksaṃvara*, and *manaḥsaṃvara*) – are expounded in detail. Chapter 39 takes up the remaining items and offers short definitions of each in an Abhidharma-style catechism: for example item seven, "In this context, what is impartiality toward the bases of consciousness (*dhātu*)? It is the relinquishing of the bases of consciousness as being similar to a magical creation." (Dutt, 1954, 628, ll. 7–8) This extensive didactic chapter is followed by the final transmission of the *samādhi*, this time to Ānanda. While these chapters are concerned with the explicit exposition of the *samādhi* itself, all other chapters offer narratives to convince the audience of the power, significance, lineage, application, and utility of the *samādhi*.

A number of significant themes that resonate throughout the *Samādhirājasūtra* are touched on in the chapters already described, but these are also set within a very simple narrative structure. The Buddha is residing on the Vulture's Peak (Gṛdhrakūṭa) at Rājagṛha and is accompanied by 100 thousand monks and 80 million bodhisattvas. Among the audience is a young man, Candraprabha, whose spirituality is well-developed through previous lives spent learning from former Buddhas and who has set out on the Mahāyāna path. He asks leave to put a question to the Buddha, and this is granted. He asks what practices lead to the highest awakening, and the Buddha replies that one single dharma guarantees such achievement, and this is to possess *samacitta* (even mind). Those who possess this quickly acquire the *samādhi* that is elaborated as the sameness in essence of all phenomena. Thereafter the Buddha addresses the content of subsequent chapters to Candraprabha. Having undertaken to preserve the *Samādhirājasūtra* for posterity in chapter 3, Candraprabha invites the Buddha to attend his house in the city for a meal, to which the Buddha agrees. Chapters 10 and 11 are thus the narrative core of the present-time action of the *sūtra*, in that they are dedicated to describing the marvels attendant on the Buddha's entry into Rājagṛha and his partaking of the meal, which is offered in chapter 11. Once again Candraprabha is granted the opportunity to question the Buddha, and he asks a series of questions on how to achieve the highest attainments, for example recollection of former births. The Buddha replies that a single dharma enables a bodhisattva to acquire these qualities, and that is to understand the essence (*svabhāva*) of all things as they truly are (*yathābhūta*). After enlarging on this answer and praising a bodhisattva's understanding of emptiness, the Buddha discourses on the virtues of preserving this *samādhi*/*sūtra* (both terms are used). For this reason, this chapter is entitled *Sūtradhāra* (Preserving the *Sūtra*), but this theme, a common one in Mahāyāna *sūtras*, recurs throughout the text and is particularly noticeable in at least another four chapters: 2, 9, 32, and 36. Candraprabha receives his prediction (*vyākaraṇa*) to buddhahood in chapter 15. The Buddha returns to the Vulture's Peak in chapter 17, and the text is once again transmitted to Candraprabha in chapter 18. Hereafter, there is no further present-time narrative development, as the location remains the same while the Buddha delivers the material in the remaining chapters.

This rather simple present-time narrative structure is a backdrop to a large body of former-life narrative material that forms a substantial component of the *sūtra* text as a whole. As many as a dozen chapters contain such *pūrvayoga*: 2, 5, 8, 16, 17, 20, 21, 29, 33, 34, 35, and 37. While a number of these are modest if not cursory in their relation, a small group of three (chs. 33, 34, and 37) are substantial literary creations employing *kāvya* poetry, 15–20 pages in length in the *editio princeps*, and a fourth is a major composition. This is the *Supuṣpacandraparivarta*, some 55 pages in length and a major retelling of the Kṣāntivādin story concerning a Buddhist ascetic who is killed for practicing forbearance (*kṣānti*). This story was well-known throughout the Buddhist world and is preserved in multiple recensions (Skilton, 2002c).

Beside the *samādhi* itself, former-life stories are the major theme of the *Samādhirājasūtra*, but the next most frequent genre of chapter is the exposition (*nirdeśa*). There are seven expositions: chapters 13, 19, 22, 23, 27, 31, and 36; these deal with discussions of relatively discursive mixed doctrinal subjects. In this sense, they are distinct from the two introductory (*avatāra*) chapters, which deal with specific doctrinal formulations. These are chapter 7, which sets forth a distinctive account of three forms or degrees of forbearance (*kṣānti*), and chapter 24, which sets forth an account of the analytical knowledges (*pratisaṃvit*). Only one chapter is a *vyākaraṇa* [to buddhahood], and this is chapter 15, in which the reasons for the Buddha having smiled in the previous chapter are explained and Candraprabha's future buddhahood is predicted. Another single representative of a literary type is the *samādhimukha* (entrance to a *samādhi*), normally an exposition of a meditative state or practice, but here applied to chapter 17, which is the *Bahubuddhanirhārasamādhimukha* (The Entrance to the *Samādhi* Cited by many buddhas). A substantial section of the verses in this chapter recite the names of former buddhas who have memorized and cited the *samādhi*, after which the *samādhi* itself is rehearsed in verse form.

The remaining genre of chapter to mention is that of advantages (*anuśaṃsā*). There are three chapters that describe themselves as such: 26, 28, and 30; on the basis of form, content, and location, however, chapter 27 (*Śīlanirdeśa*) should also be considered an integral part of this passage. This sequence of chapters in the *Samādhirājasūtra* was presumably originally built around the perfections (*pāramitā*). The first two perfections – generosity (*dāna*) and ethical conduct (*śīla*) – are explicit in the chapter titles, while chapter 28 begins by looking at the remaining four: forbearance (*kṣānti*), effort (*vīrya*), meditation (*dhyāna*), and understanding (*prajñā*); it then moves on to great learning (*bahuśruta*), giving the dharma (*dharmadāna*), dwelling in emptiness (*śūnyatāvihāra*), solitude (*pratisaṃlayana*), forest living (*araṇyavāsa*), and the permitted asceticisms (*dhutaguṇa*). Chapter 30 describes the advantages of preserving and transmitting this *samādhi*. Beyond these named chapters, it is clear that the advantages of maintaining this *samādhi* and its associated practices are frequent themes throughout the text.

The naming of chapter 27 *Śīlanirdeśa* rather than **Śīlānuśaṃsā* raises the question of the significance of the current chapter titles. It should be stressed that these are the titles adopted by a redactor for the recension *Samādhirājasūtra* I. These are largely

followed by the redactor(s) of *Sa*
but with divergences. Neverthele

Context

The likelihood that the *Samādhirājasūtra* dates from at least the 3rd century CE, and very possibly from the century prior to that, places it in the frame of what we commonly call early Mahāyāna. This is a phase of development that predated the well-developed doctrinal positions of the middle period in monastic universities, in which Mahāyāna was but a range of "differentially marginalized minority groups" (Schopen, 2005, 17), a variety of religious and doctrinal positions embodied in an emergent *sūtra* literature some of which became the focus of major Mahāyāna schools and the majority of which did not.

Like all *sūtras*, the *Samādhirājasūtra* is anonymous, and we are probably closest to understanding its origins if we see it as the product of a redacting community that was at different points responsible for at least three of the versions that we now know. (*Samādhirājasūtra* II is better placed within a learned environment concerned with revising and normalizing the text, perhaps a monastic university.) Following on from these considerations, we can note that the *Samādhirājasūtra*'s unusual usage of the term *samādhi* is not unique but one that it shares it with a small group of other *Samādhisūtra: Pratyutpannasamādhisūtra* (T. 417; P 32), *Śūraṅgamasamādhisūtra* (T. 642; P 32), *Praśāntaviniścayaprātihāryasamādhisūtra* (T. 648; P 32), and **Sarvadharmaniyatapravicayacaryāsūtra* (觀察諸法行經; T. 649). A reasonable conclusion would be that this usage was known within a redacting community that was shared by these texts (Skilton, 2002b).

The concern with its own preservation also places the *Samādhirājasūtra* with the insecurities of emergent Mahāyāna minorities, a position that also seems to be consistent with its interest in the forest vocation. It has been convincingly argued by a number of scholars that early Mahāyāna *sūtras* share an advocacy of two overlapping areas of practice: forest living and the permitted asceticisms, of which the former is one. Both of these are well attested in this text and integrated both with the present-time framework of the *sūtra* and with its *pūrvayoga* content. For example, the forest life is clearly and vigorously advocated in the *Supuṣpacandra* chapter (Skilton, 2002c). In this respect, the *sūtra* appears to reflect an antagonism toward urban monastic Buddhism. The language of this antagonism casts this opposition as a critique of severely degenerate conditions within the monastic community, which advocates of the *Samādhirājasūtra* abhor and against which they arm themselves by preservation of the *samādhi*. This concern with monastic degeneration is particularly strongly expressed not only in chapters 16, 18, and 24 but also in chapters 5, 21, 29, 35, and 37. These passages can be seen as alternating and thereby contrasting with many others that describe the qualities of buddhas or bodhisattvas, that is with exemplars of the ideal.

Reception

The *Samādhirājasūtra* is used extensively as a proof text by Indian Mādhyamika scholars. Candrakīrti cites the *Samādhirājasūtra* over 30 times, Śāntideva 25 times, and Kamalaśīla a dozen times, and there are at least another eight authors known to use the text. The chapter most frequently cited is chapter 9 (Gomez & Silk, 1989, 32–38; Cüppers, 1990, xvi–xvii). Despite this interest, there appears not to have been a Mādhyamika commentary composed for the *Samādhirājasūtra*. Instead Tāranātha mentions a now-lost commentary on the *Samādhirājasūtra* (as *Candrapradīpa*) by the prolific 7th-century Yogācārin author Candragomin (Chattopadhyaya, 1990, 207), and the Ldan dkar catalogue mentions a now-lost anonymous commentary with the title *Ting nge 'dzin gyi rgyal po chos nyid zab mo'i 'grel pa* (Elucidation of the Profound Intrinsic Nature of the *Samādhirāja*; Gomez & Silk, 1989, 38). Otherwise, the only surviving Indian commentary (*ṭīkā*), called the *Kīrtimālā*, is by Mañjuśrīkīrti. This author is known for commentaries on tantric texts, there being a total of five items ascribed to him in the Tanjur. His *Kīrtimālā*, which shows a tendency to interpret the text in a Yogācāra light (Regamey, 1990, 22), also cites Dharmakīrti, suggesting a *terminus post quem* of the 7th century for its composition (Cüppers, 1990, 110). This commentary only survives in a Tibetan translation made in the 11th century by Śāntibhadra and Tshul khrims rgyal ba (P 105). There are partial translations from it by C. Cüppers (1990) and K. Mitsuhara (1974; 1975; 1977).

In Tibet itself, the *Samādhirājasūtra* continued to be utilized by Mādhyamika authors, for example

Tsongkhapa, but a more distinctive development is the identification within the Kagyu lineage of Gam po pa with Candraprabha. This Tibetan author, also called Zla 'od gzhon nu (*Candraprabhakumāra), is seen as the rebirth of the *Samādhirājasūtra*'s hero, returning to spread the teaching of the *sūtra* in a fallen age (Roerich, 1996, 452). The *Samādhirājasūtra* is the first text cited by Gam po pa on the first page of his *Dam chos yid bzhin nor bu thar pa rin po che'i rgyan* (Jewel Ornament of Liberation), although the quotation, to the effect that the *tathāgatagarbha* can be found in all transmigrating beings, is not in known recensions of the text. There is a modern commentary in English by the Kagyu teacher Thrangu Rinpoche (1994).

In China, it was probably the *Samādhirājasūtra*'s thematic interest in the degeneration of the saṅgha and references to the final time (*paścimakāla*) that made it of interest to the Kashmiri translator Narendrayaśas, who also worked on other texts connected to the idea of final dharma (末法), the disappearance of the Buddha's teaching from the world (Nattier, 1991, 116; Hubbard, 2001, 62, 62n1). This overlaps with the emergence of a Buddho-Taoist messianism in early medieval Chinese Buddhism, which amalgamated around the bodhisattva Yueguang tongzi (月光童子), that is *Candraprabhakumāra, who is predicted to be reborn in China as an illustrious propagator of the faith during the final age in a *sūtra* bearing his name (月光童子經; T. 534; Zürcher, 1982). Between the 3rd and the 6th century, a number of apocryphal, that is non-Indian, *sūtras* were produced that portrayed Candraprabhakumāra as a savior who appears after a major apocalypse. In the same period, Candraprabhakumāra is identified with Yan Hui (顏回), Confucius' favorite disciple (Zürcher, 2007, 313–314). Besides these, there are no Chinese-language commentaries proper on the *Samādhirājasūtra*.

ANDREW SKILTON

Saṃdhinirmocanasūtra

The *Saṃdhinirmocanasūtra* is a relatively late (4th-cent. CE[?]) Indian Mahāyāna work consisting of ten chapters in which the Buddha explains apparently contradictory statements attributed to him in earlier discourses. It contains a number of doctrines that appear for the first time in Indic literature and that later became influential in India, Tibet, and East Asia. It is particularly influential in the Yogācāra-Vijñānavāda school, for which it is the most important scriptural source.

The *Saṃdhinirmocanasūtra* claims to be a discourse (*sūtra*) spoken by the Buddha, but the fact that it discusses texts and doctrines that probably did not appear before the 2nd century CE indicates that its date of composition was at least 600 years after his death. It was originally written in Sanskrit, but today only Tibetan and Chinese versions are extant. However, as K. Matsuda (2013, 942–943) has argued, features of the language of the verses, some of which are composed in Classical Sanskrit while others are instead in so-called Buddhist Hybrid Sanskrit, the independent existence of parts of the text (see below), and the presence at the end of chapters 7–10 of epilogue phrases typical of the closing of a *sūtra* suggest that the *Saṃdhinirmocanasūtra* as we have it may be the result of a weaving together of originally independent scriptures into an organic whole.

Although the text as a whole is available only in Tibetan and Chinese translation, portions are found in Sanskrit, quoted in treatises including the *Madhyāntavibhāgabhāṣya* (Nagao, 1964, 43), *Mahāyānasaṃgraha* (Nagao, 1982–1987, I.4, II.7), Kamalaśīla's third *Bhāvanākrama* (Tucci, 1971, 1), and Sthiramati's *Triṃśikābhāṣya* (Lévi, 1925, 33–34; Buescher, 2007, 102–104). The text in its entirety is quoted in the *Viniścayasaṃgrahaṇī* of the *Yogācārabhūmi* (according to Schmithausen, 1987, 14, the *Saṃdhinirmocanasūtra* might have been composed shortly before the *Viniścayasaṃgrahaṇī* was edited; Delhey, 2013, 535–538); since a Sanskrit manuscript of the latter is known to be extant in Tibet, it is possible that the *sūtra* may be recovered from this source in the foreseeable future. A single Sanskrit leaf of the *Viniścayasaṃgrahaṇī* from a portion of the whole gifted to the Czar of Russia and now kept in Saint Petersburg has been published (Matsuda, 2013), and another fragment has been identified among the Central Asian manuscript fragments kept in Berlin (Matsuda, 2013, 942; Waldschmidt, 1971, 180).

The Tibetan Kanjur contains a canonical translation of the text, titled *Dgongs pa nges par 'grel pa zhes bya ba theg pa chen po'i mdo* (D 106/P 774). However, an entirely different and older translation has been found in a partial manuscript at Dunhuang (Stein tib. 683, 194; Hakamaya, 1984; 1986; 1987; 1988), covering approximately forty percent of the text. Although not ascertained, the title of this older version may have been *Bar mtshams ma las par 'grel pa*, based on quotations in another old Tibetan translation, that of the first *Bhāvanākrama* (Hakamaya, 1984, 188). In addition, there are palpable recensional differences between the Tshal pa and Them spangs ma lines of the translation preserved in the Kanjur (Kato, 2006), further suggestive of the complex history of the *sūtra*'s textual transmission even within Tibet.

The modern edition of the Tibetan version of the *sūtra* published by É. Lamotte in 1935 is based only on the Narthang Kanjur, with some reference to the Chinese renderings and commentaries in Tibetan. When it is compared with now available Sanskrit fragments, however, É. Lamotte's reconstructions of technical terms are fully confirmed.

In addition to the Tibetan translations, five Chinese translations of the *Saṃdhinirmocanasūtra* survive:

1. *Shenmi jietuo jing* (深密解脫經; Discourse Unraveling Profound Mysteries; T. 675), translated by Bodhiruci (Putiliuzhi [菩提流支]) in 514 CE;

2. *Jie shenmi jing* (解深密經; Discourse Unraveling Profound Mysteries; T. 676), translated by Xuanzang (玄奘);

3. *Foshuo jiejie jing* (佛說解節經; Discourse Unraveling Knots in Buddha's Teachings; T. 677; chs. 1–4), translated by Paramārtha (Zhendi [眞諦]);

4. *Xiangxu jietuodi poluomi liaoyi jing* (相續解脫地波羅蜜了義經; Discourse of the Definitive Meaning, Unraveling Knots of the Perfections;

Several commentaries are extant:

1. Asaṅga's *Āryasaṃdhinirmocanabhāṣya* (Tib. *'Phags pa dgongs pa nges par 'grel pa'i rnam par bshad pa*; Commentary on the Superior Discourse Explaining the Thought; D 3981/P 5481), summarizing the main points of the *sūtra*.
2. Byang chub rdzu 'phrul's *Āryasaṃdhinirmocanasūtrasya vyākhyāna* (Tib. *'Phags pa dgongs 'grel nges par 'grel pa'i mdo'i rnam par bshad pa*; Explanation of the Superior Discourse Explaining the Thought; D 4358/P 5845). Steinkellner [1989] argues that the author may be the Tibetan translator Cog ro Klu'i rgyal mtshan [c. 8th cent.]).
3. Jñānagarbha's *Āryasaṃdhinirmocanasūtre āryamaitreyakevalaparivartabhāṣya* (Tib. *'Phags pa dgongs pa nges par 'grel pa'i mdo las 'phags pa byams pa'i le'u nyi tshe'i bshad pa*; Commentary on Just the Maitreya Chapter from the Superior Discourse Explaining the Thought; D 4033/P 5535), in which the commentary on chapter 8 gives a strongly idealistic reading.
4. Wŏnch'ŭk's (Yuance [圓測]; Tib. Wen tshegs) *Hae simmil kyŏng so* (解深密經疏; Expansive Explanation of the Superior Discourse Unraveling Profound Mysteries; ZZ 369; trans. into Tibetan as *'Phags pa dgongs pa zab mo nges par 'grel pa'i mdo rgya cher 'grel pa*; D 4016/P 5517; see Inaba, 1972.

In the Tibetan translation, the *Saṃdhinirmocanasūtra* has 10 chapters, in each of which a bodhisattva questions the Buddha. Here the names of the bodhisattvas are used as the chapter titles, except for chapter 1, which is a dialogue between two bodhisattvas. Bodhiruci's translation agrees with this format, while that of Xuanzang treats the first four chapters as a single unit, because these chapters consistently discuss the characters of the ultimate truth (*paramārtha*). According to K. Matsuda (2013, 942), a Sanskrit fragment that bridges chapters 2 and 3 suggests that these were indeed originally a single unit, this in turn suggesting that Xuanzang may have rearranged the text (or dealt with a recension that did so). The same understanding, however, is found in Asaṅga's commentary (Lamotte, 1935, 53–54), so this may represent some interpretive tradition. Xuanzang's translation takes the topics disputed in each chapter as their respective titles.

The Title

The Sanskrit term *saṃdhi* has a number of associations, including junction, knot, intention, and thought. The Tibetan translators rendered it as *dgongs pa*, suggesting that they construed it as intention or purport. This reflects the structure of the text: each chapter begins with an advanced bodhisattva pointing out apparent contradictions in statements attributed to the Buddha and asking him to explain what he intended when he made them. *Nirmocana* also has a number of possible meanings, including loosen, free, unravel, and explain. The

type I Introduction	**type II** ***Xù pǐn* (序品; Introduction)**
1. Gambhīrārthasaṃdhinirmocana	*Shèngyìdì xiāng pǐn* (勝義諦相品; Characters of the Ultimate Truth)
2. Dharmodgata	
3. Suviśuddhamati	
4. Subhūti	
5. Viśālamati	*Xīn yì shì xiāng pǐn* (心意識相品; Characters of Heart, Mind, and Consciousness)
6. Guṇākara	*Yīqiè fǎ xiāng pǐn* (一切法相品; Characters of All the Dharmas)
7. Paramārthasamudgata	*Wú zìxìng xiāng pǐn* (無自性相品; Characters of Selflessness)
8. Maitreya	*Fēnbié yúgā pǐn* (分別瑜伽品; Analyzing the Meditation)
9. Avalokiteśvara	*Dì pōluómìduō pǐn* (地波羅蜜多品; Stages and Perfections)
10. Mañjuśrī	*Rúlái chéng suǒzuò shì pǐn* (如来成所作事品; Completing the Buddha's Performance)

Tibetan translators' choice of *nges par 'grel pa* (to expound, explain) indicates that they took it in the latter sense, again apparently reflecting the structure of the text.

Xuanzang's translation of the title as "Discourse Unraveling Profound Mysteries" suggests that he regarded it as a sermon in which the Buddha revealed new teachings in order to free his followers from conceptual knots that had arisen due to confusion regarding his doctrine. This is also true of Paramārtha's translation: "Discourse Unraveling Knots in Buddha's Teachings." These interpretations of the title became normative in East Asia.

The Three Wheels of Doctrine

In chapter 7, the Buddha answers questions from the bodhisattva Paramārthasamudgata and provides a model for reconciling doctrinal discrepancies. He states that some of his words are of "interpretable meaning" (*neyārtha*), while others are of "definitive meaning" (*nītārtha*). He divides his teachings into three "wheels of doctrine" (*dharmacakra*). The first wheel refers to the division of the Dharma into Hīnayāna (Lesser Vehicle) and Mahāyāna (Greater Vehicle). The former consists of doctrines such as the four noble truths (*āryasatya*) and dependent arising (*pratītyasamutpāda*), which appear in the first sermon attributed to the Buddha, the *Dhammacakkapavattanasutta* (Discourse Turning the Wheel of Doctrine; SN 56.11), as well as other works in the *nikāyas* and *āgamas*. These were taught to trainees of inferior capacities for particular soteriological purposes, but do not represent the Buddha's final thought. In the second wheel, the Buddha undermines the excessive truth value assigned to his words by Hīnayānists by asserting that his teachings – along with all phenomena – are empty (*śūnya*) of inherent existence, merely constructs produced by causes and conditions. This probably mainly refers to the Prajñāpāramitā *sūtras* (Perfection of Wisdom Discourses). The *Saṃdhinirmocana* implies that some of the Mahāyāna trainees who heard these words also misinterpreted their intent, and as a result fell to an extreme of nihilism. They concluded that the Buddha was negating the existence of all phenomena and stating that his own words are devoid of meaning. The third wheel of doctrine, referred to as the "wheel of good differentiations" (*legs par phye pa'i chos 'khor*; Skt. *suvibhakta dharmacakra*), is taught by the Buddha in order to counteract these false views; in it, he clarifies exactly what is being negated and what is not.

The *Saṃdhinirmocana*'s argument for definitive status is not restricted to the three-wheels schema; it also includes a number of tropes that serve to reinforce this notion. The sermon is set in a celestial realm, one that can only be accessed by advanced practitioners. The interlocutors are all tenth-level (*bhūmi*) bodhisattvas, and by implication the questions that they ask and the answers that the Buddha provides will be his final thought, intended for trainees on the highest stages of the path. The text incorporates the Mahāyāna notion that the Buddha gave some teachings for beings of inferior capacities and reserved his advanced sermons for others of superior abilities (*upāya* [skillful means]). The three-wheels schema further extends this by creating a new division within the ranks of Mahāyāna and assigning the definitive teachings to the *Saṃdhinirmocana*. Those for whom this text is normative should regard its teachings as the Buddha's final word on all doctrinal matters.

Structure of the Text

É. Lamotte (1935) asserts that the *Saṃdhinirmocana* is a composite text, but it could equally well be regarded as a coherent work, perhaps written by a single author (although it is also probable that, like other Indian Buddhist *sūtras*, it has undergone revision and augmentation). The internal structure of the *Saṃdhinirmocana* can be understood to reflect a common division into basis (*vastu*), path (*mārga*), and result (*phala*).

The first four chapters discuss the basis, namely the two truths (ultimate truth and conventional truth). The ultimate truth (*paramārthasatya*) is neither the same as, nor different from, the phenomena that it characterizes. It is compared to the melodious tone of a musical instrument and the instrument itself or a conch shell and its color. As in the Prajñāpāramitā *sūtras* (see Lamotte, 1935, 21–22, 182–183), the ultimate truth is regarded here as possessing five characteristics (*lakṣaṇa*) – it is inexpressible (*anabhilāpya*), nondual (*advaya*), beyond speculation (*tarkasamatikrānta*), neither the same as nor identical to (*bhedābhedasamatikrānta*) the conditioned phenomena, and of a single taste/flavor (*ekarasa*). Whereas chapter 1 deals with the first two characteristics, chapters 2 to 4 discuss the remaining three respectively. To put it briefly, firstly, while

apters 2 to 4 discuss the remain-
ely. To put it briefly, firstly, while

reality cannot satisfactorily be described as being either conditioned (*saṃskṛta*) or unconditioned (*asaṃskṛta*), eminent persons such as the Buddha pragmatically resort to such dual metaphorical designations (*aupacarikapada*) and conventional expressions (*vyavahārābhilāpa*) born of imagination (*parikalpa*) in order to cause ordinary persons to realize the Dharma's inexpressible nature. Those who see the truth (*dṛṣṭasatya*) know that the things that appear to them as conditioned or unconditioned are comparable to magical creations (*māyopama*).

Secondly, the ultimate is beyond any speculation, in that, contrary to the ordinary persons' (*pṛthagjana*) speculation, it is cognized by the noble ones (*ārya*) through direct personal intuition/experience (*pratyātmavedanīya*), is not the object of notions (*nimittagocara*), is inexpressible, and is beyond ordinary transactions (*vyavahāravyucchedaka*) and beyond controversies (*vivādavyucchedaka*).

Thirdly, conditioned phenomena and the ultimate are neither the same nor different (the *sūtra* develops several arguments in order to demonstrate this: if they were identical, then all childish ordinary persons [*bālapṛthagjana*] would see the truth and obtain nirvāṇa and awakening; in that case, just like conditioned phenomena, the ultimate would belong to affliction [*saṃkleśa*], all conditioned phenomena would be as undifferentiated [*niviśiṣṭa*] as the ultimate, etc.).

Fourthly, the ultimate is the pure object (Tib. *rnam par dag pa'i dmigs pa*; Skt. *viśuddhālambana*) or the object for purification (Skt. *viśuddhyālambana*) that is present in things such as the five aggregates (*skandha*), the twelve sensory bases (*āyatana*), dependent origination (*pratītyasamutpāda*), the four kinds of nutriment (*āhāra*), the four truths (*satya*), the four applications of mindfulness (*smṛtyupasthāna*), the four foundations of miraculous powers (*ṛddhipāda*), the five faculties (*indriya*) and forces (*bala*), the seven limbs of awakening (*bodhyaṅga*), and the eightfold path (*aṣṭāṅgamārga*). All of them are wrongly analyzed and debated on as separate items by philosophers. In sharp contrast to this, monks who devote themselves to yogic practice (*yogācārabhikṣu*) do not distinguish between the suchness (*tathatā*) and the selflessness (*nairātmya*) of the aggregates and between the bases and the elements. Among these, the ultimate is as neutral (*animitta*), unqualifiable (*nirvikalpaka*), and immutable (*avaivartika*) as space (*ākāśa*) among different material things (*rūpa*). This is the reason why it is said to have one and the same taste/flavor everywhere.

This leads into chapter 5, a discussion of consciousness (*vijñāna*) that focuses on the doctrine of "fundamental consciousness" (*ālayavijñāna*), which the Buddha refrained from revealing to childish ordinary beings for fear that they might mistake it for a permanent soul or self (*ātman*). This is described as the underlying source of cognition on the basis of which all other consciousnesses develop. It is composed of "seeds" (*bīja*; hence its designation as *sarvabījakacitta*, mind possessing all seeds) deposited by past volitional actions, and these continually enter its continuum, come to fruition on the basis of causes and conditions, produce results that accord with the original actions and intentions, and in turn create predispositions for cognitive patternings to continue into the future.

This idea serves a number of doctrinal functions for Buddhist epistemology and soteriology. The seeds of the fundamental consciousness, like seeds produced by trees or plants, remain *in potentia* until the proper conditions for their maturation are present. Similarly, in meditative states in which consciousness ceases to function, seeds of past actions remain in stasis until emergence from meditation. This is significant because the mind, like all phenomena, is momentary according to Buddhist theoreticians, and so if its continuum is interrupted, it would be problematic for meditators to retain past memories or habits. The fundamental consciousness accounts for this, and it also serves to explain how beings gravitate toward successive existences. The *Saṃdhinirmocana* states that another name for this consciousness is "appropriating consciousness" (*ādānavijñāna*) because it makes a connection to future lives that accord with past karmas and because the mind takes possession of the body and appropriates it. As the *sūtra* has it, once "arrived" at a new destiny (*gati*) and mode of generation (*yoni*), the mind first appropriates the material organs (*rūpīndriya*) together with the body and the imprints (*vāsanā*) of objects (*nimitta*), names (*nāma*), and ideas (*vikalpa*).

It also provides a model for the path and for attainment of buddhahood. As one progresses along the path and engages in meritorious activity and meditation, one first weakens and then gradually eliminates negative seeds and replaces them with pure ones. When the continuum of the fundamental consciousness is composed entirely of virtuous seeds, one undergoes "transformation of the basis" (*āśrayaparāvṛtti*), after which it is termed "stainless consciousness" (*amalavijñāna*). This is associated with attainment of buddhahood, and because afflictions are adventitious (*āgantuka*), once they have been removed, there is no possibility of their future reemergence.

Chapter 6 expands on the previous discussion of the two truths by declaring that phenomena may be viewed in terms of three characters (*lakṣaṇa*): (1) the imputational character (*parikalpitalakṣaṇa*), false notions (essence, attributes, etc.) imputed (mainly on the basis of names [*nāma*] and verbal conventions [*saṅketa*]) to phenomena such as selfhood or the division into subject and object; (2) the other-dependent character (*paratantralakṣaṇa*), which refers to the fact that conventionally phenomena are dependently arisen (*pratītyasamutpāda*, presented here both as the twelvefold formula and as causality in general); and (3) the thoroughly real character (*pariniṣpannalakṣaṇa*), which is equated with emptiness: when one realizes that the imputational is false and no longer perceives it, one sees the thoroughly real. The third character is commonly translated as "perfected" or "consummated" (see Nagao, 1983), but this is misleading because it implies that it is brought about through human activity. The *sūtra* makes it clear that *pariniṣpannalakṣaṇa* is unchanging, and it is compared with suchness (*tathatā*) and reality limit (*bhūtakoṭi*). Like the thoroughly real character, these refer to ultimate reality, which never changes and is always the final nature of things. Knowing the imputational character amounts to knowing that things are characterless; knowing the other-dependent character amounts to knowing things connected with affliction (*saṃkleśa*); knowing the thoroughly real character amounts to knowing things connected with purification (*vyavadāna*). In chapter 7, the thoroughly real character is said to be an "object of observation for purification," which means that because it is the unchanging ultimate truth, meditators can remove afflictions by focusing attention on it. If it were transient or something brought into being by their actions, then it could not serve this purpose.

The three-characters schema is further developed in this chapter, which discusses three "nonentitynesses" (*niḥsvabhāvatā*): (1) nonentityness in terms of character (*lakṣaṇaniḥsvabhāvatā*): imputational phenomena are completely false and so lack the characteristics imputed to them by thought; (2) nonentityness in terms of production (*utpattiniḥsvabhāvatā*): phenomena are dependently arisen on the conventional level, but this is not ultimately true, and so in this sense, they lack production; and (3) ultimate nonentityness (*paramārthaniḥsvabhāvatā*): the thoroughly real character is an absence of the imputations falsely superimposed on the other-dependent, and so in the ultimate sense, they lack them. For the *śrāvakas*, the *pratyekabuddhas*, and the bodhisattvas, penetrating and cultivating these nonentitynesses is the only way to obtain nirvāṇa, the only path toward purification (*viśuddhimārga*) and the only purification (*viśuddhi*). It is with reference to this that the Buddha has spoken of the one vehicle (*ekayāna*).

The Path

Chapter 8 transitions into a discussion of the path to buddhahood, which continues in chapter 9. The future buddha Maitreya asks about calming (*śamatha*) and insight (*vipaśyanā*), the two components of yoga, to which the Buddha responds that they are integral to attainment of unsurpassed awakening (*anuttarā samyaksaṃbodhi*). The discussion of meditation practice contains a statement that the phenomena perceived in meditation are "cognition only" (*vijñaptimātra*). A. Wayman (1979, 67) contends that this is not a statement of universal idealism and that its purview is restricted to meditative states, but the *Saṃdhinirmocana* (8.7) then extends it to all phenomena:

> [Maitreya]: Are the forms of things like sentient beings, which abide in the nature of images of the mind, "different" or "not different" from the mind?
>
> [Buddha]: Maitreya, they are "not different." However, because childish beings with distorted understanding do not recognize these images as cognition-only, they misconstrue them. (trans. Powers, 1995, 155)

The text does not elaborate on this, and it is not clear that the statement is meant as an affirmation of universal idealism, as L. Schmithausen (1976, 247) contends, but the *sūtra*'s commentators agree that it is. In his commentary, Wŏnch'ŭk (D 4016 *thi*, 218.1) states the following: "When [foolish beings] abandon external objects, then they pacify incorrect minds; when they pacify incorrect minds, then they realize the middle way." Byang chub rdzu 'phrul (D 4358 *cho*, 326.5) states that "[c]hildish beings – who do not perceive suchness, whose vision has degenerated due to faults of vision – perceive external objects as existing although they do not exist." Jñānagarbha is even more explicit:

s even more explicit:

> This indicates that the mind appears as a percept (*ālambana*) that is like an image ... A percept is an appearance of the mind in the aspect of an object and, moreover, it is not different from cognition because it is observed simultaneously ... This indicates that such cognitions – which arise from seeds of cognition that from beginningless time are infused with predispositions for designating apprehending subjects and apprehended objects – appear in the aspects of apprehending subjects and apprehended objects. (D 4033 *bi*, 321b–322a)

The remainder of the chapter is devoted to a discussion of calming and insight (definitions, mutual relationships, preliminaries, supports, intellectual features, etc.). The Buddha declares that each supports the other and that the goal of this practice is attainment of a union of calming and insight (*śamathavipaśyanāyuganaddha*). This is attained at the level of "one-pointed mind" (*cittaikāgratā*). Some practices involve focusing on meditative objects, while others examine Buddhist doctrines, especially in the form of the twelvefold exposition of the Dharma, which the bodhisattva is requested to listen to, master, and reflect on. When bodhisattvas are able to understand the Dharma comprehensively without requiring explanations or contextualization, they "attain joy in the joyousness of the Dharma." This training results in attainment of the truth body (*dharmakāya*). This process begins on the first bodhisattva level and is deepened as bodhisattvas progress on the path.

The main obstacles to *śamatha* are laxity and excitement. The former is a tendency to lose focus on the meditative object due to inattention, and the latter occurs when one becomes overly stimulated. The antidote to laxity is increasing the size or brightness of the meditative object, and the antidote to excitement is decreasing them. When one is able to maintain focus for as long as one wishes and maintains an equilibrium between laxity and excitement, one perfects *śamatha*. *Vipaśyanā* involves analyzing the object to ascertain its final nature, that is, emptiness. As their wisdom deepens, bodhisattvas progressively master Buddhist doctrines and comprehend the nature and attributes of the phenomena of existence. The Buddha informs Maitreya that development of wisdom has three stages:

1. wisdom arisen from hearing (*śrutamayī prajñā*), which is when trainees listen to Dharma teachings and have a preliminary understanding;
2. wisdom arisen from thinking (*cintāmayī prajñā*), when they think about them in greater depth and develop conceptual comprehension; and
3. wisdom arisen from meditation (*bhāvanāmayī prajñā*), when they contemplate doctrines nonconceptually and attain intuitive insight.

This transforms their perceptions, and they gradually wean themselves from false ideas. In connection (and addition) to *śamatha* and *vipaśyanā*, chapter 8 deals with numerous items traditionally regarded as relevant for yoga either as mental and cognitive properties, such as a bodhisattva's special knowledge of the Dharma (*dharmapratisaṃvid*) and of things (*arthapratisaṃvid*), or as ontological determinations, such as suchness (*tathatā*) and the various forms of emptiness (*śūnyatā*), or else as specific attainments, such as supreme awakening (*anuttarā samyaksambodhi*) and nirvāṇa.

In chapter 9, the Buddha continues the discussion of the path. He tells the bodhisattva Avalokiteśvara that it begins with a pure thought. This refers to the mind of awakening (*bodhicitta*), the intention to pursue buddhahood for the benefit of other beings. This marks attainment of the first bodhisattva level (*bhūmi*). The second level is concerned with cultivation of pure ethics, and pure intention is required for entry into the third level. Cultivation of wisdom is the primary practice of the fourth level, and this continues through the tenth level. On the eleventh level, one attains buddhahood. The Buddha then explains the meaning of the names of the levels and gives detailed descriptions of negative factors that inhibit meditators from attaining them.

He then describes how bodhisattvas train in the six perfections (*pāramitā*): (1) generosity (*dāna*), (2) ethics (*śīla*), (3) patience (*kṣānti*), (4) effort (*vīrya*), (5) concentration (*dhyāna*), and (6) wisdom (*prajñā*). These are the primary focus of the bodhisattva path, and when all have been cultivated to the highest degree, one attains buddhahood. Throughout this process, bodhisattvas are motivated by intense compassion for the sufferings of sentient beings, and this enables them to overcome despondency due to the length and difficulty of their task and to overcome obstacles. Wisdom in particular aids in developing skill in means (*upāyakauśalya*), the ability to adapt their words and deeds to the individual proclivities of trainees.

After the discussion of the perfections and bodhisattva motivation, Avalokiteśvara raises an important question: if there are innumerable buddhas and bodhisattvas who have cultivated wisdom and who have perfected skill in means, why are there so many suffering and impoverished beings? The Buddha replies that this is due to their own ignorance and the negative karma that they accrued in their present and past lives. Buddhas and bodhisattvas constantly work for their benefit, but beings foolishly misunderstand their teachings and persist in counterproductive habits, and as a result they remain enmeshed in cyclic existence and suffer its vicissitudes.

Chapter 9 ends with an explanation of the Buddha's intention (*sandhā/abhiprāya*) while teaching the one vehicle (*ekayāna*). According to the Buddha, the "vehicle of the hearers" (*śrāvakayāna*) spells out the various natures of things such as the five aggregates (*skandha*) and the six internal sensory bases (*āyatana*), whereas the Mahāyāna ("Great Vehicle") claims these very things to ultimately amount to a single element or principle (*dharmadhātu*). This is the reason why the two vehicles do not really distinguish themselves. But due to excessive literalism, some people either add to (*āropa*) or subtract from (*apavāda*) the Buddha's teaching, thus concluding that these vehicles are really distinct, and so they engage in debate.

The Result

The focus of chapter 10 is the culmination of the path: attainment of buddhahood. The bodhisattva Mañjuśrī asks about the characteristics of the truth body (*dharmakāya*). The Buddha states that the path to attaining it begins with renunciation and proceeds through cultivation of the perfections and gradual progression through the bodhisattva levels. He then declares that the lives of buddhas in their respective worlds are really only displays for the benefit of sentient beings. They all follow a set pattern: they enter a suitable womb in a family of high standing, then take birth, live in opulent surroundings in which they enjoy the best that a world has to offer, and then leave home to pursue asceticism. They later declare that asceticism and hedonism are both hindrances and then appear to progress through the stages leading to unsurpassed awakening. These actions are displayed through the creation of emanation bodies (*nirmāṇakāya*).

In addition to these displays, buddhas also deliver teachings in the form of *sūtras*, Vinaya instructions, and *mātṛkā* (condensed statements of doctrine that can also function as spells or incantations). This is followed by a listing of topic areas that summarizes a wide range of teachings that had become part of Mahāyāna canonical literature by the 2nd century CE.

The Buddha then segues into a lengthy discussion of logic and reasoning. These are essential to the teaching activities of bodhisattvas because they serve to convince skeptics. To put it in a nutshell, reasoning (*yukti*) is presented as fourfold: (1) reasoning about things' mutual dependence (*apekṣā*); (2) reasoning about the way in which results or effects are produced (*kāryakaraṇa*); (3) reasoning proving by means of arguments (*upapattisādhana*); and (4) reasoning about the true nature of things (*dharmatā*). Focusing on the third type of reasoning, the Buddha spells out its various argumentative devices: perception, inference, analogy or exemplification, and authoritative statements made by trustworthy persons such as the omniscient. All such analysis is based on intuitive understanding of suchness, which guides the use of language and reasoning. Bodhisattvas make distinctions between conditioned (*saṃskṛta*) and unconditioned (*asaṃskṛta*) phenomena, and they point out the negative outcomes of engaging in unskillful deeds and the benefits of cultivating virtue. They further teach about cause and effect. In disputation with opponents, bodhisattvas must employ "pure analysis of logical correctness." This involves direct perception of the subject of reasoning, understanding how it comes to be, providing concordant examples, giving flawless reasonings, and citing "very pure scriptures."

This sort of reasoning and analysis became an important concern of many luminaries of Yogācāra and the Buddhist Pramāṇa ("Epistemology") tradition, including Vasubandhu (c. 350–430 CE), Dignāga (c. 480–540 CE), Dharmakīrti (c. 7th cent. CE), and their successors. The Buddha's description of proper reasoning encodes notions that would become important for these philosophers, particularly the emphasis on direct perception (*pratyakṣa*) as the basis for proper logic and inference (*anumāna*) based on such observation (on this discussion and its relationship with later logic and epistemology, see Steinkellner, 1988, II.14–19; Yoshimizu, 2010).

The use of examples (*dṛṣṭānta*) is a standard aspect of Indian systems of reasoning. The requirement that one cite scriptures as part of the process of disputation was later dropped by Buddhists who engaged in debate with non-Buddhist opponents. Since the two sides did not agree on which scriptures were authoritative, debates were conducted solely on the basis of agreed-on means of authoritative cognition (*pramāṇa*). For the Buddhist epistemologists beginning with Dignāga, only direct perception and inference were acceptable.

In response to a question by Mañjuśrī, the Buddha describes the activities of buddhas. He states that as a result of their training over the course of countless eons, buddhas become so habituated that their efforts on behalf of sentient beings are purely spontaneous. No thought or deliberation is required, and for each person or group, a buddha will intuitively know what is most beneficial. He concludes with a declaration that the *Saṃdhinirmocana* contains the "definitive instruction."

The *sūtra* has occasioned much discussion among scholars including in the context of the development of certain key doctrinal ideas. H. Buescher (2008) argues that the *Saṃdhinirmocanasūtra* represents a new direction in Buddhist thought, one distinct from other philosophical traditions, including Sarvāstivāda, Sautrāntika, and Madhyamaka. The main differences, he contends, relate to its introduction of a number of new doctrines, including fundamental consciousness (*ālayavijñāna*), the three natures (*svabhāvatraya*), and cognition-only (*vijñaptimātra*). His discussion of the origin of the fundamental-consciousness doctrine takes issue with L. Schmithausen (2007), who argues that the earliest mention of fundamental consciousness is found in the *Samāhitābhūmi* (Level of Meditative Concentration) of the basic section of the *Yogācārabhūmi* (Levels of Yogic Practice). It is also at odds with the chronology proposed by C. Lindtner (1992), who believes that the discussion of fundamental consciousness in the *Laṅkāvatārasūtra* (Descent into Lanka Discourse) predates that of the *Saṃdhinirmocanasūtra*. H. Buescher's ideas are further discussed by L. Schmithausen (2014), who clarifies his earlier arguments and presents new evidence for his chronology.

Suvarṇabhāsottamasūtra

The *Suvarṇabhāsottama* ([*Sūtra* of] Utmost Golden Light; also known as *Suvarṇa[pra]bhāsottama-[sūtrendrarāja]sūtra*; Utmost Golden Light, King of Kings of *Sūtras*; commonly rendered *Sūtra of Golden Light*) is a Mahāyāna text likely composed or compiled in the century or two prior to its *terminus ante quem* in the early 5th century CE, when it was first translated into Chinese. Extant in several different versions of varying title and length, the *sūtra*'s contents are quite diverse, including a confession, instructions for rituals, praise poetry, a medical text, a treatise on kingship, and three *jātaka* tales. As in several other Mahāyāna *sūtras*, these heterogeneous elements are united by a pronounced emphasis on the transformative power of the text itself and on the exalted status of its preacher. In Central and East Asia, it gained particular renown as a means for protecting the state.

Recensions, Translations, and Editions

The extant Sanskrit *sūtra* is preserved primarily through the Nepalese manuscript tradition, in which the *Suvarṇabhāsottama* is revered as one of the nine dharmas (*navadharma*), a set of ritually important texts in Nepalese Buddhism. Two known manuscripts attest to a relatively early stage in this tradition: a partially preserved palm-leaf manuscript (ms. G) held at the University of Cambridge and consulted by J. Nobel (1937), and the complete 1581 CE paper manuscript (ms. J) held in the Tōyō Bunkō Oriental Library, the primary Sanskrit witness consulted by P.O. Skjærvø (2004). P.O. Skjærvø surmises that these two manuscripts likely had a common ancestor, albeit at a remove of several generations. By comparison with the hundreds of later (late 17th-early 20th cent.) Nepalese manuscripts held in various collections, these two show a closer affinity to the more than 80 Central Asian Sanskrit fragments that have thus far been identified, dating roughly from the latter half of the 1st millennium CE (Nobel, 1937, ix–xiii; Skjærvø, 2004, xxxiii–xxxvii; Yuyama, 2004). Although the chapter divisions vary somewhat among the extant Nepalese manuscripts, all represent a single recension of the *sūtra*. Some of the Central Asian fragments attest to other recensions of the text (Skjærvø, 2004, li).

Two editions of the Sanskrit were made prior to the 1937 publication of J. Nobel's authoritative edition. Of the first, by SaratChandra Das and SaratChandra Śāstrī (1898), only the first fascicle was published (1898). The second, prepared by Bunyiu Nanjio and revised and edited by Hokei Idzumi after Nanjio's death, was published in Japan in 1931. J. Nobel (1933) deemed these previous editions flawed. An edition prepared in 1967 by S. Bagchi (1967) relies in part on the Nanjio and Idzumi edition. Tsuchida Ryūtarō (1985) provides valuable notes on J. Nobel's edition. P.O. Skjærvø's edition (2004) relies on that of J. Nobel but takes into account the abovementioned manuscript (ms. J), the numerous Central Asian fragments discovered since J. Nobel's edition was prepared, and the readings preserved in the Khotanese manuscripts, as well as advances made in the understanding of Buddhist Hybrid Sanskrit since the time of J. Nobel. On these editions, see the remarks of Hahn (2011).

The extant premodern translations of the *Suvarṇabhāsottama*, ranging from 18 to 31 chapters in length, attest to a complex history of redaction and transmission. The earliest extant recension of the text is that preserved in the 420 CE Chinese translation *Jin guangming jing* (金光明經; *Sūtra* of Golden Light; T. 663) attributed to the Central Asian monk Tanwuchen (曇無讖; Skt. *Dharmakṣema; 385–433 CE); this version lacks several passages extant in the Sanskrit, while some parallel passages differ somewhat in content or placement within the text. Certain of the Central Asian fragments agree with this translation against the Nepalese manuscript tradition (Nobel, 1937, xiii–xiv.; Skjærvø, 2004, li–lii). Despite these relatively minor differences in content, the chapter divisions of Dharmakṣema's translation agree with the extant Sanskrit text, save that a list of names of buddhas and bodhisattvas that concludes a chapter in the Chinese translation constitutes a separate chapter in the Sanskrit text.

A second canonical version of the *sūtra* in Chinese is the *Hebu Jin guangming jing* (合部金光明

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

經; Collated *Sūtra* of Golden Light; T. 664), a compilation made by the monk Baogui (寶貴) in 597 CE. This version supplements the 18 chapters of Dharmakṣema's translation with excerpts from two other translations attributed to Paramārtha (眞諦; 499–569 CE) and Jñānagupta (闍那崛多; 523–600 CE), respectively. These translations no longer survive as independent canonical works, but an incomplete manuscript of Paramārtha's text has been preserved in Japan (Radich, 2014, 209). M. Radich (2014) has demonstrated that the new chapters in Paramārtha's version have sources in earlier Chinese translations of other texts, and suggests that these chapters were likely composed in China.

The longest attested recension of the *Suvarṇabhāsottama* is the translation completed in 703 CE by Yijing (義淨; 635–713 CE), the *Jin guangming zuisheng wang jing* (金光明最勝王經; Most Victorious King of Golden Light *Sūtra*; T. 665), with 31 chapters. This version was highly influential, serving as the source text for subsequent translations into Tibetan, Sogdian, Uighur, and Tangut. The Uighur translation (*Altun Yaruk Sudur*) is perhaps the most important extant Uighur Buddhist text and has been studied quite extensively (see Radlov & Malov, 1913; Tekin, 1971; Zieme, 1996; Wilkens, 2001).

Tibetan canonical collections also contain three versions of the *sūtra*, designated Tib. I, Tib. II, and Tib. III by J. Nobel in his editions of these versions (1944; 1958). Tib. I (*'Phags pa gser 'od dam pa mdo sde'i dbang po'i rgyal po*; Noble Utmost Golden Light, King of Kings of *Sūtras*; D 557/P 176), containing 21 chapters, corresponds quite closely to the extant Sanskrit version, although a few passages in the Sanskrit are not present in the Tibetan and vice versa. Tib.II (also entitled *'Phags pa gser 'od dam pa mdo sde'i dbang po'i rgyal po*, D 556/P 175), with 29 chapters, reproduces Tib. I with only minor changes in all the sections shared between the two versions. It is said to have been translated from Sanskrit by Jinamitra, Śīlendrabodhi, and Ye shes sde in the early 9th century, but M. Radich (forthcoming) has shown that some of the additional chapters may have been translated from Chinese. J. Nobel's Tib. III (*'Phags pa gser 'od dam pa mchog tu rnam par rgyal ba'i mdo sde'i rgyal po theg pa chen po'i mdo*; Noble Utmost Golden Light *Mahāyāna Sūtra*, Most Victorious King of *Sūtras*; D 555/P 174) is a translation from Chinese of Yijing's 31 chapter version (*Jin guangming zuisheng wang jing*), attributed to Chos grub (9th cent.). Several sections of this version are preserved in two significantly different forms in different Tibetan editions of the canon. In addition, partial manuscripts of the *sūtra* found at Dunhuang attest to at least two other Tibetan translations, studied in depth by C. Oetke (1977, and see de Jong, 1979). Scholars have noted that certain Mongolian translations of the *sūtra*, the *Altan Gerel*, while based on the Tibetan canonical versions (as is usually the case), suggest that the translators consulted the Chinese and Uighur versions as well (Aalto, 1950; Nattier, 1987).

The extensive but fragmentary Khotanese manuscript remains appear to attest to all but the earliest recension of the text and to different translations of the same recension. These have been edited and translated by P.O. Skjærvø (2004). The form of the language varies considerably, testifying to Old, Middle, and Late Khotanese, and ranging from the 5th or 6th century through the 9th or 10th century. The oldest fragments are largely in agreement with the earliest Nepalese Sanskrit manuscripts but preserve an earlier stage in the development of this recension. The Middle Khotanese versions roughly correspond to Tib.II and the compilation of Baogui, while the latest manuscripts seem to correspond with Yijing's translation (Skjærvø, 2004, lx–lxvi).

The title of the *sūtra* also varied over time. While the Khotanese and Central Asian Sanskrit manuscripts attest to the title *Suvarṇabhāsottama*, the Nepalese tradition seems unanimous in preferring *Suvarṇaprabhāsottama*. The presence or absence of *-pra-* would make little difference from the point of view of Sanskrit. As the title of Yijing's translation indicates, some interpreters considered the *sūtra*'s very frequent epithet for itself, *sūtrendrarāja* ("king of kings of *sūtras*") to constitute part of the title; a certain number of other *sūtras* refer to themselves in this way as well.

Scholarly translations into modern Western languages began at the early date of 1832, with the translation by I.J. Schmidt of the chapter on the three bodies of the Buddha into German. E. Burnouf included a detailed summary of the Sanskrit *sūtra* in his 1844 *Introduction à l'histoire du buddhisme indien* (Burnouf, 1844, 484–491). A number of partial translations were made, including one by V. Radlov & S. Malov (1913) from Uighur into German. J. Nobel (1958) produced a German translation of Yijing's Chinese version. R.E. Emmerick (1970; ²1990; ³1996) translated the Sanskrit into English. The Foundation for the Preservation of the Mahāyāna Tradition, a contemporary Buddhist organization rooted in Tibetan Buddhism that advocates the recitation

of the *sūtra*, has produced transla
languages from the 21-chapter T
version. These are available on t
website (see bibliography).

Summary of Contents

The language of the Sanskrit *Suvarṇabhāsottama* is consistent with what F. Edgerton (1953) termed Buddhist Hybrid Sanskrit. As is the case with a number of other Mahāyāna *sūtras*, the *sūtra* is composed in a mix of verse and prose in which the prose sections conform more or less to standard Sanskrit, but with a distinctively Buddhist vocabulary, while the verse sections preserve more Middle Indic forms. Most of the verses are composed in the common *śloka* and varieties of *triṣṭubh* meter, but occasionally more elaborate meters are encountered. Perhaps because the *sūtra* incorporates material from a number of different sources, it shows considerable stylistic variation, and transitions between chapters are sometimes abrupt. That said, a number of overarching themes connect its diverse materials and suggest some of the aims that may have motivated its composition and ongoing augmentation.

The most pervasive of those themes is the nature and potency of the *sūtra* itself. The first chapter, *Nidānaparivarta* (Originating Circumstances) situates the Buddha not only in the geographical location of Mount Gṛdhrakūṭa ("Vulture Peak") but also in the "dharma realm" (*dharmadhātu*), the "profound region of buddhas" (*gambhīra buddhagocara*). These two locations are subsequently identified with the *sūtra* itself. The Buddha, surrounded by a sizeable assembly, utters verses regarding the power of this "king of kings of *sūtras*" that he is about to preach: the calamities, deformities, and misfortunes that it will bring to an end, the manifold deities who will respond to its preaching by offering protection, and the ritual preparations that would-be auditors of the *sūtra* should undertake.

Chapter 2, *Tathāgatāyuḥpramāṇaparivarta* (The Lifespan of the Tathāgata), opens in the house of the bodhisattva Ruciraketu, who wonders why the Buddha's lifespan was a mere 80 years, since he has so richly fulfilled the two causes of longevity: refraining from killing living beings and giving them food. The buddhas of the four directions appear, and reveal to him that the Buddha's lifespan is, in fact, immeasurable. Then the Brahman Kauṇḍinya requests a relic (*dhātu*) of the Buddha. The remainder of the chapter, mostly in verse, reveals that there cannot be a relic aside from the dharma relic/realm (*dharmadhātu*) because the Buddha does not have a flesh-and-blood body but rather an eternal body that is identical with his teachings.

In chapter 3 (*Deśanāparivarta*, Confession), the bodhisattva Ruciraketu falls asleep and has a dream in which verses of confession issue forth from a shining golden drum. When he awakens, Ruciraketu visits the Buddha and recites the verses, which move from the confession of past evil acts, through the resolve to work for the benefit of beings, to praise of the Buddha and rejoicing for the merit earned by others. The efficacy of this "confession of Utmost Golden Light," it is said, is such that a single recitation destroys negative karma accumulated over thousands of aeons. The chapter ends with the assertion that all those "in whose ear this confession enters" have already served thousands of buddhas.

Chapter 4, *Kamalākaraparivarta* (Profusion of Lotuses), consists of verses in praise of all past, present, and future buddhas. They were originally recited, the Buddha reports to the goddess Bodhisattvasamuccayā, by a certain King Suvarṇabhujendra. The expiatory power of the *sūtra* is again asserted.

Chapter 5, *Śūnyatāparivarta* (Emptiness), entirely in verse, begins by asserting that since emptiness has been dealt with at length in other *sūtras*, the *Suvarṇabhāsottama* will deal with it concisely. The primary focus of the chapter is the emptiness of the body and the illusoriness of the self. The chapter ends with a strong rhythmic assertion of the Buddha's realization and transmission of the dharma, represented as *amṛta* (immortalizing nectar).

The sixth and longest chapter in the *sūtra*, *Caturmahārājaparivarta* (The Four Great Kings), in prose save for a series of laudatory verses near the end, consists of a series of rhythmic exchanges between the Buddha and the eponymous divine kings regarding the *sūtra* and its preaching, especially in relation to the wellbeing of the human king and his kingdom. The oral *sūtra* is characterized as *dharmāmṛtarasa* (the liquid essence of the immortalizing nectar of the dharma), which enters and transforms its listeners, above all the four great kings themselves (the so-called "world protectors" [*lokapāla*]: Vaiśramaṇa, Dhṛtarāṣṭra, Virūḍhaka, and Virūpākṣa), imbuing them with virile, kingly qualities. By honoring and protecting the *sūtra*'s preachers and proponents and sponsoring the ritual oration of the *sūtra*, a human king acquires for himself and his kingdom the protection of the four great kings. The preacher is asserted to be the functional equivalent of the Buddha and receives a prediction to buddhahood by all the buddhas in the cosmos. The chapter ends when the four great kings are moved to tears by the affective force of the dharma and vow to protect the *sūtra*'s preacher.

Protecting the preacher of the *sūtra* and ensuring his eloquence remain the primary foci of the next several chapters, in which a series of deities rise from the assembly to offer their aid. In chapter 7 (*Sarasvatīparivarta*), the goddess Sarasvatī promises to bestow eloquence on the preacher of the *sūtra* and provides him with a bathing ritual and potent syllables (*dhāraṇī*) to ensure the flawlessness of his memory and the sweetness of his speech. The chapter ends with the Brahman Kauṇḍinya offering verses of praise to Sarasvatī herself. The goddess Śrī then rises from the assembly (chapter 8, *Śrīparivarta*) and offers her assistance to the preacher, as well. The chapter also includes ritual formulae and potent names to be recited by those who desire prosperity and protection. There follows the very brief chapter 9 (*Buddhabodhisattvanāmasaṃdhāranaparivarta*, Maintaining the Names of Buddhas and Bodhisattvas), which in some versions of the *sūtra* is incorporated into the preceding or following chapter. The chapter asserts that those who pay homage to a specified list of buddhas and bodhisattvas will recall their previous births.

In the tenth chapter (*Dṛḍhāparivarta*), the earth goddess Dṛḍhā promises that whenever and wherever the *sūtra* is preached, she will lay her invisible body at the feet of the preacher and be satiated with the liquid essence of the immortalizing nectar of the dharma. The richness and fertility of the earth will increase as a result, and all beings who consume its fruits will glow with energy and health. They will beg the preacher to perform the *sūtra* again, and so the cycle of flourishing continues. The *yakṣa* general Saṃjñāya rises from the assembly in chapter 11 (*Saṃjñāyaparivarta*), offering further protection to the preacher and guaranteeing his eloquent performance.

Chapter 12, *Devendrasamayaṃ nāma rājaśāstraparivarta* (The Treatise on Sovereignty-Entitled "Contract for Divine Kings"), returns to the theme of sovereignty introduced in chapter 6. A king who is stepping down from the throne recites to the son who will succeed him a versified treatise on kingship, framed as King Brahma's response to a query from the four great kings regarding why a human king is called divine. The treatise explains that the quality of divinity is not inherent but granted by the gods, on the condition that the king rule in accordance with the dharma. The benefits of doing so and the considerable costs of neglecting to do so are described in detail.

Chapter 13 (*Susaṃbhavaparivarta*), a story of the Buddha's past life as King Susaṃbhava ("Auspicious Origin"), exemplifies the benefits to rulers that result from hearing the *sūtra* and honoring its preachers. King Susaṃbhava dreams that he hears the *Suvarṇabhāsottama* uttered by a preacher shining in the midst of the sun. He seeks out the preacher when he awakens, makes the appropriate ritual preparations for the preaching of the *sūtra*, and is overcome with joy and pleasure when it is preached. At the conclusion of the story, the Buddha attests to the efficacy of this experience: it was because he heard and rejoiced in the *sūtra* that he experienced human and divine kingship over multiple lifetimes and eventually gained his beautiful golden dharma body. The preacher became the buddha Akṣobhya.

The fourteenth chapter, *Yakṣāśrayo nāmarakṣāparivarta* (The Protective Text Called "Refuge of the Yakṣas"), in verse, save for a brief prose introduction, advocates hearing and reciting the *sūtra*, and offers somewhat esoteric instruction on the process and its results, including the directive to enter the realm/relic of the dharma (*dharmadhātu*), where Buddha Śākyamuni preaches this *sūtra* in the stūpa of the dharma. Throngs of deities will ensure the success and well-being of those who hear and study this *sūtra*, and the entire cosmos will flourish.

In chapter 15, *Daśadevaputrasahasravyākaraṇaparivarta* (The Prediction for Ten Thousand Godlets), the goddess Bodhisattvasamuccayā asks the Buddha why he has predicted ten thousand godlets to enlightenment, since they have not engaged in the arduous acts of self-sacrifice and lavish giving that are supposedly required of would-be bodhisattvas. The Buddha offers two reasons: first, because the godlets developed a root of merit through hearing and rejoicing in the *Suvarṇabhāsottama*; and second, because of a resolve in a past life. The subsequent two chapters tell the story of that past life, which demonstrates the power of preaching. In chapter 16, *Vyādhipraśamanaparivarta* (On Curing Diseases), the Buddha tells the story of his previous birth as Jalavāhana ("Water Bearer"), son of the merchant and physician Jatindhara. At that time, in the realm of the good king Sureśvaraprabha, many people are ill. Wishing to heal them, Jalavāhana asks his father to share his medical knowledge. to share his medical knowledge.
so in a series of verses describing

the seasonal and alimentary causes and cures of illnesses. Jalavāhana then cures the diseases of the people in the land simply by proclaiming that he is a doctor, with the ability to free them from illness.

The story continues in chapter 17, *Jalavāhanasya matsyavaineyapūrvayogaparivarta* (The Story of Jalavāhana's Fish Disciples). Jalavāhana is wandering through a forest when he notices all the flesh-eating animals running toward a pond. Curious, he follows them, and finds ten thousand fish on the brink of death because an evil being has diverted the water source of the pond. Jalavāhana feels great compassion for the fish and brings them first water, then food. He preaches to them and causes them to hear the name of the buddha Ratnaśikhin, by the power of whose previous resolve they are reborn in heaven after they die. Recognizing that this favorable birth was due to the preaching of Jalavāhana, the former fish shower him with pearls and flowers. The narrating Buddha reveals that the ten thousand godlets whom he has predicted to enlightenment were the fish that Jalavāhana saved.

The well-known *jātaka* tale of the tigress is recounted twice in chapter 18 (*Vyāghrīparivarta*), first in a mixture of prose and verse, and then entirely in verse; the content of the two versions is similar, but not identical. The Buddha tells the story to a group of monks on finding the relics of his previous incarnation as the Bodhisattva. In that lifetime, he was Mahāsattva, the youngest of three princes. One day, the princes are wandering in a forest and come upon a tigress who has recently given birth. She is so weak and hungry that she will either die of starvation or eat her own cubs. All the princes find the situation tragic, but Mahāsattva decides to sacrifice himself to save her. In both renditions, the remainder of the story dwells in great detail on the horror and grief of Mahāsattva's parents and brothers.

Chapter 19, *Sarvatathāgatastavaparivarta* (In Praise of All Tathāgatas), consists of verses in praise of the Buddha's beauty, power, and eloquence, offered first by a throng of bodhisattvas, then by Ruciraketu, and finally by the goddess Bodhisattvasamuccayā. The goddess concludes her praise with a series of plaintive stanzas (not fully preserved in Sanskrit) in which she begs to see the Buddha's body. The Buddha rises and commends her, all present rejoice, and the *sūtra* ends.

While the *Suvarṇabhāsottama* obviously contains a broad range of material, it also makes a few central and interrelated claims: that the *sūtra* itself is the eternal body of the Buddha, and that preaching it is efficacious both as a means of state protection and as an alternative path to buddhahood. That efficacy is supported by the rich assortment of rituals included in the *sūtra*, which offer specific means for addressing suffering and enhancing well-being on a personal, communal, and cosmic level. The additional chapters included in the other versions of the *Suvarṇabhāsottama* largely augment these themes, advancing particular theories of embodiment (as in the **trikāya* chapter) and expanding the *sūtra*'s ritual resources with the addition of several *dhāraṇī* chapters. The table on the following page containing a list of the chapters included in Yijing's Chinese version of the *sūtra* and its canonical Tibetan translation (Tib. III) provides a sense of the extent and character of that expansion (for a table comparing the contents of the Sanskrit with all the Chinese and Tibetan canonical versions, see Nobel, 1937).

While the textual history of the *Suvarṇabhāsottama* suggests that it grew and changed through a gradual process of accretion, it also demonstrates that multiple versions of the *sūtra* circulated simultaneously and were deemed worthy of preservation side by side in canonical collections. Indeed, the anthologizing tendencies implied in the *sūtra*'s history and content are confirmed by a number of studies. Suzuki Takayasu (1996) has demonstrated that chapter 2 on the lifespan of the Buddha concludes with verses from the **Mahāmeghasūtra*, which is not otherwise extant in Sanskrit (see also Forte, 1976). C. Ludvik (2004; 2006) has studied a hymn in the Sarasvatī chapter of Yijing's translation of the *sūtra* that corresponds to verses in praise of a goddess from the Sanskrit *Harivaṃśa*, a very interesting example of shared material between Buddhist and other South Asian literatures. M. Radich's (2014; forthcoming) analysis of the complex relationship between the translation attributed to Paramārtha and a number of other Chinese sources points to the continued augmentation of the text in China. Hamano Tetsunori (1984; 1985) has shown that the influential chapter on the three bodies (**trikāya*) of the Buddha, which is not part of the extant Sanskrit text, but is included in all the translations except Tib. I and that of *Dharmakṣema, has parallels in the *Sku gsum la 'jug pa'i sgo* (Skt. **Kāyatrayāvatāramukha*; D 3980/P 5290). And J. Wilkens (2001) demonstrates that in the Uighur translation, the same chapter is expanded to incorporate ideas not found in the Chinese text from which it was translated, that of Yijing.

Indeed, J. Nobel (1937, xxxix–xlvii) argues that the *sūtra* was composed from the beginning through an additive process: he posits that the verses of the *Deśanāparivarta* and the *Kamalākaraparivarta*,

chapters 3 and 4 in the Sanskrit *sūtra*, constitute the original core of the *sūtra*, around which other sections, which he sees as bearing little or no relationship to one another, were later arranged. The ongoing augmentation of the *sūtra* might well indicate that its authors, compilers, and translators repeatedly seized the opportunity to make it more appealing to its changing audiences, and perhaps to further their own purposes through its appeal (Radich, 2014, 234). We should note, however, that such a process by no means necessitates that the pieces in question are unrelated; indeed, it is much more likely that they were excerpted and recontextualized with particular aims in mind. The *Suvarṇabhāsottama* may be usefully conceived as an anthology of sorts, but with the recognition that anthologies are not simply random assemblages.

Context and Reception

While little specific evidence exists outside the text itself to suggest the factors that led to its composition or the uses to which it may have been put in the South Asian context, the *sūtra*'s content and probable period of compilation (late Kushana/early Gupta; i.e. late 3rd-early 4th cents.) are suggestive. Suzuki Takayasu (2003; 2004; 2005; 2006; 2007; 2008; 2009; 2010; 2011; 2012) has interpreted the *Suvarṇabhāsottama*'s collection of various doctrinal ideas and rituals as evidence of Buddhist attempts to assert the viability of Mahāyāna teachings in a context increasingly dominated by Brahmanism. C. Haskett (2010) situates the *Deśanāparivarta* in the context of Indian Buddhist confession practices more broadly.

The centrality of kingship and state protection as themes in the *sūtra* implies that the work was intended for a courtly audience; so, too, might the text's claim to possess a *rasa* (liquid essence/aesthetic flavor) that confers sovereign qualities on listeners (Gummer, 2012b). J. Nobel (1937, xxxviii–xlvii) hypothesizes that the recurring name of Ruciraketu may reference a specific ruler and even constructs a royal genealogy based on the names given in the *sūtra* to the father and sons of this bodhisattva/king, although as C. Ludvik notes (2007, 153), the names used in the *sūtra* are not likely those of any historical personage, if indeed such a royal patron existed.

The *Suvarṇabhāsottama*'s sustained focus on its preacher and his eloquence – a focus it shares with other Mahāyāna *sūtras* like the *Lotus Sūtra* – suggests that the *sūtra* was intended for oral performance, as do some of the rhetorical techniques employed in the text (Gummer, 2000; 2012a). The *sūtra* also shares with the *Lotus Sūtra* the assertion that the lifespan of the Buddha is immeasurable and his body imperishable. The identification of the *sūtra* as the eternal body of the Buddha and the assertion of the preacher's Buddha-like status indicate that one function of such a performance is to make the Buddha present. N. Gummer (2014) argues that in the *Suvarṇabhāsottama* and related *sūtras*, rituals of recitation substitute for the self-sacrifice of the bodhisattva (itself a substitute for animal sacrifice), offering a bloodless path to buddhahood through the aesthetic consumption of the dharma body.

Various aspects of the *sūtra* have led some scholars to view the text as having esoteric or proto-tantric elements. J. Huntington (1987) has identified the miraculous transformation of Ruciraketu's house when the buddhas of the four directions appear in chapter 2 as an early description of the *maṇḍala* of Mahāvairocana. This argument, coupled with the prominence of the kingship theme in the *sūtra*, is cited by G. Samuel (2008) as evidence for the origins of Tantra. M. Walter (1979) views the text's representation of its own *rasa* as a precursor to later Indo-Tibetan *rasāyana* (alchemical) systems, and Hino Eun (2010) argues for the distinctively esoteric features of the *sūtra*'s rituals and for the role of the *dharmabhāṇaka* (preacher) as ritual specialist.

No commentaries on the *Suvarṇabhāsottama* are known to have been composed in South Asian languages, but the *Deśanāparivarta* is cited at some length in the *Śikṣāsamuccaya* (Bendall, 1897–1902, 160.12–164.7; 216.6–219.9).

The translation of the *sūtra* and its incorporation of material from diverse sources have invited comparative study, illuminating the processes of transmission through which the text came to address new audiences and purposes. In addition to the textual studies mentioned above, several works investigate the translation of specific chapters. R. Hisamitsu (1983) conducts a close comparison of the Sanskrit and the three Chinese versions of the *Tathāgatāyuḥpramāṇaparivarta*. J. Nobel (1951a) examines the bathing ritual in the Sarasvatī chapter comparatively, as do D. Maue and O. Seitkaya (1986; 1991). C. Ludvik's (2007) study of Sarasvatī's transmission from South Asia to East Asia contains extended consideration of the *Sarasvatīparivarta*, including the bathing ritual. The *Vyādhipraśamanaparivarta* has been studied for its illumination of both early Indian medical practices (Nobel, 1951b) and their reception and influence in China (Salguero, 2013; 2014).

The *Suvarṇabhāsottama*'s perceived ritual efficacy and emphasis on state protection shaped its reception and use in contexts beyond South Asia. In a number of different polities in China, the *sūtra* played a central role in ceremonies for the protection of the state and the legitimation of its rulers, and was frequently paired with the apocryphal *Renwang jing* (仁王經; *Sūtra* for Humane Kings; T. 245) to serve these ends (Li, 2009, 241–243; Hureau, 2009, 1232–1235; Lewis, 1990, 209–210; Orzech, 1998, 116–117). The *Suvarṇabhāsottama* was also frequently copied and recited as a means of making merit and ensuring protection and prosperity, and inspired the composition of miracle tales recounting its agency and efficacy in the lives of devotees (Lagerwey, 2009, 34; Hou, 2009, 1156–1160; Stevenson, 1995, 427).

Several works focused on the *Suvarṇabhāsottama* – both commentaries and ritual manuals – are ascribed to the Tiantai patriarch Zhiyi (智顗; 538–597 CE), some in collaboration with his disciple Guanding (灌頂; 561–632 CE), including the *Jin guangming jing xuanyi* (金光明經玄義; Profound Meaning of the *Sūtra* of Golden Light; T. 1783) and the *Jin guangming jing wenju* (金光明經文句; Exegesis of the *Sūtra* of Golden Light; T. 1785). Other commentaries are the *Jin guangming jing shu* (金光明經疏; Commentary on the *Sūtra* of Golden Light; T. 1787) attributed to Jizang (吉藏; 549–623 CE) and the *Jin guangming zuisheng wang jing shu* (金光明最勝王經疏; Commentary on the Most Victorious King of Golden Light *Sūtra* T. 1788) attributed to Huizhao (慧沼; 648–714 CE). Fragments of a commentary ascribed to Paramārtha are quoted in other texts (see Radich, 2015). Particularly influential in Buddhist practice was Zhiyi's *Jin guangming chanfa* (金光明懺法; Rite for the Golden-Light Repentance) and his development (on the basis of the story of Jalavāhana) of a formal ceremony for releasing animals (*fangsheng hui*; 放生會), especially fish into ponds built for that purpose, and preaching to them (Stevenson, 1986; 1999; records of the rites are preserved in the *Guoqing bailu* [國清百錄; Record of One Hundred Items Regarding Guoqing [Monastery]; T. 1934 XLVI 796a, 801c, 822b–823a]). New versions of these popular rites were produced and promulgated by Song dynasty Tiantai revivalists Zunshi (遵式; 964–1032) and Zhili (知禮; 960–1028), including the *Jin guangming chanfa buzhu yi* (金光明懺法補助儀; Emended Rite for the Golden-Light Repentance; T. 1945), the *Jin guangming zuishengwang chanyi* (金光明最勝懺儀; Ceremony of the Most Victorious King of Golden Light Repentance; T. 1946), the *Fangsheng ciji famen* (放生慈濟法門; Teaching on Compassionate Deliverance through the Release of Living Creatures) in Zunshi's *Jinyuan ji* (金園集; Golden Garden Collection; ZZ 950 [57] 8a), and the *Fangsheng wen* (放生文; Tract on Releasing Living Creatures) in the *Siming zunzhe jiaoxing lu* (四明尊者教行錄; Record of the Teachings and Career of the Sage Siming; T. 1937 [XLIV] 863a-864a; see Stevenson, 1999). Zhili also composed subcommentaries on Zhiyi's commentaries on the *Suvarṇabhāsottama*: the *Jin guangming jing xuanyi shiyiji* (金光明經玄義拾遺記; A Record of Gleanings from the "Profound Meaning of the *Sūtra* of Golden Light"; T. 1784), and the *Jin guangming jing wenjuji* (金光明經文句記; Notes on the "Exegesis of the *Sūtra* of Golden Light"; T. 1786).

its founding legends, in particular that of Prince Shōtoku (聖徳太子; see Como, 2008, 19–20, 137, 140). The network of national monasteries established by Nara rulers was explicitly identified with the *sūtra* and its power to protect the state (Abé, 1999, 238–239; Sango, 2015; de Visser, 1935). The *Suvarṇabhāsottama* (Jpn. *Konkōmyōkyō*) together with the *Lotus Sūtra*, the *Renwang jing*, and various others, figured prominently in rituals for state protection and thus also in state-controlled requirements for monastic ordination and advancement. At least two state-sponsored annual ritual assemblies – the Misaie (御斉会) and Saishōkō (最勝講) – consisted of lecture and debate related to the *sūtra* and its normative interpretation (Sango, 2011; 2012; 2015). Partly on the basis of his esoteric interpretation of the *Suvarṇabhāsottama* and the *Lotus Sūtra*, the priest Kūkai (空海; 774–835 CE) successfully argued for the need to establish esoteric counterparts to these exoteric rites. One of these, the *mishuhō* (御修法), an elaborate esoteric ritual that took the power of the *Suvarṇabhāsottama* as its primary focus, remained central to the establishment of imperial power for several centuries thereafter (Abé, 1999).

The *Suvarṇabhāsottama* 's ritual emphases have resulted in its classification as a *tantra* (Tib. *rgyud*) rather than a *sūtra* (Tib. *mdo*) in some editions of the Tibetan canon, a distinction that it shares, for instance, with the well-known *Heart Sūtra*. This does not indicate, however, that there is necessarily anything distinctively tantric about the text. The *sūtra* is cited in Tibetan scholastic debates about the bodies of the Buddha (Makransky, 1997, 308–312, 350) but does not seem to have played a role in state ritual. In Mongolia, by contrast, the *sūtra* holds a place of particular prominence, in no small part because of its lavish promises of protection for rulers and their kingdoms. It was widely distributed by Altan Khan in the 16th century. The *Suvarṇabhāsottama* and its abridgements are worshipped as tutelary deities and physical embodiments of the Buddha. The *sūtra* is also thought to possess healing properties, and is used in rituals to ensure or restore the health and prosperity of sheep and goats as well as human beings (Wallace, 2010; Bira, 2001).

The *sūtra* has prompted artistic creation, from Central Asia to China and Japan. A wonderful mural from Bezeklik, Turfan, dated to the 11th century, depicts the central vision of the *sūtra*, the Brahman's beating of a drum from which colored rays radiate, symbolizing the Buddha's teachings (see *Expedition Silk Road*, 2014, 152, pl. 66). Ten visual renderings of the *sūtra* have been identified among the murals at Dunhuang (敦煌; see the *Dunhuang shiku neirong zonglu*, 1996), depicting the preaching Buddha surrounded by his assembly of interlocutors; borders often feature episodes from the story of the tigress or Jalavāhana rescuing the fish. Among the most striking works of art are renderings of the text itself. Passages from the *Suvarṇabhāsottama* and related *sūtras* carved in stone in the cave temples at Wofoyuan (臥佛院) in Sichuan province were objects of devotion in their own right, following a visual and doctrinal program of considerable complexity (Lee, 2009). At Hiraizumi (葛巻町) in Japan, the 31-chapter version of the *sūtra* was commissioned by Fujiwara no Hidehira (藤原秀衡) in the late 12th century as he prepared for war, inviting the protection of the *sūtra* and its four great kings. Transcribed in gold on deep blue, its characters are arranged to form ten pagodas, each surrounded by a lush illuminated landscape and images of deities and devotees (Yiengpruksawan, 1998, 165–177; see also Eubanks, 2011).

The *Suvarṇabhāsottama* has also attracted interest among contemporary Buddhist communities. Sangharakshita (also known as D. Lingwood), founder of the Friends of the Western Buddhist Order, has written about the *sūtra* and its relevance for contemporary practitioners (Sangharakshita, 1996). As noted above, the Foundation for the Preservation of the Mahāyāna Tradition, a contemporary global Buddhist organization, accords the *Suvarṇabhāsottama* a central place in practice and makes available translations for recitation and study. The organization's website keeps a tally of recitations worldwide and catalogues the experiences that practitioners have reported through their engagement with the *sūtra*. The *Suvarṇabhāsottama*'s role in state protection has continued and broadened, as well. One of the foundation's leaders, Lama Zopa Rinpoche (2004), advocates its recitation for the peace and prosperity not only of the nation but also of the world, and he wrote an open letter to then-U.S. President George W. Bush advocating the recitation of the *sūtra* as a means of bringing terrorism to an end (Zopa, 2002). In 2014, Lama Zopa allowed his oral transmission (*lung*) of the *sūtra* to be recorded so that practitioners could receive the transmission via streaming audio or video, apparently the first such transmission sanctioned by a Buddhist teacher (see the website of the Foundation for the Preservation of the Mahāyāna Tradition).

NATALIE GUMMER

Tathāgatagarbha Sūtras

There is no traditional rubric of *tathāgatagarbha* scriptures, though modern scholars (e.g. Takasaki, 1974) have treated several scriptures as belonging to a thematic class, namely the *Tathāgatagarbhasūtra*, the *Anūnatvāpūrṇatvanirdeśaparivarta*, the *Śrīmālādevīsiṃhanādasūtra*, the (Mahāyāna) *Mahāparinirvāṇamahāsūtra*, the *Mahāmeghasūtra*, the **Mahābherīhārakasūtra*, and the Mahāyāna *Aṅgulimālīya* (or *Aṅgulimālīyasūtra*). This classification is based in the first instance on the use of these and related works as proof texts in the Indian treatise *Ratnagotravibhāga* (*Mahāyānottaratantra*). The category is thus in some sense conceptually coherent even in an Indian context. Moreover, many of these texts take on a very significant role in East Asia where, again, they are often appealed to in various groupings.

The notion of *tathāgatagarbha* (embryo of the tathāgatas), a Mahāyāna innovation, signifies the presence in every sentient being of the innate capacity for buddhahood. Although different traditions interpret it variously, the basic idea is either that all beings are already awakened, but simply do not recognize it, or that all beings possess the capacity, and for some the certainty, of attaining buddhahood, but adventitious defilements (*āgantukakleśa*) for the moment prevent the realization of this potential.

The grouping considered here is confined to works thought to be early (prior to c. 400 CE), and of Indic provenance, thus excluding such texts as the *Wushangyi jing* (無上依經; T. 669), a text almost certainly compiled in China (Takasaki, 1966, 49–53). Also left aside is a small group of texts with possible *tathāgatagarbha* coloring, but less central to the tradition, namely the *Dhāraṇīśvararājasūtra*, the *Ratnadārikāsūtra*, the *Sāgaramatiparipṛcchā*, the *Gaganagañjabodhisattvaparipṛcchā*, and the *Ratnacūḍasūtra*. Other works that are connected with the *tathāgatagarbha* doctrine include the *Laṅkāvatārasūtra* and the **Tathāgatotpattisaṃbhavanirdeśa* (originally an independent work which eventually was incorporated into the **Buddhāvataṃsaka* collection).

Tathāgatagarbhasūtra

The *Tathāgatagarbhasūtra* (Scripture on the Embryo of the Tathāgatas) is a relatively short text, extant in four versions – two Chinese and two Tibetan:

1. the *Dafangdeng rulaizang jing* (大方等如來藏經; T. 666), ascribed to Buddhabhadra (佛陀跋陀羅; 359–429 CE);
2. the *Dafangguang rulaizang jing* (大方廣如來藏經; T. 667), ascribed to Amoghavajra (不空; 705–774 CE);
3. the *De bzhin gshegs pa'i snying po'i mdo* (D 258/Q 924); and
4. a second Tibetan translation, *'Phags pa de bzhin gshegs pa'i snying po zhes bya ba theg pa chen po'i mdo*, known so far only from the Bathang Kanjur kept in the Newark Museum (Zimmermann, 2002).

Two other Chinese translations that may have existed are no longer extant (Zimmermann, 2002, 69–75). Portions of the *Tathāgatagarbhasūtra* are cited in the above-mentioned *Ratnagotravibhāga*, the only known Sanskrit text to preserve such citations, and several key formulations in the *Ratnagotravibhāga* clearly derive from the *Tathāgatagarbhasūtra*. In particular, the nine similes at the core of the *Tathāgatagarbhasūtra* comprise the skeleton of portions of both the *Ratnagotravibhāga* and its commentary, the *Ratnagotravibhāgavyākhyā* (see below).

The *Tathāgatagarbhasūtra* has been translated into English, with extensive annotations, by M. Zimmermann (2002) and earlier (from Chinese) by W. Grosnick (1995). Important studies include those by Takasaki Jikidō (1974, 40–68), Matsumoto Shirō (1994, 411–543), and Nakamura Zuiryū (1963).

The *Tathāgatagarbhasūtra* has long been regarded as the first scripture to propound the *tathāgatagarbha* doctrine. However, it is striking that the actual term "*tathāgatagarbha*" is not central to the text but rather appears only in introductory sections, which M. Zimmermann argues were later additions (2002, 29–32, 39–40). Instead (or in addition), the *Tathāgatagarbhasūtra* refers to the hidden potential for buddhahood by means of a wide variety of terms, most prominent among which

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

are **tathāgatatva*, **buddhatva*, **tathāgatakāya* (and other terms denoting special Buddha bodies, in contrast to the ordinary bodies borne by unawakened sentient beings), and terms denoting types of *jñāna* (Zimmermann, 2002, 50–62).

The *Tathāgatagarbhasūtra* opens in Rājagṛha (present-day Rajgir) and describes a miraculous display by the Buddha of a myriad tathāgatas seated in the calyx of each of a copious array of gigantic lotuses floating in the sky, which then blacken and rot away. The body of the scripture follows, giving nine similes for the hidden potential of sentient beings to attain liberation. According to the similes, this hidden potential resembles the following:

1. brightly shining tathāgatas sitting inside withered, rotting lotus flowers;
2. honey inside a hive fiercely guarded by bees;
3. the kernel of a cereal grain, encased in the husk;
4. a gold nugget in a pile of excrement;
5. a hidden treasure buried beneath the house of a poor person;
6. the sprout inside a seed;
7. a statuary image of a tathāgata wrapped in rotten rags and dropped by the wayside in a dangerous wasteland;
8. the embryo of a *cakravartin* (universal monarch) carried in the womb of an unsuspecting and destitute mother; and
9. golden figures within the grubby clay molds that are used to cast them, before the mold is broken.

The *sūtra* closes by describing the merit that accrues to one who propagates the text and deprecates the comparative value of the veneration of the buddhas. As an illustration of the power of the text, there follows a story of a past buddha, Sadāpramutkaraśmi, who always emitted a great and wondrous light from his body; he preached the *Tathāgatagarbhasūtra* at the request of the bodhisattva *Anantaraśmi, and countless bodhisattvas attained supreme and perfect awakening as a result. The Buddha's disciple Ānanda then asks from how many buddhas one must hear the *Tathāgatagarbhasūtra*, in order to become perfected (*niryāta*) and is told that it varies from a hundred buddhas to a myriad. Brief sections then praise one who holds the *Tathāgatagarbhasūtra* in his or her hands, and onlookers delight and rejoice.

Anūnatvāpūrṇatvanirdeśaparivarta

The *Anūnatvāpūrṇatvanirdeśaparivarta* (Scripture on the Absence of Increase or Decrease [in the Extent of the Sphere of Beings]) is preserved only in a single Chinese version, the *Bu zeng bu jian jing* (不增不減經; T. 668), translated by Bodhiruci (菩提流支; ?–527 CE), though portions are cited in the *Ratnagotravibhāga*, showing that the text was already in existence by circa 400 CE. The *Anūnatvāpūrṇatvanirdeśaparivarta* is also cited in the **Mahāyānadharmadhātunirviśeṣa* (see below), the date of which is unknown. The relative chronological relation among the *Anūnatvāpūrṇatvanirdeśaparivarta*, the *Tathāgatagarbhasūtra*, and the *Śrīmālādevīsiṃhanādasūtra* remains unclear. (For an annotated English translation, see Silk, 2014; important studies are Takasaki, 1965; 1974, 69–96; see also Srisetthaworakul, 2010; Tsai, 2004; Wakiya, 2005; Watanabe, 1984.)

The *Anūnatvāpūrṇatvanirdeśaparivarta* may be divided into two main parts, with the second, the main body of the text, giving the impression of being quite shastric – doctrinally complex and even somewhat abstruse. The first part of the text discusses a range of "false views" (*dṛṣṭi*), which are, however, difficult to identify or interpret with precision. These false views are, in various ways, said to prevent insight into the correct nature of truth and reality, the topic of the second part.

In accordance with the title of the text, the main burden of the correct view presented in the second part is that there is "neither decrease nor increase" in the "realm (or domain, or element) of (sentient) beings" (*sattvadhātu*; T. 668 [XVI] 467a2–7), which means that the overall number of sentient beings does not increase or decrease, despite all the vicissitudes of transmigration, and despite the fact that some beings may attain liberation or buddhahood. This is because there is in fact only one realm or element (**ekadhātu*), which is identical in both the deluded realm of ordinary sentient beings in saṃsāra and in the liberated state of the buddhas. This leads to a series of other equivalences: *sattvadhātu* is *paramārtha* (ultimate truth); *sattvadhātu* is *tathāgatagarbha; tathāgatagarbha* is *dharmakāya* (the transcendent body); *sattvadhātu* is *dharmakāya*. This bivalent single essence that runs through all things and states of being, both suffering and liberated, is also aligned with the notion of the "originally pure mind" (**prakṛtipariśuddhacitta*, **prakṛtiprabhāsvara*). It is also said to be precisely the *dharmakāya* that, "carried by the flood of saṃsāra," comes and goes through the rounds of birth and death; the feature that distinguishes this state of the *dharmakāya* from its fully realized state in the buddhas is that it is "hidden within a sheath of countless defilements."

Śrīmālādevīsiṃhanādasūtra

The *Śrīmālādevīsiṃhanādasūtra* (Scripture on the Lion's Roar of Queen Śrīmālā) survives in two Chinese versions: the *Shengman shizihou yisheng dafangbian fangguang jing* (勝鬘師子吼一乘大方便方廣經; T. 353), translated by Guṇabhadra (求那跋陀羅; 394–468 CE), the *Shengman furen hui* (勝鬘夫人會) in the *Ratnakūṭa* (大寶積經; T. 310[48]), translated by Bodhiruci (菩提流志; ?–727 CE), and in a Tibetan version, the *Lha mo dpal phreng gi seng ge'i sgra* (D 92/Q 760[48]), translated by Jinamitra, Surendrabodhi, and Ye shes sde (9th cent.). The *Śrīmālādevīsiṃhanādasūtra* is cited in Sanskrit in the *Ratnagotravibhāga* (see Ogawa, 2001), and the Schøyen collection includes Sanskrit manuscript fragments of the text dating to the 5th century CE (Matsuda, 2000; Sander, 2000, 293).

Tsukinowa Kenryū (1940) published an edition of both Chinese versions and the Tibetan translation (with Japanese translation, not containing the Sanskrit materials, which were unknown in his day). English translations are found in A. and H. Wayman (1974), G.C.C. Chang (1983, 363–383), and D. Paul (2004). Key studies are those by Kagawa Takao (1957), Watanabe Shōkō (1968), Tsurumi Ryōdō (1974), Takasaki Jikidō (1974, 97–126), and Matsumoto Shirō (1983). Takasaki Jikidō places the *Śrīmālādevīsiṃhanādasūtra* after the *Tathāgatagarbhasūtra* and the *Anūnatvāpūrṇatvanirdeśaparivarta*.

In the frame narrative of the *Śrīmālādevīsiṃhanādasūtra*, young Queen Śrīmālā receives a miraculous visitation from the Buddha, who prophesies that she will attain unexcelled perfect awakening (*anuttarasaṃyaksaṃbodhi*) and preside over her own Buddha land (a perfect heavenlike world created by the power of a Buddha to provide a perfect environment for sentient beings to attain liberation). Śrīmālā makes ten vows to practice various perfections. On the basis of those vows she performs an act of truth, in which the very truth of her words causes physical manifestations in the visible world, and this causes several miracles (flowers from the sky, heavenly sounds, etc.). Śrīmālā expresses three times the aspiration to teach the dharma in numerous lifetimes. The Buddha bestows on her the eloquence to teach, and she preaches the *Śrīmālādevīsiṃhanādasūtra*. The Buddha approves and levitates back to Śrāvastī (present-day Saheth-Maheth). Śrīmālā returns to Ayodhyā and converts the entire populace.

The doctrinal burden of the *Śrīmālādevīsiṃhanādasūtra* centers on several main themes. Accepting and safeguarding the true doctrine (*saddharma*; typically the doctrine of the *Śrīmālādevīsiṃhanādasūtra* itself, but also that of the Mahāyāna) are of unsurpassed benefit and identical to the six perfections, and all alike aim to promote acceptance of the doctrine of this text by sentient beings. One should renounce even the "body" (life and limb) for the sake of promoting the text, and as a result attain the *dharmakāya* of the Buddha (comp. the *Aṅgulimālīyasūtra* below). The achievements of the arhat and the pratyekabuddha of the "Hīnayāna" are paltry in comparison to those of the Mahāyāna, and the text subsumes those other vehicles into the Mahāyāna (it advocates *ekayāna*, "one vehicle"). Among other things, Mahāyāna is distinguished by the type of nirvāṇa particular to it, which is a docetic illusion for the benefit of sentient beings as *upāya* (a skillful expedient used by the Buddha to edify sentient beings) and an "inconceivable metamorphosis" (**acintyapariṇāmikī* [*cyuti*]; T. 353 [XII] 219c20–220a2).

Like the *Anūnatvāpūrṇatvanirdeśaparivarta*, the *Śrīmālādevīsiṃhanādasūtra* contains an idiosyncratic, technical, shastric doctrinal exposition. The two types of nirvāṇa and death differ because of a subtle level of defilement. Arhats and pratyekabuddhas overcome only **paryutthānakleśa* (active defilements; see Tsukinowa, 1940, 85 n1) but not the deeper *āvāsakleśas* (defilements as habitation; *zhudifannao* [住地煩惱]), which produce all active defilements. The most fundamental type of defilement is *avidyāvāsabhūmi* (ignorance as the [fundamental] ground of habitation), which exists from time immemorial and is dissociated from thought (**cittaviprayukta*). Only the tathāgatas can destroy this defilement. Because of this, arhats, pratyekabuddhas, and "bodhisattvas who have attained mastery" engender three kinds of "body made of mind" and do not entirely escape saṃsāra; thus, true liberation is possible only for full-fledged tathāgatas and more generally, for adherents of the Mahāyāna.

The *tathāgatagarbha* doctrine is the domain of the tathāgatas alone; for common people, it is an object of faith. It is the equivalent of the *dharmakāya*, but whereas *tathāgatagarbha* is enclosed in the defilements, *dharmakāya* is free of them. The *dharmakāya* is originally pure (*prakṛtipariśuddha*), unconditioned (*asaṃskṛta*), unborn (*ajāta*), unarisen (*anutpanna*), eternal (*nitya*), changeless (*dhruva*), and permanent (*śāśvata*), and it is characterized by eternity, bliss, (true) self, and purity (*nitya, sukha, ātman,* and *śuddha*). The mind is also intrinsically pure (**prakṛtipariśuddhacitta*, **prakṛtiprabhāsvaracitta*) but obscured by adventitious defilements (*āgantukakleśa*).

Mahāparinirvāṇamahāsūtra

The (Mahāyāna) *Mahāparinirvāṇamahāsūtra* (The Great Scripture of the Great, Perfect Nirvāṇa) must be distinguished from the almost identically entitled "mainstream" *Mahāparinirvāṇasūtra* (Pal. *Mahāparinibbānasutta*). Study of Sanskrit fragments shows that the correct title of the text is *Mahāparinirvāṇamahāsūtra* (Habata, 2007, xliii–xliv), although it is obvious that the authors of this text were fully aware of the earlier scripture of (almost) the same title and purposely referred to it.

The *Mahāparinirvāṇamahāsūtra* survives in four main independent versions:

1. 35 identified Central Asian Sanskrit fragments (Habata, 2007, xxvi, xxxi);
2. the *Dabannihuan jing* (大般泥洹經; T. 376), translated circa 416–418 CE by Buddhabhadra and Faxian (法顯; 320?–420? CE);
3. the *Dabanniepan jing* (大般涅槃經; T. 374), translated circa 421–432 CE by *Dharmakṣema (曇無讖; 385–433 CE); and
4. the *Yongs su mya ngan las 'das pa chen po'i theg pa chen po'i mdo* (D 120/Q 788), translated by Jinamitra, Jñānagarbha, and Devacandra (9th cent. CE).

Dharmakṣema's version of the *Mahāparinirvāṇamahāsūtra* is four times as long as all the other independent versions.

Two additional versions are based in turn on Dharmakṣema's *Dabanniepan jing*. The *Dabanniepan jing* (大般涅槃經 T. 375), by Zhiyan 慧嚴 *et al.*, is not an independent translation at all but a revision of Dharmakṣema's text. D 119/Q 787 is a Tibetan translation from Dharmakṣema's Chinese version.

H. Habata (2007) has collected, edited, and studied the Sanskrit fragments, and critically edited the Tibetan translation (2013); a second volume of Sanskrit fragments is forthcoming. The first English translation by K. Yamamoto (1973–1975) – rough, sometimes incomprehensible, and often inaccurate – is presented as a translation of Dharmakṣema's text (T. 374), but it was actually produced from Shimaji's *Kokuyaku issaikyō* translation of T. 375, itself a mere recasting of the Chinese text in Japanese grammatical order (see Yuyama, 1981, 14). Shimoda Masahiro (1993) has published a Japanese translation of the first three chapters of the Tibetan text. M. Blum (2013) has published the first volume of a planned four-volume translation of Dharmakṣema's *Dabanniepan jing* (T. 374). S. Hodge is preparing an English translation based on all four independent versions, while M. Radich (2015) has prepared a monograph on the relative dating of the *Mahāparinirvāṇamahāsūtra* and aspects of its *tathāgatagarbha* doctrine.

The most significant study of the *Mahāparinirvāṇamahāsūtra* to date is by Shimoda (1997). Other significant scholarship includes works by Mochizuki Ryōkō (1988) and Qu Dacheng (1994). S. Karashima (2007) studied the key term *icchantika*. The main English-language studies are by M.-W. Liu (1982; 1984), Takasaki Jikidō (1971), and S. Hodge (2010; 2012). The history of interpretation of this text in China and East Asia generally is a vital and crucial chapter in the history of East Asian Buddhism, which requires its own treatment. Numerous commentaries were written and debates conducted about this scripture; particularly important in this regard is the *Dabanniepan jing ji jie* (大般涅槃經集解; T. 1763), compiled in 509 CE by Baoliang (寶亮; see also Fuse, 1942).

As in the latter parts of the mainstream *Mahāparinirvāṇasūtra*, on which it is based, the *mise-en-scène* is the final hours of the Buddha's (apparent) life, as a last chance to ask questions. A vast cosmic congregation assembles, bewailing the Buddha's imminent death. After much competition for the honor, the Buddha deigns to accept the offering of the smith Cunda as his final meal. Against the mainstream text, the disciple Ānanda is depicted as entirely absent (he only reappears at the very end of the text, and then only in Dharmakṣema's version), and against his traditional role as the best keeper of the Buddha's teaching, the text stresses that Ānanda is in fact unworthy to be entrusted with safeguarding the dharma. Instead, the dharma is entrusted to the bodhisattva Mahākāśyapa. Remarkably, the *Mahāparinirvāṇamahāsūtra* (with the exception of the Dharmakṣema version) ends with the Buddha lying down upon his right side in the "lion's pose" as if to die, but stops short of his actual *parinirvāṇa*, his cremation, the division of relics, and so forth.

The central claim of the first part of the text is that the Buddha's impending *parinirvāṇa* is only a docetic show. In fact, in this text, his life is inordinately long, and his body (termed both *dharmakāya* and *abhedavajrakāya* [indivisible adamantine body]) is indestructible and made of adamant (Radich, 2011a). The second part of the text (excluding portions unique to the version of Dharmakṣema), which probably belongs to a different stratum of compositional history (Shimoda, 1997), concerns itself with a somewhat miscellaneous sequence of topics, including the following:

- the docetic reinterpretation

- creative reinterpretations of liberation and the four fruits of the monastic vocation (*śrotāpanna* [stream enterer], *sakṛdāgāmin* [once-returner], *anāgāmin* [nonreturner], and arhat);
- how best to observe the monastic rule (*vinaya*);
- doctrines of the end-times of the dharma (times in which the true dharma will fade from the world, attended by various calamities; Nattier, 1991), false monks, and false teachings;
- the "four inversions," by which – in contrast to classical Buddhist doctrine, which denies the possibility of such things – the Tathāgata is permanent (*nitya*), blissful (*sukha*), (true) self (*ātman*), and pure (*śuddha*; comp. the *Śrīmālādevīsiṃhanādasūtra*);
- the magical virtues of Sanskrit letters; and
- various parables about the realization of *tathāgatagarbha*/buddha nature and the docetic *parinirvāṇa*.

In the *Mahāparinirvāṇamahāsūtra, tathāgatagarbha* is also frequently referred to as "buddha nature" (this is by now the standard English translation of Chinese *foxing* [佛性]). Shimoda Masahiro (1997) contends that the use of this synonym for *tathāgatagarbha* buttresses efforts to supersede worship of physical Buddha relics (*buddhadhātu*) by the realization of an element of buddhahood within the sentient being. The Sanskrit underlying Chinese *foxing* (i.e. Tib. *sangs rgyas gyi khams*) is thought also to be **buddhadhātu*, exploiting an alternate sense of *dhātu* to mean "element" or "raw material." Thus, by a play on the word *dhātu*, the focus of cultic activity is shifted from the remnant of past, physical buddhahood in the external world (*dhātu* [relic]) to a nascent, future buddhahood within the sentient being itself (*dhātu* [element, raw material]). This hypothesis is among several that have displaced A. Hirakawa's (1963) hypothesis that the Mahāyāna began as a lay movement centered on the worship of Buddha relics in stūpas (see also Sasaki, 1999) and constitutes an attempt to provide a more accurate account of the relation between nascent Mahāyāna movements and the cult of the Buddha's relics.

The *Mahāparinirvāṇamahāsūtra* (again, excepting extra parts found in the Dharmakṣema translation) can be divided into two main chronological strata. The earliest layer reflects the practices and ideas of itinerant dharma preachers, who were semimonastic and engaged in frequent pilgrimages to stūpas through dangerous regions, accompanied by laypeople who did not observe the traditional five precepts and armed themselves to protect the preacher. In Shimoda Masahiro's view, this layer is apparently opposed to relic worship and proposes that the Buddha's *dharmakāya* is adamantine (*vajrakāya*; see Radich, 2011a); it also propounds the eternity of the Buddha, the docetic view of the *parinirvāṇa*, and the aforementioned four inversions (eternity, bliss, self, and purity); it separately propounds the idea that the Tathāgata is "self" (*ātman*).

Only in the second layer does the term bodhisattva come to be used for proponents of the *Mahāparinirvāṇamahāsūtra*. Moreover, with few exceptions, *tathāgatagarbha* doctrine is only introduced in this second layer, which also propounds the idea that the true teachings are secret, types of *samādhi* (meditative states), docetism (*lokānuvartanā*; "conformity with the world"), the three jewels (the Buddha, the dharma, and the saṅgha, taken as "refuges"), and criticism of *śrāvakas* (adherents of "mainstream," non-Mahāyāna doctrine); mentions *sūtras* as written books (as opposed to oral teachings); and teaches about *icchantikas*, beings who are forever unable to attain buddhahood. Shimoda Masahiro also sees here a renewed rigor in monastic discipline, corresponding to a shift to sedentary cenobiticism, linked to a new concern for the purity of the saṅgha, and vehement criticism of corrupt monks. The later very important and influential ban on eating meat also appears here.

As mentioned earlier, Dharmakṣema's version of the *Mahāparinirvāṇamahāsūtra* is much longer than the other independent versions. Yijing (義淨; 635–713 CE) searched in India and Southeast Asia for Sanskrit texts corresponding to this large unique portion, without success (T. 2066 [LI] 4a8–12). Modern scholarship has paid surprisingly little attention to the question of the origin of the remaining unique three quarters of Dharmakṣema's text (but see Chen, 2004; Hodge, 2010; 2012). However, it is clear that authors of parts of it must have known Indic texts otherwise unknown in China (Radich, 2011b, 49–50, 160–163; Granoff, 2012). These unique portions of Dharmakṣema's text played a key role in the massive impact of the *Mahāparinirvāṇamahāsūtra* on Chinese Buddhism, including the controversy surrounding the *icchantika* doctrine, in which the important cleric Daosheng (道生; 355–434 CE) played a celebrated role.

Mahāmeghasūtra

The *Mahāmeghasūtra* (Scripture on the Great Cloud) is extant in two versions:

1. the *Dafangdeng wuxiang jing* (大方等無想經; T. 387; **Mahāvaipulyāsaṃjñikasūtra* in the Korean; but *Dafangdeng dayun jing* [大方等大雲經] = **Mahāvaipulyamahāmeghasūtra* in the Song, Yuan, Ming, and "Palace" editions), translated circa 421–433 CE by Dharmakṣema; and
2. the *Sprin chen po* (D 232/Q 898), translated by Jinamitra, Śīlendrabodhi, and Ye shes sde (9th cent. CE).

Although the text has apparently otherwise been lost in its original form, a Sanskrit passage has been preserved as an interpolation into the *Suvarṇabhāsottama* (Suzuki, 1996), itself extant in Sanskrit.

No full translation of the *Mahāmeghasūtra* exists in a Western language, but a detailed English summary is given by A. Forte (1976, app. A). Western scholarship has mainly focused on a peculiar prophecy contained in the text (see below), which was used by the Chinese Empress Wu Zetian (武則天; r. 690–705 CE) to legitimate the rule of her Zhou (周) dynasty (Chavannes, 1902, 235–236; Demiéville, 1924, 218–230; Tucci, 1930, 217; Forte, 1976). Apart from Takasaki Jikidō (1974, 276–301), the most important studies are by Suzuki Takayasu (1996b; 1998a; 1998b; 1998c; 1999a; 2001; 2003a; 2003b).

The title reflects a conceit of the dharma as rain from the cloud of a Tathāgatagarbha *sūtra*, in the drought of the end-times (comp. also the *Mahāparinirvāṇamahāsūtra* and *Mahābherīhārakasūtra*). In both versions, the structure of the *Mahāmeghasūtra* is odd: of the 37 chapters, only chapters 1, 2, 36, and 37 are fully elaborated. Chapters 3 to 35, by contrast, seem merely to be skeletal outlines of topics. The following summary focuses on chapters 1, 2, 36, and 37.

In keeping with Mahāyāna convention, the frame narrative describes a vast congregation assembled to listen to the Buddha's sermon, and various wonders performed by the Buddha, or occurring spontaneously, to mark the occasion. The bodhisattva *Mahāmeghagarbha (大雲密藏) asks the Buddha a hundred questions. The Buddha responds by teaching on themes already encountered above – the docetic *parinirvāṇa*, the four inversions, the fact that sentient beings are in truth not distinct from *dharmadhātu* (the realm/element of the dharma; comp. the *Anūnatvāpūrṇatvanirdeśaparivarta* teaching of *ekadhātu* [the one realm/element]), the inferior merits of *śrāvaka*s and pratyekabuddhas, and *tathāgatagarbha*/buddha nature. Chapter 2 is largely taken up with four hundred *samādhi*s, which secure for the practitioner a long list of benefits.

Chapter 36 picks out a couple of *samādhis* for special discussion. In answer to the Brahman Shande (善德; later identified with the Indian emperor Aśoka), the Buddha explains that the Buddha's cousin and "rival" Devadatta was not as evil as he appeared. Rather, he was a *mahāpuruṣa* (great being), acting as part of the Buddha's salvific plan. A person called *Sarvasattvapriyadarśana (一切眾生樂見) then begins speaking in the Buddha's stead. Shande declares the doctrines of the *Mahāmeghasūtra* to be beyond him; instead, he says, he would like to venerate a relic of the Buddha. *Sarvasattvapriyadarśana proclaims a series of verses declaring that there is in fact no such thing as a Buddha relic (echoing similar ideas in the *Suvarṇabhāsottama*). A goddess (**devī*) called *Vimalaprabhā (淨光) asks the Buddha how Shande and *Sarvasattvapriyadarśana can have such insight. The Buddha explains that in a past life, they had a similar exchange, in the presence of a buddha who also preached the *Mahāmeghasūtra*. He also explains that in a future life, Shande will be Aśoka. The *devī* *Vimalaprabhā, moreover, was the queen in the past narrative, and will reign in the future over a kingdom of her own as a kind of "one-quarter *cakravartin*." The Buddha also gives another prophecy of an end-times scenario in which the *Mahāmeghasūtra* will circulate. The chapter closes with another iteration of the docetic *parinirvāṇa*.

Chapter 37 returns to the end-times prophecy. During the end-times, another person who also goes by the name of *Sarvasattvapriyadarśana (一切眾生樂見) will be the guardian of the true dharma. The chapter expounds at length the virtues of one specific *samādhi* – that is, the ability of bodhisattvas to manifest themselves in many different apparent bodies to save sentient beings. This exposition is interwoven with a reprise of the eternity of the *dharmakāya* and the docetic *parinirvāṇa*. *Vimalaprabhā again comes to the fore, and bests *Mahāmeghagarbha in her grasp of doctrine. The Buddha then prophesies an illustrious future for her. *Mahāmeghagarbha foolishly assumes that this future must involve changing into a male, as traditional Buddhist doctrine all but universally

asserts, but the Buddha scolds *Mahāmeghagarbha for making this assumption; in fact, he reveals, *Vimalaprabhā deliberately assumes the body of a woman through countless aeons for the sake of sentient beings (although the female body that she assumes is apparently not real but merely a body of skillful means [*upāyakāya; 方便之身]). A further very detailed prophecy expands on the promise of the previous chapter that the *devī* will become a powerful queen – this being the prophecy so useful to Wu Zetian. This queen will be a powerful sponsor of the cult of Buddha relics in stūpas (seemingly contradicting the earlier denigration and docetic denial of relics). Many lifetimes later, the *devī* will preside over her own buddha world. This theme of spiritually powerful women prophesied to buddhahood echoes the *Śrīmālādevīsiṃhanādasūtra*.

The exposition of *tathāgatagarbha* doctrine in the *Mahāmeghasūtra* echoes that of the *Mahāparinirvāṇamahāsūtra* (especially the hypothesized second layer, mentioned above). It preaches the theme of secret teachings, the idea that *tathāgatagarbha*/buddha nature is to be "seen," and the fact that sentient beings have *tathāgatagarbha* within them like a separate entity. The *Mahāmeghasūtra* is also concerned with docetism, and, indeed, one of its *samādhi*s converts the notion of conformity to the [expectations of the] world (*lokānuvartanā*) into a practice of meditation on the production of the docetic appearance of all the typical acts of a buddha (dwelling in Tuṣita heaven, conception and birth attended by a set of stock miracles, etc.). The *Mahāmeghasūtra* also preaches a docetic *parinirvāṇa*; and it discusses the danger that people will accuse its proponents of peddling fake teachings (*buddhavacana*). Both texts teach the four inversions, the ban on meat eating, and the *dharmakāya*/*vajrakāya*. Suzuki Takayasu (1998b; 2001) has proposed that Shimoda Masahiro's second layer in the *Mahāparinirvāṇamahāsūtra* bears the mark of recomposition under the influence of the *Mahāmeghasūtra*.

Mahābherīhārakasūtra

The *Mahābherīhārakasūtra* (Scripture on the Beater of the Great Kettledrum) is extant in two versions:

1. the *Da fagu jing* (大法鼓經; T. 270), translated by Guṇabhadra; and
2. the *Rnga bo che chen po'i le'u* (D 222/Q 888), translated by Vidyākaraprabha, Dpal gyi lhun po, and Dpal brtsegs (9th cent. CE).

Apart from Takasaki Jidikō (1974, 234–253), the main studies are by Suzuki Takayasu (1996a; 1997; 2000; 2002), who suggests that the *Mahābherīhārakasūtra* is linked to the *Aṅgulimālīyasūtra* (see below), because of the reference to its preachers as *hitopadeṣṭṛ* (Chn. *anweishuozhe* [安慰說者]; Tib. *phan par ston pa*, "those who teach what is beneficial [for sentient beings]").

King Prasenajit goes to hear the Buddha preaching the dharma, accompanied by a great fanfare of beating drums and blasting conches. In response, the Buddha "beats the great kettledrum of the dharma" (hence the title) and "blasts the great conch of the dharma" (T. 270 [IX] 290c15, 291c14–15). Later, we learn that Prasenajit smears his war drum with a magical ointment, and when the drum is beaten, poisoned arrows fall from his soldiers' wounds; similarly, the *Mahābherīhārakasūtra* has the power to extract the arrows of the so-called three poisons (i.e. lust, hatred, and delusion), the elements which, according to Buddhist doctrine, cause the entire wheel of transmigration to revolve and bind beings to saṃsāra.

The *Mahābherīhārakasūtra* proposes that existence (*bhava*) is at the root of all pleasure and pain (*sukhaduḥkha*), so that nirvāṇa, which is freedom from the very conditions of existence, is the supreme bliss. This apparently simple teaching (which echoes the bliss of the four inversions) is not known to all tathāgatas, and bodhisattvas from other buddha worlds come to hear it taught by Śākyamuni. This teaching is thus a "secret dharma store of the tathāgatas," a "concealed teaching" (T. 270 [IX] 291a13–14, 291a26–29). After the (apparent) *parinirvāṇa*, this secret is to be entrusted to the bodhisattva Mahākāśyapa, whom the Buddha likens to King Prasenajit, beating his drums and sounding his conches, defeating enemies, and bringing peace.

However, toward the end of the text, it is dramatically revealed that various phantoms created by Māra, the embodiment of evil, are hidden among the congregation. A series of powerful disciples and bodhisattvas – including Mahākāśyapa – prove incapable of rooting them out. This sets the scene for *Sarvasattvapriyadarśana, despite histrionic protest that he is a mere layman, to best even Mahākāśyapa by unmasking and capturing Māra's minions. The Buddha reveals that *Sarvasattvapriyadarśana only gives the appearance of being a common person (*pṛthagjana*). In fact, his true level of spiritual development is more advanced; in the end-times, he will be reborn as a monk "bearing the same name as myself" (i.e. as the Buddha, who is speaking; T. 270 [IX] 299a17–18), the main proponent of the true teachings (of the *Mahābherīhārakasūtra*); and in the very remote future, *Sarvasattvapriyadarśana will become a buddha.

The heart of the teaching of the **Mahābherīhārakasūtra* is twofold. First, the Buddha is truly eternal and does not really enter *parinirvāṇa*. Second, all sentient beings have *tathāgatagarbha*/buddha nature – clearly and explicitly identified with the self (*wo* [我]; ātman). The fact that sentient beings at first do not perceive this pure essence within themselves, but can nonetheless realize it with practice, is explained by the metaphor of gold tainted by impurities and then refined. The **Mahābherīhārakasūtra* also uses other metaphors, later commonplace, like the moon obscured by clouds, or the eye obscured by cataracts, and speaks explicitly of the covering of the *tathāgatagarbha*/buddha nature/*ātman* by adventitious defilements (**āgantukakleśa*).

The **Mahābherīhārakasūtra* shares a number of themes with other texts in the *Mahāparinirvāṇamahāsūtra* group: the eternity of the Tathāgata; the docetic *parinirvāṇa* secret teachings; the identification of the Tathāgata with *ātman*; deprecation of *śrāvaka*s and pratyekabuddhas; the identification of Mahākāśyapa as the true heritor of the dharma; and end-times prophecies. It speaks of "the great rain of the dharma" (e.g. T. 270, [IX] 299c9; comp. also the *Mahāmeghasūtra*). The **Mahābherīhārakasūtra* also includes a version of the parable, better known from the *Lotus Sūtra*, of the phantom city conjured up by a guide to encourage travelers to continue a long and arduous journey, used as a figure for the Buddha's teaching of intermediate "vehicles" (*yāna*) as way stations on the path to the Mahāyāna as the "one" (true) vehicle.

Mahāyāna *Aṅgulimālīya*/*Aṅgulimālīyasūtra*

The *Aṅgulimālīyasūtra* (Scripture on Aṅgulimālīya) is extant in two versions:

1. the *Yangjuemoluo jing* (央掘魔羅經; T. 120), translated by Guṇabhadra; and
2. the *Sor mo'i phreng ba la phan pa* (D 213/Q 879), translated by Śākyaprabha, Dharmatāśīla, and Tong Ācārya (9th cent.).

The main studies on this text are by Takasaki Jikidō (1974, 191–233), Ogawa Ichijō (1999; 2001, 7–15), Kanō Kazuo (2006), Suzuki Takayasu (1999a; 1999b; 2000), and L. Schmithausen (2003). Suzuki Takayasu notes that the *Aṅgulimālīyasūtra*, like the **Mahābherīhārakasūtra*, refers to its preachers as **hitopadeṣṭṛ* (teachers for the benefit [of others]).

Like the *Mahāparinirvāṇamahāsūtra*, the *Aṅgulimālīyasūtra* reworks a scenario from mainstream canonical scripture – this time, the conversion of the bandit and murderer Aṅgulimāl(īy)a (see *Theragāthā* vv. 866–891; *Majjhimanikāya*, 86). The *Aṅgulimālīyasūtra* thus betrays a concern with the power of the dharma to save even hopeless sinners, also seen in the *Mahāparinirvāṇamahāsūtra* (the portions found in the Dharmakṣema translation) on the salvation of Ajātaśatru (famed for killing his father, Bimbisāra, in order to usurp his throne), the *Mahāmeghasūtra*'s docetic reinterpretation of Devadatta, and *icchantika* doctrine.

Aṅgulimālīya is originally a Brahman youth named *Sarvalokapriyadarśana, connecting him to the central protagonist of the *Mahāparinirvāṇamahāsūtra* group. He is accused by the wife of his teacher of sexually molesting her, and the teacher convinces Aṅgulimālīya to expiate his guilt by killing a thousand people and making a trophy garland of their severed fingers (the source of his grisly soubriquet - Aṅgulimālīya ["Finger Garland"]). Having killed 999 people, Aṅgulimālīya prepares to kill his mother. The Buddha intervenes, and Aṅgulimālīya wants to kill him, too. Instead, the Buddha manages to convert him. Various deities and advanced disciples express their admiration at the conversion, and Aṅgulimālīya defeats each in battles of Buddhist wit (often versified) and mastery of the dharma. Aṅgulimālīya takes precepts and is ordained by the Buddha. When Prasenajit comes to arrest Aṅgulimālīya, the Buddha declares that he has already become a tathāgata in a distant Buddha world, and that the teacher, the teacher's wife, Aṅgulimālīya's mother, and Aṅgulimālīya's murders were all merely expedient phantoms to teach sentient beings.

The *Aṅgulimālīyasūtra* is elaborately concerned with the Buddha's body (or, more accurately, the various special bodies that buddhas have or appear to have). The Buddha dwells "at the limit of the unproduced" (*zhu wusheng ji* [住無生際]; T. 120 [II] 533b6) in this ordinary world of ours (the Sahāloka), without

really entering *parinirvāṇa*, and simultaneously also dwells in other buddha worlds. This is possible because he "is born in an unborn body" (or "arises in an unproduced body"; *sheng busheng shen* [生不生身]; 533b15–16). All the tathāgatas in all quarters of the cosmos are in fact doppelgängers of Śākyamuni. The Buddha also has other types of extraordinary body (or his body is described using other extraordinary epithets): he is "born in a reality-limit body" (*sheng shiji shen* [生實際身]; 533b7–9), and he dwells in a "limitless body" (or "countless bodies"; *shenwubian* [身無邊]; c1). This body is the *dharmakāya* – unconditioned; free of old age, sickness, death, and defilements; permanent and quiescent; and so on. The Buddha has attained this body, paradoxically, by giving up his (physical) body in countless incarnations. This lengthy exposition is linked in part to the prophecy complex common to the *Mahāparinirvāṇamahāsūtra* group. The *Aṅgulimālīyasūtra* emphasizes the hardship to be endured by promulgators of *tathāgatagarbha* doctrine during the end-times; bodhisattvas have to be prepared to give up their bodies and their lives. Presumably, they too are promised the reward of the *dharmakāya* in exchange for such sacrifice.

The *Aṅgulimālīyasūtra* emphasizes strenuous practice and incorporates long discussion to ward off interpretations of *tathāgatagarbha* doctrine leading to moral lassitude or even antinomianism. The text also contains an amusing story relating to naked *tīrthaka* ascetics, clearly satirizing Digambara Jaina practice. This story is juxtaposed with the ban on meat eating and with the use of "pure" (presumably strained) water for cooking, to avoid harming tiny bugs. This may suggest that these practices were instituted to "keep up with the Jainas" (Nattier, 1991, 21).

The *Aṅgulimālīyasūtra* shares with the *Mahāparinirvāṇamahāsūtra* group *tathāgatagarbha*/buddha nature preached as explicitly connected with *ātman* (**ātmadhātu* [*wojie* (我界)]) and concealed by defilements, the eternity of the Tathāgata, the secret teachings, the promotion of faith (*xin* [信]) toward the teaching of *tathāgatagarbha*, and concern with the worst sinners, including the *icchantika*.

Conclusion

A number of doctrinal themes unite the *Mahāparinirvāṇamahāsūtra*, the *Mahāmeghasūtra*, the **Mahābherīhārakasūtra*, and the *Aṅgulimālīyasūtra*, allowing us to speak of them as a single *Mahāparinirvāṇamahāsūtra* group (following Takasaki Jikidō, 1974, 127, 182). In addition to various elements of doctrinal content, these texts are bound together by a highly unusual prophecy tradition, set 700 years after the *parinirvāṇa* (a very unusual timetable; see Nattier, 1991, 37–41; Radich, 2015). The text(s) containing the prophecy (i.e. the teaching of the *tathāgatagarbha*/buddha nature) will first flourish for 40 years after the *parinirvāṇa* but will then disappear. In the 80 years leading up to the 700-year mark, the text(s) will flourish again for 40 years in a southern region, apparently under the Satavahanas. Elements of the prophecy are variously distributed over the four texts, but taken as a whole, this prophecy complex mentions the Kashmir and Andhra regions, the Kṛṣṇā River, perhaps the Satavahana capital of Dhānyakaṭaka (depending on the interpretation of Tibetan and Chinese translation terms), and the Satavahana king Gautamīputra Śātakarṇi. This period will also be the cusp of the end-times of the dharma. As part of the calamity of these times, the texts will become unpopular, and their preachers will face hard times and move to Kashmir, where the dharma will be neglected. The figure of *Sarvasattvapriyadarśana plays various roles, and the figure of the bodhisattva Mahākāśyapa is also central. Both are said to have the same name as the Buddha or be of the same clan.

This prophecy complex has been studied most closely by Suzuki Takayasu (1999b; 2000) and S. Hodge (2006; 2012; see also Lévi, 1936; Demiéville, 1924; Tucci, 1930; Takasaki, 1974; de Jong, 1978; Mabbett, 1993; Forte, 1976; Ogawa, 2001). S. Hodge has argued that this prophecy complex allows us to locate part of the compositional history of these texts in specific historical contexts (esp. the oldest strata of the *Mahāparinirvāṇamahāsūtra*) and to date it to approximately the 1st or 2nd century CE.

If the texts of the *Mahāparinirvāṇamahāsūtra* group are thus bound together more closely than the other *tathāgatagarbha* scriptures treated here, the question naturally arises as to what their relation is with the remaining three texts – the *Tathāgatagarbhasūtra*, the *Anūnatvāpūrṇatvanirdeśaparivarta*, and the *Śrīmālādevīsiṃhanādasūtra* – and how those three texts are related with one another.

Certain ideas and themes are shared between the two groups of texts, though fewer than are common to the *Mahāparinirvāṇamahāsūtra* group alone:

- end-times (*Mahāparinirvāṇamahāsūtra* group, *Śrīmālādevīsiṃhanādasūtra*, and briefly in the *Anūnatvāpūrṇatvanirdeśaparivarta*);
- **sattvadhātu* (*Anūnatvāpūrṇatvanirdeśa, Mahābherīhārakasūtra*, and *Aṅgulimālīyasūtra*);
- *ekadhātu* (*Anūnatvāpūrṇatvanirdeśaparivarta* and *Aṅgulimālīyasūtra*);
- *ekayāna* (*Mahābherīhārakasūtra* and *Śrīmālādevīsiṃhanādasūtra*);
- *prakṛtipariśuddhacitta* (the original purity of mind), concealed by adventitious defilements (*āgantukakleśa; Aṅgulimālīyasūtra* and *Śrīmālādevīsiṃhanādasūtra*); and
- *āgantukaklésa* (alone, briefly in the *Mahābherīhārakasūtra* and the *Mahāparinirvāṇamahāsūtra*).

Scholars to date, with Takasaki as the most influential, have tended to regard the *Tathāgatagarbhasūtra*, the *Anūnatvāpūrṇatvanirdeśaparivarta*, and the *Śrīmālādevīsiṃhanādasūtra* as falling in a single line of development, probably in that order. This line is seen as mainstream or quasi-orthodox, while the *Mahāparinirvāṇamahāsūtra* group is seen as a kind of – probably later – offshoot. This ostensible side branch is also often seen as propounding maverick doctrines, an understanding particularly pronounced in scholarly attitudes to "buddha nature," which is understood as a new spin on the *tathāgatagarbha* ideas of the *Tathāgatagarbhasūtra, Anūnatvāpūrṇatvanirdeśaparivarta*, and *Śrīmālādevīsiṃhanādasūtra*. However, this understanding is possibly governed by the retrospective viewpoint of the *Ratnagotravibhāga*. The *Tathāgatagarbhasūtra*, the *Anūnatvāpūrṇatvanirdeśaparivarta*, and the *Śrīmālādevīsiṃhanādasūtra* are in fact quite heterogeneous, but one of the strongest features binding them together is the fact that the *Ratnagotravibhāga* quotes them copiously. In contrast, of the *Mahāparinirvāṇamahāsūtra* group, the *Ratnagotravibhāga* cites only the *Mahāparinirvāṇamahāsūtra* itself, and that just once. If we set aside the *Ratnagotravibhāga*, relations between these two supposed strands of the *tathāgatagarbha* corpus may not be so straightforward. This is an area in which much work remains for future scholarship.

None of the scriptures discussed above has been preserved in its entirety in the original Sanskrit. In addition to the fragments of the *Mahāparinirvāṇamahāsūtra* recovered from Central Asian manuscripts, however, some fragments have been preserved as citations (or interpolations) in other Sanskrit works. More than any other single source, the *Ratnagotravibhāga*, a work in terse verses, and its accompanying expansive prose commentary, the *Ratnagotravibhāgavyākhyā*, preserve portions of these texts in Sanskrit. The *Ratnagotravibhāga* also takes the nine similes of the *Tathāgatagarbhasūtra* as a major structuring device. Furthermore, the *Ratnagotravibhāgavyākhyā* is certainly the most significant shastric work treating *tathāgatagarbha* doctrine. In fact, it is peculiar insofar as it is almost the only known Indic treatise to attempt to systematize this doctrine (setting aside the virtually unknown **Mahāyānadharmadhātunirviśeṣa*, for which see below). The numerous Tibetan commentaries on the *Ratnagotravibhāga* (Kanō, 2006b, 593–600; Burchardi, 2006) refer to the scriptures quoted by the *Ratnagotravibhāgavyākhyā* only indirectly, and thus fall outside the scope of this article.

The *Ratnagotravibhāgavyākhyā* has survived in Sanskrit (Johnston, 1950; see below), in a Chinese translation, the *Jiujing yisheng baoxing lun* (究竟一乘寶性論; T. 1611), completed by Ratnamati (勒那摩提; or by Ratnamati and Bodhiruci) in around 511 CE, and in separate Tibetan translations of the root verses and of the entire text including commentary: the *Theg pa chen po rgyu bla ma'i bstan bcos* (D 4024/Q 5525) and the *Theg pa chen po rgyud bla ma'i bstan bcos rnam par bshad pa* (D 4025/Q 5526), both completed by Blo ldan shes rab (*Matiprajña; 11th cent.; see Takasaki, 1966, 6–7). The Chinese tradition ascribes the text to an otherwise almost unknown *Sāramati (賢慧), while the Tibetan tradition ascribes the *Ratnagotravibhāga* to (the future buddha?) Maitreya and the *Ratnagotravibhāgavyākhyā* to the Yogācāra philosopher Asaṅga.

The *Ratnagotravibhāgavyākhyā* was first studied by modern scholars through the Tibetan version, which was translated in full into English by E. Obermiller (1931). The Sanskrit was rediscovered in the 20th century in two manuscripts in Tibet by Rāhula Sāṃkṛtyāyana and edited by E.H. Johnston (1950). The latter remains the standard edition but should be supplemented by the detailed philological work of L. Schmithausen (1971). Other important contributions on textual matters have been made by J.W. de Jong (1968) and D.S. Ruegg (1976). The *Ratnagotravibhāgavyākhyā* was fully translated into English by Takasaki Jikidō (1966), whose introduction to the text provides an important overview of the contents and sources. Takasaki Jikidō also translated the text into Japanese (1999).

Vimalakīrtinirdeśa

The *Vimalakīrtinirdeśa* (Teaching of Vimalakīrti) is a mid-length Mahāyāna text composed conceivably by around 100 CE, certainly by the early 3rd century. Its central protagonist is Vimalakīrti, a bodhisattva from the world Abhirati (lit. delight; the joyous buddha field of Buddha Akṣobhya), who has made himself present in our Sahā world (the painful buddha field of Buddha Śākyamuni) in the city of Vaiśālī as a wealthy householder in order to teach beings such themes as nonduality (*advaya*), nonarising of dharmas (*anutpāda*), emptiness (*śūnyatā*), and the inconceivable (*acintya*). He delivers his teaching through brilliant dialogue, displays of supernatural powers, and apophatic silence. The *Vimalakīrtinirdeśa* had limited impact on the Buddhisms of India and Tibet but exerted profound influence on Sinitic religious, artistic, and literary culture. It has also been enthusiastically received in modernist Buddhism and appreciated for its literary quality, its antinomian tendencies, and its perceived embrace of lay Buddhism and gender equality.

Translations and Studies

The most specialized scholarly translation is É. Lamotte's (1962), which is based on the Tibetan version with references to Xuanzang's (玄奘) Chinese version (T. 476) – it comes with an extensive introduction that remains the most comprehensive study of the text in a Western language. R. Thurman (1976) likewise represents the Tibetan version. B. Watson (1997) renders the Chinese version of Kumārajīva (T. 474), as does J. McRae (2004). A comparative study of the main English translations is found in J. Nattier (2000). Other English translations include those by H. Idzumi (1923–1928), Ōhara (1898), Robinson (n.d.), C. Luk (1972), Sangharakshita (1995), and T. Cleary (2013). J. Fischer and T. Yokota (1944) translated the Chinese into German. Translations into modern Japanese include those by S. Mushanokōji (1934), M. Ishida (1966), J. Takasaki and K. Kawamura (1993), G. Nagao (1983), and – from the Sanskrit – M. Nishino and H. Takahashi (2011) and M. Ueki (2011).

Important studies have come from P. Demiéville (1962), G. Fussman (2009), É. Lamotte (1962), R. Mather (1968), J. Ōshika (1970a; 1988), G. Shi (1998), J.A. Silk (2014), and J.D. Whitehead (1976).

Text and Versions

Sanskrit

A complete Sanskrit manuscript of the *Vimalakīrtinirdeśa*, dated to the 12th century, was discovered at Potala Palace in Lhasa in 1999. Facsimiles of the manuscript, which also includes the *Jñānālokālaṃkāra*, a sūtra associated with Tathāgatagarbha literature, were published in 2004 by the Taishō University Study Group on Buddhist Sanskrit Literature, along with a synoptic presentation (Sanskrit-Tibetan-Chinese), followed by an edition of the Sanskrit by the same group in 2006. The colophons indicate that the manuscript was produced at the request of the Tibetan monk Śīladhvaja, who had traveled to Vikramaśīla around 1150 (Fussman, 2009, 644). With the exception of verse passages in chapters 1 and 7 (the Sanskrit meter of which is explored in Iwamatsu, 2007; see also Iwamatsu, 2009), the text is entirely in prose. G. Fussman (2009, 646) sees in the sūtra the work of three editorial hands and speculates, agreeing with É. Lamotte's earlier opinion, that the Sanskrit *Vimalakīrtinirdeśa* must have reached a more or less complete form by about 100 CE. The terminus ad quem is the Zhi Qian (支謙) translation (see below; for information about the manuscript and its discovery, see K. Tada, 2004). The availability of this Sanskrit manuscript has led to a resurgence of scholarly interest in the *Vimalakīrtinirdeśa*, with several English translations of the text currently in progress.

Tibetan

A complete Tibetan translation by Dharmatāśīla (Chos nyid tshul khrims) from the early 9th century is preserved in the Kanjur under the title *'Phags pa Dri ma med par grags pas bstan pa* (D 176/P 843). J. Ōshika (1970a) edited a romanized transcription

a) edited a romanized transcription

of the Kanjur version, taking account only of the editions of Derge, Peking, and Narthang. He also published an index of the Tibetan translation, with corresponding Chinese equivalents and hypothetical Sanskrit terms (Ōshika, 1975).

On the basis of a study of Tibetan fragments from Dunhuang in the Fond Pelliot chinois in the Bibliothèque Nationale in Paris, É. Lamotte (1976, xlii) concluded that the Tibetan tradition produced two other translations of the *Vimalakīrtinirdeśa* slightly earlier than Dharmatāśīla's, separated in time from each other by the compilation of the Tibetan-Sanskrit dictionary *Mahāvyutpatti*, some time in the 9th century. J. Nattier (2000, 236) speaks of only one such translation.

Chinese

Chinese sources list seven translations. Three are extant, two are not, while two are spurious – the titles given below follow the Taishō edition.

Extant Chinese translations:

1. *Weimojie jing* (維摩詰經; T. 474; two fascicles; trans. Zhi Qian; dated 222–229 CE by the late 6th-century CE catalogue *Zhongjing mulu* [眾經目錄; T. 2146 [LV] 119a9]). É. Lamotte (1976, xxviii) opines that the *Weimojie jing* represents the oldest stratum of the *Vimalakīrtinirdeśa*; by contrast G. Fussman (2009, 644) thinks that Zhi Qian worked from a more or less fully developed Sanskrit text. S. Karashima (2014) argues, on phonological grounds, that *Weimojie jing* was likely based on an original in Gandhari, or at least one with Gandhari elements. Some passages found elsewhere are absent, including most of the verse section in chapter 1 and Vimalakīrti's silence at the end of chapter 8 (for a full list, see Lamotte, 1976, xxviii). Sengyou's (僧祐) catalogue lists this translation as lost (T. 2145 [LV] 6c14), which has led to speculation that *Weimojie jing* may actually be the work of Dharmarakṣa, hitherto regarded as not extant (Shi, 1998; however, Nattier [2008, 140n78] and Tu [2013] disagree).

2. *Weimojie suoshuo jing* (維摩詰所說經; T. 475; three fascicles; trans. Kumārajīva in 406 CE). É. Lamotte (1976, xxxiii) opines that it was based on a more extensive "Sanskrit" original than the *Weimojie jing*. Some information about that original, and the procedures that Kumārajīva used in producing the *Weimojie suoshuo jing*, can be gleamed from the commentary *Zhu Weimojie jing* (注維摩詰經; T. 1775; see below). It is concise in style, and philosophically central passages are rendered without abridgment. The translation borrows heavily from the *Weimojie jing*, while revising its technical vocabulary (Harrison, 2008). In the Sinitic context, this translation was by far the most influential, inspiring most of the commentarial literature. It is also the basis of most modern translations.

3. *Shuo wugoucheng jing* (說無垢稱經; T. 476; six fascicles; trans. Xuanzang [玄奘] in 650 CE). It shows many cases of verbatim correspondence with the *Weimojie suoshuo jing* but is greatly enlarged. According to É. Lamotte (1976, xxxv), Xuanzang likely worked from an original much more developed than those used by his predecessors; G. Fussman (2009, 645) observes that the *Shuo wugoucheng jing* stays very close to the surviving Sanskrit. It is the basis for only one commentary, by Kuiji (窺基; *Shuo wugoucheng jing shu* [說無垢稱經疏]; T. 1782).

Nonextant Chinese translations:

1. *Yi Weimojie jing* (異維摩詰經) or *Yi Pimoluojie jing* (異毘摩羅詰經; trans. in 291 or 296 CE by Zhu Shulan (竺叔蘭; earliest mention in T. 2145 [LV] 9c12–15]).

2. *Weimojie jing* (維摩詰經), *Weimojie mingjie* (維摩詰名解), or *Weimojie suoshuo famen jing* (維摩詰所說法門經; trans. in 303 CE by Dharmarakṣa; earliest mention in T. 2145 [LV] 7c1). An abridged version (*shan* [刪]) is also attributed to Dharmarakṣa (T. 2145 [LV] 8c16).

Spurious translations include those attributed to Yan Fotiao (嚴佛調; earliest mention in T. 2034 [XLIX] 54a14; see Lamotte, 1976, lxxxix–xci) and to Gītamitra (Qiduomi [祇多密]; earliest mention in T. 2034 [XLIX] 71c1).

Other Translations

A fragment in the Stein collection represents a Sogdian translation, no longer extant *in extenso*, based on Kumārajīva's Chinese version (see Weller, 1937). The late Khotanese text known as *Book of Vimalakīrti* may contain a number of free quotations from the *Vimalakīrtinirdeśa* in Khotanese, as argued by M. Maggi (2007), among others.

Vimalakīrtinirdeśa in Context

The textual sources of the *Vimalakīrtinirdeśa* remain a topic of debate. The lack in the *Vimalakīrtinirdeśa* of the ten-*bhūmi*s (stages of spiritual progress of a bodhisattva) concept is taken by É. Lamotte (1976, xcviii) as an indication that the text belongs to the oldest stratum of Mahāyāna *sūtras*, while its philosophic orientation indicates links with the earliest *Prajñāpāramitā* texts. É. Lamotte also considers a possible connection to the *Buddhāvataṃsaka*, which shares with the *Vimalakīrtinirdeśa* the subtitle *Acintyavimokṣa*, to some texts in the Mahāsaṃnipāta collection that feature a character by the name of Vimalakīrti (see also Hashimoto, 1983), and to two texts in the Mahāratnakūṭa collection, including – in view of the role in the *Vimalakīrtinirdeśa* of the buddha Akṣobhya – the *Akṣobhyatathāgatasyavyūha* (Lamotte, 1976, lxxxi ff.; for a critical overview of Lamotte's method and findings, see J.A. Silk, 2014, 165ff.). Some scholars (Lamotte, 1976; Fussman, 2009) highlight the emptiness angle of the *Vimalakīrtinirdeśa* and speculate on a possible link between the *Vimalakīrtinirdeśa* and Nāgārjuna, although the question of relative chronology poses problems.

Some of the most acclaimed scenes of the *Vimalakīrtinirdeśa* have parallels in other texts, mainly those in the Mahāratnakūṭa collection (Silk, 2014, 168n41). The scene of the protagonist defeating in debate a number of *śrāvakas* and bodhisattvas and reducing them to silence (ch. 3) and the episode of miraculous gender change (ch. 6, § 15) are both present, with slight variation, in the *Vimaladattāparipṛcchā*, the *Sumatidārikāparipṛcchā*, and the *Aśokadattavyākaraṇa*. The *Gaṅgottarāparipṛcchā* and *Strīvivartavyākaraṇa* also belong in this category. These parallels are perhaps best seen as cases not of influence but of drawing on a common pool of tropes and images.

In the context of mainstream Buddhist literature, the possibility that the character Vimalakīrti is textually related to the *nikāya* character Citra was first explored by B. Watanabe (1956) and later by J.A. Silk (2014, 181–182; two other possible models are Dharmodgata and Ugra [see Taki, 2007]).

Two texts of Indian origin may be considered "sequels" to the *Vimalakīrtinirdeśa* (for a discussion, see Silk, 2014, 166ff.): the *Candrottarādārikāvyākaraṇa*, which focuses on Vimalakīrti's daughter (see also Ōshika, 1970b), and the **Mahāvaipulyamūrdharāja*, which centers on Vimalakīrti's son.

A handful of Sanskrit quotations from the *Vimalakīrtinirdeśa* are preserved in Candrakīrti's *Prasannapadā* and *Madhyamakavṛtti* (7th cent. CE), Śāntideva's *Śikṣāsamuccaya* (7th cent. CE; Mochizuki, 1962), and Kamalaśīla's *Bhāvanākrama* (8th cent. CE), whence they make their way to Tsong kha pa's *Lamrim chenmo* (Langelaar, 2011). R. Soeda (1978) sees a quotation in the *Sarvatathāgatatattvasaṃgrahasūtra*. A listing of quotations is in B. Watanabe (1956, 134–136, n3).

Synopsis of Chapters

The Sanskrit and Tibetan versions divide the text into 12 chapters. The extant Chinese translations split chapters 3 and 12 in two, resulting in a total of 14. A handy synoptic table of the Sanskrit, Tibetan, and Chinese is published by Study Group on Buddhist Sanskrit Literature (2004, iv).

Chapter 1

The scene is set in Āmrapālī's garden in the outskirts of Vaiśālī. The Buddha is addressing a vast assembly. A group of five hundred youths from the Licchavi clan, led by Ratnākara, offer to the Buddha adorned parasols, which he transforms into one enormous canopy that covers and reflects the entire universe. The youths ask the Buddha how to purify the buddha field (*buddhakṣetra*); the Buddha responds that when the bodhisattva's mind is pure, the buddha field is pure. Śāriputra is unable to see the purity of Śākyamuni's world. The Buddha performs a miracle, displaying this purity briefly.

Chapter 2

The scene shifts to Vimalakīrti's house in the center of Vaiśālī. There is a lengthy description of Vimalakīrti: a merchant, eloquent and wealthy, a husband, and a father, for the sake of maturing beings, he enters the most mundane of places – gambling venues, houses of pleasure, schools of heterodox teachers – while fully retaining his *tathāgata*-like qualities. He pretends to be sick, so that the citizens of Vaiśālī will be moved to call on him and thus give him an opportunity to teach. When a large group of them arrives, Vimalakīrti speaks to them about the impermanent material body and then about the body of a tathāgata.

Chapter 3

The Buddha tries unsuccessfully to convince ten *śrāvakas*, three bodhisattvas, and one householder to visit the "ailing" Vimalakīrti. One by one, they excuse themselves of the task, as they ruefully recall prior encounters with Vimalakīrti in which he trumped them in their own particular areas of expertise.

Chapter 4

Mañjuśrī reluctantly agrees to call on Vimalakīrti. The latter miraculously empties his small house (the image of which later becomes iconic as a term for a Chan master's dwelling [Chn. *fangzhang*; Jpn. *hōjō* (方丈)]) to make room for Mañjuśrī and his

entourage. Vimalakīrti explains that he is ill because beings are ill due to ignorance (*avidyā*) and thirst for existence (*bhavatṛṣṇā*). There follows a swift exchange on the nature of emptiness and on the "emancipation of buddhas." Vimalakīrti explains that illness is best cured by a discarding of "me" (*ahaṃkāra*) and "mine" (*mamakāra*), and other forms of dualism.

Chapter 5

Vimalakīrti fetches from the distant buddha field Merudhvajā into his sickroom 32,000 giant thrones for Mañjuśrī and his entourage, without leaving his bed, and without enlarging the room or shrinking the thrones. He explains to the stunned Śāriputra that actions like these are possible for bodhisattvas who practice *acintyavimokṣa* (inconceivable liberation). Mahākāśyapa declares that *śrāvakas*, being like "scorched seeds," are incapable of understanding this profound liberation.

Chapter 6

Beings are to be viewed as empty, proclaims Vimalakīrti, and this enables compassion toward them. A goddess (*devatā*) appears in the room. She scatters flowers, which slide off the bodies of the bodhisattvas but stick to the bodies of the *śrāvakas*. Śāriputra tries to shake off the flowers but fails: the goddess explains that this is because he clings to a discriminating perception (*vikalpana*). Her own eloquence (*pratibhāna*) is due to her not having attained (*prāpta*) anything. Śāriputra asks her why she will not change out of her female body. The goddess uses her powers to exchange gender with Śāriputra and explains that the distinction between male and female, like all dharmas, is unreal (*aparinişpanna*) and like an illusion (*māyānirmitasvabhāva*).

Chapter 7

Mañjuśrī asks Vimalakīrti what path (*gati*) the bodhisattva must follow in order to attain the qualities of the Buddha (*buddhadharmāḥ*); Vimalakīrti responds that the path to follow is the non-path or wrong path (*agatigamanaṃ gacchati*). Mañjuśrī says that the family (*gotra*) of the tathāgatas consists of 62 erroneous views, from which Mahākāśyapa infers that *śrāvakas*, who have eliminated erroneous views, cannot join the family of the tathāgatas. Vimalakīrti gives an allegorical account of the true nature of his "family," identifying its members with various virtues, attainments, and points of doctrine.

Chapter 8

Vimalakīrti asks the bodhisattvas in Mañjuśrī's retinue how to enter the gate of nonduality (*advaya-dharma*). They reply in a series of some 30 ways, in each case erasing a pair of dualities (e.g. arising-passing, me-mine, and affliction-purification). Mañjuśrī turns to Vimalakīrti for an answer, and he responds with silence, generally understood to signify that truth is in some sense beyond language.

Chapter 9

The buddha Gandhottamakūṭa, presiding over that world, gives to the conjured bodhisattva one vessel of food. On his way back, the bodhisattva is joined by 90 thousand bodhisattvas from that world, eager to see Buddha Śākyamuni teach those of inferior resolve (*hīnādhimuktikāḥ*). A large group from Vaiśālī joins the gathering. The one vessel miraculously feeds all in attendance without its contents being depleted. Vimalakīrti describes to the visiting bodhisattvas Śākyamuni Buddha's methods of teaching: since beings in the Sahā world are undisciplined, they must be restrained by means of teachings on all kinds of suffering (*sarvaduḥkhaparibhāṣaṇakathāḥ*).

Chapter 10

Vimalakīrti picks up the entire assembly in his hand and takes it to Āmrapālī's garden, where the Buddha is staying. Ānanda is perplexed by the aroma. He is told that it emanates from the food from Sarvagandhasugandhā and that this food accomplishes the Buddha's work (*buddhakṛtya*), that is, helps beings progress toward buddhahood. The Buddha lists many other ways in which the buddhas, endowed with inconceivable (*acintya*) wisdom and eloquence, can accomplish their work. Impressed, Ānanda concedes the inferiority of *śrāvakas*. Before returning to Sarvagandhasugandhā, the visiting bodhisattvas ask Vimalakīrti for a teaching, and he speaks of a liberation (*vimokṣa*) of bodhisattvas that consists in not destroying (*kṣaya*) the conditioned and not preserving (*akṣaya*) the unconditioned.

Chapter 11

In a series of negations, Vimalakīrti describes how he views the Tathāgata. The Buddha tells Śāriputra that Vimalakīrti came from the world Abhirati of Buddha Akṣobhya. The assembly wants to see that world, and Vimalakīrti, without getting up from his seat, miraculously brings the entire Abhirati into Āmrapālī's gardens. The assembly sees Abhirati, and Śākyamuni gives to all present a prediction that they will be reborn in that world. Abhirati returns to its original location. The chapter closes with an exhortation to protect and propagate this teaching.

Chapter 12

Finally come the customary exhortations to protect and propagate the dharma. The Buddha entrusts this teaching to Maitreya.

Titles

The main title in the Sanskrit version – *Vimalakīrtinirdeśa* – does not include the term *sūtra*, nor is its equivalent *mdo* found in the Tibetan version. All Chinese translations use the term *jing* (經).

A secondary title is *Acintyavimokṣa* (*dharmaparyāya*); among the various Chinese translations, it appears in up to seven variants. It may have been inspired by the title and content of chapter 5, a large part of which deals with the inconceivable (*acintya*) liberations (*vimokṣa*) of the bodhisattva, and which, in a move reminiscent of the *Buddhāvataṃsaka*, contains an indication that the teaching presented therein is a summary of an "unthinkably" larger teaching. Further, the 6th-century CE Chinese catalogue *Lidai sanbao ji* (歷代三寶紀) introduces for Zhi Qian's translation the title *Fofa puru daomen jing* (佛法普入道門經; T. 2034, 57a21), which likely reflects the Sanskrit *Sarvabuddhadharmapraveśa* from chapter 10, § 11.

Yet another title – unattested in the Chinese tradition – is mentioned in the Sanskrit version (ch. 12, § 23): *Yamakapuṭavyatyastanihāra*. M. Ueki renders this as "presentation of paired phrases and paradoxical expressions" (see Ueki, 2011, 619–620n75). The corresponding Tibetan is *Phrugs su sbyar ba snrel zhir mngon par bsgrubs pa*, which É. Lamotte reconstructs as *Yamakavyatyastābhinirhāra* and translates as "production of paired and inverted sounds" (Lamotte, 1976, lvi–lvii, 272–273; comp. Thurman, 1976, 42: "reconciliation of dichotomies"), suggesting that the paired inversion refers to the contradictory or paradoxical way in which the text portrays the bodhisattva.

Commentarial Traditions

No evidence exists of any Indian or Tibetan commentary on the *Vimalakīrtinirdeśa*. By contrast, Sinitic Buddhism produced an extensive commentarial literature on the *Vimalakīrtinirdeśa* (for an overview, see J. Ōshika, 1982).

The earliest surviving quasi-commentarial work in Chinese is the 4th-century CE Zhi Mindu's (支敏度) preface (T. 2145, 58b21) to his synoptic edition (*heben* [合本]; being a kind of exegetical work; see Zürcher, 2007, 99–100), no longer extant, of the three early translations: those by Zhi Qian, Dharmarakṣa, and Zhu Shulan.

Roughly from the same time is a commentary of unclear authorship partially preserved in the Fonds Pelliot chinois (P. 3006) from Dunhuang, which G. Shi (1998) suggests may be the only available work of this sort targeting the Zhi Qian translation. Another important early commentary is the *Zhu Weimojie jing*, traditionally considered a work of Sengzhao but compiled likely in the early 6th century CE (Hanazuka, 1982). It collects glosses and longer interpretive passages attributed by name to Kumārajīva, Sengzhao, Daosheng (道生), and Daorong (道融; for studies on *Zhu Weimojie jing*, see Usuda, 1977; Kimura, 1987; for translations, see Carré, 2004; Institute for Comprehensive Studies of Buddhism of Taishō University, 2000). A modified version of this group commentary, the *Jingming jing jijie Guanzhong shu* (淨名經集解 關中疏; T. 2777) compiled in 760 CE by Daoye (道液), containing also sections of an otherwise lost commentary by Sengrui (僧叡), and a manuscript with Sengzhao's commentary edited independently (Kudara, 2002), are among the many *Vimalakīrtinirdeśa*-related textual finds from Dunhuang. The Dunhuang site yielded about 770 scrolls (*juan* [卷]) of the Chinese *Vimalakīrtinirdeśa* (mainly *Weimojie suoshuo jing*) as well as over 150 scrolls of related material – commentaries and popular texts in prose and verse (for overviews of the *Vimalakīrtinirdeśa* commentaries from Dunhuang, see Fang & Xu, 1994; Shi, 1998, 53ff.).

Other commentaries from the early period up to the Tang dynasty include those by Jingying Huiyuan (淨影慧遠; T. 1776), Zhiyi (智顗; T. 1777), Jizang (吉藏; T. 1780; T. 1781), Zhanran (湛然; T. 1778), Kuiji (窺基; T. 1782), and Daoye (道液; T. 2778). In addition, two commentaries were written in the Song, five in the Ming, and three in the Qing dynasties; the dates of three others have not been determined. The Japanese tradition preserves the *Yuimagyō gisho* (維摩經義疏), a work attributed to Prince Shōtoku but one whose authorship remains contested (Hubbard, 2012).

Exegetical works aside, the *Vimalakīrtinirdeśa* in China exerted considerable impact on secular literature and visual culture. Its influence on literature has been sketched out admirably by P. Demiéville (1962).

Vimalakīrtinirdeśa in Visual Culture

The earliest known visual representation of Vimalakīrti was a mural by Gu Kaizhi (顧愷之), produced, for public display, between 363 and 365 CE in the Waguan Temple (瓦官寺) in Jiankang (建康), the capital of the Eastern Jin Kingdom (Soper, 1959, 36). Lost at an early date, this acclaimed painting is reported to have inspired the production in southern China of many others on the same topic through the 5th and 6th centuries CE, but none has survived. The earliest surviving painting comes from the north: dated to 420 CE, it is preserved in cave 169 in the Bingling temple (炳靈寺) complex in modern-day Gansu province and depicts Vimalakīrti reclining on a bed-like structure, with a halo behind his head and shoulders, accompanied only by an attendant (He, 1982, 63). In the north in the 5th and early 6th centuries CE, themes from the *Vimalakīrtinirdeśa* were represented mainly in stone sculpture, first at the Yungang (雲崗) complex (mid-5th cent. CE) and then at Longmen (龍門; from the late 5th cent. CE). Over 70 related works from this period have been identified (Bunker, 1968, 30). The most common motif is that of the encounter between Vimalakīrti and Mañjuśrī: the two are often shown facing each other, with a buddha in between as a judge-like figure. Vimalakīrti's robes come in a variety of styles (from a Persian fur coat to free-flowing Han-style attire), as do his accoutrements: the bed or armrest and the fan (for details, see Bunker, 1968 and Ning, 2004, 50ff.). Starting with the Sui period (589–618 CE), illustrations of the *Vimalakīrtinirdeśa* appear in the Mogao (莫高) cave complex at Dunhuang, which preserves some 68 works of this type (He, 1982). The composition in cave 220 (mid-7th cent. CE) stands out on account of its large size (two panels 2 m wide and 3.42 m high) and of its inclusion of the Tang emperor and his officials among the witnesses of the Vimalakīrti-Mañjuśrī exchange. Three miracles are also represented: the giant-thrones scene from chapter 5, the Sarvagandhasugandhā scene from chapter 9, and the Abhirati scene from chapter 11 (for cave 220, see Ning, 2004, 55ff.). Models established by the Tang remained influential in later epochs throughout East Asia. For an overview of the earliest wooden statues of Vimalakīrti from Japan, see J.M. Rosenfield (1966). No visual representation of *Vimalakīrtinirdeśa* themes has been found in India.

Themes in Scholarship

It has been argued that the *Vimalakīrtinirdeśa* stands out among other Mahāyāna *sūtras* on account of its merit as a work of literature. E. Zürcher (2007, 131) highlights the "dramatic" features of the text. J.A. Silk (2014) applies a theory of narrativity to propose that the *Vimalakīrtinirdeśa* is not only a story or a number of stories strung together but also a plot on the level of the text as a whole, a feature very uncommon in Buddhist *sūtra* literature. The narrative aspects of the *Vimalakīrtinirdeśa* were earlier explored in E. Hamlin (1988).

J.G. Williams (1990) sees the *Vimalakīrtinirdeśa* as accomplishing its serious religious goals through a humor of incongruity, to which the real or apparent paradoxicality of Vimalakīrti's teaching lends itself especially well. Other scholars (Kontler, 1988; Fiordalis, 2012) attempt to make sense of the rhetoric of the magical in the *Vimalakīrtinirdeśa*; a question arises about the relation between the magical and the doctrinal. A. Cole (2005, 236ff.) sees the narrative strategy of the *Vimalakīrtinirdeśa* as one of rhetorical "humiliation" that displaces "old-style" Buddhism with Vimalakīrti as embodiment of the new authoritative tradition.

The scene of gender change from chapter 6 (§ 15) has been pointed to as evidence of a liberal attitude in some Mahāyāna circles toward gender equality (e.g. Gross, 2004; Paul, 1985). P. Demiéville (1962, 180) opines that, in its original context, this episode was meant to "scandalize the orthodox." Such distinctly modern interpretations notwithstanding, in premodern contexts the gender-change scene may have functioned as yet another expression of *Vimalakīrtinirdeśa*'s central teaching that while ultimately dualities are "empty," conventionally they remain very real: emptiness does not obliterate dualities but is their defining nature. J.A. Silk (2014, 176n68) speculates that, in the monastic context defined by Vinaya regulations, Śāriputra's transformation into a woman would likely be read as an indication of his karmic inferiority.

Much scholarship on the *Vimalakīrtinirdeśa* attempts to account for the text's great popularity, in relative terms, in Sinitic Buddhism. According to a common argument, *Vimalakīrtinirdeśa*'s treatment of subtle metaphysics through the medium of lively dialogue, paradox, and brief enigmatic statements, as well as its sensitivity to the problem of the limits of language, was a key factor in its success among the southern elites in China in the 3rd and 4th centuries CE, steeped in the practices of *qingtan* (清談; pure conversation) and *xuanxue* (玄學; dark learning; Zürcher, 2007, 132; Mather, 1968, 67). The early reception of the text in the north has not been studied in equal depth.

On a related topic, R. Mather (1968, 66–67) suggests that *Vimalakīrtinirdeśa*'s integration into the Sinitic literary patrimony was facilitated by "the flexibility of the *sūtra*'s outlook," established through its description of the Buddha as teaching the dharma with a single voice (ch. 1, §§ 10–11). However, at least early on, the single-voice passage could not have played any role as it is missing from the Zhi Qian translation. Moreover, its frequent assertions of the superiority of the bodhisattva path over the *śrāvakayāna* (*śrāvaka* path) prompted some Chinese exegetes to see the text as anything but conciliatory: for instance, in the earliest system of doctrinal classification (*panjiao* [判教]), Huiguan (慧觀) in the 5th century CE classified the *Vimalakīrtinirdeśa* as *yiyang jiao* (抑揚教: "teaching that disparages [the *śrāvakayāna*] and extols [the *bodhisattvayāna* (bodhisattva path)]"; see e.g. T. 1736 [XXXVI] 43a5–8), an evaluation that was taken up later in Tiantai (天台) dogmatics.

Another factor in the success of the *Vimalakīrtinirdeśa* in East Asia is often said to have been its embrace of the ideal of the householder bodhisattva (see esp. Whitehead, 1976; 1978; Nakamura, 1962). On this reading, the *Vimalakīrtinirdeśa* endorses a mode of withdrawal from the world enacted not through retreat into the monastery but through the cultivation of a special frame of mind. In this connection, scholars note Zhi Qian's and Kumārajīva's translation of *araṇyavāsa* (ascetic wilderness-dwelling) as *xianju* (閑居; leisure-dwelling) and *kongxianchu* (空閑處; empty leisurely place), respectively, both terms that likely appealed to the cultivated gentry (comp. Nattier, 2008, 245–246). However, any reading of the *Vimalakīrtinirdeśa* must account for the robustly pro-monastic thrust of the text as a whole. Furthermore, to view Vimalakīrti simply as a householder is problematic (see Silk, 2014, 173ff.). As a corrective to this view, some scholars insist that "really" Vimalakīrti is an advanced bodhisattva from Abhirati (Sangharakshita, 1995, 57) or even a tathāgata (Fussman, 2009, 647–648), his identity as a layman from Vaiśālī being nothing but a display of *upāya*, the extraordinary teaching skill of bodhisattvas that allows them to manifest in any form that they deem best suited to the needs and capacities of beings. J.A. Silk (2014) opines that even this does not go far enough: instead of trying to explain away the tension between Vimalakīrti's two identities, we should take it seriously as a concretization of the paradoxical philosophy of emptiness that defines the text in both its doctrinal and its magical dimensions.

Chinese Buddhist Apocrypha

The term "Chinese Buddhist apocrypha" refers to those scriptures, or the genre of such scriptures, that while appearing in form to be purely the Chinese translation of a scripture (or *sūtra*) originating in India were in fact composed in China. These texts follow the style of authentic translations of Indian Buddhist scriptures, usually beginning with the formula "Thus have I heard" (Skt. *evaṃ mayā śrutam*; Chn. *rushi wo wen* [如是我聞] or *wen rushi* [聞如是] as an earlier form). Scholars thus generally use the term Chinese Buddhist apocrypha to mean "*sūtras* composed in China." The use of the word "apocrypha" is merely conventional, and it does not exactly match the original meaning in the Judeo-Christian context.

There are various types of Chinese Buddhist apocrypha, as discussed below. It is difficult to know precisely how many Chinese Buddhist apocrypha once existed. The *Kaiyuan shijiao lu* (開元釋教録; Record of Buddhist Teachings in Kaiyuan Era), compiled by Zhisheng (智昇) in 730 CE, lists as many as 406 such texts in 1,074 fascicles (Makita, 1976, 27; see also Cao, 2011). Some of these may be duplicates, so the true number of such texts in existence by 730 CE may have been somewhat smaller than this, but we can safely say that a large number of Chinese Buddhist apocrypha were composed and spread widely in medieval China. Indeed this same catalogue records the number of authentic translations extant in Chang'an (present-day Xi'an) as only 1,076 texts in 5,048 fascicles (T. 2154 [LV] 680a27–b02; 700c27–29), so it would seem that Chinese Buddhist apocrypha were a substantial portion of the total number of medieval Chinese Buddhist scriptures.

Traditional and Modern Appellations for Chinese Buddhist Apocrypha

What modern scholars writing in English refer to as Chinese Buddhist apocrypha were traditionally called either *wei jing* (僞經; spurious scripture) or *yi jing* (疑經; suspicious/doubtful scripture). These words were used in contrast to *zhen jing* (眞經; authentic scriptures), signifying genuine translations of texts from India or the subordinate areas. The word *jing* has a double meaning: primarily it signifies *sūtra* among the three baskets (Tripiṭaka) of Buddhist canonical texts; more broadly, *jing* can also mean any text of the Tripiṭaka and can thus refer to Vinaya (monastic code) and *śāstra* (treatises) as well. The term Chinese Buddhist apocrypha can also be used in both senses.

The terms *wei jing* and *yi jing* sometimes expressed different meanings but were also occasionally used as synonyms. When differentiated, *wei jing* means a certifiably inauthentic or spurious scripture, while *yi jing* was used to refer to a scripture whose authenticity was merely highly questionable. Another term, *yi wei jing* (疑僞經; suspicious and spurious scriptures), combines the meaning of both *yi* and *wei* and was also sometimes used in traditional Buddhist catalogues. The relationship between these various terms can be summarized as follows:

1. a. *zhen jing* (眞經) ←→ b. *wei jing* (偽經; = *yi jing* [疑經] as synonyms)
2. a. *zhen jing* (眞經) ←→ b1. *wei jing* (僞經) + b2. *yi jing* (疑經; b1+ b2 = *yi wei jing* [疑僞經])

Some scholars writing in Chinese and Japanese intentionally avoid the usage of *wei*, because it is based on the value judgment that Indian Buddhist texts, and only Indian Buddhist texts, are authentic and that anything else is spurious and therefore insignificant. Accordingly, those scholars who seek to use Chinese Buddhist apocrypha as historical sources for clarifying the history of Chinese Buddhism often prefer to use value-neutral terms, such as "indigenous Chinese scriptures" (中國撰述經典; Jpn. *Chūgoku senjutsu kyōten*; Chn. *Zhongguo zhuanshu jingdian*).

In traditional catalogues of Chinese Buddhist texts, another related term is *shiyi* (失譯; lit. translator's [name] lost, i.e. anonymous translation). Since authors of spurious scriptures usually sought to conceal the true origins of such texts, they often composed an apocryphon without specifying the translator's name. As a result, such a text was treated as *shiyi* in later catalogues. Alternatively, Chinese Buddhist apocrypha were attributed to well-known and prolific translators such as Kumārajīva (鳩摩羅什) or Dharmarakṣa (竺法護). Many Chinese Buddhist apocrypha were also attributed to An

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

Shigao (安世高), the earliest translator of Chinese Buddhist texts, who worked during the late Eastern Han. Use of the label *shiyi* was thus a common way of disseminating Chinese Buddhist apocrypha without arousing suspicion about inauthentic origins. Sengyou's (僧祐; 445–518 CE) list of *shiyi sūtras* in the *Chu sanzang ji ji* (出三藏記集; Collection of the Records on Issuing the Three Storehouses; T. 2145) includes such Chinese Buddhist apocrypha as *Pusa yingluo benye jing* (菩薩瓔珞本業經; Scripture of the Original Acts that Serve as Necklaces for the Bodhisattvas; T. 1485; see Mochizuki, 1946, 471–484), *Yijiao sanmei jing* (遺教三昧經; Scripture of the *Samādhi* on the Bequeathed Teaching; Funayama, 2007), *Jingdu sanmei jing* (淨度三昧經; Scripture of the *Samādhi* on the Pure Land; Mochizuki, 1946, 404–407; Fang, vol. VII, 2000, 226–347; Ziegler, 2001; Chen, 2013), and numerous other spurious and suspicious scriptures.

Chinese Buddhist Apocrypha Defined as Scriptures Containing Sinitic Elements

One of the most significant characteristics of Chinese Buddhist apocrypha is seen clearly in a passage of the well-known *Tiwei Poli jing* (提謂波利經; Scripture of Trapuṣa [Tiwei] and Bhallika [Poli]; Tsukamoto, 1974; Makita, 1976, 148–211; Tokuno, 1994). This text was composed in the second half of the 5th century CE by the *bhikṣu* Tanjing (曇靖) of the Northern Wei (北魏). During this dynasty, Emperor Taiwu (太武; r. 423–452 CE), who supported Daoism, enacted a persecution of Buddhism in 446 CE. Buddhism was then restored in 452 CE when the next emperor, Wencheng (文成; r. 452–465 CE), ascended the throne. During the persecution, however, many Buddhist texts were lost, and in order to help restore Buddhism within society, basic texts were needed, especially those that were accessible to the lay community. It was in this situation that the *Tiwei Poli jing* was composed.

This scripture was heavily based on Chinese traditional ideas such as the notion of *wu xing* (五行; five phases), which explains the cycle of phenomena in the world by using the five elements wood, fire, earth, metal, and water, as we see in the following passage:

> Trapuṣa and Bhallika asked the Buddha, "Why do you preach neither the four nor the six precepts to us, [but only the five precepts]?" The Buddha answered, "Five is the great categorical number of the world (*tianxia zhi da shu* [天下之大數]). In heaven it appears as the five stars; on the earth, it appears as the five major mountains; in the case of humans, it functions as the five viscera; in *yin-yang* (陰陽), it becomes the five phases; in the case of sovereigns, it appears as the five primeval emperors; in this world, it works as the five virtues; in color it becomes the five colors; and in Buddhist teaching, it becomes the five precepts. (T. 1705 [XXXIII], 260c22–25; trans. by author)

The presence of clear Chinese elements such as the five phases and *yin* and *yang* here reveals that this text must have been composed in China. A similar case is seen in the *Qingjing faxing jing* (清淨法行經; Scripture of the Clean and Purified Behaviors [Fit] for the Law), composed during the Six Dynasties period. This *sūtra* contains a reference to three Chinese sages as the disciples of the Buddha - namely Laozi (老子), Zhongni (仲尼 = Kongzi [孔子] = Confucius), and Yanyuan (顏淵; Makita & Ochiai, vol. III, 1995, 13–14). These three are depicted as sages sent to China by Śākyamuni Buddha in order to prepare the Chinese people for the later arrival of the Buddha's own teachings. Similarly, the scripture makes references to Chinese classics such as Laozi's *Daodejing* (道德經) and the five scriptures of Confucianism: *Shi* (詩; Songs), *Chunqiu* (春秋; Spring and Autumn Annals), *Yi* (易; Changes), *Li* (禮; Rites), and *Shu* (書; Documents).

It goes without saying that these kinds of references do not, and indeed could not, appear in pure Chinese translations of Indic texts.

Various Purposes of Composition

In his pioneering study, T. Makita (1976, 40–84) enumerates the following six aims behind the composition of Chinese Buddhist apocrypha.

1. Some Chinese Buddhist apocrypha were written so as to glorify particular Chinese sovereigns; an example is the *Da yun jing* (大雲經; Scripture of Great Clouds; see Forte, 2005), which was composed during the reign of Empress Wu (武則天; 624–705), and which effectively implied that she was Maitreya Buddha.

2. Some Chinese Buddhist apocrypha serve as platforms for the criticism of the contemporaneous political situation, such as we find in the *Renwang huguo bore boluomi jing* (仁王護國般若波羅蜜經; Perfection of Wisdom Scripture of Benevolent [or Humane] Kings Who Protect Their Country; T. 245

Orzech, 1998) and the fundam
Sanjie jiao ("Three Stages") sch
Xiangfa jueyi jing (像法決
Resolution of Doubts in the Ti
Doctrine; T. 2870).
3. Some Chinese Buddhis
assert connections between
tional Chinese thought. For

ee Forte, 2005), which was composed
n of Empress Wu (武則天; 624–705),
ctively implied that she was Maitreya

inese Buddhist apocrypha serve as
he criticism of the contemporaneous
ion, such as we find in the *Renwang*
luomi jing (仁王護國般若波羅蜜經;
Wisdom Scripture of Benevolent [or
s Who Protect Their Country; T.245;

Orzech, 1998) and the fundamental scripture for the Sanjie jiao ("Three Stages") school (三階教) entitled *Xiangfa jueyi jing* (像法決疑經; Scripture of the Resolution of Doubts in the Time of the Counterfeit Doctrine; T. 2870).

3. Some Chinese Buddhist apocrypha serve to assert connections between Buddhism and traditional Chinese thought. For example, the *Fumu en zhong jing* (父母恩重經; Scripture on Profound Parental Kindness; T. 2887), a well-known *sūtra* of filial piety, states that the most important filial piety is that directed to the Buddha. T. Makita also classifies the abovementioned *Qingjing faxing jing* and the *Tiwei boli jing* under this category.

4. Some Chinese Buddhist apocrypha seem to be based on specific doctrines. For example, the *Da tong fangguang jing* (大通方廣經; Extensive Scripture of Great Penetration; T. 2871) is mostly concerned to explain how one can eliminate bad karma through confession (*chanhui* [懺悔]). The *Guanshiyin sanmei jing* (觀世音三昧經; Scripture of the *Samādhi* of Guanshiyin [i.e. Avalokiteśvara]) and the *Jiu ku guanshiyin jing* (救苦觀世音經; Scripture of Guanshiyin Who Saves [Sentient Beings] from Sufferings) both pertain to the state of Guanshiyin (觀世音; also known as Guanyin [觀音]) worship in medieval China. A small piece entitled *Ban nihuang hou biqiu shi bian jing* (般泥洹後比丘十變經; Scripture of the Ten Changes of *Bhikṣus* after the Buddha's Perfect Nirvāṇa) discusses the prophecy of the gradual decline of the Buddhist dharma in the 1,300 years after the Buddha's extinction. It is closely related in contents with the *Fa miejin jing* (法滅盡經; Scripture of the Annihilation of the Law; T. 396) and the *Yueguang tongzi jing* (月光童子經; Scripture of Prince Moonlight; T. 534–536; Zürcher, 1982).

5. Some Chinese Buddhist apocrypha have certain personal names in their title. For example, the *Gao wang guanshiyin jing* (高王觀世音經; Scripture of Guanshiyin Manifesting as King Gao; Kiriya, 1990), which refers to Gao Huan (高歡) of the Northern Wei dynasty (later enthroned as Emperor Shenwu [神武] of the Northern Qi [北齊] dynasty), describes Guanyin's miraculous powers.

6. Some Chinese Buddhist apocrypha are based on superstitious practices, such as how to obtain relief from disease, how to accumulate merits for the future, and so on. Typical examples are the *Yan shouming jing* (延壽命經; Scripture of Longevity; T. 2888) and the *Tiandi ba yang shenzhou jing* (天地八陽神呪經; Scripture of Mystic Spells of Eight *Yang* on Heaven and Earth; T. 2897), both of which are closely related with folk beliefs and Daoism.

The above-listed six types are far from an exhaustive or complete classification of Chinese Buddhist apocrypha, in part because T. Makita only discussed those texts known to scholars in 1976. Still, his typology is useful for understanding the basic kinds and major examples of Chinese Buddhist apocrypha.

Because the contents of Chinese Buddhist apocrypha reflect the actual state of religious beliefs in China, they are important as concrete cases of the so-called Sinification of Buddhism. They reveal, for example, those points on which Chinese Buddhists could not take recourse to the authority of authentic translations. They also show how and when Chinese Buddhists may have been dissatisfied with what was found within genuine translations from Indic texts. In other words, when Chinese Buddhists were committed to certain ideas or practices that do not clearly appear in translations of Indian Buddhist texts, one solution was to compose new *sūtras* that could be used to justify the inclusion of such ideas in Buddhism. In this sense, Chinese Buddhist apocrypha worked as an authority to justify novel Chinese Buddhist activities. Among cataloguers and other clerical authorities, however, scriptures such as these should be, and indeed often were, classified as "spurious." From the point of view of the modern scholar, however, these texts are so abundant in number and so rich in contents that we cannot simply deny their value or ignore their existence. The existence of Chinese Buddhist apocrypha, and their repeated production over the centuries, is an important part of the history of Chinese Buddhism. Indeed, in as much as Chinese Buddhist apocrypha sometimes served as the basis of "apocryphal" Chinese Buddhist practices that cannot be traced back to Indian Buddhism (see Benn, 2007), they are a remarkable and unique source for learning about the concrete forms in which Chinese Buddhism was understood and practiced.

Yet, these texts were scorned throughout the history of Buddhism in China, and the compilers of Chinese Buddhist catalogues were determined to purge the canon of apocryphal texts. The reason was simple: they viewed Chinese Buddhist apocrypha as not the Buddha's actual words and the spread of such texts as confusing true and false teachings. Sengyou, the compiler of the *Chu sanzang ji ji*, was a typical figure in this regard. With respect to the text entitled *Fofa you liu yi di yi ying zhi* (佛法有六義第一應知; The Buddhist Teachings as Possessed of Six

Senses to Be Primarily Understood) and the *Liutong wuai liugen jingye yimen* (六通無礙六根淨業義門; Entrance Gate for the Doctrine of the Unimpeded Six Supernormal Powers and the Purified Actions through the Six Sense Organs), neither of which is extant, Sengyou states the following:

> During the reign of Emperor Wu (武帝) of the [Southern] Qi, the *bhikṣu* Shi Fayuan (釋法願) compiled the two texts, by excerpting and arranging the contents of various *sūtras*. They are certainly different from forgery in that they propagate the meanings of *sūtras*, yet I [i.e. Sengyou] am afraid that they will incur any suspicion and confusion in the future because they are compiled in the form of a separate text. This is why I make an explicit note here in the present record. (T. 2145 [LV] 39b3–7; trans. by author)

Thus Sengyou tried to keep the Buddha's teachings as they were without any change or alteration. His conservative attitude led him to criticize a compilation of *chaojing* (抄經; abridgment/excerpts of *sūtra*), which was produced by Xiao Ziliang (蕭子良; 460–494 CE) in the Southern Qi dynasty.

It is important to note a political aspect of the question. By composing a text and attributing it to the Buddha's authority, it would be possible to clothe the political statements of contemporary significance in an aura of legitimacy under the umbrella of the Buddha's charisma. Although they could not altogether prevent the application of scripture to contemporary situations, by suppressing such compositions, political authorities sought to limit the potential danger from such works. Examples include works of millenarian authority by which, for instance, "rebels" sought divine sanction for themselves, sometimes as the future buddha Maitreya, while from the opposite point of view, we have the fascinating case of an interpolation in the otherwise genuinely Indian *Ratnameghasūtra* (*Baoyun jing* [寶雨經]; T. 660 [XVI] 284a; Forte, 2005) made at the behest of the Empress Wu in order to "prophecy" her ascendancy as ruler of China.

How to Prove Apocryphal Character: Historical Testimony

Roughly speaking, two main criteria can be used to prove that a given text is apocryphal. The first is evidence given by people or texts contemporary with the *sūtra* in question – in other words, historical testimony. A typical case is the description in Chinese Buddhist catalogues (*jinglu* [經録]) compiled by contemporary or slightly later scholar-monks. For example, the *Renwang huguo bore boluomi jing* (仁王護國般若波羅蜜經; Scripture of Benevolent Kings; T. 245) is described as Kumārajīva's translation in numerous later catalogues and canons, but in the earlier *Chu sanzang ji ji*, written during the Liang dynasty, this text is included in the list of the scriptures whose translators are unknown (*shiyi*). Thus, during the Liang dynasty, this text was not yet considered Kumārajīva's translation. Moreover, Liang emperor Wu's *Zhujie dapin xu* (注解大品序; Preface to the Exegesis of the Longer Wisdom *Sūtra*) contains a noteworthy passage to the effect that the emperor avoided a reference to the *Renwang huguo bore boluomi jing*, because it was regarded as apocryphal by the emperor's contemporaries (T. 2145 [LV] 54b17–20). This statement, though not from a catalogue, is important as historical testimony from the early 6th century.

Apocryphal Texts with Explicit Authorship and/or Place of Composition

On a few occasions, historical sources actually say who wrote a given apocryphon. For example, Sengyou's list of suspicious *sūtras* contained within the *Chu sanzang ji ji* enumerates some apocryphal texts whose authorship was known in Sengyou's time. With regard to the *Tiwei Poli jing*, Sengyou states that it "was compiled by *bhikṣu* Tanjing (曇靖) from the north in the reign of Emperor Xiaowu (孝武) of the Song dynasty" (T. 2145 [LV] 39a25). Likewise, the same list states that the *Baoche pusa jing* (寶車菩薩經; Scripture of Bodhisattva Baoche) "was compiled by *bhikṣu* Tanbian (曇辯) from the Huai region (淮州) of the north and revised by *bhikṣu* Daoshi (道侍) from the Qing region (青州)" (T. 2145 [LV] 39a27–28; see Lin, 2005). While these are Chinese scriptures composed in the north, there are other scriptures composed in the south. They include the *Puti fuzang fahua sanmei jing* (菩提福藏法化三昧經; Scripture on the *Samādhi* of the Dharma Transformation of the Store of Merits for *Bodhi*). Though details are totally unknown, Sengyou states that "it was compiled by *bhikṣu* Daobei (道備) during the reign of Emperor Wu 武帝 of the (southern) Qi," with the interlinear note "Daobei changed his name to Daohuan (道歡)" (T. 2145 [LV] 39b02). Sengyou also claims that the *Guanding jing* (灌頂經; Conse-

)" (T. 2145 [LV] 39b02). Sengyou
he *Guanding jing* (灌頂經; Conse-

---

cration *Sūtra*) was compiled by the *bhikṣu* Huijian (慧簡) in the first year of Daming reign period (457 CE) of Emperor Xiaowu of the Song by excerpting passages from various *sūtras* (Strickmann, 1990). According to Sengyou, this text became popular because of the methods it prescribed for extending life, which are found at the end of the text (T. 2145 [LV] 39a22–23; Oka, 1995; 2003; Wu, 2011). The *Guanding jing* is extant as the final fascicle ascribed to Śrīmitra (Bo Shili miduoluo [帛尸梨蜜多羅]) of the Eastern Jin dynasty.

In addition to naming their authors, catalogues and other texts sometimes mention where a certain apocryphon was composed. For example, in his *Xu Gaoseng zhuan* (續高僧傳; Continued Biographies of Eminent Monks), Daoxuan (道宣) states that the *Datong fangguang jing* (大通方廣經; Extensive Scripture of Great Penetration; T. 2871), which became popular in the early Liang dynasty, originated in the Jing (荊) and Xiang (襄) regions (T. 2060 [L] 699c15). This strongly suggests the possibility that the *sūtra* in question was composed in early Liang times in the midstream area of the Yangtze River or a little north of it.

How to Prove Apocryphal Character: Analyses of the Contents

While information from Chinese Buddhist catalogues and the like can serve as strong evidence that a given *sūtra* is apocryphal, this information is not always correct. Even in the absence of evidence from catalogues, internal evidence from the text itself sometimes reveals a clear Chinese origin. Concretely, if we find clear Chinese elements within a text, that text may be taken as apocryphal, because it becomes impossible to assume that it is a translation from an Indic original. As discussed above, this is the case for the *Tiwei boli jing* and the *Qingjing faxing jing*, wherein we find reference to the Chinese system of the five phases, Chinese proper names such as Laozi, and reference to classical Chinese texts.

Sinitic elements can be not only proper names but also Buddhist doctrines that developed exclusively in Chinese Buddhism. Furthermore, within some texts, we find passages that seem to have been borrowed verbatim from other genuine translations, and the presence of such passages can also work as evidence for the apocryphal character of the text in question. For example, S. Mochizuki (1946, 441–471; see also Funayama, 2011) persuasively demonstrated that the *Fanwang jing* (梵網經; Scripture of Brahma's Net; T. 1484; de Groot, 1893) contains passages directly borrowed from the *Da banniepan jing* (大般涅槃經), which is a Mahāyāna version of the *Nirvāṇasūtra*, and the *Pusa dichi jing* (菩薩地持經; Scripture of the Bodhisattva's Stages; T. 1581), which is a version of the *Bodhisattvabhūmi*, both of which were translated by Tanwuchen (385–433 CE), from the *Pusa shanjie jing* (菩薩善戒經; T. 1582), which is a different version of the *Bodhisattvabhūmi* translated by Guṇavarman (367–431 CE), and from Nāgārjuna's *Zhong lun* (中論; Middle Treatise; Skt. *Mūlamadhyamakakārikā*; T. 1564) translated by Kumārajīva (c. 350–409 CE) . The *Fanwang jing* even seems to have borrowed a passage from the *Renwang huguo bore boluomi jing* (see above), which itself is almost certainly an apocryphon (Mochizuki, 1946, 425–441).

It should be noted here that the presence of identical passages shared with another translation does not necessarily prove the apocryphal character of the text in question. Even genuine translations occasionally borrowed entire passages verbatim from other translations, as in the case of the beginning section of the *Shi di* (十地品) chapter of Buddhabhadra's translation of the *Huayan jing* (華嚴經; Flower Garland *Sūtra*; T. 278), which is almost identical to the opening section of the later *Shizhu jing* (十住經; Ten-Stages *Sūtra*; T. 286), Kumārajīva's translation of the *Daśabhūmikasūtra* . There are also several passages in which Dharmarakṣa's translation of the *Lotus Sūtra*, the *Zheng fa hua jing* (正法華經; T. 262), is nearly identical copied in Kumārajīva's translation, the *Miao fa lianhua jing* (妙法蓮華經). In both of these two cases, the translator of a text borrowed passages from an earlier translation of that same text. Situations such as this, in which translations of the same or similar Indian texts share passages, are quite different from the case of Chinese Buddhist apocrypha. In the latter case, the translated scriptures utilized in the apocryphon in question cannot be arranged in a single line of development in the history of Indian Buddhist *sūtras*.

Ultimately, to judge whether a scripture is an authentic translation or a Chinese composition, we must use all of the above criteria, most especially historical testimony and internal analyses. But even after this kind of multi-angled examination, for many texts, it is not possible to reach a definitive conclusion as to whether they are authentic translations.

Esoteric Buddhism and Chinese Buddhist Apocrypha

Many translations of Mahāyāna esoteric Buddhism were produced in China, especially during the Tang dynasty. The Tang translators of tantric texts include Amoghavajra (or Bukong [不空]; 705–774 CE) and Śubhākarasiṃha (Shan wuwei [善無畏]; 637–735 CE). In addition, it seems that many apocryphal texts associated with esoteric Buddhism were also composed.

For example, the text entitled *Dasheng yuqie jingang xing hai manshushili qian bi qian bo da jiao wang jing* (大乘瑜伽金剛性海曼殊室利千臂千鉢大教王經; Mahāyāna Yoga Scripture of Mañjuśrī, the King of Great Teaching with a Thousand Arms and a Thousand Bowls, of Adamantine, Ocean-like Essence) in ten fascicles, which is usually recorded as a text translated either by Amoghavajra or by Vajrabodhi, is apocryphal. Its preface is also of an apocryphal character (Ono, 1920; Mochizuki, 1946, 519–531; Osabe, 1971, 115–118). For example, the first fascicle of the text expounds a particular twofold classification of the Buddha's bodies: Pilushena (毘盧舍那) as *dharmakāya* (truth body), on the one hand, and Lushena (盧舍那) as *saṃbhogikakāya* (enjoyment body), on the other. This is an understanding that cannot come from Indian Buddhism, because Pilushena and Lushana are just two different Chinese transcriptions of the same Indian name (Vairocana). The fourfold epistemic enumeration of *jian fen* (見分; seer), *xiang fen* (相分; object), *zizheng fen* (自證分; self-cognition), and *zheng zizheng fen* (證自證分; cognition of self-cognition) found in the seventh fascicle, is undoubtedly based on Dharmapāla's (護法) view as introduced by Xuanzang (玄奘; 602–664 CE), and it is unlikely that such an idea would have been found presented as the Buddha's own teaching in an Indian text (Gonda, 1925, 157–162). Furthermore, fascicles five, seven, eight, and nine include passages that seem to be directly borrowed from the *Fanwang jing*. There are also other tantric *sūtras* that scholars consider to be apocryphal, such as the *Wenshushili baozang tuoluoni jing* (文殊師利法寶藏陀羅尼經; Scripture of *Dhāraṇī* on Mañjuśrī's Gemlike Dharma; T. 1185A), purportedly translated by Dharmaruci (Osabe, 1971, 118–119). The *Beidou qixing yanming jing* (北斗七星延命經; Scripture of Longevity regarding the Septentrions; T. 1307), can also be judged apocryphal, because it discusses the power of (Daoistic) talismans as well as popular beliefs concerning the relationship between one's birth year and the *ganzhi* (干支) cycle, a system drawn from Chinese cosmology.

Chinese Buddhist Apocrypha as the Transformation of a Text with a Different Original Purpose

Some Chinese Buddhist apocrypha seem to be texts that were originally authentic but which were later transformed into apocrypha. A typical example is the *Mulian wen jielü zhong wubai qingzhong shi jing* (目連問戒律中五百輕重事經; Book of Five Hundred Heavy and Light Offenses of the *Vinaya* Inquired by Maudgalyāyana; T. 1483). It is an apocryphon based on an earlier version entitled *Wubai wen shi* (五百問事; Book of Five Hundred Questions). Though this earlier text was excluded from the later woodblock print canons, it is extant in Japanese and Dunhuang manuscripts, and through these, we can see that the original text was not framed as a *sūtra*; it was, rather, a record (or transcription) of the lecture delivered by Vimalākṣa (Pimoluocha [毘摩羅叉]), Kumārajīva's master of Vinaya, in a monastery in the Jing region in the early 5th century (Funayama, 1998; 2006, 41–44).

Chinese Buddhist Apocrypha as New Chapters Added to Authentic *Sūtras*

Sometimes new chapters were forged and added to an authentic *sūtra*. For example, new chapters such as *Maming pusa pin* (馬鳴菩薩品; Bodhisattva Aśvaghoṣa; T. 2899) and *Duliang tiandi pin* (度量天地品; Measurement of Heaven and Earth; T. 2872; Fang, vol. XVI, 2011, 309–367) were forged and added to the *Lotus Sūtra*. For the *Huayan jing* (see above), a new chapter entitled *Shi e pin* (十惡品; Ten Evil Actions) was similarly forged (Fang, vol. I, 1995, 359–368).

Chinese Buddhist Apocrypha as Revealed Scriptures

Some Chinese Buddhist apocrypha are recorded to have resulted from a kind of revelation. In his *Chu sanzang ji ji*, Sengyou records the story of a 16-year-old nun named Sengfa (僧法), who experienced a supernormal state of meditation in which she fluently recited new scriptures (T. 2145 [LV] 40a9–b23). These texts were written down by someone else, resulting in a total of 21 texts in 35 fascicles. Sengyou, who recorded this strange phenomenon, states that while this kind of revelation had sometimes taken place in China, in the present case, the texts in question did not seem to be the words of the Buddha, and that furthermore this text was not officially translated by a certified master. Accordingly, Sengyou felt that it must be recorded as a suspicious case (Fang, 2003; Campany, 1991; 1993).

Chinese Buddhist Apocrypha and Popular Religions

As stated above, some Chinese Buddhist apocrypha discuss ideas drawn from traditional Chinese thought. A similar type of Chinese Buddhist apocrypha as based on folk beliefs includes the *Shi wang jing* (十王經; Scripture of the Ten Kings; Teiser, 1994), which describes how to perform rituals, while one is still alive, in order to be reborn in the Pure Land, avoiding tortures of hell. It also describes a Sinicized figure of King Yama (*Yanmo* [閻魔]) and a distinctly Chinese version of hell.

Further, the worship of Dizang (地藏; Skt. Kṣitigarbha) also became popular during the Tang dynasty, as a result of which apocryphal texts were composed such as *Dizang pusa benyuan jing* (地藏菩薩本願經; Scripture of Bodhisattva Dizang's Past Vows; T. 412; Matsumoto, 1927) and the *Dizang pusa shi zhai ri* (地藏菩薩十齋日; The Ten Fasting Days of Bodhisattva Dizang; T. 2850; Zhang, 2000; 2003, 112–116). Some of these popular Chinese Buddhist apocrypha are also intermingled with Daoist belief and practice.

An Apocryphon Unveiled to the Public

As mentioned above, though Chinese Buddhist apocrypha are by and large anonymous, in some cases, the authors were known. How were such authors treated in Buddhist society? Sengyou's *Chu sanzang ji ji* discusses the interesting case of the *Saporuotuo juanshu zhuangyan jing* (薩婆若陀眷屬莊嚴經), a lost apocryphon that was popular in Liang times (Liu, 2010, 249–251; Funayama, 2013, 142–144). Sengyou's account of this text can be summarized as follows:

> In the ninth year of Tianjian (天監; i.e. 510 CE), there was an ascetic monk whose name was Miaoguang (妙光). He was originally from the Ying region (郢州) and in the seventh year after full ordination. Many nuns and laywomen were attracted by his good-looking countenance. Monk-administrators of the region, after reflecting on his behavior, decided to expel him from the area. As a result, he concealed himself in Jiankang (present-day Nanjing), the capital of the Liang. Staying at Puhong Temple (普弘寺), he composed the *Saporuotuo juanshu zhuangyan jing*, whose length was over ten sheets. It was written down in an exquisite manner on a folding screen, to which a large number of people from outside gave offerings of flowers and incense. A multitude of people – men and women, monastics and lay – gathered in the temple and donated to it. It drew so much attention that the origin of the scripture was eventually uncovered, and Miaoguang was sent to the imperial jail of Jiankang county. He was sentenced to death for having deceived the people. After this judgment, however, Emperor Wu issued an imperial edict, and some 20 monks from the capital were instructed to reexamine Miaoguang's case. Their final decision was that he should be banned from the Buddhist community according to the treatment prescribed in the monastic code (*vinaya*). In this way, he was saved from death by the emperor's mercy. However, monastics feared that if he moved to a remote place, he might deceive people as before. Therefore it was finally decided that he should be imprisoned at Dongye (東冶), the public metallurgical factory of the capital, for punitive labor. After this decision, the rest of the copies of the apocryphal *sūtra* were confiscated. More than 20 copies were found and burned immediately. In the scripture, the householder Saporuotuo had Miaoguang's father name. His younger brother appeared in the *sūtra* by the name of Jingang deti (金剛德體; "Adamantine Merit Body"); likewise, Miaoguang's disciple had the name Shizi (師子; Lion). (T. 2145 [LV] 40b25–c12; trans. by author)

After providing this account, Sengyou explained that his reason for recording it was to prevent any remnants of Miaoguang's party from confusing people in the future.

Concluding Remarks

Chinese Buddhist apocrypha are rich sources for the history of Chinese Buddhism (note that apocryphal *sūtras* were composed also in Japan; Ochiai, 2000). More often than not, they were composed in order to supplement what had been lacking in authentic translations. However, they were often excluded from the canon, because it was felt that the official canon should include only authentic scriptures. Compilers of catalogues such as Sengyou and Zhisheng typically held such views and attempted to exclude Chinese Buddhist apocrypha from official records, so that there would not be any confusion about the true *dharma*, in both their contemporary world and the future.

However, from a modern perspective, the traditional idea of distinguishing *sūtras* as *zhen* (authentic) and *wei* (spurious) has fundamental problems. First, Chinese people believed that all *sūtras* from India, including Mahāyāna *sūtras*, were teachings spoken by the Buddha through his golden mouth (*jinkou* [金口]), and therefore that translations of Buddhist texts, in contrast to texts composed in China, were always authentic. However, most scholars now agree that Indian Mahāyāna *sūtras* cannot be the Buddha's true words as Chinese Buddhists naively believed, at least not in the sense of the Buddha as the historical Śākyamuni Buddha. So, the traditional distinction between "true" and "false" scriptures in China is clearly not suitable for modern research.

Equally importantly, it is also the case that even authentic translations sometimes contain elements that are not strict, word-for-word translations, such as abridgement or rearrangement of the original contents. In this sense, a strict distinction between *zhen* and *wei*, not to mention a value judgment as to which of these represent true Buddhism, masks what in practice was a more complicated state of affairs, both in regard to Chinese translation practices and the production of so-called apocrypha. For this reason, it may be more helpful to think of Chinese Buddhist texts in terms of a threefold classification of Chinese Buddhist translations (*hanyi jingdian* [漢譯經典]), Chinese Buddhist apocrypha (*yizuo jingdian* [僞作經典] or *yijing* [僞經]; one may even call them *hanhua jingdian* [漢化經典; "sinicized scriptures"), and Chinese Buddhist compilation scriptures (*bianji jingdian* [編輯經典]) as mediating the former two categories (Funayama, 2013, 149–176).

TORU FUNAYAMA

Sūtra Anthologies

According to traditional accounts of early Buddhism, after the death of the Buddha, his teachings were assembled by his disciples, who gathered together for this purpose in the so-called First Council, these materials being memorized by at least some of those present, since writing remained unknown. Assuming for a moment the historicity of these accounts, it is plain that command of the entirety of the Buddhist canonical literature was beyond the ability of all but a very few. Therefore, even from the very beginnings of the tradition the need for anthologies by means of which monks could easily access the essence of the Budddha's teachings becomes clear. At least early on, however, selections were probably made on the basis of complete, although relatively short, texts. As scriptures grew longer, especially with the advent of the Mahāyāna literature, however, collections were forced to become more selective. In the present usage, an anthology consists in principle of a collection of citations from several Buddhist scriptures. Compilers collected passages from the scriptures in order to explain the Buddhist teaching from their own points of view, for ritual uses and for other reasons, some of which remain obscure to us. Furthermore, there are various styles of anthologies in different Buddhist traditions. There are also various ways in which one might categorize scripture anthologies; here they are presented primarily in terms of their places of origin, although there remain ambiguities in this approach.

Indian Literature

The Pali *Suttanipāta* (Group of Discourses; trans. Norman, 1992), thought to be one of the oldest Buddhist works, consists of a collection of short scriptures, and in this sense the history of Buddhist literature may be said to start with an anthology. Likewise, however, it might equally be claimed that all canonical collections are de facto anthologies since they are certainly collections of originally disparate sermons, preached at different times and places, just as Buddhist tradition maintains. The same might be said for several collections of Mahāyāna *sūtras*. When, around the beginning of the Common Era, the new movement began which ultimately was termed the Mahāyāna or Great Vehicle, many new scriptures were composed. At unknown times, some of these were further compiled into great collections, including the *Mahāsaṃnipāta* (17 texts in 60 fascicules in Chinese; T. 397), the *Mahāratnakūṭa* (49 texts in 120 fascicules in Chinese; T. 310), and the *Mahāvaipulya Buddhāvataṃsaka* (among others the 80 fascicule; T. 279). Another example, not canonized and until recently unknown, is found in a manuscript which, as we have it, collects 20 *sūtras*, but originally no doubt had more (Vinītā, 2010). Such collections too are, formally speaking, anthologies, but for the present purposes the focus is rather on collections of excerpts from larger textual units, rather than collections of complete texts (but compare below the case of the Pali *Suttasaṅgaha*).

Mahāyāna Anthologies

There can be little doubt that among the earliest, if not indeed the very earliest, of anthologies of Mahāyāna *sūtras* is the *Sūtrasamuccaya* (Compendium of Scriptures). Although it is attributed to Nāgārjuna, there are significant problems with this attribution (Ichishima, 1968; Harrison, 2007a). No complete Indic version is known, although portions of the text are found, cited by name, in Sanskrit in quotations from Kamalaśīla's *Bhāvanākrama* III (Tucci, 1971, 22.15, 25.9–10, 27.8; Ichishima, 1972; 1986a), and in a small manuscript fragment (Karashima, 2009). The text as a whole is found in translation in Tibetan, by Jinamitra, Śīlendrabodhi, and Ye shes sde (D 3934/P 5330; ed. Pāsādika, 1989; trans. Pāsādika, 1978–1982; Driessens, 2003) and Chinese, by *Dharmapāla (Fahu [法護]; titled *Dasheng baoyaoyi lun* [大乘寶要義論]; T. 1635). The Tibetan Tanjur contains two commentaries, the *Sūtrasamuccayabhāṣya Ratnālokālaṃkāra* of Ratnākaraśānti, a larger commentary with detailed explanation (D 3935/P 5331; ed. Mochizuki, 1993; 1994; 1995; trans. Mochizuki, 2005–2010; see Mochizuki, 2013, on the philosophers cited by the commentator), and the *Sūtrasamuccaya-*

This work is arranged around t

sañcayārtha of Dīpaṃkaraśrījñāna (Atiśa), a shorter summary (D 3937/P 5333). While the work is attributed in its translation colophon to Nāgārjuna, the author of the *Mūlamadhyamakakārikā*, the main work of the Madhyamaka school, and later scholars of this school such as Candrakīrti, Śāntideva, and Kamalaśīla believed that Nāgārjuna compiled this anthology, this attribution is doubtful, among other reasons since the work cites the *Laṅkāvatārasūtra*, which refers to the teachings of the Yogācāra school, the development of which postdates the period in which the Madhyamaka Nāgārjuna lived. The text consists of citations from approximately 72 scriptures (for a total of 174 citations), though aside from several cursory remarks summarizing particular points, we encounter the compiler's own words only in the 11 topics on utmost rarenesses (for a summary of the text see, Ichishima, 1990). The topics are the utmost rareness of:

1. a buddha's appearance;
2. being born a human;
3. obtaining an auspicious rebirth;
4. having faith;
5. aspiring to buddhahood;
6. great compassion (see Ichishima, 1997);
7. eliminating obstructive conditions;
8. serious dharma practice as a householder;
9. having faith in (the true nature of) the tathāgatas' complete nirvāṇa;
10. having faith in the one vehicle;
11. taking on a buddha's and bodhisattva's sublime and exalted position.

These topics form a logical progression of increasing rarity, culminating in the attainment of buddhahood. The author rarely comments himself, letting the citations and their arrangement do the work. The text in fact lacks even the (otherwise expected in a Buddhist treatise) statement of its purpose: it simply begins with the statement that the appearance of a buddha is rare, which it then illustrates with a citation from the *Lotus Sūtra* saying precisely this. Among the topics of the text, the teaching of the one vehicle (*ekayāna*) is characteristic, as Jam dbyangs bzhad pa (1648–1721) cites this anthology in his *Grub mtha' chen mo* (Great Exposition of Tenets; Hopkins, 1983, 604–610) in order to explain the Madhyamaka interpretation.

The only anthology of Mahāyāna *sūtras* to exist wholly in Sanskrit is the *Śikṣāsamuccaya* (Compendium of Training) of Śāntideva, the author of the highly influential *Bodhi(sattva)caryāvatāra*. This work is arranged around the author's own verses, 27 in number, in which the "vital points" (*marmasthāna*; see Sasaki, 2001) of the text are expounded (Bendall, 1897–1902, xxxix–xlvii; transmitted independently in Tibetan; D 3939/P 5335), illustrated with extensive quotations (the author says he will give an introduction to the vows of the bodhisattva "using an anthology of meaningful passages" [*samuccitārthavākya*], Bendall, 1897–1902, 1.10). The vital points are summarized in a verse as follows (Harrison, 2007, 235 [root verse 4]; trans. Harrison, 2009, 90):

> The sacrifice for the sake of all living beings of one's person, one's possessions, and one's merit accrued in the past, present and future, and the preservation, purification and increase of these things.

One of the first Mahāyāna Buddhist texts edited by modern scholars, it is known in Sanskrit (ed. Bendall, 1897–1902; trans. Bendall and Rouse, 1922; on the unique manuscript, Cambridge University Library collection 1478, see Sasaki Kazunori, 2007 [aside from copies of Wright, 1478, other manuscripts are known to exist in Tibet, but are not yet accessible]), in a Tibetan translation by Jinamitra, Dānaśīla, and Ye shes sde, revised by Tilakakalaśa and Blo ldan shes rab (D 3940/P 5336), and in a Chinese version by *Dharmapāla (Fahu [法護]), titled *Dasheng ji pusaxue lun* (大乘集菩薩學論; T. 1636), where the authorship is attributed instead to *Dharmakīrti (Facheng [法 稱]). In addition to the sources identified by the editor C. Bendall, by making use of the Chinese canon Wogihara (1904) was able to identify many more sources. The Tibetan canon preserves two commentaries, the *Śikṣāsamuccayābhisamaya* of Dharmakīrti (Gser gling pa; D 3942, 4550/P 5338, 5464) and the *Śikṣākusumamañjarī* of Vairocanarakṣita (D 3943/P 5339; Sasaki, 2004). The text has attracted attention not only as a reservoir of scriptural materials in Sanskrit, but for its program and approach (e.g. Hedinger, 1984; Clayton, 2006; Mrozik, 2007). Recent research has significantly changed our picture of this anthology, however, which was for long viewed as a mere collection of scriptural passages. It has now been made clear (Harrison, 2007b; 2009) that a much larger portion of the text than once thought is from the pen of the compiler, who should then rather be thought of more actively as an author. In particular, in addition to prose comments (some of which in the past were confused with citations), the author contributed at least 133 additional verses (ed. Harrison, 2007; trans. Harrison, 2009). The close though complex relation of this work with the *Bodhi(sattva)caryāvatāra* is suggested by the overlap of 33 of these 133 verses (Harrison, 2007b, 220). The situation is complicated by the history of the *Bodhi(sattva)caryāvatāra*. According to Saito (2010, 18), when the original unrevised version of the *Bodhi(sattva)caryāvatāra* (attributed to *Akṣayamati, another appelation of Śāntideva) appeared in India, the *Śikṣāsamuccaya* had not yet been composed. The *Śikṣāsamuccaya* was then composed in accord with the central motives of the unrevised *Bodhi(sattva)caryāvatāra*, which however, in its turn, under the influence of the *Śikṣāsamuccaya*, was revised (Saito, 2010, 22). The revised *Bodhi(sattva)caryāvatāra* contains much discussed verses in which reference by the reader to both the *Śikṣāsamuccaya* and the/a *Sūtrasamuccaya* is recommended. One likely possibility is that the author intended to refer to the former, much longer text, for material covered at length, and the latter, shorter work, for a more condensed summary (Harrison, 2007b, 225–226; the same already in Filliozat, 1964).

The *Śikṣāsamuccaya* is classified into the basic text in verses and the citations from 88 scriptures (a total of 359 citations is listed in Mochizuki, 2006) with the author's commentaries. The text is divided into 19 chapters (18 in Chinese):

1. Perfection of Generosity;
2. Embrace of the Sacred Teaching through the Perfection of Morality;
3. Protection of Exponents of the Teaching and Others;
4. Avoiding Sin;
5. Renouncing Damage to the Perfection of Morality;
6. Protection of One's Person;
7. Care of One's Possessions;
8. Purification from Sin;
9. Perfection of Patience;
10. The Perfection of Effort;
11. Praise of Forest Seclusion;
12. Preparation of the Aspiration to Awakening;
13. The Topics of Intent Contemplation;
14. Purification of One's Person;
15. Purity in Enjoyment and Religious Actions;
16. Increase of Good Practice;
17. Praise of Worship and the Rest;
18. Recollection of the Three Jewels; and
19. Increase of Holiness (included in ch. 18 in Chinese).

It begins with the perfection of generosity (*dāna*), the second to the eighth concern the perfection of keeping the precepts (*śīla*), the ninth and the tenth engage the perfection of patience (*kṣānti*) and the perfection of effort (*vīrya*), the eleventh to the fourteenth concern the perfection of meditation (*dhyāna*), while the perfection of wisdon (*prajñā*) comes at the end of the fourteenth. Therefore the text was basically compiled on the basis of the teaching of the six perfections (*pāramitā*), just as was the *Bodhi(sattva)caryāvatāra*. This anthology was widely accepted in later Indian and Tibetan Buddhism, and Dīpaṃkaraśrījñāna, for instance, seems to depend on it when he cites scriptures in his *Bodhimārgadīpapañjikā*. Likewise the commentary on the *Bodhi(sattva)caryāvatāra* by Prajñākaramati, the *Bodhicaryāvatārapañjikā* (La Vallée Poussin, 1901–1914), draws heavily for its supporting scriptural citations from the *Śikṣāsamuccaya*; since the *Bodhicaryāvatārapañjikā* survives in Sanskrit, this parallelism provides us additional Sanskrit materials which also allow us to verify the wording of the *Śikṣāsamuccaya's* quotations.

Of the debt of the *Śikṣāsamuccaya* to the *Sūtrasamuccaya*, it has been said that it "amounts in places to what we would nowadays call plagiarism, with entire sequences of sūtra citations lifted from the earlier commentary, in one case with the linking prose comments of the author." (Harrison, 2009, 89). A significant number of citations are identical in the two works (Sasaki, 1965; Asano, 1995), but what is even more revealing are the identical sequences of citations (Harrison, 2007a).

Another anthology, extant only in Chinese, is the *Dasheng xiuxing pusaxingmen zhujing yaoji* (大乘修行菩薩行門諸經要集; A Collection of Key Passages from the Sūtras on the Practices of the Conduct of Mahāyāna Bodhisattva Practitioners; T. 847), translated in 721 CE by Zhiyan (智嚴). The text consists of 42 sections of quotations, but its relationship, if any, to the *Śikṣāsamuccaya* and the *Sūtrasamuccaya* remains to be clarified (*pace* Asano, 1998, 2003, 116–121).

The quite sizable *Mahāsūtrasamuccaya* (Great Compendium of Scriptures) of Dīpaṃkaraśrījñāna exists only in a Tibetan translation by Nyi ma grags pa and Mdo sde 'bar (D 3961/P 5358; ed. Mochizuki, 2004; on the cited *sūtras*, Mochizuki, 1995b). Dīpaṃkaraśrījñāna is well known as an Indian scholar invited to Tibet to introduce Buddhist teachings; his most important work is the massively influential *Bodhipathapradīpa*. The *Mahāsūtrasamuccaya* consists of citations from 83 scriptures (a total of 273 citations is listed in Mochizuki, 2006) and has 37 chapters:

33. Rejection of Astrology for Monks;
34. Despising Those Who Depend on the King;
35. Generosity toward Those Who Live at Home;
36. The Tendency Away from Generosity; and
37. The Virtue of Generosity.

This anthology begins with the topic of generosity towards those who have left the world and ends with three topics on generosity, notably citing the whole chapter on generosity of the *Bodhisattvabhūmi* in chapter 36. The author also refers to *bodhicitta* in three chapters, important also in his *Bodhipathapradīpa* and *Ratnakaraṇḍodghāṭa*. Moreover, he refers to negative topics for Buddhist practices, especially prohibition of medical treatment and the rejection of astrology, which are never referred in other Indic anthologies. At the same time, the overall plan of this large anthology remains unclear.

The *Bhāvanākramasūtrasamuccaya* (Compendium of Scriptures on Practice Steps) exists only in Tibetan (D 3933/P 5329); there is no information on its compiler or translator in its colophon. Its title, given also in Sanskrit in the text itself, suggests a relationship with the *Bhāvanākrama* of Kamalaśīla, but it is virtually certain that it is in fact a Tibetan compilation rather than a rendering of a work composed in India and translated into Tibetan. The opening verse of the text enumerates its eightfold contents: (1) the difficulty of finding freedom and favorable conditions; (2) following a spiritual friend; (3) remembrance of the teacher; (4) practices of impermanence; (5) dispassion; (6) the noble truths; (7) the irreversible wheel; and (8) the perfect purity of the three fields, though the compiler later explains the seventh as love, compassion and the awakening mind and the eighth as the six perfections. The first five belong to the superior condition, the remaining three each form a proper division. As the first topic and the contents of the seventh are the same as those of the *Sūtrasamuccaya*, the compiler may had some knowledge of the earlier anthology, but this is not certain. The text contains a total of 135 citations from 46 works, with a noticeable number of citations from the scriptures compiled in the *Mahāratnakūṭa* 86 of the citations are in prose, 41 in verse, and 8 mixed; thus the text quotes a significant amount of verse.

We should also take note of the existence of a number of Sanskrit manuscripts which proclaim themselves to be *Dhāraṇīsaṃgraha* (Collection of *Dhāraṇī*). These may also be considered as anthologies of *dhāraṇī*.

Pali Literature

A number of anthologies were composed in Pali, in Sri Lanka or Southeast Asia. In some sense the *Dhammapada* (which exists in multiple versions such as the Sanskrit *Udānavarga*) may be considered an anthology, but since it was not compiled on the basis of preexisting Buddhist texts we do not consider it here. The earliest proper anthology is the *Suttasaṅgaha* (Compilation of Scriptures; Chaudhuri & Guha, 1957; comp. Piyaratna & Ratanasara, 1929), which was added to the *Khuddhakanikāya* in Burma though it was excluded from the Burmese Chaṭṭasaṅgāyana edition because it cites the commentaries on the scriptures (*aṭṭhakathā*). According to the Burmese tradition, the compiler is said to have been Ariyavaṃsa who lived in Sri Lanka at Anurādhapura. The text consists of 85 citations mainly from the Pali *nikāya*, but also some pieces from the Vinaya, the Abhidharma, and the commentaries. It has seven chapters:

1. Generosity;
2. Moral Conduct;
3. Heaven;
4. The Dangers to Be Found in Sensual Pleasures;
5. Householders (or Life as a Human Being);
6. Miscellaneous; and
7. Ways of Gaining Thanks.

In contrast to the Mahāyāna anthologies mentioned above, this collection generally cites entire *sutta*s which are, however, relatively short works to begin with. Though it begins with the teaching of generosity, as do most Mahāyāna anthologies, it does not develop the theme toward the teachings of the six perfections, and its content is quite simple.

The *Sārasaṅgaha* (Collection of the Essence; ed. Sasaki, 1992; studied in Naniwa, 1998; Neri, forthcoming) was compiled by Siddhattha (13th–14th cent.), a disciple of Buddhappiya in Sri Lanka. It consists of 40 chapters on the various teachings with many stories on the virtues of pious behavior and generosity. Citations (797, listed in Yoshimoto, 1995; but Neri, forthcoming, identifies 818 quotations from 47 texts) come from not only the *nikāya*s but also from their commentaries (*aṭṭhakathā*). The contents are:

1. The Aspiration for Buddhahood;
2. The Marvels (of the Buddha);
3. Five Disappearances (of the Teachings);
4. Explanation of the *Cakkavattin*;
5. The Shrines of the *Muni* and *Cakkavattin*;
6. The Fruit of Sweeping;
7. The Marvels of the Teaching;
8. The Marvels of the Assembly;
9. Explanation of Sleep;
10. Explanation of Dreams;
11. Exchange of Property of the Two Jewels; (*buddhadharma*)
12. Classification of Taking Refuge;
13. Classification of Morality;
14. Actions;
15. Explanation of Nirvāṇa;
16. Discourse of Disrespect for the Three Jewels;
17. Classification of Producing Actions;
18. Explanation of Actions Bringing Retribution in the Immediately Following Existence;
19. Explanation of Wrong Views;
20. Explanation of Speaking Ill of the Noble Ones;
21. Discourse on the Disadvantages of Deceitfulness;
22. Discourses on Avarice;
23. The Three Fires;
24. Good Actions of Generosity and the Rest;
25. Classification of Food of Living Beings;
26. Place of Birth;
27. Transformation of Male and Female;
28. Young Women;
29. Eunuchs;
30. *Nāga*s;
31. *Garuḍa*s;
32. *Preta*s;
33. Demons;
34. Gods;
35. Increasing the Earth;
36. Shaking the Earth;
37. Rain and Wind;
38. Miscellaneous;
39. Supernatural Powers; and
40. Stability of the World.

This anthology especially refers to future existences in transmigration which are not frequently referred to in the Mahāyāna anthologies.

The *Upāsakajanālaṅkāra* (Ornament of Laypeople; ed. Saddhātissa, 1965; Naniwa, 1987; trans. Agostini, 2015), a work explicitly addressing Buddhist laypeople composed by the Sri Lankan Ānanda between 1150–1200, is said to be a kind of anthology (von Hinüber, 1996, §§ 386–388), perhaps because it frequently cites from the commentaries. Another style of anthology is the *paritta* (book of protection). These are small collection of texts from the scriptures, which chanted for protection from snakes, and so forth (Skilling, 1992).

Tibetan Literature

On the whole, *sūtras* were relatively speaking not as important in Tibet as they seem to have been in many other Buddhist cultures. Tibetan Buddhist authors, for instance, prefer treatises (*śāstra*) to scriptures (*sūtra*) when they cite scriptural proofs in their doctrinal discussions. Therefore the style of Tibetan anthologies is different from that of Indian anthologies. But Tibetan authors of course know the anthologies compiled in India, and some Buddhist treatises are obviously written under their influence. For example, in the *Bodhimārgadīpapañjikā* of Dīpaṃkaraśrījñāna, a commentary on his *Bodhipathapradīpa* written in Tibet, the author

cites scriptures which are also cited in the *Śikṣāsamuccaya*.

The *Gsung rab rin po che'i gtam rgyud shākya'i rabs rgyud* (with several variants on the title) is the first anthology compiled by Ska ba Dpal brtsegs (Śrīkūṭarakṣita), one of the first seven Tibetans ordained by Śāntarakṣita (*sad mi mi bdun*), a prolific translator and credited with the compilation of the *Lhan dkar ma* catalogue and one of the team of three credited with the compilation of the *Mahāvyutpatti* glossary. The *Gsung rab rin po che'i gtam rgyud shākya'i rabs rgyud* is easily overlooked, since it is contained in the Tanjur in a section of indigenous Tibetan works (*ngo mtshar bstan bcos*; D 4357/P 5844). According to G. Tucci (1958, 139):

> This is an anthology from many Mahāyāna-sūtras intended to explain the *pāramitās*, the various forms of existence, passage from death to rebirth (*saṃkrānti*), the qualities and attributes of the Bodhisattva and the Buddha, the vow to attain Enlightenment, the practice to be followed by the Bodhisattva on his way to Enlightenment, the body of the Buddha (= a non-body). Doctrinally the treatise follows the point of view expounded in the various texts.

G. Tucci offers a list of titles (1958, 139–140), but these are only a selection, and the order of his list does not at all follow the original. The text contains approximately 285 citations from about 190 texts, of which only a handful are other than Mahāyāna *sūtras*. The compiler adds very little of his own commentary.

The *Rnal 'byor chen po bsgom pa* (The [Meaning of the] Practice Consisting in the *Mahāyoga*), attributed to Spug Ye shes dbyangs (?–838/850), is preserved as several fragments in the collection of Dunhuang manuscripts (PT 818; Stein 705) and among the Tabo manuscripts (Tabo 36, 89; Otokawa, 1999; Tauscher, 2007). It was written in a new style of question and answer form and refers to 76 scriptures in 88 topics. It begins with an initial question asking how the perfection of wisdom, which is equal by nature and unique, is differentiated, and ends with a question asking how pure the Buddha field is. Especially in the first six questions the author refers to obtaining the human body and having trust which are referred to also in the *Sūtrasamuccaya*. But in the later part of the text he refers to dogmatic teachings such as the two types of selflessness, two truths, five doctrines and three natures, union of means and knowledge, stillness and insight, and three Buddha bodies, all of which are also discussed by later Indian masters.

In Tibetan Buddhism scriptures are often cited in order to explain practical teachings. Therefore anthologies seem to have been compiled as collections of practical teachings on the basis of authority from the scriptures. One prime example is the *Dam chos yid bzhin gyi nor bu Thar pa rin po che'i rgyan* (Jewel Ornament of Liberation; trans. Guenther, 1959; Konchog, 1998; Tshul khrims & Fujinaka, 2007) of Sgam po pa (or Bsod nams rin chen; 1079–1153). While not a formal anthology, the themes of the first three chapters are the same as those of the *Sūtrasamuccaya* and Sgam po pa cites many scriptures. The work consists of 21 chapters in which the author explains the steps to enlightenment and their result. The contents are:

1. The Motive;
2. The Working Basis;
3. Meeting Spiritual Friends;
4. Instruction in the Transitoriness of the Composite;
5. The Vicious State of Saṃsāra;
6. Karma and Its Result;
7. Benevolence and Compassion;
8. Taking Refuge;
9. The Acquisition of an Enlightened Attitude;
10. The Training in an Enlightened Attitude;
11. The Six Perfections;
12. The Perfection of Liberality;
13. The Perfection of Ethics and Manners;
14. The Perfection of Patience;
15. The Perfection of Strenuousness;
16. The Perfection of Meditative Concentration;
17. The Perfection of Awareness;
18. The Five Paths;
19. The Spiritual Levels;
20. Perfect Buddhahood; and
21. Buddha Activity.

The author explains the contents of the text under six headings:

1. motive (ch. 1);
2. working basis (ch. 2);
3. contributory cause (ch. 3);
4. method (chs. 4–19);
5. result (ch. 20); and
6. ensuing activity (ch. 21).

The method is further classified into four, namely concentrated attention to transitoriness (ch. 4); to the vicious state of saṃsāra (chs. 5–6); development of benevolence and compassion (ch. 7); and the formation of *bodhicitta* (after ch. 8).

Two kinds of *bodhicitta* which are taught by Śāntideva are also referred to here, namely the *bodhicitta* of aspiration (ch. 10) and the *bodhicitta* of engagement (ch. 11). Forming *bodhicitta* based on the three kinds of practice, namely higher ethics, higher thought, and higher understanding, is explained as the six perfections in the following chapters. The author concludes with the stages of practice (ch. 19) and its results (chs. 20 and 21). This structure is based on the teaching of stages of the path (*lam rim*) of the *Bodhipathapradīpa*. For citations from the scriptures as well the author seems to depend on the *Bodhimārgadīpapañjikā*, demonstrating the great if indirect influence of the *Śikṣāsamuccaya*.

Phag mo gru pa Rdo rje rgyal po (1110–1170), one of the main disciples of the above-mentioned Sgam po pa, compiled an anthology entitled *Mdo lung rin chen dpungs pa* (The Collection of Jewel Scriptures; Tenzin & Namgyal, 2003; TBRC W23891.3, 585–660). It is written in the orthodox style of Tibetan philosophical texts with a complex synopsis, and the number of citations reaches over 150. It was compiled in order to summarize the definitive meaning of the scriptures into five meanings:

1. purpose of abbreviated meaning;
2. meaning without contradiction;
3. meaning of the occasion of emergence of a false view;
4. meaning of the true path; and
5. meaning of the one vehicle (*ekayāna*).

The scriptures of this vehicle are cited in four categories: (1) (seven) names of (tantric) teaching; (2) individual person; (3) purpose of teaching; and (4) not transmitted/descended.

The third section, purpose of teaching, is the main part of the text and is classified into six divisions:

1. favorable conditions;
2. cause and result;
3. dependence on the teacher;
4. instructions;
5. practice to be carried out; and
6. how the result arises.

The topic of practice is further classified into ten divisions:

1. purpose;
2. weariness;
3. compassion;
4. producing the *bodhicitta*;
5. taking refuge;
6. preparations;
7. views;
8. meditative practice;
9. behavior; and
10. result.

In the seventh topic the author discusses emptiness in terms similar to those used by later Mādhyamika masters. In the tenth topic, he discusses the teaching of the five wisdoms of the Yogācāra schools. Therefore this text seems to be written in order to express his own philosophical position backed by citations from scriptures.

As one use of anthologies is as sources of proof texts for authors arguing doctrinal positions, it is important to note that such authors draw not only on anthologies such as those discussed above but also on works such as Candrakīrti's *Prasannapadā*, which quotes extensively from a variety of *sūtras*. No systematic study has yet been undertaken of patterns of citation of proof texts and to what extent authors simply reuse passages; a study of the first third of the Tibetan author Tsong kha pa's *Lam rim chen mo*, for example, found that almost all his citations could be traced in the works of earlier authors, especially the 11th–12th century Dge bshes Gro lung pa's *Bde bar gshegs pa'i bstan pa rin po che la 'jug pa'i lam gyi rim pa rnam par bshad pa*, but also the *Śikṣāsamuccaya*, often in patterns which demonstrate Tsong kha pa's dependence upon them (Langelaar, 2011). It is highly likely that many if not most authors, at least in Tibet, did not directly access in their entirely the texts they cite, but rather relied either on anthologies of citations or on the citations of previous authors, whose works they used at least in part as, therefore, de facto anthologies.

Chinese Literature

Anthologies are among the very earliest texts found in Chinese Buddhism. Notable in this respect are An Shigao's (安世高; *fl.* c. 147–168 CE) *Ekottarikāgama* anthology *Foshuo qi chu san guan jing* (佛說七處三觀經; T. 150A; Harrison, 1997), and a *Saṃyuktāgama* anthology, the *Za ahan jing* (雜阿含經; T. 101; Harrison, 2002: 24–25). According to P. Harrison, it is not unlikely that these works are translations of existing anthologies. P. Harrison (2002, 25) sees T. 101 "as a kind of 'greatest hits' collection, or at the very least an effective 'sampler' of the Saṃyuktāgama as a whole."

In later Chinese Buddhism, on the whole compilers focused primarily upon a single scripture, on which they depended to build their doctrinal structures. For example, the Huayan (華嚴; Flower Garland) School focused on the *Buddhāvataṃsakasūtra*, and the Tiantai (天台)

school the *Lotus Sūtra*. However, for a Tiantai author such as Zhiyi (智顗), for instance, the Mahāyāna *Mahāparinirvāṇamahāsūtra* had the same value and authority as did the *Lotus Sūtra*, and he quoted it constantly.

Most Chinese anthologies belong to a particular period around the 6th century.

> The production of compilations was related to the fear of the disappearance of the Dharma in a future age … It was probably also a way of compensation for the obstacles to the circulation of manuscripts separation of China into North and South. Moreover, encyclopedic compilations have a practical utility when manuscripts (or books) become too abundant. (Durt, 2006, 53n3)

Another type of anthology is typified by the *Shijia pu* (釋迦譜; T. 2040) of Sengyou (僧祐; 445–518 CE), a 34 chapter anthology of passages concerning the life of the Buddha (a detailed introduction is Durt, 2006). The source of each citation is given by the compiler. Although originally a 5 fascicule work (preserved in the Koryŏ canon), relatively early on it was expanded to 10 fascicules (found in the Song, Yuan, and Ming canons). The work is an attempt to offer a comprehensive "biography" of the Buddha, fully based on scriptural sources.

Among the anthologies proper compiled in China perhaps the most prominent are Baozhang's (寶唱; *fl.* 495–516 CE) *Jinglu yixiang* (經律異相; Strange Tales from the Scriptures and the Monastic Codes; T. 2121; on the title Durt, 2008, 120n2) and two works compiled by Daoshi (道世; 591?–683 CE), the *Fayuan zhulin* (法苑珠林; The Pearl Forest in the Dharma Park; T. 2122) and the *Zhujing yaoji* (諸經要集; Collection of Key Passages from Scripture; T. 2123). We might say, to oversimplify, that while the Indic and Tibetan anthologies were compiled to explain the Buddhist teaching of practices, the Chinese anthologies were compiled to explain Buddhist terms in the manner of a Buddhist encyclopedia.

The *Jinglu yixiang* was composed in 516 CE. One way of dividing the text, probably due to later editors is into:

1. heaven and earth;
2. buddhas;
3. bodhisattvas;
4. *śrāvakas*;
5. kings;
6. eminent people;
7. *upāsakas* and *upāsikās*;
8. heretics and hermits;
9. landlords and common people;
10. ghosts;
11. animals; and
12. hells.

Each of these is further subdivided, for a total of 782 sections, the entire collection taking 50 fascicules. The largest part of the text is devoted to human destinies, beginning with the section on buddhas. It is noteworthy that the compiler, concentrating on the "strange tales," removed doctrinal content from the quotations (Durt, 2008, 121n5). (The text is partially translated in Chavannes, 1911, 207–284; 1934, 229–240 for identifications and further discussion.)

The *Fayuan zhulin* was composed in 668 CE. It has one hundred chapters (and 100 fascicules [in some accountings 120]) classified into 668 topics. It begins with topics like units of time (劫量), the three realms (三界), sun and moon (日月), and so on, and ends with diseases (病苦), religious suicide (捨身), mortuary practices (送終), the end of the teaching (法滅), miscellaneous essentials (雜要), and finally traditions and records (傳記). Each chapter begins with a narrative introduction. Then follow extracts from sources, usually cited by name, these being mostly Indic sources, but also Chinese canonical and noncanonical works, historical records, hearsay, and the author's own first-hand testimony. Finally come tales of the karmic relations of miraculous events (*ganying yuan* [感應緣]), which provide evidence (*yan* [驗]) for the law of karma. Here the compiler also cites Chinese historical records and Chinese narratives. A discussion and a complete table of contents in Chinese and English are given in S. Teiser, 1985.

The *Zhujing yaoji* has 30 sections, further classified into 185 topics. Its contents are:

1. (Homage to) the Three Jewels;
2. Homage to the Stūpa;
3. Mindfulness;
4. Enteringthe Path;
5. Songs of Praise;
6. Incense and Lamps;
7. (Monks) Receiving Invitations (from Laypersons);
8. Keeping the Fast;
9. Breaking the Fast;
10. Riches and Honors;
11. Poverty and Lowness;
12. Guidance of Beings;
13. Repaying Karmic Debt;
14. Releasing Living Creatures;
15. Promoting Merit;
16. Selecting Friends;
17. Careful Thought;

18. The Six Perfections;
19. Karmic Cause and Result;
20. The Obstacle of Desires;
21. Four Kinds of Birth;
22. Retribution;
23. The Ten Evil Deeds;
24. Deceit;
25. Laziness;
26. Drinking Alcohol and Eating Meat;
27. Astrology;
28. Hells;
29. Mortuary Practices; and
30. Miscellaneous Items.

Each section begins, as in the *Fayuan zhulin*, with a narrative, in which the general point is stated. Then the sources of a karmic story are given, again citing the sources by name. Most sections end with a short hymn (*song* [頌]; Teiser, 1985).

There are also now incomplete anthologies found in Dunhuang, such as the *Zhujing yao chao* (諸經要抄; Fragment of the Collection of Scriptures; T. 2819), and others. Such anthologies continued to be compiled. The *Changuan cejin* (禪關策進; Whip for Spurring Students Onward through the Chan Barrier Checkpoints; T. 2024; trans. Broughton, 2015) was composed in 1600 by the famous monk Yunqi Zhuhong (雲棲袾宏; 1535–1615). In addition to many citations of Chan authors, it contains in its third section a collection of 33 *sūtra* quotations in support of Chan practice.

Japanese Literature

In Japanese Buddhist literature there are no genuine anthologies. However, many, if not most, Japanese scholastic texts record passages from a number of scriptures and canonical works in support of their arguments, and the results often appear as de facto anthologies. In addition, of course, the Japanese inherited the Chinese Buddhist canon, and had access to the works already compiled therein.

A typical and in no way unique example might be the *Ben kenmitsu nikyō ron* (辨顯密二教論; On the Differences between the Exoteric and Esoteric Teachings; T. 2427; trans. Giebel, 2004) of Kūkai (空海; 774–835 CE). The author compared two streams of the Buddhist teaching by means of citations from scriptures in his attempt to demonstrate that the esoteric was deeper and more excellent than the exoteric. He cites not only Indian scriptures but also Chinese treatises to express the superiority of the esoteric teachings.

The *Ōjōyōshū* (往生要集; Essentials of Birth in Pure Land; T. 2682; Andrews, 1973) was composed in 985 CE by Genshin (源信; 942–1017), a Tendai monk. It was compiled to demonstrate how to attain the Pure Land by means of *nembutsu*, and cites 160 scriptures in over 960 citations (Andrews, 1990, 2). The contents are divided into:

1. Despising the Defiled Realms;
2. Longing for the Pure Land;
3. Authorities for the Pure Land;
4. The Proper Practice of *Nembutsu*;
5. Aids to *Nembutsu*;
6. *Nembutsu* for Special Occasions;
7. Benefits of *Nembutsu*;
8. Authorities for *Nembutsu*;
9. Sundry Practices for Rebirth; and
10. Interpretation of Problems.

For a detailed analysis of the quotations see A.A. Andrews, 1990. Few (or no) comparable corpus studies aimed at evaluating the sources of proof texts have yet been carried out on other Buddhist scripture collections.

Shinran (親鸞, 1173–1262), retrospectively seen as the founder of the Jōdo Shinshū (浄土真宗), wrote the *Kyōgyōshinshō* (教行信證) or *Ken jōdo shinjitsu kyō gyō shōmon rui* (顯淨土眞實教行信證文類; A Collection of Passages Revealing the True Teaching, Practice, Faith, and Enlightenment of the Pure Land Way; T. 2646; trans. Inagaki, 2003), completed around 1224. He demonstrates the teaching of going forth to the Pure Land and returning from the Pure Land on the basis of extensive citations from the scriptures: he offers 376 quotations from 62 texts, including *sūtras*, treatises, and a few non-Buddhist sources. The contents are:

1. Revealing the True Teaching;
2. Revealing the True Practice;
3. Revealing the True Faith;
4. Revealing True Enlightenment;
5. Revealing the True Buddha and His Land; and
6. Revealing the Transformed Buddha Bodies and Lands.

The true teaching is the *Sukhāvatīvyūhasūtra* (Larger Pure Land *Sūtra*) and the practice of the *Kyōgyōshinshō*'s title comes from its 17th vow of the bodhisattva Dharmākara (who will become Buddha Amitābha) in this *sūtra*, the faith from the 18th, and the enlightenment from the 11th.

Modern Anthologies

In modern times many anthologies have been produced, which again, as with traditional anthologies, demonstrate the ideological aims of the compilers. One of the first in a Western language was S. Beal's *Catena of Buddhist Scriptures from the Chinese* (1871), a collection selected by the translator and

> arranged so far as is possible in a chronological order, with a view to exhibit the origin and gradual expansion of the system and to point out in what particulars it demands our candid consideration, and in what particulars it fails to deserve either attention or inquiry … The works here translated are mostly standard ones, and if not strictly speaking in the Canon, are yet of great authority and are found in the libraries of most of the monasteries in the south of China. (Beal, 1871, 9)

Somewhat later appeared the much more eclectic *Buddhist Bible* of Dwight Goddard (privately published in 1932, more formally 1938), a work which remains in print. Already in 1905 two Japanese Buddhist priests and scholars, Maeda Eun (前田慧雲) and Nanjō Bun'yū (南條文雄), published an anthology of Buddhist scriptures in Japanese, the *Bukkyō Seiten* (佛教聖典; Buddhist Bible; Maeda & Nanjō, 1905), and since then there are a great many comparable anthologies published in Japanese (such as Tōkyō Daigaku Bukkyō Seinenkai, 1934). They are compiled in an expressly nonsectarian manner, or at least aim to be so. Among the most often encountered is probably the work that began in 1925 as the *Shin'yaku Bukkyō Seiten* (新譯佛教聖典; Newly Translated Buddhist Bible; Bukkyō Kyōkai, 1925), eventually becoming *The Teaching of Buddha*, published by the Bukkyō Dendō Kyōkai today in more than 44 languages. Such collections are interesting among other reasons for their willingness to draw widely from Buddhist literary sources seemingly regardless of tradition.

Tantric Literature

Tantric Literature: Overview South Asia

Tantras are scriptures, in that they purport to be the teachings of a buddha, whether the "historical" buddha Śākyamuni, or a *sambhogakāya*, or, sometimes, the teachings of a "cosmic" or transcendent buddha that are supposed to be taught also by all buddhas including Śākyamuni. It might be said that *tantras* give more importance than other Buddhist scriptures to the use of mantras that are regarded as a form of a deity for a number of goals, both in this world and beyond it. However, for the purpose of this overview *tantras* are defined as scriptures that label themselves *tantras* or that have come to be classified as such by Indian Buddhist authors, starting from at the latest about the 8th century CE, even though some of those scriptures no doubt were not originally conceived of as *tantras*.

Some scholars prefer to distinguish "Tantric Buddhism" and "Esoteric/esoteric Buddhism," a question concerning which there is an already rather considerable body of discussions (e.g. Orzech *et al.*, 2011, 4–18). While there are strong continuities between these texts and earlier literature, such as *Dhāraṇī* texts or the so-called *Yoga-Lehrbuch* (see Schlingloff, 2006), we will not address this issue here. Of recent literature that investigates some of these continuities, and contributes to our understanding of the processes by which early "Tantric" or "Esoteric/esoteric" scriptures developed, see especially Copp, 2014; Davidson, 2009; 2010; 2014; Shinohara, 2010; 2014.

The category or idea of a *tantra* emerged gradually, most probably in part under the influence of the rise in importance of Śaiva scriptures called *tantras*. Some of the Buddhist *tantras* were also called (probably before they became known as such) *sūtras*; thus the *Sarvatathāgatatattvasaṃgraha*, for instance, which came to be regarded as the main or "root" *tantra* of the *yogatantra* class (see below), and which is often cited or referred to by Indian authors as *Tattvasaṃgrahatantra*, is called a *Mahāyānasūtra* in the colophon of the surviving Sanskrit manuscript, which dates to the 9th or 10th century.

It should perhaps be noted that the Buddhist tantric traditions, at least from the time of the composition of the 18th chapter of the *Guhyasamājatantra* (which was originally an independent text, a "continuation *tantra*" [*uttaratantra*, see below] of the *Guhyasamājatantra*), claim that the word *tantra* means, first of all, "continuity" (*prabandha*), and that there are three continuities: that of "cause" (*hetutantra*); that of "fruit" (*phalatantra*); and that of "means" (*upāyatantra*). Cause, fruit, and means are soteriological categories, all called continuities because they function not just at one moment but throughout time: the cause since beginningless time, the fruit from the moment of its accomplishment, and the means throughout the period during which a practitioner is on the path. The scriptures are then to be understood to be called *tantras* in a secondary sense, because they teach these three continuities.

In their form, the Buddhist *tantras* show an evolution that begins from a structure which is indistinguishable from that of a *sūtra*, especially a Mahāyāna *sūtra*, with a mixture of prose and verse, and with a preamble in prose beginning with the words *evaṃ mayā śrutam* ("Thus have I heard") and describing the place and the occasion of the teaching. Later, some *tantras* began to be written entirely or almost entirely in verse, and without such a prose preamble; it has been suggested that the first Buddhist *tantra* to have this form may have been the *Sarvabuddhasamāyogaḍākinījālaśaṃvara* (Sanderson, 2009, 154). Still later, such verse *tantras* come to resemble Śaiva *tantras* also in that they come to consist of a dialogue between a questioner or questioners and a/the Buddha as teacher; in some Buddhist *tantras* the questioner is a female consort of the Buddha, recalling the common form in Śaiva *tantras* of a dialogue between the Goddess (who may be conceived of as Pārvatī or as Kālī) and the God (Śiva or Bhairava). However the two forms (mixed prose and verse with a preamble on the one hand and verse without a preamble on the other hand) continued to exist side by side; the former was not entirely supplanted by the latter.

Classification

The ever growing mass of Buddhist *tantras* (nearly 500 scriptures are classified as *tantras* in the Tibetan

© Koninklijke Brill NV, Leiden, 2015
Also available online – www.brill

canon) came to be classified, already in India, in a large number of different ways. Instead of attempting to list and discuss all of these, we will touch only on what we regard as the central points.

First of all, we suggest that within the diversity of classification schemes, there is a consistent central dichotomy: that between *kriyātantras* and *yogatantras* (for the meanings of these names see below). Most of the other classes that have been enumerated in various schemes can be seen as special subcategories of *yogatantras*, with the term *yogatantra* acquiring a second, more limited sense of *yogatantras* – in the broader sense – which do not belong to such a special subcategory and which are therefore lower than those which do.

These two compounds are evidently parallel in their formation/analysis, and different from some of the other names of *tantra* classes, for example, *yoginītantra*. They may be naturally understood as compounds with an elided member (*madhyapadalopin/madhyamapadalopin*), in this case the word *pradhāna*, which means "main," "principal": *kriyātantras* are *tantras* in which (external) action or ritual (*kriyā*) is the main matter taught, while *yogatantras* teach mainly yoga. The analysis of the compound *yogatantra* as equivalent to *yogapradhānaṃ tantram*, with an implication that *kriyātantra* is equivalent to *kriyāpradhānaṃ tantram*, is found in Ratnākaraśānti's commentary on *Hevajratantra* 1.2.19 (see also a passage from *Buddhaguhya's commentary on the *Vairocanābhisambodhitantra* that is discussed in Sanderson, 2009, 146–147n337).

Most of the other names of *tantra* classes fall into two groups. The first consists of *caryātantra* ("observance *tantra*") and some rarer terms, such as *ubhayatantra* ("both *tantra*"), which have been used to refer, usually, to the same (very small) group of scriptures that are regarded as in the middle between *kriyātantra* and *yogatantra*, teaching both external ritual and yoga, more or less in equal measure. The second consists of names for *tantras* that are placed above *yogatantras* but could also be called *yogatantras*, in the literal sense discussed above of *tantras* that mainly teach yoga; the different name serves in this case to differentiate them from other, "ordinary," *yogatantras* as being superior. That *yoginītantras*, or *yoganiruttaratantras* – terms that probably were used in India to refer to the same group of scriptures – are *yogatantras* in the wider sense of being *tantras* that primarily teach yoga rather than external ritual is implied by the same passage in Ratnākaraśānti's commentary on *Hevajratantra* (1.2.19).

The name of *caryātantra* for the category placed always between *kriyātantra* and *yogatantra* is a less than obvious one; A. Sanderson has suggested the possibility that it may have been influenced by the common classification of the subject matter of Śaiva *tantras* into *kriyā*, *caryā*, *yoga*, and *jñāna/vidyā* (knowledge/doctrine; Sanderson, 2009, 147n337).

With this understood, the otherwise bewildering diversity of taxonomies of *tantras* becomes less daunting. Of that diversity, we will now present and briefly discuss only a few classification schemes, the ones that seem to be of particular historical interest.

Firstly, two authors of, probably, the late 8th century CE, Vilāsavajra and *Buddhaguhya, appear to divide the tantric scriptures known to them into three classes only: *kriyātantra*, *caryātantra* or *ubhayatantra*, and *yogatantra*; this in spite of the fact that Vilāsavajra, at least, knew and quotes from several *tantras*, which would later come to be classified as higher *yogatantras*, for example, *yoganiruttaratantras* (for references and further details, see Sanderson, 2009, 146n337). Some authors of the 9th century CE, including Āryadeva, the author of the *Sūtakamelāpaka* (published under the title *Caryāmelāpakapradīpa*), seem still to have the same threefold scheme (pace Sanderson, 2009, 145–146n337, we have the impression that in Āryadeva's work *mahāyogatantra* is not a different class from *yogatantra* but simply is an alternative, more respectful, way to refer to the same *tantras* that the author also refers to sometimes as *yogatantras*). At the latest by the 10th century, however, some newly emerging scriptures emphasize their superiority to the old Yogatantras by labelling themselves as *yoginītantras*, in some cases also explicitly introducing a dichotomy between *yogatantra* and *yoginītantra*. By the late 10th and early 11th century, among diverse classification schemes of *tantras* referred to by exegetical authors, a fourfold one consisting of *kriyātantra*, *caryātantra*, *yogatantra*, and *yoginītantra* was perhaps the most common. A fivefold scheme was preferred by some authors, including the distinguished commentator Ratnākaraśānti: this consists of *kriyātantra*, *caryātantra*, *yogatantra*, *yogottaratantra*, and *yoganiruttaratantra*. In this scheme the *yoganiruttara* class corresponded probably very closely with the *yoginītantra* of the four-fold scheme; while the *yogatantras* of the fourfold scheme were here divided into a lower and a

higher group. The former, simply called *yogatantra*, would comprise the *Sarvatathāgatatattvasaṃgraha* and related literature; the latter, the *yogottaratantra*, the *Guhyasamājatantra*, some directly related *tantras*, and similar scriptures.

Finally, the authors who, in the early 11th century, promulgated the *Kālacakratantra* and its associated ideas and practices, introduced the category of nondual *tantras* (*advayatantra*; also *niranvayatantra*, lit. *tantra* not belonging to [either] lineage [of *yogatantras* or *yoginītantras*]). These authors reinterpret, to a certain extent, the terms *yogatantra* and *yoginītantra*. The compound *yogatantra* is explained in two ways in a passage attributed to the *Pañcalakṣahevajra* by the early Kālacakra master Vajragarbha in his commentary on *Hevajratantra* (1.1.6–7). First, *yogatantra* is explained as a general label referring to all *tantras*, starting with the *Guhyasamāja*, that are defined as "consisting of wisdom and means" (*prajñopāyātmaka*). In this case *yoga* means "union," namely unification of the two aspects of *he* and *vajra*, *vaṃ* and *e* (i.e. the two syllables, in reverse order, of the word *evam*, traditionally the first word of Buddhist scriptures), "objectless (or great) compassion and emptiness endowed with all forms," in other words "means and wisdom," two central concepts of Mahāyāna soteriology. With a more specific sense, the word *yogatantra* is used in opposition to *yoginītantra* (this is no doubt to be conceived as a subclass of the *yogatantras* in the first and wider sense): the *yogatantras* or *upāyatantras* – the latter word is used here, but probably as a synonym of the former – are those in which (i.e. in the practice of which), in the ritual context of communal worship involving sexual union in a tantric feast (*gaṇacakra*), a male moves from one unmoving female to another, while the *yoginītantras* are those in which in the same ritual context the females move and the male is stationary. Somewhat confusingly, in describing the second case, that of the *yoginītantras*, the word for the females is used in the singular, which we take however to stand for a plural. It is possible that the singular referring to the male is also to be understood as standing, at least potentially, for a plural. The *Hevajratantra* is then explained as *niranvaya*, that is as transcending the duality (*advaya*) of "wisdom and means." The same appellation as *niranvayatantra* or *advayatantra*, now applied to the *Laghukālacakratantra*, and similar discussions about the distinction between *yogatantras* and *yoginītantras* can be found in the *Vimalaprabhā* by Puṇḍarīka (see vol. I, 18; vol. III, 6).

Concluding this discussion of the *tantra* classes, one more point should be made. In spite of the fundamental dichotomy between *kriyātantra* and *yogatantra*, there are also often clear and strong continuities to be found between *kriyātantras* and *yogatantras* (including the higher *yogatantras* that self-identify as, for instance, *yoginītantras*). Thus, to mention two examples, there is a close relation between the *kriyātantra* that is called *Siddhaikavīratantra* and the *yoginītantra* famous under the name *Caṇḍamahāroṣaṇatantra* (but also called *Ekallavīra*); and the *Mañjuśriyamūlakalpa*, a large *kriyātantra* contains some chapters with material on the wrathful deity Yamāntaka, who is more well-known as a *yogatantra* (or *yogottaratantra*) deity, central to several higher *yogatantras*, such as the *Kṛṣṇayamāritantra*, *Raktayamāritantra*, and *Vajrabhairavatantra*, all extant at least in part in Sanskrit.

Apart from being identified as *kriyātantra*, *caryātantra*, *yogatantra*, or another class of one of the numerous classification schemes, another way in which some of the *tantras* were classified is as root *tantra* (*mūlatantra*) or explanatory *tantra* (*vyākhyātantra*). The root *tantras* are often supposed to be of vast extent, a hundred thousand verses for instance, or five hundred thousand, and hence are sometimes referred to as *vistaratantras*, "*tantras* with [great] extent," "extensive *tantras*." They are usually understood to be inaccessible to ordinary human beings. In their stead we have shorter versions, abbreviations or extracts, which are sometimes called *laghutantras*, "small *tantras*," with a connotation also of "easy *tantras*" (it is often explicitly stated that the reason that we have access only to the *laghutantras* is that human beings in our age have short life spans and little energy, and are lazy). It should be noted that such a notion – that the available scriptures or authoritative texts of a system are short versions of much larger texts, which were once available or which are accessible now only in other realms than the human – is rather widely attested in India, not only in Buddhist, and not only in tantric traditions.

An unusual use of this concept was made by the early Kālacakra authors, in particular in the three so-called bodhisattva commentaries: the *Laghutantraṭīkā* by Vajrapāṇi on the *Laghuśaṃvaratantra*, the *Ṣaṭsāhasrikā* by Vajragarbha on the (*Laghu-*)*hevajratantra*, and the *Vimalaprabhā* by Puṇḍarīka on the *Laghukālacakratantra* itself. These three authors all claim access, by virtue of their status as not ordinary human teachers but high bodhisattvas, to the (extensive) root *tantras*, and even quote from these scriptures. This claimed access and claimed status are means by which the authors attempt to establish the superiority of their interpretations and their tradition, "colonizing" for this purpose what were probably the two most celebrated and popular *yoginītantras* of their day, the *Laghuśaṃvaratantra* and the *Hevajratantra*. The citations from the extensive root *Śaṃvaratantra* and *Hevajratantra* are, however, clearly products of the Kālacakra milieu (Sferra, 2005).

Whereas the notion of vast and now inaccessible root *tantras* is shared, as remarked above, with many other Indian traditions, the category of commentarial scriptures (*vyākhyātantra*) seems to be much less widely spread. In the present state of scholarship, it appears probable that this notion – that certain *tantras* function as commentaries for particular root *tantras* – originated in the milieu of the *Guhyasamājatantra* and its schools of exegesis (Matsunaga, 1964).

It should be said in passing that the idea that certain scriptures, which often do not have (or have only in very small part) the formal structure and the linguistic conventions of commentaries, are to be classified as "commentary scriptures" (*vyākhyātantra* or *vyākhyāna*) which explain other scriptures, is to be found also in Pāñcarātra literature, where it seems to appear for the first time in the *Adhikaḥ Pāṭhaḥ* of the *Jayākhyasaṃhitā* (stt. 6cd–8ab), an interpolated section dated likely in the second half of the 14th century (Dębicka-Borek, 2011, 86–88), with reference to three specific works, the *Pārameśvarasaṃhitā*, the *Īśvarasaṃhitā*, and the *Pādmasaṃhitā*. These works, which have been likely produced between the 12th and the 14th century, are supposed to be respectively the explanatory scriptures (*saṃhitā*, *tantra*) of the *Pauṣkarasaṃhitā*, of the *Sātvatasaṃhitā*, and of the *Jayākhyasaṃhitā*. The category of "commentary scripture," in this case, is probably secondary, that is to say, rather than the scriptures so labelled having been originally conceived as "commentary scriptures," they have been identified as such as part of a strategy of legitimation that was carried out at some point in the 14th century among the Pāñcarātras of Kanchipuram and Srirangam (Leach, 2012, 29–42).

The classification into root *tantras* and commentary *tantras* seems to be not only older but considerably more complex in the Buddhist case. A detailed study remains as yet a desideratum. It may suffice here to point out a few problems. Firstly there is sometimes disagreement between authorities concerning the status of an "explanatory *tantra*"; an example is the *Sampuṭatantra* (Szántó, 2013, 350). Secondly, there seem to be cases in which a *tantra* that is sometimes classified as an "explanatory *tantra*" presents itself differently; an example of this is the *Ḍākinīvajrapañjaratantra*, often regarded as a commentarial *tantra* of the *Hevajratantra*, which seems rather to present itself as an extract of the extensive root *Hevajratantra*, and thus as having status equal or parallel to, rather than subordinate to, the (extant) *Hevajratantra* itself.

Another concept which should be mentioned here is that of *uttaratantras*, "continuation *tantras*" or "sequel *tantras*" (contrasted with, again, *mūlatantras*). In some cases an *uttaratantra* has subsequently been incorporated into the *mūlatantra*; such as, famously, the case of the 18th chapter of the *Guhyasamājatantra*, which, as is clear from, among other things, the earliest references to it, was once a separate text, referred to as *Samājottara*. This concept is known also from Śaiva tantric literature, though it is apparently not found in the Pāñcarātra.

Extent of Surviving Literature and State of Research

It is impossible to give more than a very crude estimate as to the total extent of Indian Buddhist *tantras* surviving in their original language, especially since there are reported to be some thousands of (mainly) palm-leaf manuscripts of Buddhist texts, a large percentage of which is likely to prove to contain tantric literature, extant in Tibet but not currently accessible to the scholarly world.

What can be said is that since the first publication of a complete tantric scripture in its original language, which as far as we are aware was B. Bhattacharya's edition of the *Guhyasamājatantra* in 1931 (the *Mañjuśrīnāmasaṅgīti*, though published in its entirety considerably earlier yet, presents itself as a part of a scripture rather than as a complete one), less than 30 *tantras* belonging to the higher *tantra* classes have been published in their original, the editions of several being only partial. There has been a noticeable acceleration in the rate of publication of *tantras* beginning from around 30 years ago. This

is largely, though not solely, due to the activities of the Central University of Tibetan Studies (formerly called Central Institute of Higher Tibetan Studies) in Sarnath.

Of the published editions, few are even approximately critical, and the best available editions of such important texts as the *Guhyasamājatantra* and the *Hevajratantra* are far from satisfactory.

The following table is designed primarily to give a schematic idea of the development of studies of Buddhist tantric scriptures. Scriptures are listed in chronological order of their first publication, with reference to the name of the editor and the date of the *editio princeps*. In some cases better editions were subsequently published; complete references to these editions are given in the bibliography.

A number of *tantras* do not survive, or survive only in part, in their original Indic form, but have Sanskrit commentaries that are extant. In such cases the wording of the text commented on can often be partly recovered from the commentary or commentaries (in a few cases commentaries even preserve most of the words of the main text). This is the case, for instance, of the *Sarvarahasyatantra*, of which we can rely on the still unpublished *nibandha* by Ratnākaraśānti and of which there are several stanzas (c. 6.5%) quoted in other works, and of the *Vajrāmṛtatantra*, half of which is available in a *codex unicus* kept in the Cambridge University Library (MS Or. 158) and of which two Sanskrit commentaries (the **Vajrāmṛtapañjikā* by *Vimalabhadra [P 2521/D 1649] and the *Amṛtadhārā* by Śrībhānu [P 2523/D 1651]) are extant in Sanskrit. In 1992 the *Mahāmāyātantra* has been retranslated into Sanskrit and published with the *Guṇavatī* by Ratnākaraśānti; this edition can certainly be improved on further, also with the use of the commentary by *Alaṃkāraśrī/*Śrībhūṣaṇa of which some fragments survive in Sanskrit as part of Tokyo University Library MS 517. The text of the *Sekoddeśa*, a large portion of which is available in fragmentary manuscripts and quotations, has been partly retranslated by R. Gnoli (the first time in 1994, with further improvements in 1997 and 2006) on the basis of the two Tibetan translations and the three extant Sanskrit commentaries: the *Sekoddeśaṭīkā* by Nāropā, the *Sekoddeśaṭippaṇī* by Sādhuputra Śrīdharānanda, and the anonymous *Sekoddeśapañjikā*, which is incompletely available.

The number of *tantras* that have been translated, even in part, into a Western language, whether directly from Sanskrit/Apabhramsha or from a Tibetan or Chinese translation, is likewise small, especially bearing in mind that when Tibetan and Chinese translations are included the number of surviving *tantras* of Indian origin is around 500 (excluding *tantras* which are extant only in Nepalese Sanskrit manuscripts and which are likely to be rather recent Nepalese compilations; see below). Noteworthy and influential translations include D.L. Snellgrove's of the *Hevajratantra*, Tsuda Shinichi's

of selected chapters of the *Saṃvarodayatantra*, C.S. George's of the first eight chapters of the *Caṇḍamahāroṣaṇatantra*, S. Hodge's and R. Giebel's of the *Vairocanābhisambodhitantra*, D.B. Gray's of the *Laghuśaṃvaratantra*, Luo Hong's of chapters 9–14 of the *Buddhakapālatantra*, and P.-D. Szántó's of selected chapters of the *Catuṣpīṭhatantra*. The 84000 Project website, which aims ultimately at the translation of all the works in the Tibetan scriptural canon, is contributing, and will no doubt continue to contribute, to the corpus of translations of *tantras*; as is well-known, however, their translations include relatively little annotation, being aimed primarily at an audience of nonscholars.

Content

The primary concern of the *tantras* is not doctrine, although Buddhist doctrine (mainly, but not solely, Mahāyāna viewpoints) can be said to provide an underlying structure that is often visible, as well as being in some relatively rare passages explicitly taught and elaborated upon. Instead their main subject matter can be summarized briefly as ritual (*kriyā*) and yoga. It is not the case that the former topic is absent in the *yogatantras* (including higher *yogatantras*, such as the *yoginītantras*), which on the contrary often have extensive sections on external ritual (sometimes hard to distinguish from, and containing direct parallels with, similar sections in *kriyātantras*); nor that the latter topic is entirely absent in the *kriyātantras*. Narrative passages can sometimes be found, though these as a rule either form part of the frame of the *tantra* or are directly related to ritual or yoga, for instance in that they provide an aetiology of some element. The most famous of such narratives is a myth detailing the subjugation of the Hindu deity Maheśvara (Śiva) by Vajrapāṇi (in the earliest source for such a myth, the *Sarvatathāgatatattvasaṃgraha*) or another wrathful deity such as Heruka. This myth has been studied by several modern authors (see e.g. Davidson, 1991; Mayer, 1998).

There is no particular group of specific subtopics that are dealt with in all or almost all *tantras* (or even all or almost all of a particular class). Some subtopics that are of rather common occurrence, however, are the procedures for drawing the *maṇḍala*; the ritual of initiation (*abhiṣeka* or *seka*); the mantras (sometimes given in encoded form); the fire ritual (*homa*); special observances (*caryā*); various magical rituals; the visualization of the deity/deities, especially self-visualization as the deity (*devatāyoga*), the main feature of the generation stage (*utpattikrama*); special yogas, often but not always involving the manipulation of winds, channels, and drops, which belong to the higher stage called "stage of the arisen/perfected" (*niṣpannakrama* or *utpannakrama*, more commonly translated in modern secondary literature as "perfection stage" or "completion stage"); the tantric feast (*gaṇacakra*); and, in the *yoginītantras*, the characteristics of *yoginīs*, and the secret signs and code words or syllables (*chommā*/*chomā*) by which they can be recognized and communicated with.

These topics are either almost entirely new within Buddhism, or are given new and different significance and content. The fire ritual, for example, of ancient Vedic origins and very common in Śaiva *tantras*, is in turn taken up in the Buddhist *tantras*, perhaps largely in an attempt to emulate and compete with the Śaivas. Again, the ritual of initiation or consecration, which becomes an essential prerequisite for tantric practice, is probably in part influenced by the parallel ritual in Śaivism, in which however initiation, as a rite of entering the religion, at the same time guaranteeing the accomplishment of the ultimate soteriological aim, is, unlike in Buddhist esotericism, distinguished from *abhiṣeka*, the special consecration as a master or as a power-seeking religious specialist. In spite of these parallels and influences, however, the Buddhist tantric initiation ritual certainly also has developments which are purely "internal" in their logic (for a study of some of these developments, see Isaacson, 2010). In yoga too, the Buddhist *tantras* are innovative by comparison with non-esoteric Buddhism, again with some of the "new technologies" being influenced by or introduced in competition with Śaivism. This holds true, perhaps, for the fairly common (though not ubiquitous) idea that yoga is divided into six "limbs" (*ṣaḍaṅga*), rather than eight, and the elaboration (not before the *yoginītantras*) of a "yogic body" in which drops are propelled through channels by winds and from which consciousness can be deliberately projected at death (*utkrānti*; on which see Sanderson, 2009, 183–184; see also Sanderson, 2009, 179–186 for discussion of a number of elements of *yoginītantra* Buddhism that have been drawn from or influenced by Śaivism).

As in many Mahāyāna *sūtras*, in *tantras* too we regularly find more or less self-laudatory passages, for instance ones which present the *tantra* as being at the pinnacle of the Buddhist teachings/scriptures. Two particularly famous ones, with some significance for the history of the development of Buddhist doxographical literature (*siddhānta*; Tib. *grub mtha'*) are *Hevajratantra* 1.8.54–55 and 2.8.9–10.

The extent to which the contents, ritual or yogic, are presented in clear and systematic fashion varies very considerably. Some sections can be almost manual-like; others can be extraordinarily cryptic; yet others are more or less commentarial in nature.

The broad variety in contents and style of *tantras* even within one *tantra* class is no doubt related partly, at least, to different compositional histories. Some scriptures appear to have been compiled in part by something that can be called not too unfairly a "cut and paste" method. The sources used for this included, at least in some cases, non-Buddhist *tantras*; a case that has been discussed in detail (and that seems to be somewhat unusual) is that of the *Laghuśaṃvaratantra*, an important and early *yoginītantra* that has drawn very heavily on a Śaiva source or sources (see most recently Sanderson, 2009, 186–240), as well as on some earlier Buddhist tantric scriptures (see Sanderson, 2009, 163–164). At the other extreme may be put a *tantra* such as the *Laghukālacakratantra*. This scripture is written entirely in verses composed in the impressive *sragdharā* metre (the longest of the Sanskrit metres that are relatively frequently used), and even if it is probably not entirely homogenous in its origin, it certainly has a high degree of internal consistency and of unity of vision.

While both in general outline and in many details the Buddhist *tantras* are no doubt, we think, influenced by Śaivism, and some have been compiled, as we have seen, in a hardly sophisticated manner, nonetheless they are of interest not only from a purely historical perspective, and certainly not merely as a testimony to the decline of Indian Buddhism (on this idea, recurring throughout the history of the study of Indian Buddhism, see the remarks in Wedemeyer, 2013, 43–50). They have inspired not only countless further literary compositions but also works of art, including many that are of great power and beauty, throughout Asia; they have deeply influenced Tibetan Buddhism and some strands of East Asian Buddhism, not to speak of Southeast Asian Buddhism, albeit that there their place of once considerable importance was supplanted by the rise of Theravāda from the 12th–13th century onward; and they themselves, when read in their original languages – nonstandard, sometimes apparently deliberately so, Sanskrit and Apabhramsha – can still, at least in some passages, impress a reader, even one who is not positively predisposed, by the vigour, boldness, and often humour, with which they present a powerful vision of nonduality and of the experience, at the culmination of the path, of the whole universe as, in some sense, divine.

Language

Like the Hindu *tantras*, the Buddhist *tantras* too are mostly written in Sanskrit, although their language usually deviates to a lesser or greater extent from "standard" Sanskrit. Commentators occasionally refer to this language (as they also sometimes do to the language of non-tantric Buddhist scriptures) as *ārṣa* (lit. [speech/language] of a/the sage). This term, as well as others by which Buddhist authors have sometimes referred to the language of their scriptures, has been studied by D. Seyfort Ruegg (2000), although it should be noted that with one exception all the passages he adduces are from non-tantric literature.

As in other registers of Buddhist Sanskrit (or what is sometimes called "Buddhist Hybrid Sanskrit"), the irregularities or deviations from a "classical" (approx. Pāṇinian) norm mainly concern morphology and syntax; nonstandard metre and *sandhi* are also not rare. The linguistic irregularities can often be related to developments in Middle (perhaps sometimes even early New) Indo-Aryan. Most of these nonstandard features are known also from the language of Śaiva tantric scriptures, a language called by several Śaiva exegetes, and frequently also by modern scholars of Śaiva *tantra*, *aiśa* (lit. [speech/language] of God/the Lord).

Some *tantras*, for instance the *Sarvabuddhasamāyogaḍākinījālasaṃvara*, the *Vajrāmṛtatantra*, the *Hevajratantra*, the *Ḍākārṇavatantra*, and the *Buddhakapālatantra*, but also already a possibly older scripture, which is rather *kriyātantra* in its orientation, the practically unstudied *Bhagavatīsvedāmbujā*, contain also verses written in Apabhramsha. Although the Apabhramsha verses of the *Ḍākārṇavatantra* were already studied by N.N. Chaudhuri in 1935, the use of this linguistic register in the Buddhist *tantras* remains insufficiently investigated. We often find Sanskritisms, almost at random, within Apabhramsha verses; and sometimes other surprising linguistic phenomena such as violations of the famous *Zwei-Moren-Gesetz* ("two-mora-rule"), forbidding a long vowel before a consonant cluster. Further, much needed,

investigation of these Apabhramsha passages may also shed further light on questions of dating and provenance of the scriptures in which they occur.

Date and Provenance

Since historical sources at our disposal (such as inscriptions and art-historical evidence) provide relatively few references useful for the dating of the tantric Buddhist traditions, it is difficult to establish a precise relative chronology among *tantras*, and also determine their place of composition. At present it is very hard to be sure about the original place of diffusion of the Buddhist tantrism; the presence of tantric circles is attested both in the north and in the south of the Indian subcontinent. For some later *tantras* it is possible to propose a northern origin, such is likely the case of the *Laghukālacakratantra*, or even, more precisely a northeastern origin, as in the case of the *Laghuśaṃvaratantra* (Sanderson, 2009, 165) and the *Catuṣpīṭhatantra* (Szántó, vol. I, 2012, 196). Northeast India is the probable place of origin also of some early tantric scriptures, for instance, the *Mahāvairocanābhisambodhisūtra*. According to S. Hodge the identification of some flora named in the text suggests that it was compiled "somewhere… in the region between Nālanda and the Himalayan foothills" (Hodge, 1994, 72).

Although at present it is not possible to delineate a precise chronology about the production of the Buddhist *tantras*, through the scant information that can be gathered directly from texts, quotations, commentaries, and the Chinese and Tibetan translations, which at least fix the *terminus ante quem* for the production of individual works, we can try to sketch a relative and probable chronology.

We can relatively be safe to say that a first group of higher tantric scriptures emerged in the 7th century CE (some works that later came to be classified as *kriyātantras* might be older). Such is probably the case of the *Mahāvairocanābhisambodhisūtra*, the first Chinese translation of which was completed by *Śubhākarasiṃha in collaboration with Yixing (一行) in 725 CE (T. 848). It seems however that this work – together with two other *tantras*, that is, the *Subāhuparipṛcchā* and the *Susiddhikara* (both of which are classified as *kriyātantras*) – was already known to the Chinese pilgrim Wuxing (無行), who died in 674 CE (Hodge, 2003, 14–15).

Things can become more complex if we consider that, in some cases at least, the texts that have come down to us are the product of an editorial process that could span decades, or even perhaps a century or more; such is the case, for instance, of the *Mañjuśriyamūlakalpa*. This *kriyātantra* – which has only relatively recently begun to be critically studied in the light of all its surviving sources (see Delhey, 2012) – was compiled gradually, most likely by different authors; its heterogenous nature is partly reflected by the fact that the three textual traditions (Sanskrit, Chinese, and Tibetan) differ as regards the length of the work and chapter division. The oldest among the Chinese partial translations have been done in 702 (T. 1181) and 703 CE (T. 1182), and so the original bulk of the work was probably composed around the end of the 7th century CE, but other chapters are certainly later, the 53th chapter for instance (in the Sanskrit available version), in which the Pala king Gopāla is mentioned, must have been written not earlier than the late 8th century CE (Matsunaga, 1985, 893; Sanderson, 2009, 129n300).

Without pretending to be exhaustive, and limiting ourself to giving some information about the most celebrated *tantras*, it may suffice to point out that among those that may have been composed in the 7th and 8th century CE, the *Paramādyatantra*, a rather difficult to define textual corpus, to which two Tibetan translations, with quite different content (D 487, 488/P 119, 120) are assigned, the *Vajrabhairavatantra*, and the *Sarvatathāgatattvasaṃgraha* have been the most influential. The *Guhyasamājatantra* and the *Sarvabuddhasamāyogaḍākinījālasaṃvara* are likely to have been composed in the 8th century CE. The *Cakrasaṃvara*/*Cakraśaṃvara* (also known as *Laghusaṃvara*/*Laghuśaṃvara*), one of the first *yoginītantras*, if not the first among them, which mentions and incorporates stanzas from the above-cited *tantras* (see 3.23cd–24ab), was likely composed at a later time; tentatively we can say that its composition may date to the late 9th century CE (see Sanderson, 2009, 158–164). We do not have attestations of the *Hevajratantra* before the 10th century. The *Laghukālacakratantra* was probably written in the early 11th century.

Although the *Laghukālacakratantra* has sometimes been called the last major Indian Buddhist *tantra* to emerge, there are a number of scriptures that are most probably later yet, including for instance the well-known *Saṃvarodayatantra*, possibly a Nepalese production. The compilation of tantric scriptures seems to have continued in Nepal almost up to modern times. More recent productions tend to be purely compilations of preexisting textual material, sometimes with an opening formula and a concluding one added, so as to make the whole have at least some of the formal characteristics typical of many scriptures. For examples of two such compilations, one called the *Kalparājamahātantra* and the other the *Jvālāvalīvajramālātantra*, both incorporating in their entirety nonscriptural *sādhanas* (Pāṇḍeya, 1989, 15–16, 26–28). A published example of what is probably also a relatively late Nepalese composition (without opening and concluding formulas), lacking a Tibetan translation, is the *Jñānodayatantra*.

Diffusion in Tibet, East Asia, and Southeast Asia

Traditionally, the *tantras* are intended for an audience of initiates and therefore it is not strange that they often present teachings formulated in a cryptic and not immediately understandable way. Not unlike other Indian scriptures and in accordance with a general feature of Indian literary tradition (not only Buddhist and not only religious), the *tantras* are often followed by commentaries, and sometimes even by subcommentaries, which can differ on the interpretation of the text. Only a part of the commentaries written in Sanskrit is still available in that language. Many more are preserved in Tibetan translation, together with an important tradition of independent exegetical literature composed directly in Tibet. Numerous independent works, sometimes but not always associated directly with particular *tantras*, and with primarily apologetic and exegetical functions, also survive in Sanskrit or Tibetan translation. Lack of linguistic competence leads us to omit any discussion of material in Central Asian languages such as Uighur (for which, see Elverskog, 1997, 105–125) or Khotanese.

It may be noted in passing that in spite of the large scale effort made by Tibetans to translate Indian Buddhist tantric material, there are also not a few texts surviving in Sanskrit of which we do not have such translations. These include older works (e.g. the *Bhagavatīsvedāmbujā*) as well as the more recent Nepalese compositions/compilations mentioned above. It should also be added that in Indian works we find quoted names and sometimes even passages of scriptures that are no more available either in Sanskrit or in Tibetan. Although the tantric scriptures present in the Kanjur have been translated almost entirely during the second diffusion of Buddhism (*phyi dar*), starting with the second half of the 10th century, there is no doubt that tantric works have also been rendered into Tibetan in the earlier phase of the diffusion of Buddhism (*snga dar*). In fact, both the *Lhan dkar ma* catalogue (which may have been composed in 812 or 824 CE; Herrmann-Pfandt, 2008) and the *Dkar chag 'Phang thang ma* (Halkias, 2004), a later Tibetan imperial catalogue also composed in the 9th century CE, list a number of tantric works translated from Sanskrit. A third catalogue, produced in the same period and entitled *Mchims phu ma*, is presently not accessible to scholars. Some translations that predate the second diffusion may be present in the *Rnying ma* canon, although the majority of the texts in that canon are of dubious origin. Earlier Tibetan translations of some *tantras*, for instance the *Guhyasamāja*, have been found also in Dunhuang.

It is possible that some *yogatantras* have been diffused into the Indonesian archipelago already since the late 7th or early 8th century CE (Nihom, 1994, 67, 113–114). As far as we know to date, the first Buddhist tantric inscription in that area is the famous stone of Kelurak, dated 704 Śaka (i.e. 782 CE), which "appears to deal with a tantric form of Mañjuśrī where the Buddha, Dharma and Saṅgha are related to Brahmā, Viṣṇu and Maheśvara" (Nihom, 1994, 70; see also Griffiths, 2014). A collection of Sanskrit verses with Old Javanese commentary, the *Saṅ Hyaṅ Kamahāyānan Mantranaya*, may reflect a stage of *yogatantra* development preceding or contemporary with *Buddhaguhya, i.e. the late 8th century CE (see Nihom 1994, 70–71).

Epigraphical records and statues representing Hevajra in Thailand (see Boeles, 1966) suggest that tantric cults (and hence also scriptures) were diffused also in Southeast Asia already in medieval times.

Even though the first translations of Buddhist *tantras* in China date back to the Tang dynasty (618–690 and 705–907 CE) – among these the above mentioned *Mahāvairocanābhisambodhisūtra* (725) and the *Subāhuparipṛcchā* (726) – the great bulk of esoteric works have been rendered into Chinese under the Song dynasty (960–1279), after the foundation of The Institute for the Propagation of the Dharma (Chuanfa yuan [傳法院]) in 983 CE (Orzech, 2011). Texts translated in this period were, for instance, the *Mañjuśriyamūlakalpa* (T. 1191) by *Devaśāntika (983–1000), the *Guhyasamājatantra* (T. 885) by *Dānapāla (1002), the *Sarvatathāgatatattvasaṅgraha* (T. 882) by *Dānapāla (1012–1015; a first translation of a shorter version of this work was done by *Amoghavajra in the early 8th century CE [T. 865; Weinberger, 2010], with another translation of a shorter text [T. 868] produced by *Prajñā/Prajña [supposedly 744–810 CE]), and the *Hevajratantra* (T. 892) by

*Dharmapāla (1054–1055). The translation of tantric works (mainly from Tibetan) continued during the Mongol Yuan dynasty (1206–1368) and the Ming dynasty (1368–1644; Shen, 2011a; 2011b).

Chinese translations were the basis also for the study and practice of tantric Buddhist scriptures in Korea, Vietnam, and Japan. (For a more indepth analysis and historical description of the complex dyanamics involved we refer the reader to chapters 56–87 of Orzech, Sørensen & Payne, 2011.)

In conclusion, it suffices to say that the spread of Tantrism in Asia not only resulted in the translation of tantric scriptures in other languages, such as Tibetan, Chinese, Tangut, and Mongolian, but has also involved an immense work of revision, interpretation, adaptation, and reformulation. The development of a large exegetical literature and of innovative and independent treatises in Tibet, China, and Japan (just to quote the main areas) are evidence of this.

Catuṣpīṭha

Catuṣpīṭha may be either an abbreviation of the scriptural title *Catuṣpīṭhatantra* or the name of the textual cycle and teachings directly or supposedly based on that scripture. The *Catuṣpīṭhatantra* is one of the earlier *yoginītantra*s, the penultimate wave of scriptural revelation in Indian esoteric Buddhism. It was composed most likely in the late 9th century in northeast India (Szántó, vol. I, 2012, 35ff.). Like other examples of the genre, the text for the most part teaches a pantheon, the initiation rite meant to create a qualified worshipper of the pantheon, the worship proper of these deities, and related yogic-ritual practices employing visualization and mantras.

Title and Structure

The title of the text is to be understood as The Scripture in Four Chapters, since it has nothing to do with *pīṭha*s in the sense of pilgrimage places. The chapters are given the names *Ātmapīṭha, Parapīṭha, Yogapīṭha*, and *Guhyapīṭha*; it is not at all clear how these chapter titles (meaning self, other, meditation, and secret, respectively) relate to their contents. The chapters are further divided into four subchapters each. Exegetical tradition maintains that the currently preserved text is the abbreviation of a 12,000-verse version, which itself was an abridgment of an 18,000-verse ur-revelation. The *Catuṣpīṭhatantra* as we have it today consists of what would amount to about 1,200 verses. Excepting a few prose passages, speaker markers, and mantras, the text is composed in more or less regular *anuṣṭubh* meter. The text is in the form of a dialogue between an unspecified Bhagavat ("Lord"), sometimes styled Jñānendra ("Sovereign of Gnosis"), and Vajrapāṇi, the standard petitioner of Vajrayāna scriptures (Szántó, vol. I, 2012, 25ff.).

Sources

The *Catuṣpīṭhatantra* has not yet been published in its entirety (about half of the text accompanied by the *Catuṣpīṭhanibandha* of Bhavabhaṭṭa is edited in Szántó, vol. II, 2012, 5–224). It survives in at least three almost complete palm-leaf manuscripts, several paper manuscripts, and at least six palm-leaf fragments. All these codices were copied in Nepal. There is also a canonical Tibetan translation from the 11th century, the joint effort of Gayādhara and Khug pa lhas btsas of the 'Gos clan (Szántó, vol. I, 2012, 73–89).

A significant amount of the text is also transmitted in the lemmata of the most extensive commentary, the *Catuṣpīṭhanibandha* of Bhavabhaṭṭa (northeast India, first half of the 10th cent.). The *Catuṣpīṭhanibandha* survives in several paper copies and three almost complete palm-leaf codices: two of these are of Nepalese origin, whereas what is the best manuscript was probably copied at Vikramaśīla Monastery in the second half of the 12th century. An enlarged Tibetan translation of this commentary was produced by the same translators as those of the *Catuṣpīṭhatantra* (Szántó, vol. I, 2012, 97–115).

There are two further commentaries extant in Sanskrit. Both are unfinished, as they comment on the first three chapters only. This does not mean that the authors knew a shorter recension, since both allude to passages in the *Guhyapīṭha*, chapter 4. The earlier, by one Kalyāṇavarman (Nepal?, 10th cent.), is simply called the *Pañjikā*. It is extant in a single Nepalese palm-leaf manuscript dated 1012 CE. This work was translated into Tibetan and completed with a commentary on the fourth chapter by Smṛtijñānakīrti (Szántó, vol. I, 2012, 115–119). The latter of the commentaries, the *Mitapadāpañjikā* by Durjayacandra (northeast India, late 10th cent.), survives in a single Nepalese palm-leaf manuscript and a paper apograph thereof. This copy is incomplete: there are two leaves missing from the beginning and an undeterminable number of folios from the end. The work has not been translated into Tibetan (Szántó, vol. I, 2012, 119–123).

The two earlier commentators, Bhavabhaṭṭa and Kalyāṇavarman, already allude to variant interpretations, thus there has already been some kind of exegesis of the text before them (Szántó, vol. I, 2012, 95–96). Both exegetes betray knowledge of a very influential satellite text of the cycle, the *Maṇḍalopāyikā*. The transmission history of this text is quite complex, and its authorship is problematic

(see Szántó, 2008b; vol. I, 2012, 123–147). Besides laying down the initiation ritual in great detail, one recension of the text introduced a new pantheon – most significantly a male deity, Yogāmbara, as the central figure – and eventually took over the role of primary scripture from the *Catuṣpīṭhatantra* itself. For Bhavabhaṭṭa and Kalyāṇavarman, the pantheon is still exclusively female, but Durjayacandra already acknowledges Yogāmbara as the main deity of the cult.

The rest of *Catuṣpīṭha* literature consists of smaller commentaries, minor ritual manuals, and several scriptural texts, the longest of which, the **Vyākhyātantra*, is extant only in Tibetan translation. Two texts delineating the daily ritual-meditative practice of the initiate deserve special mention. The *Yogāmbarasādhanopāyikā* of Amitavajra (northeast India, 11th cent.) seems to have been the standard manual, until it was overshadowed by a work based on it, the *Yogāmbarasādhanavidhi* of Jagadānandajīvabhadra (Nepal, 14th cent.). Judging by the number of extant manuscripts and the current manner of worshipping Yogāmbara in the Kathmandu Valley, this was certainly the most popular ritual manual in recent times. (For an account of these unpublished texts, see Szántó, vol. I, 2012, 89–95, 147–194.)

The Pantheon

The original pantheon of the *Catuṣpīṭha* was exclusively female. The goddesses' iconographic features, seed syllables (*bījas*), mantras, corresponding hand gestures (*mudrās*), and worship are described in what may be called the flagship subchapter, 2.3 (that is, third subchapter of the *Parapīṭha*). The chief goddess, Jñānaḍākinī, occupies the central seat of the *maṇḍala*. She has three faces and six arms; she is clad in red garments and wears snake ornaments. Her faces are laughing, coquettish, and fierce. She holds a skull-staff, a battle-axe, a *vajra*-scepter, a bell, a skull-bowl, and a sword. She is surrounded by four goddesses in the cardinal directions, four in the intermediate directions, and four doorkeepers. The visualization starts with the central goddess. Each goddess is a transformation of her seed syllable (*bīja*), and they are later summoned by their specific mantras and corresponding gestures.

The main points can be tabulated as follows:

goddess	position	color	*bīja*	mantra
Jñānaḍākinī	middle	dark	*hūṃ*	*oṃ hūṃ svāhā*
Vajraḍākinī	east	white	*suṃ*	*oṃ a svāhā*
Ghoraḍākinī	north	yellow	*huṃ*	*oṃ ā svāhā*
Vettālī	west	red	*yuṃ*	*oṃ ā3 svāhā*
Caṇḍālī	south	black	*kṣuṃ*	*oṃ āṃ svāhā*
Siṃhī	northeast	yellow-white	*smryuṃ*	*oṃ ṛ svāhā*
Vyāghrī	southeast	black-white	*·hmryuṃ*	*oṃ ṝ svāhā*
Jambukī	southwest	black-red	*ymryuṃ*	*oṃ ḷ svāhā*
Ulūkī	northwest	yellow-red	*kṣmryuṃ*	*oṃ ḹ svāhā*
Raudrī/Ḍākinī	east	white	–	*oṃ phuṃ svāhā*
Dīpinī	north	yellow	–	*oṃ pheṃ svāhā*
Cūṣiṇī	west	red	–	*oṃ phoṃ svāhā*
Kāmbojī	south	black	–	*oṃ phriṃ svāhā*

Table 1: Where two colors are mentioned, it should be understood as half-half and not a mixture of the respective colors; *ā3* denotes the protracted (*pluta*) vowel.

In the *yoginītantras*, especially in scriptures related to the cult of Śaṃvara or Saṃvara, the general trend was to appropriate full-fledged antinomianism and Kāpālika or charnel-ground imagery (see Sanderson, 2009, 145ff.). The *Catuṣpīṭha* imagery and the ritual procedures related to the deities are still at what may be termed a transitional phase (Szántó, vol. I, 2012, 55–57). The goddesses of the cardinal directions and the doorkeepers are visualized in the antinomian counterclockwise order, but those in the intermediate directions are not. Some of the goddesses do carry skull-bowls (h. *yogapātra*) and skull-staffs (*khaṭvāṅga*), but they are not wearing bone ornaments (their ornaments are snakes instead) and are not smeared with ash. Their hair is disheveled, but they are still fully clad. Instead of the dynamic dancing postures, they are visualized as seated. Only some of the goddesses are said to display ferocious laughter (*aṭṭahāsa*), and we find animal-headed goddesses only among the outer eight. Jñānaḍākinī herself does have a ferocious face, but it is not the one facing the worshipper. Since this original pantheon is female, there are no copulating deities. However, with the arrival of the new pantheon headed by Yogāmbara, the old chief goddess and the new god are portrayed in sexual embrace, as are some of the attendants.

The male deity Yogāmbara is in many ways similar to what with his superimposition became his consort: he is also dark, has three faces displaying the same emotions, and six arms, which also hold a *vajra*-scepter, a bell, and a skull-bowl, but a bow and an arrow in the remaining two, while one hand fondles the consort's breast. By being relegated to the role of female consort, Jñānaḍākinī sometimes adopts the name Yogāmbarī.

The superimposition of a male deity onto a female pantheon is against the general trend of late tantric Buddhism (and also tantric Śaivism), where the tendency was rather for goddesses to become autonomous from their male partners, such as in the case of Vajrayoginī (see Sanderson, 2009, 173ff.).

The Language of the *Catuṣpīṭhatantra*

Although the Sanskrit of most later Buddhist *tantras* tends to deviate greatly from classical usage, the language of the *Catuṣpīṭhatantra* goes even further. The text is written in an almost *sui generis* register of Sanskrit, one that unsystematically violates practically every grammatical rule. In declination there is complete promiscuity in gender, case, and number. Conjugation does not fare any better: singular and plural, active and medial, and simplex and causative are frequently confused. Pronouns, enclitic particles, the word *et cetera* (*ādi*), and the *-tas* suffix are sometimes meaningless verse fillers. Words are sometimes truncated only to fit the meter (Szántó, vol. I, 2012, 60–67).

For example, *Catuṣpīṭhatantra* 1.1.1ab reads as follows:

evaṃ bhāṣita sarvajña rigīnāṃ jñānam īśvaram

Aside from the doctrinal problem that this is not the standard etiological introduction (*nidāna*), every word except "thus" (*evaṃ*) and "gnosis" (*jñānam*) requires some explanation. The past participle with a zero-suffix *bhāṣita* acts as a finite verb, meaning "he spoke," whereas the next word – "the omniscient one" (*sarvajña*), which looks like a vocative – is to be understood as the subject, with the zero-suffix standing for a nominative ending. The second verse quarter describes the subject: he is the gnosis (*jñānam*) of, or – as one commentator glosses it – that which is to be known for, *rigīs* (sometimes spelled *ṛgī*), a word of unknown origin, usually understood by the exegetes as buddhas or elsewhere as goddesses. He is also the lord (*īśvaram*), but here, too, what is expected to be one case, the accusative, is to be taken as another, again the nominative. The example chosen here is a relatively straightforward one, and with such explanations, most of the teachings of the *Catuṣpīṭhatantra* can be more or less followed. However, some lines were so obscure that even scriptures that lift over entire passages from the *Catuṣpīṭhatantra* simply chose to ignore them, while retaining the immediately surrounding text (Szántó, vol. I, 2012, 48–54).

The exegetes were not blind to this highly idiosyncratic Sanskrit (Szántó, vol. I, 2012, 61–64). The author of the aforementioned *Maṇḍalopāyikā*, who nevertheless emulates this ungrammatical style, calls it barbaric language/usage (*mlecchabhāṣā*). He also alludes to the fact that this usage is meant to safeguard the esoteric teachings. The commentator Bhavabhaṭṭa advises the reader to pay attention to the meaning, since meter, gender, case endings, number, and the such are "beyond worldly usage" (*atilaukika*) in this scripture (Szántó, vol. I, 2012, 62). He also warns the reader not to criticize grammatical or ungrammatical expressions, since they are both constructs. It is not unlikely that the *Catuṣpīṭha* exegetes considered the barbaric language of the *Catuṣpīṭhatantra* something intentional, meant either to keep the uninitiated ignorant or to teach

on a metalevel the ultimately constructed and conventional nature of all things.

The *Catuṣpīṭhatantra* is perhaps the second earliest *yoginītantra* to employ Apabhramsha verses (the first – as far as we know – is the so-called proto-*yoginītantra*, the *Sarvabuddhasamāyogaḍākinījālaśaṃvara*). Some of these became very influential in later liturgy especially in the rite of collective worship (*gaṇacakra*). There are several features in these verses pointing to a strong affinity with eastern types of Apabhramsha.

Synopsis of Contents

The idiosyncratic usage of Sanskrit affected the transmission of the text and exegetical consensus greatly. It is therefore difficult to outline a precise synopsis of contents, since, depending on chosen readings and interpretation, the same passage could be describing different topics. Moreover, since the *Catuṣpīṭhatantra* is not organized well, the borders of subunits may vary according to each commentator. The contents of the subchapters are broadly as follows:

Subchapter 1.1 first describes the setting for the revelation of the scripture. The petitioner is Vajrapāṇi, who is found heading an unusual list of bodhisattvas: Dhutaguṇa, Bībhatsa, Lambaka, Trikaṇṭha, Meru, Meruśikhara, Padma, and Padmodara. Although the first questions refer to breath retention, in what follows, a unique system of reckoning time is revealed. The basis is a duodecimal group of so-called sovereigns of abodes (*bhuvaneśvaras*), a list unique to this scripture (and to those, such as the *Vajraḍākatantra*, that have borrowed from it): Rohitā, Mohitā, Bhadra, Vṛṣabha, Kūrma, Makara, Raṇḍā, Mikira, Bhidrika, Vyākuli, Svapna, and Kāma. On the basis of this system (studied by Sugiki, 2005a), the text teaches natal prognostication, practical astrology (e.g. when to undertake moneylending), auspicious times for beginning rituals, and so on. The subchapter also describes a computation of the northern and southern progression of the sun as well as another type of divination, this time based on a diagram. (The first eight verses are edited, translated, and discussed by Szántó, vol. II, 2012, 5–13; vol. I, 2012, 199–207.)

Subchapter 1.2 teaches the bodily signs of death, how to counteract them and thus cheat death (*mṛtyuvañcana*), matters related to curing snakebite, and rainmaking. (See a full edition, translation, and discussion by Szántó, vol. II, 2012, 14–54; vol. I, 2012, 208–242.)

Subchapter 1.3 teaches meditation on emptiness (*śūnyatā*) accompanied by a method to divine success in particular rituals depending on the color that emerges when the practitioner contemplates emptiness. (For an edition with all three commentaries, see Szántó, 2008a. For a reedition of the text of the *Catuṣpīṭhatantra* and the *Catuṣpīṭhanibandha*, translation, and discussion, see Szántó, vol. II, 2012, 55–65; vol. I, 2012, 243–251.)

Subchapter 1.4 first teaches the first part (followed up in 2.3) on how to meditate on the chief goddess, Jñānaḍākinī. The remaining part teaches a rite to paralyze and a method to stop excessive rain. (See a full edition, translation, and discussion by Szántó, vol. II, 2012, 66–83; vol. I, 2012, 252–270.)

Subchapter 2.1 for the most part deals with oblation into fire (*homa*). The rite can be undertaken for a variety of worldly aims: killing enemies, invigoration, subjugation, placating, obtaining a son, increasing fertility in cattle, averting danger from a city or a country, paralyzing, attracting, and restoring an ousted king. The size of the pit, the firewood, substances cast into the fire, measurements, and so forth are customized according to the aim. A short passage at the end describes the ideal initiate (*śiṣya*). (This last passage is edited, translated, and discussed by Szántó, vol. II, 2012, 84–85; vol. I, 2012, 274–277. A synopsis of the rest is given by Szántó, vol. I, 2012, 271–274.)

Subchapter 2.2 teaches oblation into water (*jalahoma*), a rare but not unparalleled ritual. The aims are similar to those of usual *homa*s, the only major difference being that substances are not cast into fire but in a large receptacle of water. (See a detailed synopsis and discussion by Szántó, vol. I, 2012, 278–282.)

Subchapter 2.3 is by far the longest one. It describes in considerable detail the pantheon of the cult and related matters such as mantras and hand gestures used both to invoke the goddesses and to worship them. The food offering called *bali* is also described in detail. The subchapter contains praises in both Sanskrit and Apabhramsha. In the latter half, elements of transgressive worship are given: here the deities are offered liquor, the so-called nectars (*amṛta*, i.e. bodily substances such as semen, urine, and feces), and the so-called hooks (*aṅkuśa*s), known in other systems as lamps (*pradīpa*, i.e. five kinds of flesh – that of elephants, cows, dogs, horses, and humans). The subchapter finishes with a dedication of merits and the ritual dismissal of the deities. (The subchapter is edited, translated, and discussed by Szántó, vol. II, 2012, 86–161; vol. I, 2012, 283–356.)

Subchapter 2.4 deals with a variety of topics, including descriptions of the nectars and hooks, ways of purifying and empowering them, miscellaneous details concerning the *bali* offering, rituals of propitiating the doorkeeper goddesses, an Apabhramsha verse to be recited in order to gain entry to secret collective worship, and the secret signs and code words used in the same context (see Sugiki, 2005b). The most striking statement in this subchapter concerns the goddesses: should they fail to comply with the initiate's wishes, they can be killed. (See synopsis, including an edition and discussion of the Apabhramsha verse by Szántó, vol. I, 2012, 357–366.)

Subchapter 3.1 teaches the symbolism of the main ritual implements: the scepter (*vajra*), the bell (*ghaṇṭā*), and the string of beans for recitation (h. *akṣasūtra*). The last passage is a somewhat obscure presentation on the amount of knowledge (*jñāna*) that inhabitants of different levels of the universe possess. (A synopsis is given by Szántó, vol. I, 2012, 367–373.)

Subchapter 3.2 teaches a variety of minor rites, mostly the drawing of amulet-like diagrams but also rites to attract a king, a woman, or material wealth. (A synopsis is given by Szántó, vol. I, 2012, 374–379.)

Subchapter 3.3 reveals a variety of methods to induce possession (*āveśa*) and rites to drive off one's enemy, to attract a woman, to paralyze, to chastise what the text calls "wicked wives" by blocking their vulva, to produce an ointment for clairvoyance of female spirits, and to cause strife between two targets. (A full edition, translation, and discussion are given by Szántó, vol. II, 2012, 162–188; vol. I, 2012, 380–410.)

Subchapter 3.4 discusses the symbolism of the *maṇḍala*, a variety of yogic sexual practices undertaken with a consort, and further individual propitiations of goddesses. (See a synopsis by Szántó, vol. I, 2012, 411–416.)

Subchapter 4.1 deals mostly with matters related to initiation (*abhiṣeka*): characteristics of the ideal officiant (*ācārya*), the manner in which the initiate should behave toward him, the rite of initiation proper, and rules of postinitiatory observance. (See full edition, translation, and discussion by Szántó, vol. II, 2012, 189–214; vol. I, 2012, 417–449.)

Subchapter 4.2 is perhaps the most obscure one. The outset is quite antiritualistic in its tone, and there are several philosophical discussions on the topics of bondage, impermanence, and the nature of consciousness. In spite of all this, the text continues with yet further meditational methods, including the visualization of Vajrasattva and the interiorized oblation into fire (*guhyahoma*). (See synopsis by Szántó, vol. I, 2012, 450–453.)

Subchapter 4.3 starts with a speculation on the presence of elements (earth, water, etc.) in the body and continues with a visualization meant to make consciousness firmly concentrated and the practice of conscious egress from the body at the time of death (*utkrānti*). In this practice, the initiate is supposed to block with mantras the apertures of his body and direct his consciousness toward the top of his head, whence it should exit. Although liberation is not promised explicitly, the text says that even great sinners become purified by this method. However, it warns, the initiate must wait until the time death has become inevitable (i.e. when he has perceived the signs of death described above and has no wish to prolong his worldly existence). The last procedure (or procedures?) described is too obscure to be identified with certainty: it may be a continuation to *utkrānti* or a separate method meant to read other people's thoughts. (The passage on *utkrānti* is edited, translated, and discussed by Szántó, vol. II, 2012, 215–224; vol. I, 2012, 455–468. An overview of the rest is given by Szántó, vol. I, 2012, 454–455, 469–470.)

Subchapter 4.4 first teaches a meditation method meant to secure perfect enlightenment. A few verses teach signs of accomplishment, mostly visions that the meditator experiences. Two further, similar methods are taught, along with practical advice for the meditator, such as finding a suitably isolated place, and a recipe to alleviate his hunger and thirst. The closing passages describe the joy of the retinue on hearing the *Catuṣpīṭhatantra* and the benefits accrued from merely listening to it or copying it. (See synopsis by Szántó, vol. I, 2012, 471–474.)

Presumed Environment, Innovation, and Influence

Judging from the divinatory passages and targets of rituals, the intended clientele of the specialist initiates was the urban or semi-urban Buddhist laity. Furthermore, the passages describing the *ācārya*'s fee and a passage praising the value of the *ācārya* in the *Maṇḍalopāyikā* seem to suggest that the *ācāryas* themselves were not monks but married householders.

The *Catuṣpīṭhatantra*, although several of its texts were translated into Classical Tibetan, seems to have enjoyed only a marginal role in Tibet. Quotations and references in Indic texts are also rather scarce when compared to other *yoginītantra*s, such as the *Hevajratantra*. However, the cycle was greatly successful in the Kathmandu Valley, where Yogāmbara and Jñānaḍākinī are worshipped to this day.

The *Catuṣpīṭhatantra* was nevertheless very influential on the subcontinent (here discounting Nepal), in an indirect way. Several important scriptures related to the cult of Śaṃvara or Saṃvara borrow passages from it. Almost two hundred verses are incorporated into the *Saṃpuṭodbhavatantra* and several dozens of verses into the *Vajraḍākatantra*, the *Ḍākārṇavatantra*, and the *Saṃvarodayatantra*, and there are echoes even in the *Yoginīsaṃcāratantra* and the *Abhidhānottaratantra*. The aforementioned Apabhramsha verses were incorporated into the periodically observed collective worship (*gaṇacakra*). The *Catuṣpīṭhatantra* was very likely the first esoteric Buddhist scripture to teach *utkrānti*, although it was not the earliest text to do so (the earliest being the *Dvikramatattvabhavānā Mukhāgama* of Buddhaśrījñāna/Jñānapāda). The waning popularity of the text was perhaps due to its highly obscure language.

PÉTER-DÁNIEL SZÁNTÓ

Guhyasamāja

The *Guhyasamājatantra* (Scripture of Esoteric Assembly) is one of the most influential scriptures in later Indian tantric Buddhism. The key term "esoteric assembly" here is explained in the scripture itself (ch. 18) as the aggregate (*samāja*) of body, speech, and mind (*guhya*). It is the principal scripture of the *yogottaratantra* class, the wave following the *yogatantra* in the historical development of tantric literature. In this scripture, esoteric eroticism, only marginal in the *yogatantras*, has moved to the foreground, and multi-faced, multi-armed male deities are represented and visualized copulating with their consorts. Likewise, teachings of sacramental consumption of impure substances have become conspicuous. A feature of esoteric eroticism is apparent right from the preamble of the scripture. Although it follows the style of the traditional Mahāyāna scriptures, in which the Buddha preaches in historical places or, especially in tantric literature, in some heaven or divine realm, here the Buddha is stated to reveal and preach this scripture in the vaginas of women (*yoṣidbhaga*), namely, of the goddesses.

The *Guhyasamājatantra* as we have it consists of 18 chapters. The last chapter, the *Samājottara*, was, however, originally a different scripture and incorporated into the *Guhyasamājatantra* complex at some later time. The Indo-Tibetan exegetical tradition recognizes some discontinuity and regards the first 17 chapters as the root scripture (*Mūlatantra*) and the last chapter as the supplementary scripture (*Uttaratantra*).

Sources

Owing to its popularity, a number of Sanskrit manuscripts of this scripture survive. The extant manuscripts are divided into three types with regard to their contents: (1) manuscripts that contain the text of all 18 chapters; (2) manuscripts that contain the text of the 18-chapter *Guhyasamājatantra* as the first half (*pūrvārdha*) and that of a redaction of the *Sampuṭatantra*/*Sampuṭodbhavatantra* as the latter half (*parārdha*/*aparārdha*/*uttarārdha*); and (3) manuscripts that contain only the latter half of the scripture. There are several other manuscripts that cannot be classified from the catalogues (Tsukamoto *et al.*, 1989). Since the *editio princeps* by Benoytosh Bhattacharyya, the *Guhyasamājatantra* has been published in its entirety four times, by Bhattacaryya (1931), Bagchi (1965), Matsunaga (1978), and Dwarikadas Shastri (1984). Below we follow the verse-numeration of Matsunaga's edition. The whole text was also edited by F. Fremantle (1971), but this remains unpublished. The scripture has been translated in its entirety into modern languages three times, into English by Fremantle (1971), German by Gäng (1988), and Japanese by Matsunaga (1998, 2000).

The existence of a Dunhuang manuscript shows that the *Guhyasamājatantra* proper (i.e. chs. 1–17) was translated into Tibetan in the Imperial Period (Eastman, 1980). The *Guhyasamājatantra* proper and chapter 18 are contained as different scriptures in the Tibetan canon. The Tibetan title of the former is *De bzhin gshegs pa thams cad kyi sku gsung thugs kyi gsang chen gsang ba 'dus pa zhes bya ba brtag pa'i rgyal po chen po* (D 442/P 81). The Tibetan title of the latter is simply *Rgyud phyi ma* (Skt. **Uttaratantra*; D 443/P 81a). Śraddhākaravarman and Rin chen bzang po are registered as the translators of both. There are two versions of the canonical Tibetan translation, of which the respective revisers differ (Eastman, 1980, 9; Tsukamoto *et al.*, 1989, 231). Comparison between the Dunhuang manuscript and the canonical translation reveals that Rin·chen bzang po was most likely not a translator but a reviser of the root scripture (Eastman, 1980).
